Mr. Murray publishes "popular" editions of (1) Dean Stanley's *Lectures on the History of the Eastern Church*, and (2) Bishop Boyd Carpenter's *Popular History of the Church of England from the Earliest Times to the Present Day* (2s. 6d. net each). The latter volume is liberally illustrated. These cheap editions of books that have been great in their time will be widely appreciated.

MISCELLANEOUS.

The Rev. J. O. Bevan, M.A., F.C.P., &c., Rector of Chillenden, discusses in a vigorous brochure *The Education Question in the Immediate Future: How to deal with it* (6d., H. J. Goulden, Canterbury). Having

4.—THE MEADOW I KNOW.
5.—THE STREAM I KNOW.
6.—THE COMMON I KNOW.

London: J. M. DENT & CO., Bedford Street, W.C.

Digitized by Google

reviewed the position since 1870, and particularly the recent struggle, he proposes a constructive policy. On the purely educational aspect of the question, he "deprecates the introduction of a uniform cast-iron system, with the steam-roller of the Board of Education passing over everything, crushing out initiative and reducing all to a dead level." The author's attitude is strenuous and uncompromising for the Church position.

The Nation's Income—an outline of National and Local Taxation—by F. W. Raffety and W. H. Cartwright Sharp, M.A., LL.B., Barristers-at-Law (2s. net, Murby), comes opportunely at Budget time. It is "a practical book for the citizen and the student of public affairs," setting forth in clear and simple terms the principles, methods, and facts necessary for understanding the Nation's Accounts and for judging political issues from such understanding. It is written with ample knowledge and sound judgment, and ought to be widely read and pondered.

Les Cinq Langues, "journal des langues allemande, anglaise, espagnole, française, italienne," which appears fortnightly from October 5 to July 20 (Paris Vuibert et Nony, Boulevard Saint-Germain, 63: 10 fr.), and is now in its ninth year, offers to polyglots varied and interesting opportunities of keeping up their linguistic practice. Each number represents all the five languages, and a supplement records what is going on in the educational world and suggests "devoirs."

Messrs. W. H. & L. Collingridge have issued from the City Press the 1909 edition of the *City of London Directory*, an indispensable guide to business people (12s. 6d.). The comprehensive features of the work are well known, and evidently the utmost care has been taken to maintain the fullness and the accuracy of the information up to the date of publication. Though special attention is given to the city square mile, the London County Council (with its Committees) is usefully included. The map is large and elaborately detailed. The present is the thirty-ninth annual issue.

The Great Eastern Railway Company's *Tourist Guide to the Continent*, edited by Percy Lindley and well supplied with illustrations and maps, appears opportunely (6d.). It contains much useful information, judiciously selected and agreeably and clearly presented. There has been added to the present edition a brief but helpful "everyday vocabulary in French, German, and English." The booklet is nicely got up and handy.

FIRST GLANCES.

Classics.

Cambridge University Press School Series.—(1) Caesar: De Bello Gallico, Liber I. Edited by the late E. S. Shuckburgh, M.A., Litt.D. (2) Horatius and other Stories (adapted from Livy). Edited by by G. M. Edwards, M.A. 9d. each.
[Text with vocabulary. Useful and agreeable.]

Cicero, Six Orations of (Allen and Greenough's edition). Revised by J. B. Greenough and G. L. Kittredge. With a special vocabulary by J. B. Greenough. 4s. 6d. Ginn.
[Pro Lege Manilia, the four orations against Catiline, and Pro Archia. Very full introduction—biographical, stylistic, constitutional. Useful notes; ample vocabulary; abundant illustrations and several maps. Substantial get-up. Thorough and able work.]

Messrs. BELL'S New Text-Books.

MASON'S NEW ENGLISH GRAMMARS.

REVISED IN ACCORDANCE WITH MODERN REQUIREMENTS BY

A. J. ASHTON, M.A.,

Senior English Master, Kelvinside Academy, Glasgow; and Examiner in English to the College of Preceptors.

Ready immediately. Completing the Course.

Crown 8vo, 376 pp., 3s. 6d.

MASON'S SENIOR ENGLISH GRAMMAR.

This volume is based on the forty-first edition of Mason's "English Grammar," and while retaining all the characteristic features of that work, includes much supplementary matter, and is adapted to the requirements of Training Colleges, and of the highest classes in Secondary Schools.

The previous volumes of the Course are—

Mason's Junior English Grammar. 125 pp. 1s.
Mason's Intermediate English Grammar. 218 pp., 2s.

Now Ready. Crown 8vo, 2s. 6d.

A NEW PRIMER OF ENGLISH LITERATURE. By T. G. TUCKER, Litt.D., Professor of Classical Philology in the University of Melbourne; and WALTER MURDOCH, M.A., Lecturer in English in the University of Melbourne.

Professor EDWARD DOWDEN says:—"The preface admirably describes the ideal of such a book, and I cannot but see that in the book itself that ideal is in a large measure attained."

Crown 8vo. Illustrated. 2s.

A FIRST GERMAN READER. By L. B. T. CHAFFEY, M.A., Assistant Master at Eton. With Themes for Retranslation and a Vocabulary.

This reader is intended to follow after the "First German Course" by the same author. It is divided into three parts. Part I. contains a selection of Anecdotes and Short Pieces; Part II. a Narrative of a Tour through Germany and Switzerland; and Part III. a Selection of German Lyrics. At the end of the book Questions and Themes and Vocabularies are given.

NEW FRENCH TEXTS.

ERCKMANN-CHATRIAN.—Histoire d'un Conscrit de 1813. With English Notes by F. BOCHER, Professor in Harvard University, and a Vocabulary by G. A. D. BECK 2s.

ERCKMANN-CHATRIAN.—Le Blocus, Épisode de la Fin de l'Empire. With English Notes by Professor F. BOCHER. 2s.

ERCKMANN-CHATRIAN.—Madame Thérèse; ou, les Volontaires de '92. With Notes by Professor F. BOCHER, and a Vocabulary by G. A. D. BECK. 2s.

NEW MATHEMATICAL BOOKS.

Crown 8vo, 4s. 6d.

PRACTICAL SOLID GEOMETRY. By the Rev. PERCY W. UNWIN, M.A., Assistant Master at Cheltenham College.

"The training which the study of descriptive geometry provides is designed to strengthen the power of visualizing problems of solid geometry, and is therefore of real intellectual value. The present volume is admirably suited to this purpose. The diagrams are models of clearness, and the subject-matter is set down in a lucid and attractive form."—*Guardian.*

Crown 8vo, 4s. 6d.

ELEMENTARY MECHANICS. By C. M. JESSOP, M.A., Lecturer in Mathematics at Armstrong College, Newcastle-on-Tyne, and T. H. HAVELOCK, M.A., D.Sc., Lecturer on Applied Mathematics at Armstrong College.

New and Cheaper Reissue.

JUNIOR PRACTICAL MATHEMATICS. By W. J. STAINER, B.A. (Lond.). Complete, price 2s., or with Answers, 2s. 6d. Also in Two Parts:

Part I. (Arithmetic and Algebra), 1s. 4d., or with Answers, 1s. 6d.

Part II. (Geometry and Mensuration), with or without Answers, 1s. 4d.

The Answers separately, 6d. net.

London: GEORGE BELL & SONS, Portugal St., Kingsway, W.C.

[Sixth Edition. 20 engravings.]

Dynamics, The Elementary, of Solids and Fluids. By W. Peddie, D.Sc., F.R.S.E., Harris Professor of Physics, University College, Dundee (University of St. Andrews). With sectional and general examples, by J. D. Fulton, M.A., B.Sc., Mathematical Teacher, Boroughmuir Junior Student Centre, Edinburgh. 2s. 6d. Oliver & Boyd.

[Vigorous practical treatment on modern lines.]

Mechanics, Introductory. By Edward J. Bedford, Science Demonstrator for the Sheffield Education Committee. 1s. 6d. Longmans.

[Carefully and simply presented. Numerous exercises (with answers) and diagrams. Most useful little work.]

Natural Philosophy, Thoughts on; with a new reading of Newton's First Law. By A. Biddlecombe. Revised and enlarged edition. Whittaker.

Plant Biology: a Text-Book of Elementary Botany arranged for modern methods of teaching. By F. Cavers, D.Sc. Lond., A.R.C.Sc., F.L.S., Professor of Botany, Hartley University College, Southampton. 3s. 6d. Clive.

[Some two hundred figures. Excellent.]

Telegraphs and Telephones: How they work. Explained in non-technical language. By Charles R. Gibson. 1s. 6d. net. Seeley.

[Simple and clear. Illustrations and diagrams.]

Trees: a Handbook of Forest Botany for the Woodlands and the Laboratory. By the late H. Marshall Ward, Sc.D., F.R.S., Professor of Botany in the University of Cambridge. Volume V., Form and Habit. With Appendix on Seedlings. 4s. 6d. net. Cambridge University Press.

[Over two hundred figures.]

English.

Arnold's (E. J.) Bright Story Readers (edited by Alfonzo Gardiner).—Grade P. (preparatory): (1) Tales of Old (Myths and Legends of Greece and Rome); (2) Long Ago Stories (from Greece and Rome). 1½d. each.—Grade I. (age 6-8): Snowdrop and the Seven Dwarfs (Grimm). 2d.—Grade II. (age 7-9): The Snow Queen (Andersen). 2½d.—Grade III. (age 8-10): The Mad Tailor, and The Caliph Stork (Hauff). 3d.—Grade IV. (age 9-11): Alice's Adventures in Wonderland (Lewis Carroll). 4d.—Grade V. (age 10-13): (1) Harold (Lytton); (2) The Last of the Barons (Lytton); (3) The King of the Golden River, &c. (Ruskin); (4) The Black Tulip (Dumas); (5) The Story of Wallace Wight (Sir William Wallace), after Blind Harry—all adapted, and some severely abridged. 4d. each.—Grade VI. (age 11-14): (1) Tales from Tennyson's Idylls of the King; (2) Further Lamb's Tales from Shakespeare (third selection); (3) Stories from Barbour's Bruce; (4) Tom Brown's School Days (Hughes). 4d. each.

[Beautifully printed; illustrations. Excellent.]

Blackie's English Texts.—(1) War of the Spanish Succession (Macaulay). (2) John Hampden (Macaulay). (3) Sir William Temple (Macaulay). (4) Captain Singleton's Early Adventures (Defoe). (5) History of the Church of England (Bede.) (6) The Crown of Wild Olive (Ruskin). (7) Wars with the Turks (Knolles). (8) Warwick the King-maker (Commines). (9) Voyages and Plantations of the French in Canada, Acadia, &c. (10) Letters on France and the French Revolution (Horace Walpole) (11) Letters on the American War of Independence (Horace Walpole). (12) The Spanish Armada, The Last Fight of the "Revenge," and other Adventures of the Reign of Elizabeth. 6d. each.

Cassell's The People's Library.—(1) Masterman Ready (Captain Marryat); (2) Essays and Lays of Ancient Rome (Macaulay); (3) Peter the Whaler (Kingston); (4) Ravenshoe (H. Kingsley); (5) The Three Midshipmen (Kingston); (6) A Wonder Book, and Tanglewood Tales (Hawthorne); (7) Charles O'Malley (Lever); (8) Sheridan's Dramatic Works; (9) Gulliver's Travels (Swift); (10) Vanity Fair (Thackeray); (11) Our Village (Miss Mitford); (12) Wuthering Heights (Emily Brontë). 8d. net each; 1s. 6d. net leather.

Dent's The Temple English Literature Series for Schools.—(1) Tales from Browning. By the Rev. G. Lacey May, M.A.—(2) Voyages of Famous British Seamen. Selected, with an introduction, by R. Brimley Johnson.—(3) Stories from Carlyle: Scenes from the French Revolution. By D. M. Ford.—(4) The Story of the Iliad. Retold in English by F. S. Marvin, R. J. G. Mayor, and F. M. Stowell. 1s. each.

[Portrait frontispiece. Charming get-up.]

Heinemann's Favourite Classics.—(1) Shorter Poems of Milton; (2) The Traveller, and the Deserted Village (Goldsmith); (3) Lays of Ancient Rome (Macaulay); (4) Sesame and Lilies (Ruskin); (5) The Lady of the Lake (Scott); (6) Evangeline (Longfellow). 6d. each.

[Introductions and portrait frontispieces.]

Jack's Stories from History.—(1) Stories from English History. By Hilda T. Skae, with pictures by Frank Dad.—(2) Stories of the Vikings. By Mary Macgregor, with pictures by Monro S. Orr. 8d. each.

Jack's The Children's Heroes.—(1) The Story of Cromwell; (2) The Story of Napoleon. Both written by H. E. Marshall and pictured by Allan Stewart. 8d. each.

Scott. Tales of a Grandfather: being the History of Scotland from the earliest period to the Battle of Flodden in 1513. Edited by P. Giles, M.A., LL.D. Aberd., Fellow of Emmanuel College, Cambridge. 1s. 4d. Cambridge University Press.

[Brief notes. Handy and agreeable edition.]

Stevenson. Kidnapped. Edited by J. Harold Boardman, B.A. Lond., L.C.P., Principal of Douglas Pupil-Teachers' Centre. 1s 6d. Cassell.

[Biographical and literary introduction; full notes. Type rather small and crowded, but clear.]

Trevelyan, G. M. English Life Three Hundred Years Ago: being the first two chapters of "England under the Stuarts." Edited by J. Turral, B.A. Lond., Head Master of Blackpool Secondary School. 1s. Methuen.

[Useful notes for upper and middle forms.]

Poetry for School and Home.

"A.L." Golden Gems; being Select Poems for Young People. 1s.; or in Four Parts, 2d., 3d., 3d., 3d. E. J. Arnold.

[Very carefully chosen and edited. Suitable to pupils of eight to fourteen. Simple explanations and brief biographical notes appended.]

Ballads, Cassell's Penny. Nos. 1 and 2. Illustrated.

Ballads, Old. Edited by Frank Sidgwick. 1s. 6d. Cambridge University Press.

[Good selection, with explanatory notes.]

English History, Poems and Ballads on. Three Books—Junior, Intermediate, Senior. 5d. each. Pitman.

[Ample typical specimens.]

The Lays of Ancient Rome (Macaulay). Edited by M. Hale Shackford, Ph.D., Associate Professor of English Literature, Wellesley College. 1s. Heath (English Classics).

[Introductory "Study of Heroic Poetry," notes, &c.]

The Sesame Poetry Books. Books I.-VII. 2d. each. Edward Arnold.

[Miscellaneous; graduated for pupils of seven to fourteen.]

GERMAN.

Am Rhein: a German Story for Beginners. By Karl Wichman, Ph.D., Professor of German in the University of Birmingham. 2s. Swan Sonnenschein (Ora Maritima Series).
[Narrative illustrating everyday life and thought of the Germans. Text simple and idiomatic. Plan follows the idea of the series. Interesting and practical introduction to German.]

Colloquial German, Lessons in, by the Gouin Method. Part I. 1s. net. Kegan Paul, Trench, Trübner, & Co. (Modern Language Series, edited by A. Thouaille, M.A. Paris).
[Practical and attractive. Useful as collateral exercises, as well as independently.]

Heath's Modern Language Series.—(1) Johannes (tragedy, by Sudermann). Edited by F. G. G. Schmidt, Ph.D., Professor of Modern Languages, State University of Oregon. 1s. 6d. (2) Alltagliches: Ein Konversations- und Lesebuch. By M. B. Lambert, Boys' High School, Brooklyn, N.Y.
[(1) Biographical and literary introduction; brief, helpful notes. (2) Presents in simple German objects and incidents of the pupil's daily life in and out of school. Fragen, exercises for retranslation, vocabulary. Serviceable.]

Historical Reader, German. By J. E. Mallin, M.A., Assistant Master, Strand School, King's College, London. 2s. George Bell.
[Sketch of German history as elementary reader. Ample notes and full vocabulary; illustrations. Very good.]

Lesebuch, Deutsches Reform.—Herausgegeben von D. Ll. Savory, M.A., Dozenten an der Universitat London, Goldsmiths' College, früher Oberlehrer am Marlborough College, &c. 2s. 6d. Clarendon Press.
[Enthaltend dreiszig Erzahlungen aus der deutschen Geschichte; mit Fragen für Sprechübungen mit grammatischen Übungen und einem deutschen Wörterzeichnis. Mit Abbildungen. Readings brief; apparatus very full. Attractive and interesting.]

Poetry, German, A First Book of. Compiled and annotated by Walter Rippmann. 1s. 4d. Dent (Modern Language Series).
[Varied selection, classified. Anmerkungen.]

Rivingtons' Direct Method Elementary German Texts.—(1) Der Dachs auf Lichtmess (Riehl). (2) John Wells (Gerstacker; abridged). Both edited by D. Ll. Savory, M.A. 1s. 6d. each.
[Good reading; abundance of exercises.]

EDUCATION.

Architectural Education: a History of the Past and some Criticisms of the Present System, upon which are founded some suggestions for the Future, with particular reference to the position of the Universities. By Wilfred I. Travers, A.R.I.B.A. Harrison, Jehring, & Co.
[Much historical detail; some pointed criticism.].

Board of Education.—(1) Memorandum on Language Teaching in State-aided Secondary Schools in England. 1d.—(2) Regulations for the Preliminary Education of Elementary School Teachers (in force from August 1 in England, excluding Wales and Monmouthshire). Cd. 4628. 3d. Wyman.

L.C.C.—Accommodation and Attendance in Elementary Schools, for year ended March 31, 1908.

National Froebel Union.—(1) Regulations for Award of Certificates (in force from 1910). 4d.—(2) Child Attendant Association, affiliated to the National Froebel Union: Scheme for Certificates of Practical Fitness. Norwich House, Southampton Street, Bloomsbury, W.C.

MATHEMATICS.

16617. (M. T. NARANIENGAR, M.A.)—Prove that the vertices of the harmonic triangle of the Feuerbach quadrilateral lie on the sides of the pedal triangle.

Note by B. C. WALLIS, F.C.P., B.Sc. (Econ.).

In Gallatly's "The Nine Point Circle," Theorem 6, it is shown that the vertices occur at the respective intersections of the lines joining (i.) the mid-points of the sides, (ii.) the points of contact of the in-circle with the sides. The proposition does not follow.

16548. (SARADAKANTA GANGULI, M.A.)—The tangent plane at any point P of the surface $xyz = k$ meets the axes of co-ordinates at A, B, C. Show that P is the centre of inertia of the triangle ABC. Generally, the tangent plane at any point P of the surface $x^l y^m z^n = k$ meets the axes of co-ordinates at A, B, C. Show that P is the centre of mean position of the points A, B, C for the multiples l, m, n respectively. Prove also the converse of the general proposition.

Solution by A. M. NESBITT, M.A.

In the general case if (α, β, γ) be the co-ordinates of P, we have for the equation to the tangent plane at P,

$$x.lk/\alpha + y.mk/\beta + z.nk/\gamma = (l+m+n)\,k \quad \ldots\ldots\ldots\ldots (1),$$

so that $l.\mathrm{OA} = \alpha.\Sigma l$, $m.\mathrm{OB} = \beta.\Sigma l$, $n.\mathrm{OC} = \gamma.\Sigma l$; conditions which make α, β, γ the co-ordinates of the centre of inertia of masses l, m, n at A, B, C respectively. Conversely, being given these three conditions, we are led at once to the relation (1), which shows that ABC is the polar plane of (α, β, γ) with respect to $x^l y^m z^n = k$. But the centre of inertia of masses at A, B, C must lie in the plane ABC; so that the pole lies on its polar plane, and thus ABC touches the surface at the centre of inertia of these masses. Or we may argue that since equation (1) is clearly satisfied by (α, β, γ) the pole lies on its polar plane, &c.

16601. (R. F. DAVIS, M.A.)—If A, B, C are the angles of a triangle factorize:— $\cos^2 \mathrm{B} + \cos^2 \mathrm{C} + 2\cos 3\mathrm{A} \cos \mathrm{B} \cos \mathrm{C}$.

Solution by S. NARAYANAN, B.A., L.T.

Since $\cos^2 \mathrm{A} + \cos^2 \mathrm{B} + \cos^2 \mathrm{C} = 1 - 2\cos \mathrm{A} \cos \mathrm{B} \cos \mathrm{C}$,

we have
$$\begin{aligned}
&\cos^2 \mathrm{B} + \cos^2 \mathrm{C} + 2\cos 3\mathrm{A} \cos \mathrm{B} \cos \mathrm{C} \\
&= 1 - \cos^2 \mathrm{A} + 2\cos 3\mathrm{A} \cos \mathrm{B} \cos \mathrm{C} - 2\cos \mathrm{A} \cos \mathrm{B} \cos \mathrm{C} \\
&= \sin^2 \mathrm{A} + 2\cos \mathrm{B} \cos \mathrm{C} (\cos 3\mathrm{A} - \cos \mathrm{A}) \\
&= \sin^2 \mathrm{A} + 8\cos \mathrm{A} \cos \mathrm{B} \cos \mathrm{C} (\cos^2 \mathrm{A} - 1) \\
&= \sin^2 \mathrm{A} (1 - 8\cos \mathrm{A} \cos \mathrm{B} \cos \mathrm{C}).
\end{aligned}$$

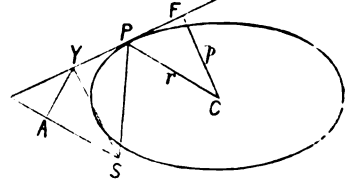
The PROPOSER's Solution is the following:—

Denoting $\cos \mathrm{A}$, $\cos \mathrm{B}$, $\cos \mathrm{C}$ by c_1, c_2, c_3, we require to factorize $c_2^2 + c_3^2 + 2c_2c_3(4c_1^3 - 3c_1)$, where $c_1^2 + c_2^2 + c_3^2 + 2c_1c_2c_3 = 1$.

$$\begin{aligned}
\text{Expression} &= c_2^2 + c_3^2 - 6c_1c_2c_3 + 8c_1^3c_2c_3 \\
&= c_2^2 + c_3^2 - 6c_1c_2c_3 + 8c_1c_2c_3(1 - c_2^2 - c_3^2 - 2c_1c_2c_3) \\
&= c_2^2 + c_3^2 + 2c_1c_2c_3 - 8c_1c_2c_3(c_2^2 + c_3^2) - 16c_1^2c_2^2c_3^2 \\
&= (c_2^2 + c_3^2 + 2c_1c_2c_3)(1 - 8c_1c_2c_3) \\
&= (1 - c_1^2)(1 - 8c_1c_2c_3) = \sin^2 \mathrm{A}(1 - 8\cos \mathrm{A} \cos \mathrm{B} \cos \mathrm{C}).
\end{aligned}$$

16540. (W. F. BEARD, M.A.)—Prove geometrically that the latus rectum of the parabola, which has closest contact with an ellipse at any point, varies inversely as the cube of the diameter through the point.

Solution by the PROPOSER.



Let P be any point on an ellipse, centre C; let S, A be the focus and vertex of the parabola having closest contact with the ellipse at P.

Draw $\mathrm{CF} (= p)$ and SY perpendicular to the tangent at P. Join AY, SP, $\mathrm{CP} (= r)$. Let the semi-diameter conjugate to $\mathrm{CP} = r_1$.

If two conics have contact of the third order, it is easily proved (by considering a case of double contact) that they have a common diameter through the point of contact. Hence CP is parallel to the axis of the parabola.

Thus $\angle \mathrm{SPY} = \angle \mathrm{CPF}$; therefore $\mathrm{SY}/\mathrm{SP} = p\,r$; but $\mathrm{SY}^2 = \mathrm{SA}.\mathrm{SP}$; therefore $\mathrm{SA} = p^2/r^2.\mathrm{SP}$.

But 4SP = chord of curvature at P of the parabola parallel to the axis, which is the same as the central chord of curvature at P for the ellipse $= 2r_1^2/r$; therefore $4\mathrm{SA} = (p^2/r^2).(2r_1^2/r) = 2a^2b^2/r^3$; because $pr_1 = ab$; therefore latus rectum varies inversely as the cube of the diameter through P.

Algebraical Note in reply to a Correspondent.

On the Factorization of $a^8+2a^6b^2+3a^4b^4+2a^2b^6+b^8$, *and its application to the Factorization of* 6507601.

By CONSTANCE I. MARKS, B.A.

$$a^8+2a^6b^2+3a^4b^4+2a^2b^6+b^8 = (a^4+a^2b^2+b^4)^2$$
$$= [(a^2+b^2)^2-(ab)^2]^2$$
$$= [(a^2+b^2+ab)(a^2+b^2-ab)]^2.$$

Consider the factors of 6507601.

It is at once evident from the number of periods that the square root must be a number of 4 digits.

Its first digit is, by inspection, 2, and its unit digit will be either 1 or 9, since these are the only final digits which when squared will give a unit digit 1.

Now a little consideration shows that 6507601 lies between $(2550)^2$ and $(2560)^2$; therefore it must be either $(2551)^2$ or $(2559)^2$.

By trial, we find that

$$6507601 = (2551)^2 = \{(50)^2+1^2+50\times1\}^2,$$

or, expressing the result as a special case of the above algebraical formula, $6507601 = \{(\sqrt{50})^4+(\sqrt{1})^4+(\sqrt{50})^2(\sqrt{1})^2\}^2$.

Since a^2 is *not* a square number, it follows that the factorisation of 6507601 cannot be carried further without the introduction of factors which necessarily involve surds.

Note that 2551 is known to be *prime* from tables.

16586. (Professor NEUBERG.)—Intégrer l'équation

$$xyy''+xy'^2-yy'=0.$$

Solutions (I.) *by* G. N. WATSON, B.A.; (II.) *by* P. WERTHEIM, B.Sc., L.C.P., *and* S. NARAYANAN, B.A., L.T.

(I.) After dividing through by x^2, the equation may be written in the form $d/dx\,(yy'/x)=0$. On integration this becomes $yy'=c_1x$. Integrating again, $y^2=c_1x^2+c_2$, the complete primitive; c_1, c_2 being arbitrary constants. The differential equation is, accordingly, the differential equation of all conics whose axes coincide with the co-ordinate axes.

(II.) Since $d/dx\,(xy.dy/dx)=xy.d^2y/dx^2+y.dy/dx+x\,(dy/dx)^2$,

therefore given equation becomes

$$d/dx\,(xy.dy/dx)-2y.dy/dx=0 \quad\text{or}\quad d\,(xy.dy/dx)=2y\,dy;$$

whence, by integration, $xy.dy/dx=y^2+A$.

Separating the variables, we have

$$\int dy\,y/(y^2+A)=\int dx/x \quad\text{or}\quad y^2+A=Bx^2,$$

which is the required solution.

16626. (Professor E. HERNÁNDEZ.)—On donne un nombre composé de trois tranches de n chiffres, qu'à partir de la première tranche à droite sont trois nombres entiers consécutifs. On renverse les tranches, mais sans changer l'ordre de leurs chiffres. La différence entre ce nouveau nombre et le proposé est $2(10^{2n}-1)$.

Solution by JAMES BLAIKIE, M.A.

If we write x for the number of n digits, then the requir difference is $[(x+2)10^{2n}+(x+1)10^n+x]-[x.10^{2n}+(x+1)10^n+x+2] \quad 2(10^{2n}-1)$.

Ex.: $247246245-245246247 = 1999998 = 2(10^6-1)$.

16621. (Professor R. W. GENESE, M.A.)—To a passenger in a train, moving uniformly, a rope in a parallel plane appears on the window to rotate uniformly. Prove that it hangs in a catenary of equal strength.

Solution by A. H. S. GILLSON.

Let ψ be the angle which the tangent at any point of the curve makes with the axis of x, which is supposed horizontal. Then, if u be the uniform velocity of the train, $d\psi/dt=u.d\psi/dx=c$ (a constant). Hence $\psi=c/u.x+A$; so that the curve is a catenary of uniform strength.

Property of a Plane Figure.

By C. E. MCVICKER, M.A.

Let the point A_r have for co-ordinates in three dimensions (x_r,y_r,z_r), and consider the plane quadrilateral $A_1A_2A_3A_4$.

If area $A_2A_3A_4=m_1$, $A_3A_1A_4=m_2$, $A_1A_2A_4=m_3$, $A_3A_2A_1=m_4$,

we have $m_1+m_2+m_3=A_1A_2A_3=-m_4$;

therefore $\Sigma m=0$.

Obviously $x_4=(m_1x_1+m_2x_2+m_3x_3)/(m_1+m_2+m_3)$, ...;

thus Σm, Σmx, Σmy, Σmz all vanish .....(1).

If $P=(xyz)$ be any point in space

$$\Sigma m_rPA_r^2=\Sigma m_r[(x-x_r)^2+(y-y_r)^2+(z-z_r)^2] \quad (r=1,2,3,4),$$

which, by (1), is independent of (xyz), the position of P, and is therefore a constant depending on the measurements of the quadrilateral.

Now, let $A_1A_2A_3A_4$ be displaced bodily to any position $A_1'A_2'A_3'A_4'$, and it follows that $\Sigma m_rPA_r^2=\Sigma m_rPA_r'^2$ .....(2).

Choose P at the point common to the planes bisecting A_1A_1', A_2A_2', A_3A_3' at right angles; then $PA_1=PA_1'$, $PA_2=PA_2'$, $PA_3=PA_3'$, whence $PA_4=PA_4'$, by (2).

For a pentagon $PA_5=PA_5'$ (by using the quadrilateral $A_2A_3A_4A_5$), and so on.

Thus for any two positions of a plane lamina there is a point P such that $PA=PA'$ for all pairs of corresponding points A and A'.

It should be observed that there may possibly be right- and left-handed equality between the pyramids subtended at P, so that P is not a centre round which the lamina can always be rotated into its second position. In fact (as is well known) there is in general no such centre.

Note.—Other demonstrations of this curious property, which appears to have been noticed first by Professor Cayley, have been given by Professor Bromwich and Mr. James Blaikie, M.A., in the columns of *The Mathematical Gazette*.

16618. (T. E. LINDFIELD.)—If

$$\sin\theta=a\sin\phi/b \quad\text{and}\quad \cos\theta=c\cos\phi/d,$$

prove that $\sin(\theta+\phi)=\sqrt{[(b^2-a^2)(c^2-d^2)]}/(ad-bc)$

and $\cos(\theta+\phi)=(ac-bd)/(ad-bc)$.

Solutions (I.) *by* B. C. WALLIS, B.Sc., F.C.P.; (II.) *by* MANOHAR LAL; (III.) *by* F. G. W. BROWN, B.Sc., L.C.P., *and others*.

(I.) $\cos(\theta+\phi)\sin(\theta-\phi)=\sin\theta\cos\theta-\sin\phi\cos\phi$;

therefore $\cos(\theta+\phi)=(\sin\theta\cos\theta-\sin\phi\cos\phi)/(\sin\theta\cos\phi-\sin\phi\cos\theta)$.

Divide top and bottom by $\sin\phi\cos\phi$, and substitute

$$=(ac/bd-1)/(a/b-c/d)=(ac-bd)/(ad-bc),$$

the value for $\sin(\theta+\phi)$ follows at once.

(II.) Square and add the given equations for $\sin\theta$ and $\cos\theta$, and we have $1-c^2/d^2=(a^2/b^2-c^2/d^2)\sin^2\phi$ .....(i.)

therefore $\cos(\theta+\phi)=\cos\theta\cos\phi-\sin\theta\sin\phi$

$=(c/d)\cos^2\phi-(a/b)\sin^2\phi$ [from data]

$=c/d-(a/b+c/d)(d^2-c^2)/d^2\times b^2d^2/(a^2d^2-b^2c^2)$

$=c/d-(b/d)(d^2-c^2)/(ad-bc)$, [from (i.)]

$\cos(\theta+\phi)=(ca-bd)/(ad-bc)$.

Again, $\sin(\theta+\phi)=\sqrt{\{1-(ca-bd)^2/(ad-bc)^2\}}$

$=\sqrt{[(a^2d^2+b^2c^2-c^2a^2-b^2d^2)/(ad-bc)]}$

$=\sqrt{\{(c^2-d^2)(b^2-a^2)/(ad-bc)\}}$.

[Rest in *Reprint*.]

Algebraical Note in reply to a Correspondent.

On the Equation whose Roots are $\Sigma\alpha$, $\Sigma\alpha^3$, $\Sigma\alpha^5$, *where* α, β, γ *are the Roots of* $x^3-px^2+qx-r=0$.

By CONSTANCE I. MARKS, B.A.

Let α, β, γ be the roots of the cubic equation

$$x^3-px^2+qx-r=0.$$

Then $\Sigma\alpha=p$,

$\Sigma\alpha^3=p^3-3pq+3r$,

$\Sigma\alpha^5=p^5-5p^3q+5pq^2+5p^2r-5qr$

(*v.* Salmon, *Higher Algebra*, Tables of Symmetric Functions).

Hence, if the equation whose roots are $\Sigma\alpha$, $\Sigma\alpha^3$, $\Sigma\alpha^5$, be

$$x^3-Px^2+Qx-R=0,$$

we must have

$P=\Sigma\alpha+\Sigma\alpha^3+\Sigma\alpha^5$

$=p^5+p^3(1-5q)+5p^2r+p(1-3q+5q^2)+3r-5qr$,

$Q=\Sigma\alpha.\Sigma\alpha^3+\Sigma\alpha.\Sigma\alpha^5+\Sigma\alpha^3.\Sigma\alpha^5$

$=\Sigma\alpha.\Sigma\alpha^3+\Sigma\alpha^5(\Sigma\alpha+\Sigma\alpha^3)$

$=p^4-3p^2q+3pr+[p^3+p(1-3q)+3r][p^5-5p^3q+5pq^2+5p^2r-5qr]$

11744. (R. W. D. Christie.)—No part being greater than 3, numbers of form $6N+M$ have $(3N+M)(N+1)$ partitions, if $M \neq 1 \neq 5$; but, if $M = 0$, unity must be added to the result. *E.g.*, the partitions of 17, no part being greater than 3. Here $N = 2$, $M = 5$; therefore there are 33 partitions.

Solution by H. Br.

If $P(r)$ be the required number of partitions of r, $P(r)$ consists of three groups:—(1) No part being greater than unity. The number of these is 1. (2) No part being greater than two, and at least one part equal to two. The number of these is $I(\frac{1}{2}r)$, where $I(p)$ denotes the integral part of p. (3) At least one part being 3. The number is obviously equal to the partitions of $r-3$, and is zero if $r < 3$. Therefore

$$P(r) = 1 + I(\tfrac{1}{2}r) + P(r-3) \quad \ldots\ldots\ldots\ldots\ldots\ldots (1).$$

Also
$$P(r-3) = 1 + I[\tfrac{1}{2}(r-3)] + P(r-6) \quad [\text{if } r \neq 6]$$
$$= -1 + I[\tfrac{1}{2}(r+1)] + P(r-6);$$

therefore $P(r) = I(\frac{1}{2}r) + I[\frac{1}{2}(r+1)] + P(r-6) = r + P(r-6)$ .....(2).

If $r = 0$, $P(0) = 1$. If $0 < r < 3$, $P(r) = 1 + I(\frac{1}{2}r) = r$, from (1). If r is 3, 4, or 5, $P(r) = r$, from (2). Therefore

$$P(r) = r, \text{ if } 0 < r < 6, \text{ and } = 1 \text{ if } r = 0 \quad \ldots\ldots\ldots\ldots (3).$$

If $r = 6N+M$, and $f(N)$ be written for $P(6N+M)$, we have, by repeated applications of (2),

$$P(r) = f(N) = 3N(N+1) + NM + f(0)$$
$$= (3N+M)(N+1) + P(M) - M \quad (M \text{ being } < 6)$$
$$= (3N+M)(N+1) \quad \text{if } M > 0$$
$$= (3N+M)(N+1)+1 \quad \text{if } M = 0 \Big\} \text{ by (3).}$$

and

16016. (C. E. Youngman, M.A.)—In a circle (O) an arc AB and its chord are trisected and the lines joining corresponding points of trisection meet at P. Prove that $\angle AOB = 3\angle APB$.

Note by Professor Sanjana, M.A.

In my Solution of this problem, p. 35 of Vol. xi., the process has been shortened by a trigonometrical formula; it is, however, capable of a wholly geometrical proof.

Produce ed to meet PA, PB in a, b respectively, and join Ad. As $AD = DE = EB$; therefore $ad = de = eb$. But $Ad = de = eB$; hence $Ad = ad$, so that $\angle Ade = 2\angle Aad$. But $\angle Ade = 2\angle Ode$: thus $\angle Ode = \angle Pad$, *i.e.*, Od and Pa are parallel. Therefore

$$\angle APN = \angle dON = \tfrac{1}{3}AON.$$

16625. ("λ, μ.") — Factorize the following polynomials for the values specified:—

(1) $4x^8+3x^7+7x^6+9x^5+6x^4+9x^3+7x^2+3x+4$ when $x = 17a^2$;

(2) $4x^6+3x^5+6x^4+x^3+6x^2+3x+4$ when $x = 13a^2$;

(3) $x^8-6x^7-x^6+3x^5+7x^4-5x^3-2x^2-3x+4$ when $x = 19a^2$;

(4) $4x^6-14x^5+5x^4+14x^3+5x^2-14x+4$ when $x = 2a^2$.

Solution by Lt.-Col. Allan Cunningham, R.E.

The four polynomials (say N_1, N_2, N_3, N_4) must be expressible in the form $N = Y^2 - qx.Z^2$, where $q = 17, 13, 19, 2$ respectively; and Y, Z are functions of x. Also Y, Z may be assumed to be symmetric functions in N_1, N_2, N_4, but not in N_3, (assumptions to be justified by the result).

(1) As to N_1, assume

$$N_1 = (2x^4 + Ax^3 + Bx^2 + Ax + 2)^2 - 17x(\alpha x^3 + \beta x^2 + \beta x + \alpha)^2.$$

Expanding Y, Z, and identifying term by term with the given N_1, four equations result for finding A, B, α, β,

$$4A - 17\alpha^2 = 3, \quad A^2 + 4B - 34\alpha\beta = 7, \quad 2AB + 4A - 17\beta^2 - 34\alpha\beta = 9,$$
$$B^2 + 2A + 8 - 34\alpha^2 - 34\beta^2 = 6.$$

After a few trials, these are found to be satisfied by

$$A = 5, \quad B = 4, \quad \alpha = \beta = 1;$$

whence $N_1 = (2x^4 + 5x^3 + 4x^2 + 5x + 2)^2 - 17x(x^3 + x^2 + x + 1)^2$.

(2) and (4). By a precisely similar process, it will be found that

$$N_2 = 4(x^3 + 2x^2 + 2x + 1)^2 - 13x(x^2 + x + 1)^2,$$
$$N_4 = (2x^3 - 3x^2 - 3x + 2)^2 - 2x(x^2 - 2x + 1)^2.$$

(3) As to N_3, in which Y, Z are non-symmetric, assume

$$N_3 = (x^4 + Ax^3 + Bx^2 + Cx + D)^2 - 19x(\alpha x^3 + \beta x^2 + \gamma x + \delta)^2.$$

By identifying this expression term by term with the given N_3, eight equations result for finding A, B, C, D, α, β, γ, δ. After a few trials it is found that $N_3 = (x^4 - 3x^3 - 5x^2 - 4x - 2)^2 - 19x(x^3 + x^2 + x + 1)^2$.

16615. (W. Austin Sleigh, B.A. Suggested by Question 15782.)—If K be the mid-point of the side BC of a triangle ABC, and I, I_1 the in-centre and ex-centre opposite A respectively, prove that

$$KI^2 + KI_1^2 = II_1^2 - \tfrac{1}{2}BC^2.$$

[*Note.*—As problems also bearing on Question 15782, Mr. Sleigh *communicates* the following:—(1) If I be the in-centre, I_1 the ex-centre opposite A of the triangle ABC, and P, K the mid-points of II_1 and BC respectively, prove that PK is perpendicular to BC; (2) Ex. 6, p. 52 of Richardson and Ramsey's *Modern Plane Geometry*.]

Solution by B. C. Wallis, B.Sc., F.C.P., *and others.*

By a well known theorem B, I, C, I_1 are concyclic with P as centre, whence BC is a chord; therefore PK is perpendicular to BC (note 1), also $KI^2 + KI_1^2 = 2KP^2 + 2PI^2 = 4PI^2 - 2CK^2 = II_1^2 - \frac{1}{2}BC^2$.

16209. (J. J. Barniville, B.A., I.C.S.)—Prove that

$$\frac{1}{1.3} + \frac{1.2}{3.7} + \frac{3.2^2}{7.17} + \frac{7.2^3}{17.41} + \ldots = 1,$$
$$\frac{1}{1.3} + \frac{2.2}{3.8} + \frac{5.2^2}{8.21} + \frac{13.2^3}{21.55} + \ldots = 1.$$

Additional Solution by James Blaikie, M.A.

Let
$$S = 1 + \frac{2}{3} + \frac{2^2}{7} + \frac{2^3}{17} + \frac{2^4}{41} + \ldots,$$
$$S - 1 = \frac{2}{3} + \frac{2^2}{7} + \frac{2^3}{17} + \frac{2^4}{41} + \ldots;$$

therefore, by subtraction,

$$1 = \frac{1}{3} + \frac{1.2}{3.7} + \frac{3.2^2}{7.17} + \frac{7.2^3}{17.41} + \ldots.$$

Let
$$S' = 1 + \frac{2}{3} + \frac{2^2}{8} + \frac{2^3}{21} + \frac{2^4}{55} + \ldots,$$
$$S' - 1 = \frac{2}{3} + \frac{2^2}{8} + \frac{2^3}{21} + \frac{2^4}{55} + \ldots;$$

therefore, by subtraction,

$$1 = \frac{1}{3} + \frac{2.2}{3.8} + \frac{5.2^2}{8.21} + \frac{13.2^3}{21.55} + \ldots.$$

QUESTIONS FOR SOLUTION.

16658. (A. M. Nesbitt, M.A.)—A man gambles with a die in the form of a prism with rounded ends, whose section is an equilateral triangle. The sides are marked respectively 1, 2, 3, and the man scores for each throw a number corresponding to the one which falls underneath. Prove that the chance he will score exactly n is

$$\tfrac{1}{2}\left\{1 + (-\tfrac{1}{3})^n\left(1 - \frac{x(x-1)}{1.2}2 + \frac{x\ldots(x-3)}{1.2.3.4}4 - \frac{x\ldots(x-5)}{1.2.3.4.5}8 + \ldots\right)\right\}.$$

16659. (S. Narayana Aiyar.)—Show that

$$\int_0^\infty \frac{\cos(\phi_a + \phi_b + \phi_c + \ldots + \phi_l) - \theta\sin(\phi_a + \phi_b + \phi_c + \ldots + \phi)}{\rho_a\rho_b\rho_c\ldots\rho_l}\frac{d\theta}{1+\theta^2} = \tfrac{1}{2}\pi,$$

where $\phi_a = \tan^{-1}\dfrac{ar\sin\theta}{1-ar\cos\theta}$, $\phi_b = \tan^{-1}\dfrac{br\sin\theta}{1-br\cos\theta}$, ...,

and $\rho_a = (1-2ar\cos\theta + a^2r^2)^{\frac{1}{2}}$, $\rho_b = (1-2br\cos\theta + b^2r^2)^{\frac{1}{2}}$, ...

16660. (S. Andrade.)—If d^nx/du^n be expressed in terms of

$$du/dx,\ d^2u/dx^2,\ \ldots,\ d^nu\,dx^n,$$

thus
$$d^nx/du^n = (-1)^{n+1}N/(du/dx)^{2n-1};$$

show (1) that the sum of the coefficients in $N = (n-1)!$, and (2) that if the values 1!, 2!, 3!, ..., $n!$ be substituted for

$$du/dx,\ d^2u/dx^2,\ \ldots,\ d^nu\,dx^n \text{ respectively,}$$

then N becomes $n!$.

16661. (L. Isserlis, B.A.)—When n is a positive integer, prove that

$$1 - \frac{2n-1}{2}\frac{1}{3} + \frac{(2n-1)(2n-3)}{2!\,2^2.5} - \frac{(2n-1)(2n-3)(2n-5)}{3!\,2^3.7} + \ldots = \frac{\pi}{2^{2n+1}}\frac{2n!}{n!\,n!},$$

and more generally, when the real part of n is greater than $-\frac{1}{2}$, and p is a positive integer, prove that

$$\frac{1}{2p+1} - \binom{n-\frac{1}{2}}{1}\frac{1}{2p+3} + \binom{n-\frac{1}{2}}{2}\frac{1}{2p+5} - \binom{n-\frac{1}{2}}{3}\frac{1}{2p+7} + \ldots$$
$$= 2^{-2p-1}\frac{2p!}{p!}\frac{\Gamma(\frac{1}{2})\,\Gamma(n+\frac{1}{2})}{\Gamma(n+p+1)},$$

where $\binom{m}{s}$ denotes $\dfrac{m(m-1)(m-2)\ldots(m-s+1)}{s!}$.

16662. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Prove that, if

$$N'_r = (\tau'^6_r + 3^3.\upsilon'^6_r)/(\tau'^2_r + 3\upsilon'^2_r) = L'_r.M'_r,$$

and $$N_r = (\tau^6_r + 3^3.\upsilon^6_r)/(\tau^2_r + 3.\upsilon^2_r) = L_r.M_r,$$

where $$\tau'^2_r - 3\upsilon'^2_r = \overline{2} \quad \text{and} \quad \tau^2_r - 3\upsilon^2_r = +1,$$

with $\tau'_1 = 1$, $\upsilon' = 1$; $\tau_0 = 1$, $\upsilon_0 = 0$; then

$$M'_{r-1} = \tau_{2r-2} = L'_r, \quad M'_r = \tau_{2r} = L'_{r+1};$$

and $$M_{r-1} = \tfrac{1}{2}\tau_{2r-1} = L_r, \quad M_r = \tfrac{1}{2}\tau_{2r+1} = L_{r+1}.$$

Ex.—Factorise into prime factors N'_7 and N_7.

16663. (D. BIDDLE.)—Let N be the product of two known primes, each above 3. Then N, like them, is of form $6n \pm 1$. Let $N = 4r + p$, where p is a number of the same form as N, and, on being subtracted, leaves a remainder divisible by 4; this is for the avoidance of fractions later on. Let $4r = a^2 - b^2$, and $p = c^2 - d^2$, where $c = \frac{1}{2}(p+1)$, and $d = c - 1$. Then $N = a^2 - b^2 + c^2 - d^2 = (a^2 - d^2) - (b^2 - c^2)$. Show how to select p, so that the bracketed pairs of transposed squares may represent multiples of a factor of N. *Examples.*—$N_1 = 1843 = 97.19$. Take $p = 7$, then $4r = 2^2.3^3.17$, and we obtain

$$N_1 = 60^2 - 42^2 + 4^2 - 3^2 = (60^2 - 3^2) - (42^2 - 4^2),$$

where we have $60 - 3$ and $42 - 4$ both multiples of 19.

$$N_2 = 559 = 43.13.$$

Take $p = 7$, then $4r = 2^3.3.23$, and we obtain

$$N_2 = 29^2 - 17^2 + 4^2 - 3^2 = (29^2 - 3^2) - (17^2 - 4^2),$$

where $29 - 3$ and $17 - 4$ are multiples of 13.

16664. (R. F. DAVIS, M.A.)—The product of 76 and 83 is 6308. Were this product 6378 its digits would have been the same as those of its factors. Determine two two-figure numbers having this property.

16665. (Professor SANJÁNA, M.A.)—Take any rational number N, and let $N^{\frac{1}{2}}$ when reduced to a continued fraction have a recurring period of k quotients. Denoting the k-th, $2k$-th, ..., nk-th convergents by p_1/q_1, p_2/q_2, ..., p_n/q_n, prove that

$$p_n/q_n = [(q_{n-1}/p_{n-1}).N + p_1/q_1]/[(q_{n-1}/p_{n-1}).p_1/q_1 + 1].$$

16666. (Professor NEUBERG.)—Trouver le lieu du centre d'un hyperboloïde à une nappe, connaissant deux génératrices g, g' d'un même mode et un ou deux points du cône asymptote.

16667. (Professor COCHEZ.)—On donne deux droites fixes Ox et Δ. On prend un point variable M sur Δ et sur la bissectrice de l'angle xOM on porte une longueur $OP = \sqrt{(OM)}$. Lieu de P.

16668. (*Communicated by* C. M. Ross.)—Find the equation giving the points of inflexion of the plane unicursal cubic

$$x/(a_1, b_1, c_1, d_1 \nabla t, 1)^3 = y/(a_2, b_2, c_2, d_2 \nabla t, 1)^3 = z/(a_3, b_3, c_3, d_3 \nabla t, 1)^3.$$

16669. (C. E. M'VICKER, M.A.)—If X, Y are the foci of a variable conic touching four given straight lines, and F the focus of the parabola of the system; $FX.FY$ = constant.

16670. (Hon. G. R. DICK, M.A.)—Every conic passing through the in- and ex-centres of a triangle ABC is a rectangular hyperbola which always touches four fixed straight lines. The centres of all these hyperbolas lie on the circum-circle and their foci on the curve

$$X^{-1} + Y^{-1} + Z^{-1} = 0,$$

where $X = x(-x^2 \cos A + yz + zx \cos B + xy \cos C)$, $Y = \ldots$, $Z = \ldots$,

the co-ordinates being trilinear and the given triangle that of reference.

16671. (S. NARAYANAN, B.A., L.T.)—Show that the sides of triangles inscribed in a conic and having their orthocentres at a focus touch a fixed circle.

16672. (M. T. NARANIENGAR, M.A.)—Show that the trilinear co-ordinates of the Feuerbach point of the in-circle and the nine-point circle referred to the pedal triangle are

$$\sin \tfrac{1}{2}A \operatorname{cosec} \tfrac{1}{2}(B-C), \quad \sin \tfrac{1}{2}B \operatorname{cosec} \tfrac{1}{2}(C-A), \quad \sin \tfrac{1}{2}C \operatorname{cosec} \tfrac{1}{2}(A-B).$$

16673. (I. ABRAHAMSON.)—Prove that the radical axis of the in-circle of a triangle, and the nine-point circle of the triangle formed by joining the points of contact of the in-circle, is the straight line bisecting the diagonals of the complete quadrilateral, formed by the pedal triangle and the radical axis of the circum- and nine-point circles of the original triangle.

16674. (Professor NANSON.)—Two triangles have equal bases and equal altitudes, and the base is not the smallest side in either triangle. Show, by dissection, that the areas are equal.

16675. (W. J. DOBBS, M.A.)—A circle is inscribed to a triangle ABC, touching its sides at D, E, F. P is any point in the side BC, and AP meets FE at Q. DQ meets the circle at R, and AR meets the circle at S. Prove that PS is the tangent at S.

16676. (Colonel R. L. HIPPISLEY, C.B., R.E.)—If

$$A_1 + A_2 + A_3 = 180°, \quad \theta_1 + \theta_2 + \theta_3 = 180°,$$

and $$\theta_1 - A_1 = x_1, \quad \theta_2 - A_2 = x_2, \quad \theta_3 - A_3 = x_3,$$

show that the equation

$$\Sigma\left[\{\sin\theta_2 \sin A_3 (k_2 \sin x_3 - k_1 \sin x_1) - \sin\theta_3 \sin A_2 (k_3 \sin x_1 - k_2 \sin x_2)\}\right.$$
$$\times \{k_2 \cos\theta_1 (k_1 \sin x_2 - k_3 \sin x_3)^2$$
$$\left. - k_3 k_1 \sin\theta_1 \sin x_1 (k_2 + k_1 \cos x_2 + k_3 \cos x_3)\}\right],$$

is reducible to $\Sigma(k_3 k_1 \sin\theta_1 \sin^2 x_1 \sin A_2 \sin A_3) = 0$,

where Σ means summing the three terms formed by cyclically changing the suffixes.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

10840. (Professor Sir W. THOMSON, F.R.S.)—A cylindrical rod hangs down vertically so as to be partly above and partly below the surface of a liquid resting in a large vessel. Show that its apparent weight is equal to its weight in air increased by the (positive or negative) quantity by which the weight of the volume of liquid drawn up above the plane level exceeds the weight of a quantity of liquid equal in volume to the portion of the solid below the plane level. Alter the statement to suit cases in which the solid depresses the liquid. Explain, in accordance with Laplace's theory, the forces by which the equilibrium is maintained.

11434. (H. W. SEGAR.)—Show that the determinant of n rows of which the constituent of the r-th row and s-th column is

$$d^r[x^{\frac{1}{2}r+2s-2} J_r(\sqrt{x})]/dx^r$$
$$= [(n-1)!!/2^n].[x^{n(n-1)/2} J_0(\sqrt{x}) J_1(\sqrt{x}) J_2(\sqrt{x}) \ldots J_{n-1}(\sqrt{x})],$$

where $J_n(x)$ denotes Bessel's function of the n-th order, and $(n-1)!!$ denotes $1!\,2!\,3! \ldots (n-1)!$.

11582. (Professor MINCHIN, M.A.)—An elastic rod of length l has its ends, A and B, fixed (not tangentially) by two pins, the distance between which is c; prove that, if the rod forms n bays between A and B, the pressures on the pins are proportional to n^2, to which also the potential work of its stresses is proportional; moreover, whatever be the number of bays the terminal tangents make a constant angle with the line AB. [The circumstances of the rod depend on the (unique) value of the modulus k which satisfies the elliptic integral equation

$$2/E(k, \tfrac{1}{2}\pi) = (c + l) F(k, \tfrac{1}{2}\pi).]$$

11898. (Professor HUDSON, M.A.)—A cricket ball, of mass m, being supposed to move with uniform velocity in a horizontal plane, occupies t seconds in traversing the distance, 22 yards, from the bowler to the batsman; (1) find in what direction it must be hit, so as to go off with equal velocity in a direction at right angles to that in which it first moves; and (2) give a numerical measure of the blow, supposing $m = 5\frac{1}{2}$ oz., $t = 5\frac{1}{2}$.

11922. (Professor SYLVESTER.)—If the equation

$$(a, b, c, c, b, a)(x, y)^3 = 0$$

has two equal roots and no more, show that it may be transformed by linear substitutions into one or the other of the two following forms, viz., $u^3v^2 + u^2v^3 = 0$ or $-u^4v + u^3v^2 + u^2v^3 - uv^4 = 0$.

12472. (Professor LAMPE.)—Draw a circle round the focus of the ellipse $r = p/(1 + \epsilon\cos\phi)$ as centre, so as to make the arc AB of the circle within the ellipse a maximum. The angle ϕ will be a root of the equation $\sin\phi + \cos\phi - 1/\epsilon = 0$. For instance,

$$\epsilon = 1/\sqrt{2}, \quad \phi = 60° 48' 3''.$$

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Road, West Kensington, W.

Vol. XV. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, *89 Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.*

THE LONDON MATHEMATICAL SOCIETY.

Thursday, May 13th, 1909.—Sir W. D. Niven, President, in the Chair.

The Vicomte Robert de Montessus de Ballore was elected a member.

Mr. H. B. Heywood was admitted into the Society.

The following papers were communicated:—

"Ternary Quadratic Types," Mr H. W. Turnbull.

"On Gauss's Theorem, and on the Semi-Convergence of certain Force Integrals in the Theory of Attractions," Dr. J. G. Leathem.

"On the Continuity or Discontinuity of a Function defined by an Infinite Product," Mr. J. E. Littlewood.

RECENT MATHEMATICAL TEXT-BOOKS.

Introduction to Analytic Geometry.

By P. F. SMITH and A. S GALE.

Containing an adequate minimum preparation for the Calculus, this work presents a short but thorough course in Analytic Geometry.

217 pages. **Price 5s. 6d.**

Elements of Analytic Geometry.

By P. F. SMITH and A. S. GALE.

Presents all the elementary methods and ideas of Analytic Geometry as a general science rather than as a detailed treatment of Conic Sections.

424 pages. **Price 8s. 6d.**

Elements of Differential and Integral Calculus.

By W. A. GRANVILLE.

While this book includes all that is usually given in an extended course, it is so arranged that it can be easily cut down.

463 pages. **Price 10s. 6d.**

An Elementary Treatise on Theoretical Mechanics.

By J. H. JEANS.

Supplies for Students beginning this study a course of such a nature as to emphasize the fundamental physical principles of the subject.

364 pages. **Price 10s. 6d.**

COMPLETE CATALOGUE SENT ON APPLICATION.

Plane and Spherical Trigonometry.

With Four-Place Tables of Logarithms.

By W. A. GRANVILLE.

302 pages. **Price 5s. 6d.**

Plane Trigonometry and Tables.

229 pp. Price **4s. 6d.**

Tables only, 38 pp. Price **2s. 6d.**

A Course in Mathematics.

By F. S. WOODS and F. H. BAILEY.

Vol. I.—Algebraic Equations, Functions of One Variable, Analytic Geometry, Differential Calculus. 385 pages. **Price 10s. 6d.**

Vol. II. — Integral Calculus, Functions of Several Variables, Space Geometry, and Differential Equations. 410 pages. **Price 10s. 6d.**

A Course in Mathematical Analysis.

By E. GOURSAT.

Translated by E. R. HEDRICK.

Treats the subject studied in a Second Course in Calculus with admirable clearness and simplicity.

Vol. I.

548 pages. **Price 16s.**

Advanced Algebra.

By H. E. HAWKES.

Beginning with Quadratic Equations, this book includes a thorough treatment of the subjects of Higher Algebra.

The book is adapted for use in High Schools or in short College Courses.

285 pages. **Price 6s. 6d.**

Nelson's
Alert Arithmetics

A New Series of Pictorial Arithmetics on a Novel Plan.

By HENRY WILKINSON.

Pupils' Book I.
48 pages. Cloth limp, **3d.**

Pupils' Book II.
48 pages. Cloth limp, **3d.**

Each book contains no less than *eighty pictures* of a simple diagrammatic character, and all the exercises are arranged to be worked from the illustrations.

Pupils' Book III.
48 pages. Cloth limp, **3d.**

This volume continues the method of the first two books of the series. Number Drill and Intelligence Questions alternate, and the picture or diagram is used in the latter.

Pupils' Book IV.
48 pages. Cloth limp, **4d.**

Number Drill and Intelligence Questions based upon sketches and diagrams as in Book III.

Teachers' Book I.
32 pages. Cloth limp, **4d.**

Teachers' Book II.
32 pages. Cloth limp, **4d.**

Teachers' Book III.
32 pages. Cloth limp, **4d.**

Teachers' Book IV.
32 pages. Cloth limp, **5d.**

Each book contains Answers to the Exercises in the Pupils' Book, Notes on Method, Outline Drawings for the Blackboard, and a large number of additional Mechanical Sums for Blackboard Practice.

The complete Plan of Work in this Series is that of Scheme B, with modifications suggested by long and practical experience.

Books V. and VI. are in active preparation, and will contain many features quite novel in books of this class, all designed to make the work in Arithmetic both pleasant and practically useful.

Nelson's
Preparatory Mathematics

A New Arithmetic for Junior Forms in Secondary Schools and Upper Standards in Primary Schools.

By A. CLEMENT JONES, M.A., Ph.D.,

and

C. H. BLOMFIELD, M.A., B.Sc.,

Mathematical Masters in Bradford Grammar School.

Cloth, with or without Answers. Price Is. 6d.

THIS new and highly-interesting volume aims at preparing the pupil for formal Mathematics by taking him through a complete course in Number Work, and so introducing him not only to Arithmetic proper, but also to Algebra and Practical Geometry. It will be found invaluable in Junior Forms of Secondary Schools, as well as in recapitulating the whole of the work covered in the Elementary School, and so preparing for the Labour Certificate of the Board of Education. Teachers who use this book will find their pupils interested from the first, as the examples make direct appeal to the everyday life of the boy and girl.

Great care has been taken in the external production of this volume, which in this respect marks a new departure in Mathematical works.

THOMAS NELSON & SONS, 35 and 36 Paternoster Row, London, E.C.;
Parkside, Edinburgh; Dublin, and New York.

COLLEGE OF PRECEPTORS.
(INCORPORATED BY ROYAL CHARTER.)

GENERAL MEETING.

The Half-Yearly General Meeting of the Members of the Corporation will be held at the College, Bloomsbury Square, W.C., on Saturday, the 17th of July, 1909, at 3 p.m.

LECTURES FOR TEACHERS.

On Thursday, 30th of September, JOHN ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London, will commence a Course of Twelve Lectures on

"PRACTICAL PROBLEMS OF THE CLASSROOM."

The matters to be dealt with are such as interest all classes of teachers, and will be treated with that frankness that is possible in an unreported discourse, but is out of the question in a printed book. While the Lecturer will lose no opportunity of indicating how present educational conditions may be improved, he will take the present conditions as the basis and show how to make the best of things as they are. The Lectures will be copiously illustrated by references to actual experience in all kinds of Schools. The Syllabus will be published in the August issue of the *The Educational Times*. The Lectures will be given on Thursday Evenings at 7, beginning on September 30th.

The Fee for the Course is Half-a-Guinea.

Members of the College have free admission to this Course.

EXAMINATIONS.

Diplomas.—The next Examination of Teachers for the Diplomas of the College will commence on the 30th of August, 1909.

Practical Examination for Certificates of Ability to Teach.—The next Practical Examination will be held in October, 1909.

Certificate Examinations.—The Christmas Examination for Certificates will commence on the 7th of December, 1909.

Lower Forms Examinations.—The Christmas Examination will commence on the 7th of December, 1909.

Professional Preliminary Examinations.—These Examinations are held in March and September. The Autumn Examination in 1909 will commence on the 7th of September.

Inspection and Examination of Schools.—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

The Regulations for the above Examinations can be obtained on application to the Secretary.

Directors:
S. A. TRUMAN. F. E. KNIGHTLEY.
JAMES HEARD, B.A.
(Trinity College, Cambridge).

Telegrams—"TUTORESS, LONDON."
Telephone—No. 1136 City.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

A.—EMPLOYMENT DEPARTMENT.

(i.) ASSISTANT MASTERS & TUTORS.
MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

(ii.) ASSISTANT MISTRESSES.
MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

(iii.) LADY MATRONS AND HOUSEKEEPERS.
MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

B.—SCHOOL TRANSFER DEPARTMENT.

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

C.—PUPILS' DEPARTMENT.

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. *No charge is made for registration.*

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

The Pronunciation of English: Phonetics and Phonetic Transcriptions. By DANIEL JONES, M.A., Lecturer on Phonetics at University College, London.

Crown 8vo
2s 6d net

This work is primarily designed for the use of English students and teachers, and more especially for students in training colleges and teachers whose aim is to correct undesirable pronunciation in their scholars. At the same time it is hoped that the book may be found of use to lecturers, barristers, clergy, &c.—in short, to all who desire to read or speak in public.
The book is divided into two parts, Part I dealing with phonetics proper, while Part II. consists of phonetic transcriptions of passages selected from well-known English authors.

Euripides: The Phoenissae. Edited by A. C. PEARSON, M.A. (Pitt Press Series.)

Fcap 8vo
4s

The present book has been prepared on the same lines as Mr. Pearson's editions of the *Helena* and the *Heraclidae* in the Pitt Press Series. The editor provides a text with critical notes at the foot of the page, preceded by an introduction dealing with the story, the sources, dramatic purpose, and date of the play, and followed by explanatory notes and two appendixes.

The Teaching of Modern Foreign Languages and the Training of Teachers. By KARL BREUL, Litt.D., Ph.D., Cambridge University Reader in Germanic. Fourth Edition, Revised and Enlarged.

Crown 8vo
2s 6d net

Although only a short space of time has elapsed since the publication of the third edition of this book, the necessity for the preparation of a fourth edition has already arisen, and this gratifying fact has encouraged the author to revise it again very carefully and to increase it not inconsiderably, in the hope that it may once more prove useful to many students and teachers.

Solutions of the Exercises in "Modern Geometry." By C. GODFREY and A. W. SIDDONS.

Crown 8vo
4s net

"Modern Geometry" published last year (price 4s. 6d.) is a sequel to the Elementary Geometry written by the same authors and covers the schedule of Modern Plane Geometry required for the Special Examination in Mathematics for the ordinary B.A. Degree at Cambridge, representing what the authors take to be a useful course for any student of mathematics, whether he intends to read for Mathematical Honours or to take up Physics or Engineering. For those who ultimately make a special study of geometry "Modern Geometry" would serve as an introduction to more advanced treatises.

SUBJECTS FOR THE CAMBRIDGE LOCAL EXAMINATIONS 1910

The Educational Times.

Education in Japan.

THE publication of the substance of the lectures delivered two years ago by Baron Dairoku Kikuchi under the Martin White Benefaction in the University of London (5s. net, John Murray) affords complete and authoritative information upon the subject of Japanese education. The author is President and Honorary Professor of the Imperial University of Tokyo, and previously he was for some time Minister of Education in Japan; and he is familiar with the educational systems of the Western world. The volume is of the most comprehensive character: it furnishes an epitome of Japanese history (especially as bearing upon the educational developments), sketches the administrative system, explains the position of women in the home and in society and in relation to the State, and expounds the organization and methods adopted in all the different classes of colleges and schools, with a final chapter upon home education. Recent events in the East have drawn special attention to the influence of early training upon the character of the Japanese people; and the explanations expressly stated or merely indicated by Baron Kikuchi will be found alike interesting and instructive.

The historical chapters are particularly impressive. They bring home to the reader effectively the immense force of a long national tradition. To the Western world Japan appeared to spring suddenly into existence some forty years back, in 1868. This, however, was but the new era, the Restoration of *Meiji*, or "The Enlightened Government," when the Shogunate came to an end, after seven hundred years of rule, and the whole country was brought immediately under the sway of the Emperor. But the Empire goes back to B.C. 660, and the present Emperor can boast of an unbroken line of descent from the first Emperor, Jimmu. "This unique character of our Imperial dynasty," says Baron Kikuchi, "together with the fact that all Japanese (with the insignificant exception of the subjugated aborigines and naturalized Coreans and Chinese) are regarded as descended either from the Imperial family or from those who came over with it from the Taka-Ma-ga-Hara [literally, Plain of High Heaven], may be said to constitute the fundamental character of our nationality as distinguished from other nations. Our nation is, as it were, one family, of which the Emperor is the head or patriarch, and this relation has subsisted from the first foundation of our Empire down to the present time." Hence the singular solidarity of ruler and people; and a like relation has been maintained between head and members of a feudal house, and between the head of an ordinary "house" (in the wide sense) and its members. Every Japanese has in his blood an inborn reverence for the ancestral ideal embodied in "house"-head, lord, and Emperor. The present is lived under the vivid presence and influence of the past; the new is permeated by the old with all the efficiency of a national ideal that is at the same time a religion.

The object of Japanese education is "to prepare boys and girls, young men and women, for their future life"—a life, in whatever sphere or mode, devoted to the national ideal. "Education is considered one of the most important functions of the State, and is therefore entirely under State control"; but "the educational system is not determined by laws which have to pass through the Diet, but by Imperial Ordinances, which are issued by the Emperor on the recommendation of the Cabinet, after being submitted to the Privy Council," though certain administrative matters require to be sanctioned by laws. The basis of the whole teaching is laid down in the Imperial Rescript on Education, issued on October 30, 1890:—

> Our Imperial Ancestors have founded our Empire on a basis broad and everlasting, and have deeply and firmly implanted virtue; Our subjects, ever united in loyalty and filial piety, have from generation to generation illustrated the beauty of it. This is the glory of the fundamental character of Our Empire, and herein also lies the source of our education. Ye, Our subjects, be filial to your parents, affectionate to your brothers and sisters; as husbands and wives be harmonious, as friends true; bear yourselves in modesty and moderation; extend your benevolence to all; pursue learning and cultivate arts, and thereby develop intellectual faculties and perfect moral powers; furthermore, advance public good and promote common interests; always respect the Constitution and observe the laws; should emergency arise, offer yourselves courageously to the State; and thus guard and maintain the prosperity of Our Imperial Throne coeval with heaven and earth. So shall ye not only be our good and faithful subjects, but render illustrious the best traditions of your forefathers.

Those of us that are concerned for the propagation of the Imperial idea may find here a useful example of dignified, serious, and touching appeal.

It is obviously impossible to follow the detail of the

Digitized by Google

various grades of educational work: this must be sought in Baron Kikuchi's volume. Throughout the whole system the most vigilant and laborious care is taken to ascertain the best ways of doing things and to carry them into operation. The aid of foreign example and of foreign instructors is freely invoked, but governed in application by keen regard to Japanese circumstances. The fifth article of "The Imperial Oath of Five Articles" (April 6, 1868), setting out the future Imperial policy, runs: "Knowledge shall be sought for throughout the world, so that the welfare of the Empire may be promoted." Though Occidental knowledge, mainly through Dutch, had been encouraged early in the eighteenth century, yet less than a dozen years before 1868 Baron Kikuchi's grandfather, Dr. Mitsukuri Genpo, who was a medical doctor of a Dutch University and a Professor of Dutch in the academy that developed in 1857 into the Imperial University of Tokyo, suffered threats of assassination for teaching the foreign learning. Now Japanese youths flock to all the great educational centres of the West. English, "being, as it were, the common language of the East," is taught in elementary schools where Local Authorities think fit, and it is prominent, in spite of its intrinsic difficulties and the scarcity of teachers, in the middle schools and in the colleges, though French and German are usually admissible alternatives. Even Western melodies have been introduced, "and now you will hear children singing in Occidental fashion in every village." English and American games have been added to the repertory of gymnastic teaching; but baseball has caught on more successfully than cricket. "We are still learning and investigating," says Baron Kikuchi; "there are many questions which we have to solve, many improvements which we have to attempt. We shall not take any one country as our model: we have tried, and we are trying, to find out good and bad points of different systems, that we might know how to introduce and adapt the good to our use and avoid the bad."

With a comprehensive control of education by the Government, there is but limited scope for the private school. Still, private schools are in some cases officially recognized as substitutes, and in other cases special permission may be given to pursue education at home or elsewhere by certain Local Authorities. Otherwise there can be no private school. "This will explain why there are so few private elementary schools, viz., 249 out of a total of 27,269 (in 1906), of which some 50 were substitute schools: it is noteworthy that out of this number 166, or two-thirds, were in Tokyo, about 40 being substitute schools." There is, however, an increasing desire for preparatory schools for secondary education better fitted for the purpose than the ordinary elementary school. This fact is significant for educational legislators and administrators elsewhere than in Japan.

NOTES.

THE Birthday Honours list contains a rather unusual proportion of names associated with educational and literary work. One actually gets into the highest class: Mr. James Stuart, LL.D., M.P., who was for a long time Professor of Mechanics at Cambridge and was one of the original moving spirits of the University Extension system, is made a Privy Councillor. General Sir W. F. Butler, besides being a distinguished soldier, has been a prolific and interesting writer: he is made an Irish Privy Councillor. Sir Dyce Duckworth, an eminent physician and a member of Liverpool University Court, Mr. H. H. Longman, of the time-honoured publishing house, and Mr. Henry Morris, President of the Royal College of Surgeons and author of many medical works, become Baronets. Knights are more numerous: Mr. Thomas A. Bramsdon, M.P., has been Chairman of the School Board of Portsmouth; Mr. J. H. Yoxall, has been schoolmaster, President and Secretary of the N.U.T., a Royal Commissioner on Secondary Education, and a novelist of some piquancy; Professor Dill, of Queen's College, Belfast, was previously High Master of Manchester Grammar School (1877–88), and has distinguished himself greatly as social historian of the Roman Empire; Mr. Francis Galton, a grandson of Dr. Erasmus Darwin, has done much original work in anthropology and in the exploration of heredity, and is the founder of the science of Eugenics; Prof. Larmor, Secretary of the Royal Society, long ago made his mark in mathematical studies; Dr. T. E. Thorpe has written much on Chemistry and is Director of Government Laboratories; Dr. F. J. Campbell is the energetic Principal of the Royal Normal College and Academy of Music for the Blind at Norwood; the Press is represented by Dr. Stuart, Mr. John Duncan, Mr. G. A. Riddell, Mr. H. W. Lucy, Dr. T. Carlaw Martin, and Mr. Edwin Pears; the drama is honoured in Mr. A. W. Pinero and Mr. H. Beerbohm Tree; and economics in Mr. R. H. Inglis Palgrave, the editor of the "Dictionary of Political Economy." As usual, one misses names that might have been expected equally with some that find a place in the list: probably their owners are lacking in pushfulness. 'Twas ever thus, and ever will be. How much does it really matter?

THE vitality of the question of a Teachers' Register is once more certified by the fresh suggestion and the keen discussion at the recent meeting of the Assistant Masters at Cambridge. The most outstanding suggestion is the proposal of sub-registers or schedules, each sub-register to contain the names of teachers qualified to teach in some one type of school, and to "provide, by reference to schedules, for the proper differentiation of teachers in respect of attainments, training, and experience." In this way every teacher would be admissible, originally or by transfer, to as many sub-registers and schedules as his qualifications might warrant. Certainly, as the Chairman said, the scheme "looks perilously like the old Register." If it is not a construction of "cast-iron compartments," still there are compartments, and it remains to be seen whether the new flexibility will remove the old objection. There is also an old difficulty on the other side of the arena. It would be well to give attention to one of the practical aspects—the question of cost, which obtruded itself so remorselessly in the earlier stage of registration. If there is, first of all, a comprehensive register containing the names of all teachers, with reference numbers directing the reader to the sub-registers and schedules for each teacher's qualifications, there must be a repetition of names, often more than

Digitized by Google

once, in the sub-registers and schedules—or at least a repetition of numbers, which would hardly be satisfactory and would probably in the long run prove little less onerous than the repetition of names; and thus the scheme would seem to run perilously in the direction of a duplication of expense. The proposal is not a final expression of opinion on the part of the Association, but the discussion of it may be expected to furnish useful guidance.

At the annual dinner of King's College was raised once more the familiar lament over the exiguous resources of the higher education in London and the inadequate appreciation shown by the Treasury for the needs of the Metropolis in comparison with the provinces and the Celtic fringes. The complaint is only too well grounded. At the same time, it is quite reasonable that London should provide largely for its own needs; and it may well be doubted whether wealthy citizens of London would be so very much more backward than wealthy citizens of other municipalities if they were only approached in the right way. At any rate, what seems to be wanted is a leader—a good sturdy beggar, unashamed to speak up for the claims of the University, and fortified with a winning and a persistent way of asking. The great City Companies have certainly been most generous; the County Council contributes very largely to education in one form or another, if not so very handsomely to University education. Bristol is proposing to devote a penny rate to its new University: the same rate in London is calculated to produce £186,000—a sum that could be quite easily utilized. Still, such a rate in London would bear too hard upon a vast population that would not profit so directly as to justify it. Have we not already recalled the dismissal of the President of a great American University because he had failed to gather in more than a million dollars in the current year? This businesslike example should be pondered. And the Treasury, though sorely tried, may usefully remember John Knox's dictum, that "every scholar made is an addition to the wealth of the community."

The centenary celebrations at Cambridge in commemoration of Darwin brought together delegates representing science in all the foremost intellectual centres of the world. It is very suggestive to reflect on what is implied in the statement of the Chancellor that he remembered the uncomfortable stir that was caused by the publication of "The Origin of Species," but that Cambridge had followed Darwin's lead successfully, and hoped to carry the enterprise still further, for it was proposed to found a new Chair of Genetics, a study that is peculiarly associated with Darwin's name. Mr. Balfour, in a remarkably appreciative speech, expressed the universal opinion of instructed persons when he said that the discoveries of the great scientist would remain as perpetual landmarks in the intellectual history of mankind: he had imprinted his signature on the whole development of future thought. Mr. Balfour also most properly pointed out that Darwin's scientific work apart altogether from the generalization of the origin of species would suffice to rank him as one of the most remarkable investigators the world had ever seen. The appreciations delivered by eminent men of science of various nationalities formed a specially interesting and impressive portion of the ceremonies. Cambridge has honoured herself in honouring so handsomely one of her most eminent sons.

A quarter of a century has now passed since the establishment of the Mediæval and Modern Language Tripos at Cambridge. The growth of the modern language school that furnishes the candidates has naturally been very gradual, but probably has by no means disappointed reasonable expectations. Valuable as the results have been, they afford no adequate measure of the strenuous efforts of Dr. Breul and Dr. Braunholz—notably of Dr. Breul. We are glad, therefore, to see that a score of the most eminent professors of modern languages in Germany have seized the occasion of the semi-jubilee of the appointment of Drs. Breul and Braunholz to call attention to the work these have accomplished and to the present conditions of modern language study at Cambridge. They express a feeling of regret "that, after the long period of probation through which the modern language school has passed with such signal success, there has been so little advance in proportion in the official recognition of the status of German and French." "The two lectureships of 1884 were converted in 1899 to Readerships in Germanic and Romance, but Cambridge is still without full professorships in these subjects, and still denies to modern languages the status that is undoubtedly due to them to-day." There will scarcely be any dissent from the opinion that the Readers ought to be elevated to the dignity of Professors. The difficulty will no doubt lie in the eternal want of pence, which vexes Cambridge—and all the other Universities of this world. Why the dignity should not be conferred, pence or no pence, is one of those puzzles that no outsider can understand. Anyhow, we rejoice to note this appreciation of Drs. Breul and Braunholz by their German colleagues, and we hope that something will promptly be done to satisfy the aspiration that these have so opportunely expressed.

The amount devoted to scholarships by the London County Council this year, though somewhat lower than in some previous years, still reaches the very large figure of £263,080. The considerations kept in view by the Higher Education Sub-Committee in working out the scheme are well worth repeating:

> That, as far as possible, no child or young person shall be debarred by poverty from obtaining the kind of education which will prepare him for the career for which his talents and character befit him; and that the pecuniary emoluments attaching to the scholarships should be sufficient to enable students to obtain the kind of education, whether industrial, scientific, or literary, which is best suited to their needs and capacities, but not sufficient to induce them to undertake a particular course of study with the object of securing the pecuniary advantages attaching to the scholarship.

These principles are alike generous and discriminating. It is also worth remark that the number of junior scholarships awarded to boys and to girls are to be approximately equal. So many girls nowadays have to make their way independently that it would be obviously unfair not to provide them with an equal chance. It is to be hoped that somebody is keeping statistics of the results of the operation of this large educational scheme: they ought to be very useful in confirmation or in check of the method of administration.

SUMMARY OF THE MONTH.

THE London County Council Education Committee have decided that teachers who are Licentiates or Associates of the College of Preceptors shall be exempt from the necessity of passing the theoretical part of the examination for the Council's Physical Education Certificate. Teachers in the London service possessing either of these qualifications who have passed the practical part of the Council's Physical Education Examination, but not the theoretical part, should forward their College of Preceptors Certificates to the Council's Physical Education Organizer for their district for inspection.

THE Education Section of the British Association will assemble on Thursday, August 26, in the Senate House of the University of Manitoba under the presidency of the Rev. H. B. Gray, D.D., Warden of Bradfield. After the President's address, a discussion on Moral Instruction in Schools will be opened by Prof. L. P. Jacks, who will be followed by Mr. Hugh Richardson, and, it is hoped, by representatives of the American Association for the Advancement of Science. Friday, the 27th, will be given up to a discussion on Practical Work in the Schools, which will be opened on behalf of the Special Committee of the Section which is now considering the subject by Mr. W. M. Heller. Dr. C. W. Kimmins, Vice-President of the Section, will contribute some account of the London Trades' Schools. Mr. J. G. Legge is expected to speak on Practical Work in English Industrial Schools. Mr. W. Hewitt, Director of Technical Instruction in Liverpool, on Practical Work in Evening and Continuation Schools. Monday will probably be devoted to a joint Meeting with the Geographical Section of the Association on Practical Work in Geography Teaching. Prof. R. E. Dodge, of Columbia University, and Mr. G. G. Chisholm, of Edinburgh University, are expected to contribute papers. On Tuesday, the President of the Section will open a discussion on Education as a Preparation for Agricultural Life, with special reference to the public-school boy in Canada. In accordance with the practice of previous years, visits will be made in the afternoons to various institutions of educational interest in Winnipeg and neighbourhood.

MR. RUNCIMAN received a deputation from the National Education Association with reference to the recent circular dealing with school staffing. Mr. John Massie, M.P., said the deputation consisted of ladies and gentlemen of different creeds and political opinions, who had devoted themselves to education from the point of view of its efficiency only. They suggested that any Imperial grant should be ear-marked for building purposes, and could be extended over a series of years. The Rev. E. F. M. MacCarthy (Birmingham) declared it was quite impossible to get the best educational results out of children when the classes numbered sixty or more. Mr. G. L. Bruce said classes of sixty or seventy rendered useless a teacher's college training, which taught him to get into personal touch with every child in an elementary school. Mr. A. G. Harvey, M.P., asked for an extension of grant for specific purposes, and for an annual sum from the Exchequer ear-marked for the building of new schools. Before many months were over, he said, there would be furious demands from Local Authorities for a large sum from the taxes raised by the unearned increment.

Mr. Runciman said the points raised were all of the first magnitude, because he understood that the deputation wished to see a scheme embarked upon which would involve many millions over a period of not less than twelve years—possibly many millions per annum. The deputation's standard was so high that, were he to put forward all they suggested, whereas there was now apathy among Local Authorities, there would be positive revolt. With regard to provision for children under five, he could not, in the state of public opinion and the pressure of Local Authorities on the Exchequer, make such provision compulsory. He would like to see the elementary classes reduced far below the number he had put forward, but he could not press for that, and he must be satisfied with his small demand.

THE Annual Conference of the Association of Head Mistresses was held at the North London Collegiate School for Girls. the President, Mrs. Woodhouse (Clapham High School) in the chair. In her presidential address. Mrs. Woodhouse said that it was little short of a disaster that teachers could not to-day claim as a professional body their right to be registered or recognized. As units in the State they counted for nothing, were "entered" nowhere, had no official or professional status, did not belong to a fully accredited profession, and this notwithstanding the fact that they were alive to the great importance of registration, for which professional equipment was an essential. She did not, however, regard the labours of the seven years during which the Registration Council was in existence as wasted. The question of the status of the teacher had been continually before the public mind, as well as that of the efficiency of schools; the need and value of experience had been weighed; the relative values and equivalents of degrees had been under constant revision. The culmination of this experience was the fact that Associations, whether of Heads or Assistants, had made up their minds to have Registration. She urged the necessity for differentiation between the work of the future college girl, the pupil who would proceed either to a University or to a professional career, and the girl who would leave school to take up one of the varied lines of life, either in the home, or outside the more defined limits of what is called "Home Life." The course of Home Economics at King's College had given a strong lead on these lines.

THE following resolutions were carried:—

That this Conference disapproves of external examinations for girls under sixteen years of age, and invites all members of the Association to co-operate in discouraging pupils to enter for them.

That this Conference is of opinion that governing bodies should provide and, subject to parental consent, require medical inspection by a duly qualified doctor in the case of all children entering a public secondary school, and that provision should be made for re-inspection from time to time.

That the Board of Education be approached with a view to the modification of (1) Regulation 24 (*c*), whereby a grant of £2. 10s. is paid in place of £7. 10s., if the candidate does not pass in the Pupil Teacher Examination; and (2) of Regulation 33 (*b*), which makes the passing of a qualifying examination by a bursar a condition of the payment of the grant of £10 for the bursar's year of instruction in the secondary school.

That application be made to the chief University Examination Boards, the Board of Education, and the Local Authorities which give examinations in science for scholarships, to receive and consider the science syllabuses of typical secondary schools, and to set papers with a wide range of alternative questions in applied science in accordance with the movement to give courses in "home economics" in girls' schools, and other efforts to relate science teaching to life.

Resolutions were also carried by large majorities in favour of asking the Federal Council of Secondary School Associations, in conjunction with the National Union of Teachers and the Association of Teachers in Technical Institutes, to call a Convention for the discussion of the principles and methods of registration, and of referring to the Executive Committee the question of communicating with the Board of Education as to carrying into effect the provisions of the Act of Parliament with regard to the Teachers' Registration Council. Miss Burstall, M.A. (Manchester High School) was elected President for the years 1909–1911.

THE Twelfth Annual Conference of the National Association of Head Teachers was held at Leicester. The Association has now sixty-eight branches, with a total membership of five thousand. Mr. J. W. Iliffe, of Sheffield, the president, in the course of his address claimed that the time had come for a Royal Commission to investigate the curriculum and functions of the primary school. While not admitting that the existing system had failed, he pointed out that the conception of the purposes of the school had widened enormously of late years. Later, the Conference, on the motion of Mr. H. E. Storey, of Manchester, adopted a resolution strongly deprecating the repeated utterances in the public press and elsewhere casting serious reflections upon the education given in the primary schools of the country. The resolution declared that many of the reflections had little foundation in fact, and also stated that, though the curriculum was capable of improvement, the children of to-day were better behaved, and more intelligent, resourceful, and observant, than in the days of individual examination. The Conference declared itself in favour of the abolition of the half-time system, and the raising of the age of exemption to fourteen years. Among the resolutions passed was one in support of the teaching of domestic subjects to girls being made compulsory. Another expressed the opinion that the whole cost of training teachers should be borne as a rule by parents or guardians, and urged Local Education Authorities to provide from a portion of the money thus saved

Digitized by Google

enough to make it possible for all poorer but clever and specially adapted children to enter the teaching profession. There was a lively discussion on the question whether women teachers should be allowed to continue teaching after marriage. A resolution affirming that they should was defeated by a large majority.

The National Association of Teachers of the Deaf points out that there too often occur cases of serious delay in the proper education of deaf children which might have been avoided if teachers and others interested in general education knew what to do in the matter. It sometimes happens that, unless a child is totally deaf, it is allowed to remain in the ordinary "hearing" schools, and thereby loses that special training which it requires and to which it is by law entitled. The Association, therefore, desires to point out, to teachers in elementary schools especially, that, in schools for the deaf, speech and speech-reading are now very generally taught, and that the course of training in articulation which a partially deaf child would receive in a good school for the deaf is exactly that form of training which is calculated to do him the greatest permanent good. Scores of children are kept away from schools for the deaf because those who come in contact with them say—"They are not deaf and dumb." Very many children who are born totally deaf are far from being dumb, owing to the excellent training they now receive on the oral system in schools for the deaf. And, for the children who have a good amount of hearing, but not sufficient to permit them to profit to the full by the instruction in public elementary schools, good oral training, special care in articulation training, and practice in making the eye assist the ear in understanding what is said, are calculated to produce the best possible results. Children also who can speak, but who become deaf from illness or other cause, require special training in lip-reading, and should not be allowed to remain in the ordinary classes for the hearing.

The Duke of Devonshire presided at Devonshire House over a meeting in support of the Trinity College (Cambridge) Mission in Camberwell. The Committee's appeal, he said, was much too moderate. Mr. S. H. Butcher, M.P., said it was a great gain to the Universities that the young men should not only strengthen and enlarge their minds but expand their sympathies. One thing essential to the success of such an undertaking as this was that the workers, and those among whom they worked, should understand each other better, a great deal of our social estrangement being due to mutual and extraordinary ignorance of each other among both rich and poor. State enterprises for social improvement were apt to become bits of soulless mechanism. By altering machinery they did not get at people's hearts. Some said that what was wanted in a poor district was not a mission, but a settlement. They should not, however, raise that sharp alternative; what they wanted was a mission and a settlement also to supplement its work. In the present case they had both. The Bishop of Woolwich said he did not know what the Church in South London would do without school and college missions. The Rev. M. S. Ware, Warden of the Mission, said that the parish in which they worked had a population of over 16,000. They were practically all poor, and the lives of the mothers especially were one continual strain.

The Rev. Dr. Montagu Butler, Master of Trinity College, Cambridge, presided at the annual meeting of students and friends of Livingstone College, Leyton. Dr. Charles Harford, the Principal, stated that 359 students had passed through the institution since its foundation, forty-one of whom had gone as missionaries to China. Great advances had been made in the department of tropical research, making it more and more possible for missionaries to combat the diseases of the tropics. The Master of Trinity spoke of the serious loss of life that occurred amongst missionaries through lack of medical training such as the College affords. Prof. Alexander Macalister expressed his opinion that the kind of knowledge taught at Livingstone College was that which every man who went off the beaten track as to climate ought to possess.

A striking example of the social progress that may be expected in Turkey under the new régime reaches us (says the *Times*) in the shape of a notice of a school which is to be started in Constantinople. The enterprise owes its inception to the well known scholar and poet, Tewfik Fikret Bey, for many years Professor of Turkish at Robert College, the founder of the *Tanin* newspaper, and now director of the Lyceum of Galata-Serai. "The New School," as it is to be called, will provide an essentially practical and liberal education for two hundred pupils, who will be admitted between the ages of ten and thirteen. "Civic instruction," according to the notice, "will be the pivot" of its entire system of education. To teach the rising generation its duties and social and political rights, and to obliterate the "unfortunate legacy of the past," will be its chief aim. It is a high tribute to the esteem in which the institutions of this country are held by enlightened Turks that English as well as Turkish will be used as a medium of instruction. Pupils will be required to study two other languages, the choice being between French, German, and the Slavonic tongues. Great stress is laid upon the practical study of commerce and agriculture. The fee will be £T85 per annum. It is intended to establish the school upon an estate of at least 100 acres. To meet this and other expenses it is estimated that a capital of £50,000 will eventually be needed. Ten per cent. of this capital must be subscribed before, under Ottoman law, the proposed limited liability company for the school can be officially recognized. The capital will be divided into 10,000 £5 shares at 4 per cent. The first £10,000 has already been promised in England. Mr. Allan Ramsay, late of the Ottoman Bank, and now representative of the Imperial Tobacco Company in Constantinople, is on the Organization Committee of the school. Subscriptions may be sent to and information demanded of Salih Kéramett Bey, "Dette Publique Ottomane," for Tewfik Fikret Bey, President of the Organization Committtee of "The New School," Constantinople.

The death is announced of Mr. Archibald Grant Munro, B.A., for the last twenty-seven years a master in the City of London School. Mr. Munro was born in 1855, and educated at Ecclesall College, Yorks, of which school his father was then head master. He proceeded to Queens' College, Cambridge, took his B.A. degree in 1880, and joined the staff of the City of London School in 1882, when the new buildings on the Thames Embankment were opened. Mr. Munro will be remembered by many generations of "old boys" as the enthusiastic and devoted organizer of their athletic clubs and games during the years before the school had acquired its playing field. He will, perhaps, be most gratefully remembered by the members of his Saturday Excursion Club. He used to conduct a large club of boys every Saturday for many years, either for a country ramble or on a visit to some building or institution of public interest. Mr. Munro was one of the founders, and for some time treasurer, of the Association of Assistant Masters. He was an ardent member of the Footpaths and Commons Preservation Society and the author of more than one descriptive handbook of the country round London and Rochester. He was also well known as a writer of serial stories for boys, most of which appeared in *Chums* and the *Boy's Own Paper*.

UNIVERSITIES AND COLLEGES.

Oxford.

The *Oxford Magazine* gives the following statistics about prize fellowships. The numbers refer, of course, to fellowships still held, not to all that have been given since the last Commission:—"As prize fellowships have been criticized of late as if they were a severe tax upon the resources of the Colleges, we have counted up all those Fellows elected after examination since the last Commission who are not employed in University or College teaching. The figures are: University, one; Merton, two; Magdalen, one; Brasenose, one; St. John's, two—so that seven is the total outside All Souls, at which College there appear to be thirteen. The grand total is, therefore, twenty, unless we insist upon adding two more on recent foundations unaffected by statute—viz., University, one; and Hertford, one. We must add that it must not be supposed (1) that all of these twenty or twenty-two are engaged in lucrative professions; (2) that all of them draw their stipend; (3) that none of them is engaged in research."

Cambridge.

(*From our own Correspondent.*)

The term is over and it is time for our annual stock-taking. An interesting item in our balance sheet is the report of the Teachers' Training Syndicate as to the doings of the Cambridge Day Training College. Of the 20 members of this organization who are in their third year, no fewer than 6 have taken first classes in a Tripos, 7 have taken seconds, and most of the others have graduated in honours. It must be remembered that these men have had to do their professional training at the same time as

Digitized by Google

their Tripos preparation; the results are most satisfactory. It is by quiet work like this that Cambridge keeps in touch with the country. Vague speeches about cheapening University life go for little with practical men: there is no real difficulty in getting customers if you sell a good article. This is a banal argument, but it is one which the outside world understands—and upon which it acts. "All the students who left our College after three years' training in June, 1908, have obtained educational posts at an average stipend of £150 a year." This is common sense.

The exigencies of space prevent me from saying much about the results obtained in other spheres. At random, the case of the Agricultural Department. "The number of visitors to Burgoyne's farm (the experimental ground of the Department) was nearly 1,000. Parties came from the contributing counties, from Farmers' Clubs and Chambers of Agriculture. Deputations were received from Agricultural Colleges at Edinburgh, Glasgow, and Aberdeen, with a view to establishing similar farms at their respective institutions." From the Engineering Laboratory—Average number attending instruction, 244. Visits of students have been arranged to great works, to the Midland Railway locomotive works, and to the works of Messrs. John Brown, Limited, T. Firth, Limited, and Hadfields, Limited. In Experimental Physics the story is the same—Average number under instruction about 235, and so on all through the lists of of our scientific departments. Against all this we have to set the inevitable losses of a personal character which enhanced prestige indirectly causes. There is a constant drain caused by the greed of outside bodies for our best men. Prof. Sedgwick is the last and most conspicuous example. Fortunately, he has during the last 32 years trained a school of zoologists who will between them try and part his mantle if they cannot wear it.

The Syndicate on Alternatives for the General Examination have issued their regulations in order to carry out the changes sanctioned by the Senate. The result is somewhat confusing. It is not quite plain why certain changes are made. Regulation II. puts the case simply in the form that a Special may be taken as an alternative for the General. At present no one can take a Special before having passed the General, but it seems possible to take part of one Special with a part of another, and yet contrary to rule to take one part of the General and one part of a Special. But it is the May term, and there has been much going on. It is best to be merciful.

Through the beneficence of the late Mrs. Warre, a Research scholarship of the value of £200 is to be founded. Selection of the scholar is to be otherwise than by examination. The fetish of examination which reached us from China is gradually losing its hold on the affections of educationists. Judging candidates by examination marks is mainly in the interest of the selectors. "You might as well give an appointment to the man with most marks on his face," was a summary of the situation from the lips of a certain Cambridge man. And another fetish. The Master of Caius, in deprecating the fixing of an important professional examination for the festive season known as the May week: "They had sacrificed the convenience of the University and the interests of the candidates too long to the fetish of a big degree day in June." Yes; and the agglomeration of Triposes in the merry month of May, followed by a fortnight in June, originally devised for the purpose of saving men the expense of a tenth term, has reduced the price of a degree to a very much less extent than the value of the same.

A word about the examinations. The outside world thinks much about the Mathematical Tripos, and every man in the street knows that Trinity won the "blue ribbon of the year" through the efforts of Mr. Daniell. But there are other Triposes of which perhaps the outside world has not heard much, and of which it certainly thinks little—Classics, for example. In the First Division of Part I. Mr. J. R. M. Butler's name appears, as was expected. As places are not allotted, it is impossible to say who would have been Senior as under the old regulations, but we may hazard a guess. The first class in Science was of enormous proportions, but the standard is undoubtedly high, as the after careers of the candidates indisputably prove.

The special feature of this term was the Darwin Celebration, which at the time of writing is still in full swing. The reception at the Fitzwilliam Museum was an imposing sight. Delegates from all sorts and conditions of educational organizations in all quarters of the globe came together to do honour to the memory of the great scientist who learnt so little from Cambridge and taught Cambridge so much. The scene was quite unique. Academical robes of every hue and of varying splendour, wise men from the North, South, and West—few from the East—in gowns and uniforms and orders: even a descriptive reporter might have been forgiven for an allusion to a kaleidoscope. Mr. J. W. Clark and Prof. Seward had much responsibility, but earned much praise. The outstanding feature among the costumes was the academic robe of the Rector of the University of Bonn, the admiration of men and women alike.

The Wednesday's proceedings began with the presentation of addresses by the delegates in the Senate House, followed by a garden party at Christ's. Luckily, the weather was all that could be desired. The evening was devoted to a banquet in the new examination hall, followed by an "At Home" at Pembroke.

On Thursday, the *pièce de résistance* was the conferring of honorary degrees. Most interesting of all was the fact that Mr. Francis Darwin was one of the number—a position he has richly earned not only by hereditary claim, but by personal merit. With this the term came to an end.

The festivities of the May week proper were of unequalled extent—thirteen different balls were given on two nights, and all were successful. The week of the Races was signalized by one of the most successful of the whole series—that given by the Hawks' Club. This function has much to answer for, inasmuch as it brings to Cambridge many ladies who used in the old days to visit us only after the boat-racing was over. The example of the Hawks was followed by the Athenæum Club and the Old Rugbeian Society, and yet, in spite of all this, the numerous balls in the week proper were more popular than ever.

The success of Jesus in going head of the river was thoroughly well deserved, and much of the credit for this is due to the vigour and perseverance of that typical Cambridge rowing man, Mr. Stephen Fairbairn. Trinity Hall had a series of misfortunes, but Henley may show that there's life in the old place yet. First Trinity were far above the average of a college crew, but not good enough to displace Jesus. There probably never has been a time when there have been so many men nearly good enough to get their blues in cricket, football, and rowing. The cult of the "blue" may meet with many a scoff, but, if it means the disappearance of the loafer, who would weep?

Before these lines are in print Cambridge will be given over to desolation and the tourist.

London.

The London County Council Education Committee have adopted a report of the Higher Education Sub-Committee recommending that the following grants should be made (under certain conditions) to the Senate of the University of London with a view to the promotion of higher education in the schools of the University specified:—(1) University College, an equipment grant of £4,000 chargeable to maintenance account for the year 1909–10; and an equipment grant of £6,000 chargeable to either capital or maintenance account for the year 1910–11; (2) Bedford College, building grant of £5,000 a year for four years; (3) London School of Economics and Political Science, an equipment grant of £1,000. The Sub-Committee further recommended that, subject to the Council having the right to nominate students to fifty free places at both King's College and University College, to twenty-five free places at Bedford College, to forty free places at the London School of Economics and Political Science, and to fifty free places at the East London College, the undermentioned grants to the authorities of the institutions named be renewed for the educational year 1909–10:—University of London, £10,000; King's College, £1,500; University College, £1,500; Bedford College, £800; London School of Economics and Political Science, £1,200; and East London College, £1,000.

The new Institute of Physiology at University College was opened (June 18) by the Rt. Hon. R. B. Haldane, Secretary of State for War. "University College," writes the *British Medical Journal*, "may be said to be the cradle of model physiology in this country. There William Sharpey taught for nearly forty years. . . . To Sharpey's teaching it was mainly due that physiology gained its rightful place in medical education, and, directly or indirectly, he trained most British teachers of that science for many years. It was at University College that the practical teaching of physiology, begun by Michael Foster, was further developed by Burdon-Sanderson. These great men were afterwards the creators of the schools of physiology at Oxford and Cambridge. The foundation of a new Institute of Physiology carries on the tradition of University College, and gives to the teaching of physiology there vastly increased possibilities of development."

Digitized by Google

The Foundation Oration at University College was delivered by Dr. H. A. Miers, Principal of the University. The subject was the "Revival of Learning"—not in some past century, but in the present—a revival of learning on the part of students, as distinct from teaching on the part of teachers. A weak feature of modern education was that so much was expected to be done by the teacher. The way in which students learned was more important than the way in which they were taught. Dr. Miers's trust was in the student. The duty of the teacher was to help the student to understand what he sees, and not merely to tell him what to look for. The students of to-day had the opportunity to initiate a great movement—the Twentieth Century revival of learning.

The Annual Assembly of Faculties at University College was held on Wednesday, June 30. The Right Hon. Lord Avebury presided. The winners of exhibitions, scholarships, studentships, and medals were presented to him, and he addressed the students and the members of the Faculties.

The speeches at the annual dinner of King's College, London, naturally dealt in the main with the incorporation of the College in the University of London and with the prospects of higher education in the metropolis. The Hon. W. F. D. Smith, M.P., the Treasurer, occupied the chair (in the absence of the Visitor, the Archbishop of Canterbury, who was unable to attend). He said that, before many months were over, incorporation with the University would, he hoped, be an accomplished fact. The idea of incorporation was entered on because they desired to assist, as far as they were able, in the development of University teaching in London; and he thought it was not unreasonable for them to say that King's College, during the whole period of its existence, had done much for the teaching of a University standard in this great city. He imagined that people hardly realized how small was the help the Government of this country gave to University education in London, or, for that matter, anywhere else; and, in the second place, they hardly realized how important for the good of the country University education always must be. With the exception of the City companies, who had generously supported University education in London, there were very few people who had followed the example that had been set in the provinces in this matter. In their own case they had been able, during the past few months, largely through the efforts of the Principal, to collect a large part of the sum required before the College could be incorporated in the University of London; but in respect of King's College School, which also had a heavy debt, the appeal had not been so successful, for of the £38,000 required to relieve it completely from debt, they had only been able to collect about £12,700. All who knew how closely the school had been connected with the College would regret that its development should be hampered by debt. The College was never doing better work than at the present moment.

The Principal (the Rev. Dr. Headlam), in responding, referred, amid cheers, to the immense services which had been rendered to the College by their Treasurer, and added that the College was in a better state than it had been for many years past. In the carrying out of the incorporation in the University they had solved a religious difficulty, enabling the Council to continue the work for which it was appointed, and also the secular portion of the College to be carried on without interfering with the religious liberty of staff or students. In addition to the difficulties of the situation with which they had had to deal, it must be remembered that the colleges were very badly endowed. Compared with the endowments given by the Treasury for University education in Scotland, Ireland, and Wales, the amount in proportion to the population given in this country was very insignificant. Whereas much was done for these other parts of the United Kingdom, very little was apparently done for England. This was a matter which deserved serious consideration, and he thought the members who represented London in Parliament might act together and inform the Chancellor of the Exchequer that they would not vote for the Budget unless he treated London properly. Everything made him believe that incorporation with the University was the right thing to do, and that it was their duty to try to build up for London a university which should have a real university life and feeling.

Regulations have been approved by the Senate for the award of the Ouseley Memorial Scholarships in 1909—scholarships founded by the Misses Ouseley in memory of their father, the late Colonel J. W. J. Ouseley, for the encouragement of the study of the Arabic, Persian, Hindustani, and other Oriental languages in this country. In the present year three scholarships of £50 each are offered. Candidates must either have pursued a course of study from October, 1908, to June, 1909, in the School of Oriental Studies either of University College or of King's College; or, in the case of their not having done so, undertake to pursue their studies for a year in one of these schools.

Miss Mary Taylor Fraser, B.Sc., has been appointed to the Lindley Studentship (£100), tenable in the Physiological Laboratory of the University.—Mr. G. Roche Lynch, St. Mary's Hospital Medical School, has been appointed to the University Studentship in Physiology (£50), tenable for one year in the Physiological Laboratory of the University or of a School of the University.—Miss Euphemia Ramsay, B.A. University College, has been appointed to the Gilchrist Studentship in Modern Languages (£80), awarded to enable the selected student to follow abroad a course of preparation for the profession of modern language teacher.

Queen's College, London.

THE Annual Report on Queen's College, Harley Street, presented by the Principal, the Rev. Canon Bell, M.A., showed the successful progress of the College, which has done yeoman service in the cause of the intellectual training of girls since its foundation more than sixty years ago. The College had sustained a great loss in the death of Prof. Seeley, whose work had been of inestimable value, while his position in the world of science made his place as Dean of the College of great importance. He extended a warm welcome to Miss Lewer, B.A., who had recently accepted the position of warden, made vacant by the much regretted resignation of Miss Harper, who, with rare self-abnegation, had offered to continue her work for the College as assistant to the Head Mistress, Miss M. D. Teale, an announcement that was greeted by the warm applause of the assembled girls. Special attention was being paid, continued the Principal, to physical development amongst the students, and the daily attendance at Swedish drill, which was compulsory except under a medical certificate, was much appreciated. This term an opportunity of learning swimming would be given, while through the winter hockey had been regularly played, though the difficulty of securing a proper playing ground was much felt. The intellectual honours gained by students, past and present, was a long and distinguished one; amongst others mentioned were Miss Milroy, who has just been appointed Head Mistress of Truro High School; Miss Una Griffin, who has won the scholarship of £180 per annum at the London School of Medicine, and Naomi Tribe, who has won one of £30 at the same school; while Miss M. Baxter has passed the London Matriculation. Contributions to the worlds of science and of books during the past year by old student were also appreciatively mentioned. The Bishop of London, as visitor, occupied the chair, and his address was listened to with eager attention.

Matriculation Interchange.

AN agreement allowing of an interchange of the Matriculation Certificates issued by the Joint Matriculation Board and the University of London respectively has been completed, and each party to the agreement will now proceed with the mutual recognition on the terms and conditions arranged. In each Examination system, there are certain obligatory subjects without which no Certificate is issued. In the London Matriculation Examination these obligatory subjects are English and Mathematics. In the Examination conducted by the Joint Board the obligatory subjects are either English Language or English Literature, English History, and Mathematics. Besides these obligatory subjects, each system requires that three other subjects should be taken, under stated conditions, from a schedule of subjects specified in the syllabus. In order to obtain recognition of the Certificate by both bodies, these three optional subjects must be chosen from the following list:—Greek, Latin, French, German, Mechanics, Chemistry, Geography. The further condition required by the Joint Board is that one of the subjects shall be a language. The conditions required by the University of London are—that one of the three subjects must be either Latin or a science; that, if Latin be not taken, one of the other subjects must be another language chosen from the list; and that the Certificate should state, in the case of each language taken, that the candidate has passed in "Unprepared Translation in lieu of Set Books." The conditions here recited are those which each body requires from its own candidates.

THE EDUCATIONAL LADDER.

ABERDEEN UNIVERSITY.—Town Council Gold Medal: John McCulloch. McRobert Fellowship for Cancer Research: A. G. Anderson, M.B. Radstone Memorial Prize in Political Science: William Thomson, M.A. Hunter Gold Medal in Roman Law: J. C. McPherson; *proxime accessit*, James R. Park. Hutton Prize in Mental Philosophy and Bain Gold Medal: Lachlan McRae. Caithness Prize in History: R. N. Gilchrist.

BRADFIELD.—Foundation Scholarships, 90 guineas per annum: W. L. Mortimer (Mr. E. W. M. Lloyd's, Hartford House, Winchfield); W. H. Rowe-Williamson (Dr. A. E. Crawford's, St. Anselm's, Croydon); G. R. Daubeney (Mr. G. S. Chittenden's, Streete Court, Westgate-on-Sea). A fourth Scholarship was not awarded. Warden's Exhibition, 50 guineas per annum: T. W. Warlow (Messrs. Campbell and Reece's, Doon House School, Westgate-on-Sea). Simonds Exhibition, 45 guineas per annum: not awarded. General Exhibitions, 30 guineas per annum: (1) G. W. L. Day (Mr. W. H. P. Hayman's, Abbey School, Beckenham); (2) L. St. J. Mowbray (the Rev. H. C. V. Snowden's, Hildersham House School, St. Peter's, Broadstairs); (3) F. A. Stacpole (the Rev. H. C. L. Tindall's, Hurst Court, Ore, Sussex); (4) A. B. Clegg (the Rev. John Clegg's, The College, Lowestoft).

CAMBRIDGE UNIVERSITY.—The Mathematical Tripos list, Part I., shows 31 Wranglers, 20 Senior Optimes, and 26 Junior Optimes—in all, 77, to which are to be added 10 women candidates. Mr. P. J. Daniell, Trinity, is Senior Wrangler—the last of the line. In W. E. H. Berwick, Clare (4th Wrangler); A. W. H. Thompson, Trinity (4th); L. B. Benny, Christ's (16th); H. Freeman, Christ's (29th); and C. M. Ross, King's (68th), we are pleased to recognize contributors to our mathematical columns. There is but one woman that rises to the height of a Wrangler, Miss J. M. Mathews, Girton, who is placed between the 18th and 19th Wranglers; there are 2 Senior and 7 Junior Optimes. Three of the ten hail from Girton; the other seven from Newnham.—In Part II., Selig Brodetsky, bracketed Senior Wrangler last year, obtains but a second class; while Miss Marjorie Long (North London Collegiate School and Girton), equal to the Fourth Wrangler of last year, is placed (with two men) in Class I., Division 2.

Examination for the Diploma in Geography.—Part I.—Examined and approved: A. R. Griffiths, non-coll.; J. Jones; G. E. Joyce, Queens'; R. A. Leakey, Corpus; W. G. Points, non-coll.; G. H. Ridout, non-coll.; and H.A. S. Wortley, Downing. Part II.—Examined and approved: A. B. Griffiths, non-coll.; I. Jones; H. A. S. Wortley, Downing; Mabel Wynne.

CLIFTON.—Modern Language Scholarship, H. Herzl; Roquet Palmer-Palmer Scholarship, H. Herzl; Old Cliftonians' Scholarship, A. Evershed; The Junior School Scholarship, C. H. B. Kitchin; under 17, The Guthrie, A. B. Craddock; under 16 (increase), R. Francis; under 15, E. K. Wakeford, R. L. Farnell, and F. C. Phillpotts; under 14, G. A. Herdman; Mathematics and Classics, K. T. C. Gurney (Mr. Kitchener, Greenbank School, Liverpool); Modern Languages, G. W. E. Whitehead (Mr. McLaughlin, Newnham-on-Severn); Classics, T. R. Milford (Mr Carter, Maidenhead) and E. S. Blenkinsop (Mr. Radcliffe, East Grinstead); Classics and English, K. N. Crawford (Clifton College); Modern Languages, B. B. Edwards (Wykeham House, Worthing); Army Scholarship, M. H. Jones (Mr. Palmer, Eastbourne); The "C. F. Balfour" (Exhibitioner), J. L.Bermad (Mr. Lush, Rugby).

DUBLIN UNIVERSITY.—Fellowship: Henry Thrift, B.A. (Mathematics and Experimental Science). Madden Prize (£300, to the candidate second for the Fellowship): James C. Wasson (Mathematics and Ethics and Logic). Fellowship Prizes of £20 each: Rev. W. O'Connell and H. F. Biggs. Mathematical Scholarships: A. C. Davies, W. P. Hone, J. B. Browne, G. M. Kidd, J. K. Tully. Classical Scholarships: Henry Burd, Valentine Holmes, Joseph Johnson, Robert E. Russell, Richard W. Shegog, Edward Norton, W. O. Tobias. Experimental Science Scholarships: Lyndon E. Bastable, James W. O'Neill. Non-foundation Scholarships in Modern Literature: Kathleen H. Huggard, Olive Ross.

LONDON INTER-COLLEGIATE SCHOLARSHIPS BOARD.—*University College.*—Andrews Arts Scholarship (£30), G. Davis, University College School and Northern Polytechnic; Andrews Science Scholarship (£30), R. M. Clark, Southend Secondary School; West Scholarship in English and English History (£30), Hilda Fowlds, Lydney Secondary School. *King's College.*—Sambrooke Classics Exhibition (£50), J. Lodge, King's College; Clothworkers' Science Exhibitions (£30 for two years), W. Legg, King's College; (£20 for two years), B. E. C. Robinson, St. Paul's School. *East London College.*—Four Drapers' Company Science Scholarships for Men (£40 each for three years): J. Brimelow, Borden Grammar School; A. S. Wood, East Ham Technical College; W. Lowcock, Hampton Grammar School; A. E. R. Church, Leyton County High School. Two Drapers' Company Science Scholarships for Women (£40 each for three years): Alice S. Smart, City of London School for Girls; Winifred I. Willett, Battersea Polytechnic and Norwood Technical Institute. Two Drapers' Company Arts Scholarships for Men (£40 each for three years): J. W. Jones, Hastings Grammar School; S. H. Waters, Christ's Hospital.

MALVERN COLLEGE.—Entrance Scholarships—Senior: C. J. Jeffries, from Clare House, Beckenham (Classics and R. Faber Exhibition); R. W. M. Dewhurst, from Lindisfarne, Blackheath (Classics and Mathematics). House: C. L. Saul, from St. Christopher's, Eastbourne (Classics); E. Shaw, from Stancliffe, Matlock (Mathematics and Classics). Minor: P. G. Heath, from Naish House, Burnham (Classics); C. R. B. Mortimer, from St. Andrew's, Eastbourne (Classics); W. H. Lloyd, from Winchfield (Classics); J. E. M. Maw, from Stancliffe, Matlock (Classics and Mathematics); C. H. V. Cox, from Pelham House, Folkestone (Army side); C. S. Knight, from Thanet College, Margate (Mathematics).

OXFORD: ST. EDWARD'S SCHOOL.—Scholarships: E. A. P. Stonex (Elleray Park, Wallasey), G. L. Bird (Cathedral Choir School, Oxford), C. W. Bourne (Beech Lawn, Leamington). Exhibitions: C. P. Peach (Stanmore Park) and B. W. Ramsbottom (St. Cuthbert's, Malvern Link).

OXFORD UNIVERSITY.—Abbott Scholarship: William Whitaker Sweet-Escott, Exhibitioner of Magdalen; *proxime accessit*, B. C. Hamilton Nicholls, St. John's. Hertford Scholarship: Alexander Percival Waterfield, Scholar of Christ Church; *proxime accessit*, Edward N. A. Finlay, Scholar of Balliol: Honourably mentioned—Edgar Lobel, Scholar of Balliol; Roderick McKenzie, Scholar of Trinity; and Edward H. W. Meyerstein, Demy of Magdalen.

Christ Church.—Dixon Scholarship: W. Burridge. Fell Exhibition: E. H. McGrath. Boulter Exhibition: A. B. Vansittart. Holford Exhibition: H. B. Brady.

Queen's.—Open Scholarship: Cyril A. Wheeler. Fitzgerald Exhibition for natives of Middlesex: Geoffrey R. Sayer, Exhibitioner of the College, formerly of Highgate School.

REPTON.—Entrance Scholarships: E. P. K. Hough (Mr. Savery, Bramcote, Scarborough), N. F. Drummond (Mr. C. L. Wright, May Place, Malvern Wells), C. F. McLean (Mr. R. S. Lea, Lindley Lodge, Nuneaton), M. D. Colbourne (Army) (Mr. W. H. P. Hayman, The Abbey School, Beckenham), D. Hamlyn (Mr. A. M. Kilby, Lindisfarne, Blackheath), R. I. Musson (Mr. C. M. Henderson, the Grammar School, Clitheroe). To Exhibitions: F. H. Hodgson (Mr. J. R. Morgan, Connaught House, Weymouth), A. H. Goulty (Mr. H. Ashe, Wadham House, Hale, Cheshire), E. L. Hewitt (Mr. D. E. Norton, King's School, Bruton). Honorary Exhibition; A. F. Williams (Modern Languages) (Mr. J. Cyril Morgan-Brown, St. Edmund's School, Hindhead).

RUGBY.—Entrance Scholarships: G. M. A. Hobart-Hampden (Messrs. Wilkinson and Armes, Waynflete, Woodcote, Oxon.), J. W. Bowyer (Mr. E. W. M. Lloyd, Hartford House, Winchfield, Hants), H. W. House (Mr. P. Christopherson, Lockers Park, Hemel Hempstead), B. N. Rice (Mr. R. S. Lea, Lindley Lodge, Nuneaton), F. R. Dymond (Mr. J. G. Bradshaw, Packword Haugh, Hockley Heath), C. J. L. Lutyens (Messrs. Biddle and Barton, Rosary Gardens, South Kensington), F. Jones-Bateman (Mr. G. S. Chittenden, Streete Court, Westgate), E. M. Jenkins (Mr. J. G. Bradshaw, Packwood Haugh, Hockley Heath), F. C. O. Twist (Mr. R. S. Lea, Lindley Lodge, Nuneaton), W. W. Smith (Bowden College, Cheshire), T. T. H. Verschoyle (Rugby School).

CORRESPONDENCE.

[*We do not hold ourselves responsible for the opinions expressed by our correspondents.*—ED., *E.T.*]

"HEAD MASTERS AND ASSISTANTS."

TOO MUCH LOWER FORM.

To the Editor of "The Educational Times."

SIR,—I was very much interested in the paper and discussion on the relation between Head Masters and Assistants published in the May issue. With many of the points raised it seems to me there can be no objection. With your permission, however, I should like to point out a side of one of the questions, which does not appear to have been raised—that with regard to the "loss of dignity in taking the work of a lower Form." I am speaking from experience when I say that, though undoubtedly this teaching is of great value, to confine oneself practically to it alone has its disadvantages. Though a Second Master of over four years' standing and a total experience of eight years, I have now to be content with teaching, for more than half the week, the lowest Form in the school. In no single subject do I teach any Form higher than that taking the Junior Certificate of one of the examining Boards, though previously I have taken my special subject throughout the whole school. The point I want specially to raise is that, situated as I am, I can never hope to claim to my credit any successes of the higher Forms. No higher work is placed in my hands, I have to be satisfied with laying the groundwork on which another master is to place the finished building—he gets all the credit for successes, I get all the blame for failures. It appears to me that there surely can be some remedy for this, and I should be very glad to hear of any solution arrived at in any other similar situation. I enclose my card, and am, Sir, &c.,

A SECOND MASTER.

Thay haif said . . .
Quhat say thay?—Lat thame say!

THE HUMANIZING OF MATHEMATICS.

By GUSTAV SPILLER.

THE proposals which I desire to make with regard to the humanizing of mathematics in school life follow the lines of a rapidly growing tradition. The days are passed when a sea of figures and symbols were almost the only things that met the eyes of the pupil; to-day hosts of concrete problems are proposed for solution. The nature of these problems, again, has suffered a sea change, for, on the one hand, problems derived from commerce and industry are being introduced in plenty, while, on the other, problems referring to health and to money-saving have been multiplied.

There are two new directions along which the advance must take place—first, that of *definite* problems, which acquaint the child with men so far as they are ethical and so far as they pass a cultured existence; and, secondly, that of *indefinite* problems, the object of which is to promote exactness in the thoughts and actions of common life. Furthermore, we suggest that love of mathematics and of exactness generally might be encouraged by the teacher's dwelling on the history of mathematics. Here all the marvels connected with that history could be presented to the minds of the children in the form of stories that should lighten and enliven the mathematical lesson.

I.

In the problems of this class moralizing and criticism should be as far as possible avoided. This demand is a reasonable one, since the examples will deal, as a rule, with what is intensely human and near to the heart of the child. Explanations might be wanted, but in these a sermonizing or critical tone should also be absent. A survey of the topics given below will show that we are only asking of the authors of mathematical manuals a wider outlook on life and a due consideration for that which is commonly regarded as of supreme importance—right conduct. That the latter of these aspects has been almost completely overlooked cannot be disputed.

(1) We deal first with income and expenditure. The number of hours worked, the kind of work engaged in, the intensity of application, the wages received, the character, health, strength, and peace derived from strenuous labour, and the advantage to society, to the nation, and to the world, and progress generally of such labour should be illustrated. The problems of unemployment through conditions of trade, absence of health, and idleness must be investigated. Overwork and underwork and their consequences should also be dealt with, as well as the raising of the value of work through physical, intellectual, æsthetic, and moral education. On the expenditure side an endless range of problems present themselves. The manner of expending the total annual, monthly, or weekly income in a reasonable way and the laying by a part of this should form by themselves an important department of arithmetic; expenses on altruistic purposes of a general order (perhaps one-fifteenth to one-tenth of the total income), on insurance of every type, excursions into the country, visits to museums, books, garden or flowers, pets; expenses for damaged, broken, and lost objects; assistance to relatives and friends, parents and grandparents, as well as public expenses on art, science, museums, parks, hospitals, lifeboats, lighthouses, &c.; the simple life might be illustrated by the fact that men have lived to a hale old age without luxuries or abundance of comforts.

(2) Here we come to a more abstract type of numerical example, which, however, should prove interesting and should not be difficult to find. Time and labour gained by punctuality and promptness in business and in public affairs; the general results of strenuous application; keeping things and thoughts in order; over how many obstacles courage, self-respect, self-control, or love of truth will carry us; what time and energy a devoted citizen gives to his locality and country; errands of mercy; how the day is spent; how long things last with care; time spent on lectures, books, excursions, sport, or meeting of friends; regular meals, quantities eaten, number of courses; baths; washing, brushing, and dressing oneself; gymnastic exercises and walks; use of too few or too many words; attention to plants and domestic animals; hygienic value of foods and drinks—such are some of the problems to be examined.

II.

In the previous section we indicated some of the sources whence ethical examples of a numerical order might be drawn. This section, on the contrary, seeks to infuse into the spirit of the pupil the habit of exactness and to destroy the notion that mathematics has nothing valuable to teach concerning that which cannot be stated in simple mathematical terms. We suggest, therefore, that a definite attempt should be made (1) to encourage numerical treatment of problems on every occasion; (2) to insist generally on exactness and on detecting the constituent factors in the problems of everyday life; and (3) to lead the students to examine and to generalize properly.

(1) The object here is to discourage unnecessary guessing by encouraging, even at the cost of some labour, mathematical treatment of all kinds of problems. Especially in work should size, quantity, number, proportion, position be determined partly or wholly through measurement, simplifying the problem to the utmost in each case. Here are a few general problems. How many children or how many boys and girls are there in the class or school? What is the number of benches in the class, and how long, broad, and high are they? How many pages are there in a copy-book or how many words are there on a page, a sheet, in a certain volume? How many pints could this vessel hold? How often do we eat, and how much? How many articles of clothing have we on? How often during the day did the baby kick, cry, smile, sit, roll, sleep, take food? How many branches and leaves has a certain tree, and how many petals, sepals, or seeds a certain flower? How old are the teachers, parents, pupils? In these and similar instances we ought to seek to determine the exact quantity or else at least to obtain an approximate numerical statement or an average based on all the material available, while we discourage random suppositions or vague words such as "much," "many," "often," "large," "long," "general," "far," "strong." In the secondary schools, more especially, the mathematical theory of probability should be applied to problems of social and ethical importance.

(2) In mathematical problems we deal with definite factors; but such definiteness is out of the question in daily experience. What we may, however, strive to accomplish is to be as exact as possible, and accordingly a nice sense of proportion and of probability should be cultivated in the mathematics class. We should encourage, without forgetting to provide at the same time experiences and cases, careful and repeated counting, observation, generalization, deduction, and verification. We should teach the young to take into account differences due to individual temperaments, education, capacities, and experiences, to peculiar situations, to the general environment, to the date or place of events, and to the stage of development. The children should learn to allow for complexity and interdependence in most problems, as well as for absence of complete knowledge. Such simple questions as—Why is he ill, well, hungry, thirsty, tired, unhappy, late? why is it cold, warm, snowing, raining? why does he love to study, to be with others? why do we want order in thoughts and actions, in home, school, street, and society?—should be discussed for the purpose of gradually enabling the pupil to see clearly as many sides as possible of a question and to give the mind a mathematical bent. The striving for precision would prevent rash generalizations regarding races, peoples, and epochs; it would also make an end to arbitrary and fantastic statements in matters of law and statistics, in the transmission of news, in accounts of life experiences, and in business transactions, and it would develop and cultivate the sense of truth in small as in great things, and that of consistency and reasonableness in thought and action. At the same time prejudice, laziness, slovenliness, and ignorance should be discouraged by encouraging the practice of the complementary virtues.

(3) In addition to aiding analysis, as in the above series of instances, the mathematics lesson should assist the systematization of knowledge. Pupils should be trained to find likeness and unlikeness on a large scale amounting to generalizations and discoveries of some magnitude. By putting together, for instance, all that is of a like nature we may obtain generalizations of a high degree, and by looking keenly for unlikeness we may find an unsuspected truth. In following this method we promote, as in Section (1), freedom from prejudice, desire for knowledge, and other valuable mental and moral qualities.

III.

Interest in the subject of mathematics should also be aroused and sustained by regular references to the wonderful progress

Digitized by Google

made from the times when men could not even count up to five to our day, when most intricate problems are solved by mathematical procedure. Early customs, on the one hand, and the results of mathematical physics, on the other, should yield the required material. Such a view of mathematics would broaden the mind and strengthen the will to work.

The above scheme does not pretend to be exhaustive nor to replace the strong ethical influence already exerted by many mathematical teachers. If we have convinced the reader that the mathematics class should be, and could be, strongly developed in an ethical direction, the present proposal will have achieved its purpose.

THE COLLEGE OF PRECEPTORS.

MEETING OF THE COUNCIL.

A MEETING of the Council was held at the College, Bloomsbury Square, on June 19. Present: Professor Adams (Vice President) in the chair, Dr. Armitage Smith, Mr. Bain, Mr. Barlet, Rev. J. O. Bevan, Rev. J. B. Blomfield, Mr. Brown, Mr. E. A. Butler, Mr. Charles, Miss Dawes, Mr. Eve, Mr. Hawe, Mr. Kelland, Rev. R. Lee, Dr. Maples, Mr. Marx, Mr. Milne, Dr. Moody, Mr. Morgan, Mr. Pendlebury, Miss Punnett, Rev. Dr. Scott, Mr. Starbuck, Rev. J. Twentyman, and Mr. White.

The minutes of the last meeting were read and confirmed.

The Secretary reported that the number of entries for the Midsummer Certificate and Lower Forms Examinations was about 4,570.

The Diploma of Associate was granted to Mr. J. Carruthers, who had satisfied the prescribed conditions.

An interim report of the Special Committee appointed "to consider whether by any methods the work and usefulness of the College may be increased" was submitted. The Committee had not been able to complete their consideration of important questions which had been raised in the course of the inquiry, and the Council decided to postpone their report to the members of the College till the General Meeting in January, 1910.

The representatives of the College on the Federal Council reported that it had been decided that arrangements should be made by the Federal Council for holding a Conference of Associations of Teachers in the autumn of this year for the purpose of securing agreement with regard to the constitution of a new Registration Council.

The draft Report of the Council to the General Meeting was considered, and was referred to the President, Vice-Presidents, and Dean for final revision.

A Special Committee was appointed to enquire into the circumstances in connexion with the refusal of the Board of Education to recognize as efficient a private school on the work of which the Board's inspectors had reported favourably.

Professor W. E. Dixon, M.A., M.D., was elected a member of the Council.

The following persons were elected members of the College:—

Mrs. A. J. Felkin, 39 Lexham Gardens, Kensington.
Mr. R. Howse, 16 St. Ann's Road, Bath.
Mr. S. B. Hanton, Boys' High School, Rondebosch, Cape Colony.

The following books had been presented to the Library since the last meeting of the Council:—

By the AUTHORS.—Bevan's Genesis and Evolution of the Individual Soul Brown and Johnson's How People Live.
By E. ARNOLD.—Arnold's English Texts (Voyage to Lilliput, The Bible in Spain, and Natural History of Selborne); Byles' Rambles in Bookland; Chatwin's First Précis Book; Johnson's Dramatic Scenes from English Literature; Keen's De Beaumont's Contes de Fées.
By A. & C. BLACK.—Mackenzie's Selections from Barbour's The Bruce.
By BLACKIE & SON.—Defoe's Captain Singleton's Early Adventures; Evans' Geography of the World; Frew's Byron's Childe Harold's Pilgrimage, Canto IV.; Layng's Elementary Algebra; Rogers' Brief Survey of the World's History; Wright's Goethe's Lyrics and Ballads.
By MACMILLAN & CO.—Healey's First Book of Botany.
By METHUEN & CO.—Shipley's English Church History for Children, 1066–1500.
By J. MURRAY.—Fletcher's Introductory History of England. Vols. III. and IV.; Hardwick and Costley-White's Old Testament History, Vols. I. and II. Poole and Lassimonne's Textes et Questions.
By the OXFORD UNIVERSITY PRESS.—Sacret's Michelet's Jeanne d'Arc; Unstead's Practical Geography, Part II.; Wheeler's Tennyson's Enid.
By ALSTON RIVERS.—Lester and Tordoff's Public School Chemistry for Beginners.
Calendar of University College of Wales, Aberystwyth.
Calendar of University of Manitoba.
N.U.T. Report, 1909.

OPPOSITE THE BRITISH MUSEUM.

THACKERAY HOTEL

GREAT RUSSELL STREET, LONDON.

NEAR THE BRITISH MUSEUM.

KINGSLEY HOTEL

HART STREET, BLOOMSBURY SQUARE, LONDON.

These well-appointed and commodious **TEMPERANCE HOTELS** will, it is believed, meet the requirements, at moderate charges, of those who desire all the conveniences and advantages of the larger modern Licensed Hotels. These Hotels have

PASSENGER LIFTS, ELECTRIC LIGHT THROUGHOUT, BATHROOMS ON EVERY FLOOR, LOUNGES, AND SPACIOUS DINING, DRAWING, WRITING, READING, BILLIARD, AND SMOKING ROOMS. HEATED THROUGHOUT.

Fireproof Floors. Perfect Sanitation. Telephones. Night Porters.

Bedrooms, including attendance, from 3s. 6d. to 6s. *Full Tariff and Testimonials on application.*

Inclusive Charge for Bedroom, Attendance, Table d'Hôte Breakfast and Dinner, from 8s. 6d. to 10s. 6d. per day.

ALSO UNDER THE SAME MANAGEMENT.

ESMOND HOTEL

1 MONTAGUE STREET, RUSSELL SQUARE, LONDON.

This **Temperance Hotel** adjoins the British Museum, and is exceptionally quiet and economical.

Bedrooms, including attendance, from 3s. to 4s. 6d. per night. *Full Tariff and Testimonials on application.* **Night Porter.**

Telegraphic Addresses:

MACMILLAN'S NEW BOOKS.

ENGLISH LITERATURE FOR SECONDARY SCHOOLS.—*New Volumes.*

Selections from the Poems of Robert Browning. With Introduction and Notes by Mrs. M. G. GLAZEBROOK. Limp cloth, 1s.

Gulliver's Travels.—I. **A Voyage to Lilliput.** II. **A Voyage to Brobdingnag.** Abridged. With Introduction, Notes, Glossary, Questions, and subjects for Essays by G. C. EARLE, B.A. Illustrated by C. E. BROCK. Limp cloth, 1s.

Selections from White's Natural History of Selborne. Edited, with Introduction, Notes, and Glossary, by F. A. BRUTON, M.A. With 40 Illustrations. Globe 8vo, limp cloth, 1s.

MACMILLAN'S PRACTICAL MODERN GEOGRAPHIES.

A Geography of the British Isles. With numerous practical Exercises. By Dr. A. MORLEY DAVIES. 3s. Also in Two Parts. Part I., England and Wales. 2s. Part II., Scotland and Ireland. 1s. [*Immediately.*

Practical Exercises in Geography. By B. C. WALLIS, B.Sc. 2s. 6d. [*Immediately.*

A Two Years' Course of Geography for Secondary and other Schools.

A School Arithmetic. By H. S. HALL, M.A., and F. H. STEVENS, M.A. Complete, with Answers, 4s. 6d.; without Answers, 3s. 6d. Or, in Two Parts:—Part I., with Answers, 2s. 6d.; without Answers, 2s. Part II., with Answers, 2s. 6d.; without Answers, 2s. Answers, 1s. KEY in preparation.

This work follows closely the recommendations of the Mathematical Association.

A Modern Arithmetic with Graphic and Practical Exercises. By H. SYDNEY JONES, M.A. Parts I. and II., with or without Answers, 2s. 6d. each. Complete, with or without Answers, 4s. 6d.

Graphical Methods in Applied Mathematics. A Course of Work in Mensuration and Statics for Engineering and other Students. By G. C. TURNER, B.Sc. (First published in 1908 under the title of "Graphics.") 6s.

A First Book of Botany. By ELIZABETH HEALEY, A.R.C.Sc. Illustrated. 1s. 6d. [*First Books of Science.*

Beginners' Botany. By L. H. BAILEY. Illustrated. 3s. 6d.

CLASSICAL SERIES.—*New Volume.*

Thucydides. Book III. Edited by E. C. MARCHANT, M.A. Fcap. 8vo, 3s. 6d.

SIEPMANN'S FRENCH TEXTS FOR RAPID READING.

ELEMENTARY SECTION. Sewed, 6d. each.

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W. [FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, Bart.
Secretary—W. N. NEALE, Esq. Actuary and Manager—FRANK B. WYATT, Esq., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE without personal liability on highly favourable terms to

THE CLERGY AND THEIR RELATIVES.

ALL PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,351,137. Annual Income, £471,097.

Bonuses Distributed, £4,256,464.

LOW PREMIUMS. LARGE BONUSES. Notwithstanding the lowness of the Premiums charged, the BONUSES are on an EXCEPTIONALLY HIGH SCALE.

NEW AND SPECIAL POLICIES. Application is invited for the PROSPECTUS, and Leaflets explaining two new Policies, with valuable Options.

1. **WHOLE-LIFE CONVERTIBLE ASSURANCES.** Very Low Premium—about one half the usual rate—during first ten years.

2. **PENSION POLICIES.** Premiums returnable with compound interest in case of death or surrender before pension age. Option to commute for cash.

Assurances without profits, at low rates of premium, may be effected, and Life Annuities on favourable terms may be purchased, by any person irrespective of any special qualification by relationship to the Clergy.

ANNUAL PREMIUMS FOR £1,000, WITH PROFITS.

Age next Birthday.	£1,000 Payable at Death.			£1,000 Payable at Age 60 or earlier Death.		
	£.	s.	d.	£.	s.	d.
25	20	1	8	27	3	4
30	23	3	4	32	10	10
35	26	10	0	40	1	8
40	31	1	8	51	5	0

NOTE.—Under the Reduced Premium System (explained in Prospectus) four-fifths only of these Premiums need be paid, the other one-fifth remaining a charge to be repaid out of Bonus.

No Agents employed and no Commission paid for the introduction of business, whereby £10,000 a year is saved to the Members.

Assurances can be effected by direct communication with the Office, 2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

AN IMPORTANT NEW EDITION.

READY 5th JULY. *REVISED AND ENLARGED.*
WITH COMPLETE SERIES OF MAPS.

FOR LOWER AND MIDDLE FORMS AND FOR PREPARATORY SCHOOLS, &c.

A JUNIOR COURSE OF COMPARATIVE GEOGRAPHY.

By P. H. L'ESTRANGE, B.A. With Maps, Pictures, and Diagrams.
Demy 8vo, **3s. 6d.** net.

Also published in separate Parts as under, price 10d. net each.

Part I.—The Principles of Geography.
Part II.—The British Isles.
Part III.—Europe.
Part IV.—North America and Asia.
Part V.—Central and South America and Africa.
Part VI.—The British Empire.

All Teachers of Geography should write for a full Prospectus, with specimen pages of this book and also of Mr. L'Estrange's complete "Progressive Course of Comparative Geography."

"We can heartily recommend it as an excellent class-book, the most attractive we have seen."—*The Geographical Teacher.*

USE EARLY IN THE SUMMER VACATION
(for best results—three times a year only)
The "DUST-ALLAYER" CO.'S
ODOURLESS, or powerful GERMICIDAL

FLORIGENE

(A REGISTERED NAME suggested by FLOOR—HYGIENE)
Unequalled for the Hygienic and Anhydrous treatment and cleaning of all **SCHOOL, LABORATORY,**
Art Gallery, Library, Museum, and other Floors—
Wood, Concrete, Stone, or Polished; Linoleums, &c.
"Florigene"
(Awarded the **Bronze Medal** of the **Royal Sanitary Institute**)

LAYS THE DUST

(As recommended in the Education Department Blue Book):
Purifies atmosphere, aids prevention of diseases and throat irritations, preserves floors, saves time and greatly reduces labour.

Anhydrous, economical, easily used by the unskilled—each application lasts for 2 to 6 months, according to wear.

Scrubbing (unless preferred), **also wet and all other sprinkling of floors entirely dispensed with,** therefore no injurious moisture.

Not sticky—floors are only impregnated with "Florigene" and **can be cleaned daily with an ordinary broom alone—the sweepings being "weighted"** are not distributed.

BOOKS, FURNITURE, APPARATUS, &c., are less likely to soil, and seldom require dusting or cleaning.

"Florigene" is extensively used in Government (Royal Colleges, Science and Art and other Departments) and Municipal Buildings, also Schools, Laboratories, Libraries, Museums, Offices, &c.—and has been for many years—with highly satisfactory results.

Send for particulars, **Bacteriological, Medical,** *and other Reports and Testimonials to the Sole Manufacturers—*

SUITABLE BOOKS
FOR
SECONDARY SCHOOLS.

GEOGRAPHY, TEXT-BOOK OF. By G. CECIL FRY, M.Sc., F.I.C. For University Entrance Examinations and the Upper Forms in Schools. 4s. 6d.

"The compilation is by no means one of mere facts: the 'why' and the 'wherefore' are everywhere in evidence—the subject is, indeed, presented scientifically."—*Schoolmaster.*

ARITHMETIC, THE SCHOOL. An Edition of the *Tutorial Arithmetic* for School use. By W. P. WORKMAN, M.A., B.Sc., Head Master of Kingswood School, Bath. *Second Edition.* 3s. 6d. Also in two Parts:—Part I., 2s.; Part II., 2s.

"The best arithmetic for schools on the market."—*Mathematical Gazette.*

GEOMETRY, THEORETICAL & PRACTICAL. By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc.

PART I. Contains the matter of Euclid I., III. (1-34), IV. (1-9). With or without Answers. 2s. 6d.

PART II. Euclid II., III. (35-37), IV. (10-16), VI. 2s.

"The book is sound and sensible throughout, and deserves to hold its own easily in the severe competition which text-books on elementary geometry have to face at present."—*Nature.*

BOTANY FOR MATRICULATION. By Professor F. CAVERS, D.Sc., F.L.S. 5s. 6d.

Adapted to modern methods of teaching; suitable for the new Matriculation Syllabus of London University.

CHEMISTRY, JUNIOR. A Text-Book for the Oxford and Cambridge Junior Locals, and Examinations of similar standard. By R. H. ADIE, M.A., B.Sc., Lecturer in Chemistry at St. John's College, Cambridge. 2s. 6d.

"A useful and practical course, constructed on thoroughly scientific principles."—*Oxford Magazine.*

MAGNETISM AND ELECTRICITY, THE SCHOOL. By R. H. JUDE, M.A., D.Sc. 3s. 6d.

"One of the most instructive elementary text-books that we have ever come across. We recommend the book throughout."—*Knowledge.*

ENGLISH HISTORY, GROUNDWORK OF. By M. E. CARTER, Honour School of Modern History, Oxford. 2s.

"Any student in search of the best bird's-eye view of English History will turn to 'The Tutorial Series' in the natural order of search, and will there find his reward."—*School Guardian.*

ENGLISH COURSE, THE MATRICULATION. By W. H. LOW, M.A., and JOHN BRIGGS, M.A., F.Z.S. *Third Edition.* 3s. 6d.

"The matter is clearly arranged, concisely and intelligently put, and marked by accurate scholarship and common sense."—*Guardian.*

OUR MOTHER TONGUE. A Grammar and History of the English Language. By H. M. HEWITT, M.A., LL.M., and GEORGE BEACH, M.A., LL.D. *Twelfth Edition.* 3s. 6d.

"Scholarly, practical, clear, and helpful, it should in its revised form command a wide acceptance."—*Schoolmaster.*

FRENCH COURSE, THE MATRICULATION. By ERNEST WEEKLEY, M.A. *Third Edition, Enlarged.* 3s. 6d.

"The rules are well expressed, the exercises appropriate, the matter accurate and well arranged."—*Guardian.*

FRENCH COURSE, JUNIOR. By E. WEEKLEY, M.A. *Second Edition.* 2s. 6d.

"The execution is distinctly an advance on similar courses."—*Journal of Education.*

LATIN GRAMMAR, THE TUTORIAL. By B. J. HAYES, M.A., d W. F. MASOM, M.A. *Fourth Edition.* 3s. 6d.

"It is accurate and full without being overloaded with detail, and varieties of type are used with such effect as to minimize the work of the learner."—*Schoolmaster.*

LATIN COURSE, JUNIOR. By B. J. HAYES, M.A. 2s. 6d.

"A good practical guide. The principles are sound, and the rules are clearly stated."—*Educational Times.*

CURRENT EVENTS.

Fixtures.

THE Half-Yearly General Meeting of the Members of the College of Preceptors will take place on Saturday, July 17.

* * *

PROF. RIPPMANN proposes to deliver (1) five lectures on Phonetics (English, French, German sounds), October 2, 16, 30, November 13, 27; and (2) five lectures on Methods of Modern Language Teaching, on the same days, at Queen's College, Harley Street. Apply to Prof. Rippmann, 45 Ladbroke Grove, W.

* * *

A NATURE Study Course for Women will be held at the Horticultural College, Swanley, Kent, July 31 to August 14. Entrance forms and particulars from the Principal.

* * *

THE Edinburgh Vacation Courses in French and English will be held, July 28 to August 28, within the University buildings. Particulars from Prof. Kirkpatrick.

Honours.

THE University of Oxford has conferred the following honorary degrees:—

D.C.L.: Mr. C. B. Heberden, M.A., Principal of Brasenose College (on occasion of the quatercentenary of the College); Lord Grey, Governor-General of Canada; Hon. Oliver Wendell Holmes, LL.D., Associate Justice of the United States Supreme Court; the Very Rev. Hermann Adler, D.D., LL.D., &c., Chief Rabbi of the United Hebrew Congregations of the British Empire; and Thomas Brock, R.A.

D.Litt.: Mr. James Ford Rhodes, LL.D., American historian.

D.Sc.: George E. Hale, Sc.D., LL.D., Director of the Solar Observatory of the Carnegie Institution of Washington, Mount Wilson, California.

* * *

ON the occasion of the Darwin celebrations, the University of Cambridge conferred the honorary degree of D.Sc. upon Prince Roland Bonaparte, Dr. Francis Darwin, Dr. Edmond Perrier (Paris), Mr. Secretary Walcott (Washington), Profs von Beneden (Liège), Bütschli (Heidelberg), Goebel (Munich), Graff (Graz), Hertwiz (Munich), Höffding (Copenhagen), Loeb (California), Schwalbe (Strassburg), Solms Laubach (Strassburg), Timiriazeff (Moscow), Vejdovsky (Prag), Verworn (Göttingen), Vries (Amsterdam), and Zeiller (Paris).

* * *

THE University of Manchester has conferred the following honorary degrees:—

LL.D.: Mr. Whitelaw Reid, the American Ambassador, and Sir Robert Stout, Chancellor of the University of New Zealand.

D.Sc.: Prof. Theodore William Richards, Professor of Chemistry at Harvard; Dr. Otto Wallach, Professor of Organic Chemistry in the University of Göttingen; and Prof. Henry Edward Armstrong, Professor of Chemistry in the City and Guilds of London Technical Institute.

Litt.D.: Sir Alfred Lyall and Mrs. Sidney Webb.

* * *

THE University of Glasgow has conferred the honorary degree of LL.D. upon six of the Colonial editors now visiting this country.

* * *

MR. ARTHUR J. EVANS, M.A., D.Litt., Extraordinary Pro-

Digitized by Google

fessor of Prehistoric Archæology, has been elected to an Additional Fellowship at Brasenose College, Oxford.

* * *

THE ARCHBISHOP OF YORK (Dr. Lang) and Mr. Justice (Sir J. A.) Hamilton, formerly Fellows, have been elected honorary Fellows, of Magdalen College, Oxford.

* * *

MR. J. RENDEL HARRIS, M.A., Litt.D. Dubl., formerly Fellow of Clare College, Cambridge, and Mr. Owen Seaman, M.A., Litt.D. Dunelm., formerly Scholar and Porson Prizeman (now Editor of *Punch*), have been elected honorary Fellows of the College.

* * *

MR. H. S. THEOBALD, K.C., formerly Fellow of Wadham College, Oxford, has been elected an honorary Fellow of the College.

* * *

MR. JUSTICE (LORD) COLERIDGE, M.A., of Trinity College, Oxford, has been elected an honorary Fellow of the College.

* * *

A TABLET commemorating the late Mr. John Richard Green, the historian, has been placed in the inner quadrangle of Jesus College, Oxford.

* * *

A PORTRAIT of Archbishop Maclagan, painted by the Hon. John Collier, has been presented to his old College, Peterhouse, Cambridge.

* * *

AT a reception at the Sorbonne, Mr. Carnegie was presented with a medal commemorating his generosity to the University of Paris, which enabled it to found a special laboratory for Mme. Curie's radium researches.

Endowments and Benefactions.

THE late Mrs. Annie Fulton, always a generous supporter of Cardiff University College, has bequeathed to the College £4,000 as a specific legacy for general purposes, £3,327 for the establishment of a chair or chairs in connexion with the College, and £3,327 for the completion of the new buildings in Cathays Park.

Mr. Henry Webb, Llwynarthen, Castletown, has given £500.

Lord Tredegar has intimated his intention of making a further contribution of £5,000 to the fund for the new buildings—making his total contribution £12,500.

* * *

DR. CHARLES THEODORE WILLIAMS, Hon. Fellow of Pembroke College, Oxford, has given two sums of £2,500 each for scholarships in Physiology and Human Anatomy in Oxford University.

* * *

THE Clothworkers' Company have granted £50 for the present needs of the Pepysian Library at Magdalen College, Cambridge.

* * *

THE Drapers' Company have renewed their grant of £2,000 (£400 a year for five years) to the Department of Applied Mathematics under Prof. Karl Pearson, thereby enabling the research work in statistics and in the Biometric Laboratory to be continued and extended.—The Mercers' Company have made a grant of £500 to the Department of Physiology.

* * *

DR. JAMES DOUGLAS, of Quebec and New York, has founded a scholarship of £300 a year at Guy's Hospital Medical School for cancer research.

THE late Dr. Keeling has left £250 to the University of Sheffield.

* * *

MESSRS. JOHN SWIRE & SONS have promised a contribution of £30,000 towards the Hong Kong University Endowment Fund, the Taikoo Sugar Refining Company £5,000, and the Ocean Steamship Company £5,000, on condition that the whole amount required is subscribed.

Scholarships and Prizes.

A SUPPLEMENTARY examination for the election of one (Tenor) Choral Student will be held at St. John's College, Cambridge, on August 3. £40 for three years.

* * *

AN examination for Entrance Scholarships at Corpus Christi College, Cambridge, will be held on January 4–6.

Appointments and Vacancies.

DR. JAMES BELLAMY has resigned the Presidentship of St. John's College, Oxford. He recently celebrated his ninetieth birthday, and has been a member of St. John's for upwards of seventy years.

* * *

THE REV. ALEXANDER WHYTE, D.D., Minister of St. George's United Free Church, Edinburgh, has been appointed Principal and Professor of New Testament Literature in New College, Edinburgh.

* * *

PROF. JOHN CLELAND and Prof. William Jack have resigned their respective Chairs of Anatomy and of Mathematics in the University of Glasgow.

* * *

APPLICATIONS for the Chair of Constitutional Law and Constitutional History in the University of Edinburgh should be lodged with the Dean of the Faculty of Advocates, Advocates' Library, Edinburgh, by July 9.

* * *

MR. CHARLES RAYMOND BEAZLEY, M.A., D.Litt., Fellow and late Sub-Warden of Merton College, Oxford, has been appointed to the Chair of History in Birmingham University.

* * *

PROF. L. E. KASTNER, M.A. Cantab., Professor of French and of Romance Philology in the University College of Wales, has been appointed Professor of French in the University of Manchester, in succession to his father, Prof. Victor Kastner, B. ès L., M.A.

* * *

THE Professorships of Classics and of Geography in Queen's College, London, will fall vacant at the end of the current term.

* * *

THE REV. D. MIALL EDWARDS, M.A., Brecon, has been appointed Professor of Theology and Philosophy at the Congregational Memorial College, Brecon.

* * *

MR. A. R. BROWN, M.A., Fellow of Trinity College, Cambridge, has been appointed Martin White Lecturer in Ethnology in the University of London (for session 1909–10).

* * *

THE Council of College Hall (Hall of Residence for Women) have appointed Miss Alice Elizabeth Lindsell, M.A. Dublin, and formerly of Newnham College, Cambridge, to be Principal of the Hall in succession to Mrs. Viriamu Jones. She has been Acting Principal of College Hall during Mrs. Viriamu Jones's absence.

Digitized by Google

Miss Frances H. Melville, M.A. Edin., Lady Warden of University Hall, St. Andrews, has been appointed to Queen Margaret College, Glasgow.

* * *

Mr. E. S. Foster, M.A., has been appointed Lecturer in Greek, and Miss E. C. Eaves, B.Sc. Lond., Demonstrator in Physiology, in Sheffield University. The Council have decided to appoint also an additional Lecturer in Education.

* * *

Mr. Arthur Lapworth, D.Sc. Lond., head of the Chemical Department of the Goldsmiths' Institute, New Cross, has been appointed a Senior Lecturer in Chemistry and Assistant Director of the Inorganic Laboratories, Manchester University.

* * *

Dr. Griffith Thomas, Principal of Wycliffe Hall, Oxford, has been nominated for the Archbishopric of Sydney.

* * *

Applications for a Junior Lectureship in French and a Junior Lectureship in German in Edinburgh University should be lodged with the Secretary of the University Court by July 12. £200 a year each.

* * *

A Lecturer in French and English is required for Homerton Training College, Cambridge. Apply early to the Principal. At least £100 resident.

* * *

Mr. Oscar Browning has resigned the Principalship of the Cambridge University Day Training College.

* * *

Mr. G. Fenton, B.A. Aberdeen, has been elected President of the Educational Institute of Scotland.

* * *

Applications for the Principalship of the Technical School, Dudley, should be lodged with the Director of Education, Dudley, by July 12. £200 to £250.

* * *

Mr. Nowell Charles Smith, M.A. Oxon., assistant master, Winchester College, has been appointed Head Master of Sherborne School.

* * *

Mr. H. C. Norman, B.A. Oxon, assistant master (French), Liverpool Institute, has been appointed Head Master of the Secondary School, Ramsgate.

* * *

The Rev. T. S. Bateman, B.A. Lond., assistant master, Watford Grammar School, has been appointed Head Master of the Grammar School, Coleshill.

* * *

A Head Master is required for the County Grammar School of King Edward VII., Coalville (£350); also a Science Master and Principal, and an Art Master, for Loughborough Technical Institute (£225 and £220). Apply to the Director of Education, Leicestershire C.C. (33 Bowling Green Street, Leicester) by July 14.

* * *

The Rev. W. Lloyd, M.A., Head Master of Ashby Grammar School, has been presented to the living of Tickenhall, Derbyshire.

* * *

Mr. F. Shirley Goodwin, M.A., Second Classical Master, Perse Grammar School, Cambridge, has been appointed Rector of the High School, Glasgow.

Mr. W. J. Watson, M.A., Rector of Inverness Royal Academy, has been appointed Rector of the Royal High School, Edinburgh.

* * *

Applications for the Head Mastership of the School of Art, Halifax, should be lodged with the Secretary (22 Union Street) by July 7. £250.

* * *

An Under Librarian is required at Cambridge University Library. Age 25 to 40. Apply to the Librarian by September 30.

* * *

A Librarian is required by University College, Dundee. Apply to the Secretary of the College by July 6. £120 to £150.

* * *

A Non-resident Mistress (for Mathematics and Class Singing principally) is required at Winchester County School. Degree and Teaching Diploma essential. Forms from the Director of Education for the County of Southampton, The Castle, Winchester, up to July 12. £100.

Literary Items.

Messrs. George Bell & Sons announce a new edition of Webster's "International Dictionary." Very few books have received such authoritative and general testimony in favour of their utility. The "Twentieth Century" edition will contain 2,348 pages and 5,000 illustrations. The work has been revised throughout, and will have a new supplement of 25,000 additional words, phrases, and definitions, prepared under the direct supervision of Mr. W. T. Harris, Ph.D., LL.D.

* * *

Messrs. J. M. Dent & Co. will shortly publish "Animals and their Ways," by Ernest Evans, a companion volume to the author's "Plants and their Ways"—written for students of Nature Study, and suitable as a first book of Zoology. Also the Intermediate Section of the "Ruskin Nature Reader," designed on the same plan as the Senior Section published last autumn.

* * *

Messrs. Heffer hope to publish in the early autumn an edition of the "Symposium" of Plato, by Mr. R. G. Bury—the first annotated edition of the dialogue produced in England. It will contain a revised text, and a literary and philosophical commentary.

* * *

Mr. Hammond Hall, late Editor of the *Daily Graphic*, has accepted the editorship of "Hazell's Annual," in succession to Mr. Wm. Palmer, who has resigned after seventeen years' service.

General.

Sir Robert Stout, Chief Justice of New Zealand, who is at present on a visit to London, spoke as follows concerning University education:—"We have double the number relatively getting a University education that you have. We hope the time will soon come when the Universities will be as free as State schools. Until that time comes I feel we shall not be doing our duty. A University career ought not to be a question of a man's means, but of his capacity."

* * *

The Educational Exhibit in the Department of Africa and the East at the Agricultural Hall shows extremely interesting work from all grades of colleges and schools. The work of the Japanese schools attracts special attention.

ASSISTANT MASTERS IN SECONDARY SCHOOLS.

CONFERENCE AT CAMBRIDGE.

THE Incorporated Association of Assistant Masters in Secondary Schools met at the Leys School, Cambridge, on May 29. The morning was occupied by the deliberations of the Council on the Teachers' Register, the Pension Fund, and a Sickness and Accident Insurance scheme; and a resolution was unanimously passed instructing the Executive Committee to consider the advisability of establishing such a scheme and to report thereon to the Council in January next. In the afternoon the proceedings were opened with the address of the Chairman (Mr. W. A. Newsome, Stationers' School) to the General Meeting of the members of the Association.

THE CHAIRMAN'S ADDRESS.

The Chairman dealt first with the question of the Teachers' Register. The Permissive Clauses in the Act of 1906 (he said) provide for (1) the formation of a Registration Council representative of the teaching profession; (2) a Register to contain the names of all teachers in one column. "There are thus obviously two ways of dealing with the problem: settle the composition of the Council, and leave the Register to its care; or, come to some agreement first as to the form of the Register, and then constitute the Council. Now we may as well state here, clearly and openly, that the profession, as such, has no use for a one-column Register. This huge work, containing some hundreds of thousands of names, would be useless for reference; the general public could not use it, and would not if it could. The old two-column Register had failed mainly because of its form; it had accentuated class prejudices, and had undoubtedly caused bitterness, perhaps as justifiable as it was considerable. It was evident, therefore, that the real crux of the situation was the determination of the form of the Register, the principles of registration, or the "plan of registration," as Mr. Madeley called it at the Head Masters' January meeting. Thus it was that the obvious method of approaching the problem was along what seemed to be the line of least resistance, by way of a representative Registration Council. It was for this reason that the Federal Council—the oft-maligned Federal Council of Secondary Schools Associations—invited Dr. Gow to undertake the conduct of negotiations which, it was hoped, would result in the election of a representative body, acceptable to the Board of Education and to all branches of the teaching profession. Dr. Gow assembled a Committee which contained representatives of primary, secondary, and technical education; and a working agreement was ultimately arrived at. We are all familiar with the course of events which culminated in the deadlock of last November, and, while we deplore the result, it is evident that the rebuff was inevitable. And here I should like to take the opportunity of publicly acknowledging the debt that all teachers owe Dr. Gow for his self-sacrifice, his immense expenditure of time and energy on a task the accomplishment of which has proved hopeless—a task which, if successful, would only have postponed the conflict of interests, and might have prevented the great body of teachers from expressing their wishes on what is, after all, the point of vital importance to us, the form of the Register. Thus it is that, having failed to get the Council, we are compelled to grapple with the real difficulty. The old Register failed mainly because it shut up teachers in cast-iron compartments. The plan we advocate for the new Register should remove this objection once and for all. By Clause 16 of the Act, there must be one Register for all teachers. We suggest that to this there be appended sub-registers for special qualifications: (1) for primary teachers, (2) for secondary teachers, (3) for technical teachers and teachers of special subjects. At first sight this looks perilously like the old Register; but, under the proposed scheme, it will be possible for a man's name to appear on each of the sub-registers; the primary teacher's main objection to the old Register will be removed; and we believe that by the mere proposal of such a plan a great step will be taken towards the attainment of professional unity, whether the Register ever becomes an accomplished fact or not."

Mr. Newsome next reviewed the recent action of the Leeds Education Committee and "the corresponding attempts" elsewhere in regard to teachers' salaries. He then drew attention to the work of a Sub-Committee of the Association which had been appointed to investigate the conditions of service of teachers in other European countries, whether as Civil servants or otherwise, and expressed the hope that the report of this Committee, though it might provoke some divergence of opinion, would have great influence on the future policy of the Association, and quoted Dr. Upcott's dictum that what English education most wanted was unity, but unity without uniformity.

TEACHERS AND LOCAL AUTHORITIES.

A resolution that "This Association strongly protests against the unjust and unwise action of certain Local Authorities in repudiating their contractual obligations to teachers in schools under their control, and regards all attempts to suspend increases of salary or to lower salary scales as derogatory to the best interests of secondary education," was next moved from the chair, and, after some vigorous expression of opinion, was carried unanimously.

THE TEACHERS' REGISTER.

Mr. C. H. Greene (Berkhamsted School) introduced the subject of the Teachers' Register, and moved *en bloc* the following series of resolutions which had been adopted unanimously at the Council meeting in the morning:—

1. That a comprehensive Register of Teachers should be started in accordance with the Education (Admistrative Provisions) Act, 1906.
2. That the Register should contain opposite the name of each teacher reference numbers indicating the Sub-Registers and Schedules in which further details of each teacher's qualifications may be found.
3. That each Sub-Register should contain the names of teachers qualified to teach in one type of school (*e.g.*, primary, secondary, and technical); and should provide, by reference to Schedules, for the proper differentiation of teachers in respect of attainments, training, and experience.
4. That teachers should be admissible to as many Sub-Registers and Schedules as their qualifications warrant.
5. That a uniform fee of not less than one guinea should be paid by or on behalf of each teacher registered.
6. That for the purposes of registration the term *teacher* should be provisionally defined by Order in Council.
7. That the Order in Council should provide for the transference to the new Register of all teachers on the old Register, and for their names to be placed in the appropriate Sub-Registers.
8. That the total amount of fees already paid for the registration of teachers (about £12,000) should be transferred to the new Registration Council.
9. That the Order in Council should provide for the formation of a Registration Council. to consist, in addition to a small number of nominated or co-opted members, of representatives of each Sub-Register; such representatives to be elected to serve for a definite period in equal numbers by the teachers on each Sub-Register; and in such a manner as to secure that the whole Council should not retire at one time.
10. That, as a temporary measure, the Order in Council should provide that in the first instance the Registration Council be formed in the proportions above indicated, but on nomination by certain Associations or Bodies to be specified in the Order.

These resolutions were submitted to enable and empower the Executive Committee to answer questions that have been proposed to them, and to assist in future discussion, and they are not to be taken as a final expression of opinion on the part of the Association. They were carried unanimously.

SPECIALIST AND FORM SYSTEMS.

Mr. G. Warre Cornish (University College School) then read a stimulating and suggestive paper on "The Specialist and Form Systems in Secondary Schools Compared," in which he pleaded that one man should teach one subject and one subject only. In support of his contention he dealt exhaustively with Latin, in terms which should be of special interest to the advocates of the new method of teaching this language:—"Latin," he said, "is a subject which particularly requires special teaching, and specialist knowledge and methods. Its condition at present is highly unsatisfactory. Mistakes are made which would be an impossibility to boys in a subject of which they had a living understanding, whilst the simplest passage direct from an ancient author is apt to floor the great majority. The reason is that teachers take a narrow view of the subject. Latin is an easy subject to teach mechanically and superficially. The majority of teachers think that a very modest amount of scholarship is sufficient to instruct any but the highest forms. Consequently the knowledge of the language bears small reference to the language as a language, or to the ancient world as a field of study. It is a merely pedagogic subject, taught not for its own sake, but rather as a form of mental gymnastic. But Latin is capable, if specially treated, and if the proper scope of the subject is allowed, of being far more than this. I am not speaking now of the few who arrive at real scholarship and real appreciation of ancient authors, but of Latin as a compulsory subject in lower forms. The great

Digitized by Google

possibilities of the subject are not done justice to. A teacher should know the language as a language, be not afraid to write it, and handle it as freely as possible, even though his results may not be the equal of Cicero and Tacitus. If he is afraid of the language, dare not trust himself in it, and still trembles at the thought of lurking mistakes and un-Latin forms of speech, what degree of familiarity or ease can his pupils be expected to attain? Only one man in a thousand can learn to write good Latin, but any teacher can with practice learn to use Latin as a language." Several speakers followed, and it was pointed out that a prolonged course of teaching one subject might lead to staleness, was unlikely to promote due co-ordination in the school time-table, and could not be introduced into the smaller schools on the ground of expense.

CONFÉRENCES FRANÇAISES.

SOCIÉTÉ NATIONALE DES PROFESSEURS DE FRANÇAIS.

MADAME TALLIEN.

Par M. A. CANIVET.

LE 29 mai, à la belle salle du College of Preceptors, M. A. Canivet traitait, devant une nombreuse et sympathique assistance, l'intéressant sujet de "Madame Tallien." M. le professeur Couillault était au fauteuil présidentiel.

Le conférencier, après avoir rapidement critiqué les quelques ouvrages qui ont été écrits sur cette femme célèbre de l'époque révolutionnaire—lesquels, déclare-t-il, sont partiaux et ne projettent aucune lumière définitive sur Mme Tallien—entre au cœur même de son sujet.

Née en Espagne en 1773, d'un père d'origine française occupant une haute situation à la cour de Madrid, la future Mme Tallien, qui n'est encore que Mlle Thérézia Cabarrus, vient à Paris, en 1785, pour parfaire (ou plutôt refaire) son éducation qui a été jusqu'alors assez décousue. Elle épouse le marquis de Fontenay en 1788, n'étant encore âgée que de quinze ans et demi. Elle est déjà célèbre dans le monde par sa superbe chevelure de jais et son extraordinaire beauté qui fera tourner tant de têtes.

Fuyant la Terreur, le marquis et la marquise, qui sont en instance de divorce mais que le danger commun rapproche, arrivent à Bordeaux en 1793, au moment où les républicains bordelais, indignés de la mise à mort des Girondins, menacent de créer une insurrection dans le Midi de la France, mouvement que la Convention prévient en envoyant à Bordeaux l'un de ses membres les plus farouches, le jeune, beau et peu scrupuleux Tallien. Celui-ci établit le régime de la Terreur par tout le Midi. La belle marquise de Fontenay, qui a repris son nom de Thérézia Cabarrus, se trouve un jour comprise dans l'une des terribles "fournées" bordelaises.

Tallien, qui semble l'avoir aimée en secret quelques années auparavant, lui sauve la vie et fait d'elle une déesse révolutionnaire. En amazone, coiffée du bonnet rouge, on la voit plus d'une fois passer à cheval dans les rues de Bordeaux, ou, en robes de mousseline, trôner sur les coussins d'une voiture de gala, aux côtés du proconsul tout d'abord implacable et qui, par amour d'elle, s'adoucit et épargne les suspects. Des espions de Robespierre dénoncent au Comité de Salut public le trop faible constitutionnel endormi aux genoux d'une aristocrate pendant que toutes sortes d'ennemis conspirent contre la République.

Tallien est venu se justifier à Paris; l'ex-marquise l'y rejoint peu après. Robespierre s'est déjà résolu à les envoyer tous deux à la guillotine. Mais Tallien a sur la Convention une influence considérable: "le tyran" n'ose le frapper de face; du moins, se venge-t-il en faisant jeter son amie en prison. Pour sauver cette dernière, que la guillotine menace, Tallien fait tomber Robespierre (9 thermidor, an II.; 27 juillet 1794).

C'est la fin de la Terreur; ce sont les portes des prisons qui s'ouvrent, ce sont des milliers de suspects arrachés à une mort certaine: Thérézia Cabarrus devient la patronne des naufragés de l'ancien régime; on la bénit sous le nom de Notre-Dame-de-Thermidor. De juillet 1794 à octobre 1795, elle et Tallien sont les idoles de Paris; dans sa reconnaissance envers son sauveur et son enthousiasme pour le héros de Thermidor, elle a voulu définitivement lier son sort au sien; ils se sont mariés et l'avenir semble leur promettre toutes les joies et tous les bonheurs.

La place nous manque pour suivre le conférencier dans l'exposition de la seconde partie de l'odyssée de Mme Tallien. C'est pourtant la période la plus intéressante de la vie de cette femme extraordinaire. C'en est aussi la moins connue. Qu'il nous suffise de dire que l'exposé de M. A. Canivet, forcément sobre et circonspect, a laissé entrevoir de fort curieux dessous de l'histoire de l'époque dorée du Directoire. La peinture saisissante qu'il a faite du déclin de Tallien, de l'ambition effrénée de l'ex-marquise, de sa soif d'adulation et de plaisirs, de sa trahison de l'homme qui lui avait tout sacrifié et sauvé deux fois la vie; puis de la misère, de l'oubli où mourut l'ancien terroriste pendant que la belle Thérézia continuait sa course ascendante dans le ciel de la célébrité et de la fortune mondaine, finissant princesse de Chimay, mère de famille respectée et entourée d'enfants — cette peinture ne peut que donner aux curieux d'histoire le désir de se documenter davantage sur cette femme et sur cette période particulièrement captivante.

REVIEWS.

A CENTURY OF GERMAN HISTORY.

A History of Germany, 1715–1815. By C. T. Atkinson, Fellow and Modern History Lecturer of Exeter College, Oxford, formerly Demy of Magdalen College, Oxford. (12s. 6d. net. Methuen.)

During the hundred years covered by Mr. Atkinson's volume, Germany "was not a nation with a well-defined national life and history, but was merely a chaotic collection of states with conflicting aims and ideals, constantly engaged in struggles with one another." At the beginning of the period Mr. Atkinson counts three hundred and sixty-five states as making up the German Kingdom—one for every day in the year; and "particularism and localism were infinitely stronger than any unifying or centralizing tendencies." Moreover, the struggles of the principal states "are so completely merged in the international history of Europe as a whole that the affairs of Germany only become intelligible, if at all, when narrated as part of the history of all Europe." In such straits and complications, then, the historian with limited space must exercise a decisive power of selection. Mr. Atkinson chooses to lay most emphasis upon the military aspect of affairs, remarking but casually upon the social conditions and the intellectual and literary life of the period. It matters little to inquire whether the military movements, and especially the details of some at least of the battles, might not have been treated so as to relieve space for a more complete presentation of the various elements of the life of the time. Mr. Atkinson has deliberately decided to do what he conceives he can do best, and the scope of his subject is quite important enough for independent handling.

Wherever the historian makes a start, he is liable to be chided for not starting somewhere else. Big as a break may look, there is always an underlying continuity to reckon with. The Peace of Westphalia in 1648 may seem a more decisive opening, but the essential failure of the Hapsburgs (it should require but little courage to write the correct form, "Habsburgs") "to make real their position as titular heads of Germany came with the premature death of Joseph I." in 1711; and "the condition in which the year 1715 found Germany differed in degree rather than in kind from that in which the Thirty Years' War had left her in 1648." Mr. Armstrong opens his work with a succinct and lucid sketch of the Empire and its institutions, and of the states composing the German Kingdom in 1715. After bringing into line various preliminary and collateral movements, he puts his strength into an ample narrative of the War of the Austrian Succession and of the Seven Years' War, interposing an instructive account of Maria Theresa's reforms and of the Diplomatic Revolution. The military operations are described with great spirit, and on an ample scale. The Partition of Poland, Mr. Armstrong says, "is an action which it is much easier to condemn in the strongest terms than to extenuate in the least." But "it was only with real and sincere reluctance that Maria Theresa at last listened to the urgent advocacy of it by Kaunitz and Joseph," her ambitious and energetic son, who was now gaining the upper hand in the Austrian counsels. Mr. Armstrong's estimate of Maria Theresa is worth quoting:—

What she did for Austria it is hard to over-estimate. Her indomitable courage and perseverance carried her dominions through an almost unexampled danger and made the surmounting of that very danger a

Digitized by Google

source of union and strength. She did much to reconcile Hungary to the Hapsburg dynasty, to reform the administration and the social, financial, and political conditions of the countries over which she ruled. A woman of the highest character, a true mother of her people, a "benevolent despot" in the very best sense of the words, she had the tact and sympathy to see what was possible and suitable, and to avoid the errors into which her more impetuous, more theoretical, and more self-centred son fell. In all the annals of the House of Hapsburg, there is hardly any name which can be put on the same level as that of Maria Theresa.

The Silesian Wars had immensely enhanced the prestige and the whole position of Prussia in Europe as well as in Germany, and rendered it hopeless to look for the reunion of Germany by the House of Hapsburg. "The only real effect of the war on Germany was to complete the utter disintegration of the German kingdom, which had suffered so much through its association with the Holy Roman Empire." Germany thus lay open to the assault of France. Until the year 1791, however, the French Revolution "was regarded as a purely French concern, important to the rest of Europe only because it prevented France from taking her usual part in international politics." In 1792 the armies were in the field, from the intervention of Austria and Prussia in the internal affairs of France. The story of the conflict down to the liberation of Germany from the yoke of Napoleon occupies the remainder of the volume—a series of spirited descriptions of strategic movements and military operations. There are thirty-five maps and plans, and a full index. The work is comprehensive and scholarly, and presents in a reasonable compass a very clear account of a very important period in the development of modern central Europe.

CONICS.

(1) *Cartesian Plane Geometry.* Part I., *Analytical Conics.* By C. A. Scott, D.Sc. (5s.) (2) *Geometry of the Conic.* By G. H. Bryan, M.A., F.R.S., and R. H. Pinkerton, M.A. (3s. 6d. Dent.)

Both these volumes belong to a series of school text-books—mathematical and scientific—published by Messrs. Dent & Co., under the able editorship of Mr. W. J. Greenstreet, M.A., F.R.A.S. Each affords a valuable course in the geometry of the plane sections of the cone, the former dealing with the subject from the standpoint of analysis, the latter proving the elementary properties of these and certain other well known curves by the methods of geometry unaided by algebra. Each work has certain characteristics which give it an individuality amongst treatises on this branch of mathematics. To Dr. Charlotte Scott's volume, in addition to its own intrinsic worth, which must claim for it a leading place in the ranks of standard text-books, there attaches a melancholy interest by reason of the circumstances under which its production was undertaken. The task of contributing to the series a volume on the subject was left unfinished owing to the untimely death of the appointed author, the late Mr. R. W. H. T. Hudson. His MS., we learn from Dr. Scott's preface, has left a distinct impress on the work as we have it; but, in the main, the actual writer has given to students her own view of a subject in which she is known to be an expert by those who have had an opportunity of seeing some of the results of her higher work. The present treatise may be widely differentiated from others of its class by the fact that the theory is studied throughout with the help of line as well as point co-ordinates. The combined use of the two systems is preferred as likely to ensure a clearer insight into fundamental truths than the exclusive employment of either, and the whole treatment testifies to the author's skill. The writer, however, allows the traditional point system to occupy the more prominent place of the two. The entire course is most instructive, and calculated to give the student a grasp of the broad principles of the subject.

The special character of Messrs. Bryan and Pinkerton's text-book is to be looked for in the arrangement rather than in the actual contents of the text, and in the careful summary which precedes each chapter. The development of the theory of the three leading varieties of the conic proceeds *pari passu*, each curve throwing light on the others, by means of a discussion on the one hand of properties common to all and on the other of those peculiar to each. In some cases the diagrams are of exceptional excellence, but all are good. The book is designed to help the student who, without a knowledge of the geometry of the conic sections, is often placed at a serious disadvantage in his later work.

GENERAL NOTICES.

CLASSICS.

Atlas Antiquus. By Emil Reich, Doctor Juris. (10s. net. Macmillan.)

Dr. Reich follows in this volume the plan of his Atlas of English History. The chief purpose of the work is "to project historical events graphically upon the territory in which they happened and by the configuration of which they were largely influenced." There are forty-eight "original graphic maps, with elaborate text to each map." The maps are excellently produced. The drawing of the lines of the multifarious military movements of Greek and Roman history must have involved enormous labour. Apparently confusing as the lines often appear to be at the first glance, there needs but a little patience to follow them surely: and they will be very helpful to the student—though he ought really to draw his own lines. The text accompanying each map presents a concise historical outline of the movements illustrated; it is very much better done than was the text of the English History Atlas. There is a full index.

The Annals of Tacitus, Books XI.–XVI.: an English Translation. By George Gilbert Ramsay, M.A. Oxon., Litt.D. Dubl., LL.D. Edin., Aber., & Glas., late Professor of Humanity in the University of Glasgow. (15s. net. John Murray.)

Dr. Ramsay now completes his English version of the "Annals." As in the former volume, he has diligently thought out the meaning of the text and expressed it in plain narrative English. The form is, of course, not Taciteau: that would tax the powers of a Carlyle at his best, and probably enough would satisfy nobody. Nor is the English marked by such study of the niceties of expression as the translator has bestowed upon Latin prose. Still it is direct and vigorous English, and it reproduces with alert and patient fidelity the context of the original; and that suffices. The footnotes "are intended to put the English reader in possession of all the information needed for the understanding and appreciation of the history, and also to justify to the scholar, where necessary, the interpretation given, or the reading followed, in the translation." They are ample and welcome aids, and they bear the marks of the careful and discriminating scholarship that characterizes the translation. In a long discursive introduction, Dr. Ramsay reviews the history recorded in the Books translated, discusses the art of translation, and deals in considerable detail with outstanding characteristics of the language and style of Tacitus. Though (and to some extent because) occasionally discursive, the essay is of sustained interest; and it will be found very instructive and suggestive. There are two excellent maps—Roman Britain, and Armenia. The index is reasonably full. We heartily congratulate Dr. Ramsay on the accomplishment of a scholarly, sincere, and most laborious work.

A Grammar of the Old Testament in Greek according to the Septuagint. By Henry St. John Thackeray, M.A., sometime Scholar of King's College, Cambridge. Vol. I.: Introduction, Orthography, and Accidence. (8s. net. Cambridge University Press.)

This volume is yet another evidence of the increasing attention of scholars to Hellenistic Greek, and particularly to the Septuagint. The Attic purist may contemn a Greek that is far removed from the Attic standard; but "the Septuagint, in view both of the period which it covers and the variety of its styles, ranging from the non-literary vernacular to the artificial Atticistic, affords the most promising ground for the investigation of the peculiarities of the Hellenistic or 'common' language." Besides, it was the only form in which the Scriptures were known to many generations of Jews and Christians; it exercised a strong influence upon New Testament and Patristic writers; and "the fact that it is in the main a translation gives it a special character and raises the difficult question of the extent of Semitic influence upon the written and spoken Greek of a bilingual people." An elaborate introduction deals at considerable length with grammar and textual criticism, the grouping of the LXX Books, the κοινή (basis of LXX Greek), the Semitic element, the papyri and the uncial MSS. Then follows the detailed treatment of the orthography and phonetics, and of the Accidence. The volume has obviously cost immense labour, minute, exacting, and but faintly realisable by any one that has not gone through some similar process of investigation; and it must be regarded as a very valuable contribution to the elucidation of the later development of Greek, and to its application under the peculiar conditions of Semitic influence.

MATHEMATICS.

A First Course in the Differential and Integral Calculus. By William F. Osgood, Ph.D. (10s. 6d. Macmillan.)

A well written and very interesting treatise. The author—who holds the Professorship of Mathematics in Harvard University—gives to his readers a course in differential and integral calculus in which the subject is treated by methods analogous to those that he has used for years past in the classroom of the University. The scheme adopted is, moreover, in general agreement with the lines of argument followed by Prof. B. O. Peirce in this branch of mathematics. The work exemplifies a happy combination of theory with the practical applications to which it lends itself. We see one of the special features in the writer's mode of grouping the leading elementary principles of the calculus and in his discussion

Digitized by Google

of a group first in its formal and theoretical aspect and immediately afterwards in its relation to practical problems, physical, geometrical, &c. Perhaps this may be considered before all others the ruling characteristic of the treatise. Another excellent quality, met with indeed in many others of the best manuals, is the absence of proofs that are rendered unnecessarily difficult either with regard to method or to language.

Correlated Arithmetic (Scheme II). By S. W. Trought, B.A. Book III. (Teacher's), 1s. 3d. net. Book IV. (Scholar's), 3½d. (Pitman.)

A continuation of the series, the earlier volumes of which attracted favourable notice in these columns some time since. The course of instruction is carried on by the writer on the same lines as in the former parts of the work. As the epithet "correlated" implies, a special feature of the scheme of study is the attempt to teach the subject not as an isolated one, but in its relation to other branches included in the school curriculum.

Elementary Mensuration. By W. M. Baker, M.A., and A. A. Bourne, M.A. (1s. 6d. George Bell.)

A handy little volume designed for the useful purpose of providing a course of elementary work in mensuration which will not be beyond the grasp of students whose mathematical knowledge is limited to that acquired through the study of arithmetic. Nevertheless, the contents of the manual may also be of much practical value to more advanced workers, since the matter discussed is fairly comprehensive in character. The text-book is fully illustrated and neatly brought out.

SCIENCE.

Dent's Scientific Primers (Edited by J. Reynolds Green, Sc.D., F.R.S.).—(1) *Chemistry*, by W. A. Tilden, D.Sc., F.R.S., Professor of Chemistry in the Imperial College of Science and Technology.—(2) *Biology*, by R. J. Harvey Gibson, M.A., Professor of Botany in the University of Liverpool.—(3) *Botany*, by J. Reynolds Green, Sc.D., F.R.S., Downing College, Cambridge. (1s. net each.)

Excellent as were the science primers of a generation ago, the time has certainly come for a restatement of the fundamental theories of the several sciences in simple language and in an introductory manner. Science has advanced immensely; "new facts have been discovered; older observations have been re-interpreted; new theories have been formulated, and old ones amended or discarded altogether": indeed, old boundary lines between the sciences have been obliterated or broken. For this new series Messrs. Dent have wisely appealed to foremost men in the several sciences. The first three volumes of the series are admirable examples of the union of scientific knowledge and popular exposition. The form is handy; the type and the get-up are excellent; and the illustrations are numerous and effective.

"Practical Elementary Science Series."—*Elementary Applied Mechanics (Statics), introducing the Unitary System.* By Alexander Norwell, B.Sc., C.E., Principal of Greenock Technical School and Watt Memorial Engineering and Navigation College, Greenock. (3s. Longmans.)

Mr. Norwell here gives the substance of his teaching of statics to young engineering students in evening class during the past eighteen years. He makes a distinctive feature of the unitary system in working out the examples, and no doubt the consistent employment of units secures marked advantages. Without attempting a complete exposition of graphical statics, he yet introduces efficiently graphical solutions and methods by way of complement to the arithmetical solutions. The trigonometry of the right-angled triangle is freely applied, often side by side with other methods; and this element of the treatment should receive serious attention. Numerous typical examples are worked out, and an abundant selection of examples for practice is provided under every section, with the answers appended. There are 218 figures. The volume has been thoroughly well thought out, and the exposition is lucid and pointed. An exceptionally capable and practical text-book.

A Public School Chemistry for Beginners. By E. C. Lester, B.Sc., Senior Science Master, Eastbourne College, and B. Tordorff, B.A., late Scholar of St. John's College, Oxford, Assistant Science Master, Eastbourne College. (3s. 6d. Alston Rivers.)

The authors make a valiant effort to place themselves in the position of young beginners in chemistry, and to realize what is really important at the moment and what may be advantageously postponed or specially arranged. They present in an interesting form such theoretical information as may be learnt outside the laboratory just as well as in it; and they satisfy the practical claims by describing the important experiments and furnishing at the end of each chapter a well-selected and considerable set of suggested experiments, as well as testing questions. The final chapter is devoted to the metals—somewhat of a novelty, perhaps, but still a procedure bearing very directly upon portions of a beginner's practical work. There are 26 figures. A very sensible and serviceable book.

Botany for Matriculation. By F. Cavers, D.Sc., F.L.S., Professor of Biology at Hartley University College, Southampton. (5s. 6d. Clive: University Tutorial Series).

Prof. Cavers furnishes a very full and lucid treatment of the higher plants—flowering or seed plants. He justifies the inclusion of a good deal of matter that is usually reserved for books on chemistry, physics, meteorology, and geology, by the opinion that ecology (the study of adaptation to environment) and physiology are the aspects of plant life that should be chiefly presented to beginners; and he gives a long chapter on air, water, and soil, because "it is impossible to get a clear picture of the adaptations of a plant without carefully studying its natural surroundings and also experimenting with it under controlled conditions." The principle is right, and it carries with it a distinct accession of interest. Prof. Cavers's name guarantees the quality of the technical exposition. A large number of experiments are proposed, and to each chapter is attached a considerable series of questions. There are 179 figures. An excellent introductory work.

MODERN LANGUAGES.

(1) *Polyglot Phrases.* Collected and Arranged by Lewis Nicholas Worthington, M.A. Yale, M.D., Officier d'Académie, &c. (5s. Bell.) (2) *French and English Parallels.* By F. R. M. Fursdon. (3s. 6d. net. Methuen.)

(1) Dr. Worthington presents a considerable volume of phrases, spaciously printed indeed, yet containing 2,641 sentences, each in four languages—French, English, Italian, and German. We fail to discover any principle of arrangement: there is no division of the text indicating a fresh aspect of the subject, and there is nothing, so far as we can see, in the proximity of particular phrases to suggest an underlying classification, nor is there an index, or a list of contents. You plunge in anywhere, and you are instructed as chance will have it. However, the collection is a very good one to dip into, and the comparison of the different modes of expression in the different languages is always interesting to linguistic students. (2) Mr. Fursdon endeavours to be systematic, as far as his materials will bend to system. He begins with definitions of terms: gallicism, locution, idiom, &c. He next divides his matter into three parts: idioms, metaphors, and maxims and proverbs; and he arranges the idioms and the metaphors in alphabetical order—necessarily somewhat uncertain, but still an order. Moreover, he appends both a French and an English index. The equivalents are idiomatically expressed, and the volume will form a most helpful companion to text and dictionary.

French Series for Rapid Reading. General Editors: Otto Siepmann and Eugène Pellissier. (6d. each volume. Macmillan.)

This series forms a welcome addition to the readings in good and easy French likely to interest beginners. The books ought to be read largely at home as well as in school. The story will be a sufficient attraction, which will not be lessened by being disengaged from the school routine; and the notes will explain all that needs explanation in the matter of the text, and the "Words and Phrases" will serve adequately for vocabulary. The type is excellent, and the get-up is agreeable. There are to be three sections—Elementary, Intermediate, and Advanced. All the examples as yet before us belong to the Elementary Section: (1) Les Aventures du dernier Abencerage (Chateaubriand); (2) Les Deux Frères (Dumas); (3) La Chasse au Lion (Gérard); (4) Le Chien Volant (Mme de Girardin); (5) Pif Paf, ou L'Art de gouverner les Hommes (Laboulaye); (6) Yvon et Finette (Laboulaye); (7) Les Prisonniers du Caucase (de Maistre); (8) Contes des Fées (Perrault); (9) Les Jeunes Parisiens (Pezet); (10) Pocahontas (Pichot); (11) David le Trappeur (Souvestre); (12) La Bibliothèque de mon Oncle (Töpffer); (13) Le Col d'Anterne (Töpffer). Of course, the works are nearly all "adapted" to the special purpose. An excellent series.

Messrs. Whittaker publish a *Teacher's Handbook to Mackay and Curtis's First and Second French Books*, consisting of "Notes to First French Book," by D. Mackay, M.A., Ayr Academy, and F. J. Curtis, Ph.D., B.A., Professor at the Akademie, Frankfurt am Main, formerly of Dollar Institution, and of "Notes to Second French Book," by D. Mackay, M.A. (1s. net). The original works are framed in accordance with the direct method, and the new explanations and directions drive home the main points. The aid of phonetics is freely invoked. A very thoughtful and practical book.

The Cambridge University Press issues a fourth edition of Dr. Karl Breul's papers on *The Teaching of Modern Foreign Languages and the Training of Teachers* (2s. 6d. net). The brochure is steadily developing into a book. It has been very carefully revised and not inconsiderably enlarged, so as to bring it up to date in every respect. We join cordially in the author's hope "that it may once more prove useful to many students and teachers, and in some parts also to educationists and members of Local Education Committees who have officially to deal with modern languages." And we have no doubt that it will.

A Pocket Glossary of English-Spanish and Spanish-English Technical Terms, suitable for the Engineering, Manufacturing, and Mining Industries, by R. D. Monteverde, B.A. Madrid, Examiner to the London County Council, Lecturer at the Birkbeck College, &c., cannot fail to be most useful in the large and increasing commercial intercourse of English- and Spanish-speaking countries (2s. 6d. net, Crosby, Lockwood, & Son). It is neatly and strongly got up, and can be conveniently lodged in the vest pocket.

Esperanto insistently claims attention. *Esperanto for the English*, by A. Franks (6d. net, Milner, 15A Paternoster Row), affords ample instruction in the language: grammar, exercises, correspondence, conversations, vocabulary. *The Student's Elementary Text-Book of Esperanto*,

Digitized by Google

by Leslie P. Beresford, LL.D., M.A. (International Language Publishing Association) very efficiently sets out "first steps."

ENGLISH LITERATURE FOR SCHOOLS.

First Friends in Literature. (1s. each volume. Edward Arnold.)

This interesting series has been projected to meet the demand for continuous readings in good literature. The works produced have been edited and abridged so as to bring them within the uniform limit imposed by the circumstances (160 pages). The story is kept intact, however, by a careful summary of the omitted parts (printed in italic type), the rest of the text being practically unaltered. Allusions and hard words are briefly explained at the end of the book. Each volume is furnished with eight full-page illustrations, and the type is generous and the binding substantial. Of this admirable series we have half-a-dozen specimens: (1) "A Christmas Carol" (Dickens); (2) "Parables from Nature" (Mrs. Gatty); (3) "Robinson Crusoe" (Defoe); (4) "The Arabian Nights"; (5) "The Talisman" (Scott); (6) "Tom Brown's School Days" (Hughes).

Bell's Literature Readers. (1s. each volume.)

Another new series of standard works in English literature by well-known authors that have written specially for the young. The print is large and clear and the binding strong, and each volume has eight full-page illustrations. Of this excellent series we have (1) "Six to Sixteen" (Mrs. Ewing); (2) "The Water Babies" (Kingsley); (3) "The Last of the Mohicans" (Cooper); (4) "Feats on the Fiord" (Harriet Martineau); (5) "Parables from Nature" (Mrs. Gatty). Abridgment has been necessary to fit the works into the regulation number of pages (160). Difficult words and references are explained briefly at the end of each volume.

(1) *Voyages of the Elizabethan Seamen.* Edited by Edward John Payne. (4s. 6d.) (2) *Matthew Arnold's "Merope,"* to which is appended the "*Electra*" of Sophocles, translated by Robert Whitelaw. Edited by the late Prof. J. Churton Collins. (3s. 6d.) (3) *Selections from Dryden.* Chosen and Edited by G. E. Hadow, Tutor in English Literature, Lady Margaret's Hall, Oxford. (2s. 6d.) (4) *The Coverley Papers* from the *Spectator.* Edited by O. M. Myers. (2s.) (5) *Pope's Rape of the Lock.* Edited by George Holden. (2s.) (Clarendon Press.)

(1) Mr. Payne's volume is a delightful selection of narratives from the "Principal Navigations" of Hakluyt, illustrating the truth and fact of English expansion in the great days of Elizabeth. There is an ample historical introduction and an account of the life and works of Hakluyt. The selections represent voyages of Hawkins, Frobisher, Drake, Gilbert, Amadas and Barlow, and Cavendish. Some instructive notes are appended by Prof. C. Raymond Beazley, who has also provided three maps. Portraits of each of the great navigators whose voyages are chronicled (except Amadas and Barlow) and of Sir Walter Raleigh (frontispiece) add much interest to the volume. —(2) "This volume is an experiment. It is an attempt to introduce and to bring home to modern readers who are not Greek scholars Attic tragedy in its most perfect form and in all its characteristics of theme, structure, sentiment, and style." Prof. Collins, in his introduction, deals at length with the "Merope" in all aspects, reproduces Arnold's historical introduction, and adds abundant notes as well as Mr. Whitelaw's translation of the "Electra" for comparative purposes.—(3) Mr. Hadow's selections are intended to illustrate Dryden's work (1) as a master of style and versification, (2) as a critic, and (3) as a satirist. The introduction is brief and felicitous.—(4) The "Coverley Papers" are perennially delightful. In the present collection some of them "have been slightly abridged where they would not be acceptable to the taste of a later age." The introduction and notes are careful and helpful.—(5) Mr. Holden's introduction deals fully with the poem—its origin, history, machinery, &c. The notes are full and provide much needful explanation.

(1) *Westward Ho!* (Kingsley). Edited by A. D. Innes. (2) *The Water Babies.* Slightly Abridged and Edited by Janet Horace-Smith and Marion L. Milford. (2s. each. Clarendon Press.)

(1) Mr. Innes furnishes an excellent introduction, historical and literary, and brief notes that are most usefully explanatory—an unpretentious, but extremely careful, piece of work. (2) This volume is remarkable not only as the first annotated edition of the work, but also as an exhaustively annotated edition, the notes occupying fifty-five close-packed pages, with forty-five illustrations. The first object of the editors was "to quicken thought by enlarging on the most interesting points contained in the book, by making obscure passages plain and uncommon allusions intelligible." Much of the matter is really rather for reference than for study. A second object was "to make 'The Water Babies' specially interesting to individuals who have a taste for Natural History without, perhaps, the time or opportunity of pushing it as a science." In any case, the elaborate annotation is very valuable and signalizes the edition in a very distinctive way. The text has five full-page illustrations by Janet Robertson.

Murray's English Literature Series.—*Readings in English Literature.* Junior Course: Vol. I., The Elizabethan Period: Vol. II., Seventeenth and Eighteenth Centuries; Vol. III., Nineteenth Century. By E. W. Edmunds, M.A., B.Sc., and Frank Spooner, B.A. (2s. 6d. each volume.)

These volumes are primarily intended to accompany and illustrate the "Story of English Literature" by the compilers; and, as constituting a Junior Course, they consist of extracts suitable for boys and girls. Prose and verse alternate, and the passages are substantial and complete, as well as fairly representative of the periods embraced in the several volumes. The notes, which are neither frequent nor extensive, are placed at the foot of the text. Pupils that go through this course will be prepared and stimulated to proceed to the Intermediate and Senior Courses; and we should hope that all the Courses will find multitudes of readers beyond the school age.

The Riverside Literature Series.—(1) *The Prologue, The Knight's Tale,* and *The Nun's Priest's Tale* (from Chaucer's "Canterbury Tales"). Edited by Frank Jewett Mather, Jr., Ph.D., formerly Assistant Professor of English and the Romance Languages in Williams College. (2) *The Song of Hiawatha* (Longfellow). (1s. 6d. each. Harrap.)

(1) Prof. Mather's introduction treats of Chaucer's life and literary development, the plan of the "Canterbury Tales," pronunciation and metre, &c.; and each tale here reproduced has its introductory note. There are occasional explanatory foot-notes to the text and an appendix of various readings; but Prof. Mather relies upon an ample glossary as the best aid to the interpretation of the text. (2) is prefaced by an account of a visit to Hiawatha's people by Alice M. Longfellow, and has an appendix on Indian wearing apparel and utensils (with numerous illustrations). There are a dozen full-page illustrations to the text, after the designs of Mr. Frederick Remington, "who has placed himself in the foremost rank of illustrators of Western scenes." The get-up is artistic and substantial. The series will be much appreciated for private reading as well as in school use.

HISTORY.

History of the Latin and Teutonic Nations, 1494 to 1514. By Leopold von Ranke. A Revised Translation by G. R. Dennis, B.A. Lond. With an Introduction by Edward Armstrong, M.A., Fellow of Queen's College, Oxford. (6s. net. George Bell.)

Mr. Dennis has thoroughly revised the translation by Mr. P. A. Ashworth, which was published in Bohn's Standard Library in 1887, but has been for some time out of print. Mr. Armstrong reviews Ranke's work generally at some length and in judicious terms, defending him against opponents, yet offering frank criticisms. He also points out the special interest of this—the earliest—work of Ranke, sketches the theme, and comments on the handling. He notes a few mistakes, and it seems a pity that these, and any others, should not be signalized in the foot-notes at the points where they occur. Though "Ranke in after years had little parental affection for his firstborn, and wished first to exclude it from the edition of his collected works and then to give it a new form," we cannot doubt that he did well to listen to the remonstrances of Lorenz, who "saved it for posterity by insisting that he would spoil one of his most original and instructive contributions to history." There is a very full and useful index. The volume is agreeably and substantially got up, and will be widely read with profit and with pleasure.

"Cambridge Historical Essays."—No. XVI., *The Client Princes of the Roman Empire under the Republic.* By P. C. Sands, M.A., Fellow of St. John's College, Cambridge. No. XVII., *Claudian as an Historical Authority.* By J. H. E. Crees, M.A. Cantab, M.A., D.Lit. Lond. (4s. 6d. each. Cambridge University Press.)

(1) Mr. Sands investigates with much thoroughness and insight an important aspect of the external policy of Rome. By Client Princes "may be understood those rulers who, in one or more directions, were limited in their power of initiative, and had either to receive Rome's sanction for their actions or let Rome act for them; who owed Rome certain services, but, in return, received her protection." He outlines first the growth of the Protectorate, from the time of Hiero of Syracuse (B.C. 263), and then, in Part I., considers the position of the kings as "friends" or "allies." The main section of the essay, however, is Part II., which deals with the functions which constituted the clientship of the kings that came under the influence of the Roman Republic. The concluding comparison with British rule in India is somewhat slight, and appears to be based exclusively upon Sir W. Lee-Warner's "Protected Princes of India." Two appendixes supply a large force of illustrative quotations and references.

(2) Mr. Crees essays the difficult task of extracting history from poetry. For the narrow space of time—chiefly the years A.D. 395–404—during which Claudian wrote, it so happens that there is but scanty material of a trustworthy character in other available sources; and Claudian's information is copious. The examination is therefore necessarily literary as well as historical: artistic motives for reticence or for curtailment are pointed out, and the attitude of a poet and a client has to be considered in relation to the virtues of an historian. After all deductions, Mr. Crees decides that Claudian's works "remain inestimably valuable as the last great expression of the Roman spirit in literature, and also as an exposition of the point of view taken by Stilicho with regard to contemporary events." Stilicho is the one great Roman figure of the epoch—"Rome's last great man," though "a half-Romanized Vandal." Mr. Crees writes with ample grasp of the materials, ancient and modern, and with laudable independence of judgment.

Both volumes are Thirlwall Prize Essays (1906). They are both

MR. EDWARD ARNOLD'S
NEW LATIN BOOKS.

The New Latin Prose Book for University and Scholarship work, and for Fifth and Sixth Forms of Public Schools.

LATIN PROSE COMPOSITION.

COMPRISING

Part I.—Notes on Grammar, Style, and Idiom.
Part II.—English Passages for Translation into Latin.

By W. J. HARDIE, M.A., Professor of Humanity in the University of Edinburgh; formerly Fellow of Balliol College, Oxford. Crown 8vo, cloth, **4s. 6d.** Parts I. and II. separately, **2s. 6d.** each.

Professor J. S. PHILLIMORE (Glasgow University).—"It seems to me admirable, as I should have expected of his great erudition and true taste in language."

M. TULLII CICERONIS DE FINIBUS BONORUM ET MALORUM.
LIBRI QUINQUE.

With Introduction and Commentary by W. M. L. HUTCHINSON, sometime Fellow of Newnham College, Cambridge. Demy 8vo, cloth, **8s. 6d.** net.

This edition aims at meeting the requirements of the large class of students for whom Madvig's standard work is at once too bulky and too difficult. It is hoped that an English commentary based upon that work, but presenting in more handy compass a simpler and to some extent independent exposition of the subject-matter, may be found helpful by University students, as well as suitable for use in Upper Forms of schools.

COMPENDIUM LATINUM.

By W. F. WITTON, M.A., Classical Master at St. Olave's School; Author of "Dies Romani." Cloth, **2s. 6d.**

A Course for pupils who commence the study of Latin at the age of twelve or thirteen, and who will not continue it for more than three or four years. It presupposes a knowledge of the principles and ordinary terms of grammar and analysis.

Educational Times.—"Mr. Witton seems to have written a book which is quite in line with most of the modern ideas on the teaching of this difficult subject, and is well worth a trial by those who are not quite satisfied with the best of the old and the new books on the subject."

SIMPLIFIED CAESAR.

A First Latin Reader and Exercise Book. Arranged, with Notes and Exercises, by W. F. WITTON, M.A. Cloth, **1s. 6d.**

The aim of this book is to provide simple and interesting reading matter for pupils who commence a Latin text at the earliest possible moment, so that accidence and syntax may be learned by experience rather than by rote. The episodes chosen are Caesar's Invasion of Britain and the Battle with Ariovistus.

DIES ROMANI.

A new Latin Reading Book. Edited by W. F. WITTON, M.A. Cloth, **1s. 6d.**

Designed to give pupils whose study of Latin is limited to two or three years a representative selection from the best authors within their range. Each passage is complete in itself, and the bulk of the book is drawn from Caesar, Ovid, Catullus, Cicero, Horace, and Virgil. Some schoolboy colloquies from Erasmus are also introduced. There are no Notes or Vocabulary.

Please write for Catalogues and Prospectuses.

London: EDWARD ARNOLD, 41 & 43 Maddox St., W.

exceptionally able monographs, welcome to all serious students of Roman history.

MAPS AND WALL SHEETS.

Messrs. George Philip & Son are indefatigable in supplying the schoolroom with excellent maps and other modern appliances for geographical teaching. Nothing could well be more serviceable than the ample, clear, and attractive "Comparative Series of Large Schoolroom Maps." The physical features receive special prominence; the outlines are strongly defined, and the elevations are graduated in tint. The importance of emphasizing the comparative areas of the various regions is recognized in the adoption of a uniform scale and equivalent projections for the continental maps, and of a similar uniformity in the case of nearly all the European countries and British possessions. Inset maps show the political divisions, or else diagrammatic sections are presented (as in the case of the British Isles). Boundaries, railways, steamship routes (with differential marks indicating populations of varying magnitude), and all other important elements are boldly shown. Of this series we have *The British Isles* (74 x 59 in., 16s.), *Asia* (80 x 67 in., 18s.), and *South America* (74 x 59 in., 16s.). The scale is spacious, and saves over-crowding; the workmanship is of the finest; and the sheet is strongly mounted, while the beauty of it forms an artistic decoration of the schoolroom, attractive to the pupils. With such maps in front of a class, the geography lesson should be a delightful as well as an easy exercise.

Messrs. Philips are also issuing a very interesting series of *Geographical Pictures*—a series of twenty-four pictures on twenty plates enlarged from actual photographs direct from nature, prepared specially for illustrating geography lessons, and beautifully printed in sepia tint on enamelled cards. The sheet measures 25 x 20 in., the picture 20 x 14½ in. The subjects have been chosen primarily for their scientific value, as affording each of them a definite illustration of some principle in physiography or geography; and, indeed, the pictures of Series I. have been selected specially to illustrate "A Progressive Course of Comparative Geography," by P. H. L'Estrange, B.A., the editor of the series, though, of course, they will equally illustrate any other competent geography. This Series I. devotes thirteen of the plates to Land Forms in four sections: (1) Sedimentary Rocks, (2) Volcanic Work, (3) Ice Work, (4) River Work: and the remaining seven plates to typical illustrations of climate and vegetation in various latitudes. The sheets are most carefully and artistically produced, and must prove very helpful towards a vivid realization of the significance of the geographical facts they illustrate. (Sheet, suitable for framing, 1s. 3d. net each; set complete in box, 21s. net.)

Messrs. Philips have just introduced a *Self-Rolling and Raising System* (Weekes' Patent), whereby, at a trifling additional expense, "any map may be mounted so that it can be consulted in the same way as a spring roller map, and when done with can be rolled up by a self-acting device and left hanging on the wall ready for use whenever required or taken down and stored." The device is extremely simple, and it solves the constant difficulty of what to do with maps, especially large maps, when not in immediate use; it also lends certain advantages when they are in use. Teachers should see the system for themselves.

Messrs. Macmillan publish a splendid *Orographical Map of Europe*, designed by B. B. Dickinson, M.A., F.R.G.S., and A. W. Andrews, M.A., F.R.G.S. (62 x 51 in.; 15s.). It is beautifully printed in ten colours, showing in scale the variations of altitude and depth—a notable example of geographical art. The designers have also prepared a booklet of "Notes" to accompany the map: it will be found extremely helpful (1s.).

Messrs. Macmillan's *Wall Pictures of Farm Animals* (30 x 20 in., no margins) form a series of six—horses, cows, sheep, pigs—3s. each unmounted; 3s. 6d. each mounted on cards, bound edges and hangers. The large form gives scope to the artist, and the pictures are beautifully coloured. They are sure to be attractive to young people, in schoolroom or in nursery.

Messrs. J. M. Dent & Co. provide three large sheets (about 33 in. sq.) suitable for the classroom wall, showing boldly (1) *The Sounds of English*, (2) *Les Sons du Français*, and (3) *Deutsche Laute*. They will be very useful in modern language teaching.

In connexion with these sheets we may recall the admirable "Coloured Wall Pictures" published by A. & C. Black, to accompany Mr. F. B. Kirkman's charming book, "La Première Année de Français": (1) *La Famille Pascal à Table* (a domestic scene), and (2) *La Porte Saint-Martin à Paris* (a street scene), both drawn from French models and photographs. The size is 45 x 35 in. (7s. 6d. net each, on linen, with rollers; 5s. net each, on linen; 3s. net each, unmounted).

Messrs. John Wright & Co., of Bristol, produce a fine set of twenty-five *Large Type Wall Sheets of National Songs* (26 x 40 in.; 9s. 6d. the set; 3d. single sheets: Nos. 329–353). The sheets are specially adapted for use in schools. The type is bold and clear, and can be readily followed by a class in front of the wall on which the sheets are suspended. The rollers are prepared so as to admit change of sheets as desired from time to time. The songs are judiciously selected. The set must be extremely useful for its purpose. The sheets may be obtained in London from Messrs. Simpkin, Marshall, & Co., or at the "Review of Reviews" Office, Norfolk Street.

FIRST GLANCES.

Classics.

Aristophanes: The Acharnians. With introduction, critical notes, and commentary. By W. Rennie, M.A., Fellow of Trinity College, Cambridge, Lecturer in Greek at the University of Glasgow. 6s. net. Edward Arnold.

Colloquia Latina. Adapted from Erasmus. First Series. By G. M. Edwards, M.A., Fellow and Lecturer of Sidney Sussex College, Cambridge. 9d. Cambridge University Press.

[Text and vocabulary only.]

Limen: a First Latin Book. By W. C. Flamstead Walters, M.A., Professor of Classical Literature in King's College, London, formerly Master in Christ's College, N.Z.; and R. S. Conway, Litt.D., Professor of Latin in the University of Manchester, formerly Fellow of Gonville and Caius College, Cambridge. 2s. 6d. Murray.

[Grammar; numerous exercises; vocabularies. Reading lessons specially careful. "We have sacrificed a good deal of lumber."]

Limen Appendix: suggestions for Teachers on the Oral Method. By Messrs. Walters and Conway, and Miss R. H. Rees, B.A., Assistant Mistress at Ladybarn House School. 6d.

Phaëthon, and other Stories from Ovid. By G. M. Edwards, M.A., Fellow and Lecturer of Sidney Sussex College, Cambridge. 1s. 6d. Cambridge University Press (Pitt Press Series).

[Introduction, notes, and vocabulary. Attractive.]

Mathematics.

Arithmetic Test Cards, Bell's New Practical. By W. J. Stainer, B.A. Lond. Years One to Seven. 1s. 3d. net each yearly group. George Bell.

[Each group consists of two sets of 24 cards, containing 1,100 sums, with two copies of answers. Varied and thoughtful; extremely serviceable.]

Mathematics, A Course in: for Students of Engineering and Applied Science. By Frederick S. Woods and Frederick H. Bailey, Professors of Mathematics in the Massachusetts Institute of Technology. Vol. II.: Integral Calculus, Functions of several Variables, Space Geometry, Differential Equations. 10s. 6d. Ginn.

[Vol. I. was noticed in our last issue.]

Trigonometry, Plane and Spherical, and Four-Place Tables of Logarithms. By William Anthony Granville, Ph.D., Sheffield Scientific School, Yale University. 5s. 6d. Ginn.

[Worked examples; graded exercises; numerous figures.]

Science.

Chemistry, An Organic: for Schools and Technical Institutes. By A. E. Dunstan, B.Sc. (Sheff. and Lond.), F.C.S. (Lond. and Berl.), Head of the Chemical Department, East Ham Technical College. 2s. 6d. Methuen.

[Intended for the use of higher forms of schools taking the Special Science Course, and as a first year text-book in Technical Institutes. "Arranged on a largely practical basis." Able and effective.]

Chemistry, Organic, Practical. By J. J. Sudborough, Ph.D., D.Sc., F.I.C., Professor of Chemistry in the University College of Wales, Aberystwyth, and Director of the Edward Davies Chemical Laboratories, and T. Campbell James, M.A., B.Sc., Lecturer and Demonstrator in Chemistry in the same College. 5s. net. Blackie.

[Companion book to Prof. Sudborough's edition of "Bernthsen's Chemistry." Comprehensive; exemplifies all the more important types of operations in a modern organic laboratory. Lucid description and directions; over 300 experiments; 92 figures. Most capable and useful.]

Dynamics, A First. By C. S. Jackson, M.A., late Scholar of Trinity College, Cambridge, and W. M. Roberts, M.A., late Scholar of Corpus Christi College, Oxford, Instructors in Mathematics at the Royal Military Academy, Woolwich. 5s. Dent (Series of Mathematical and Scientific Text-Books for Schools).

[Stress on concrete examples; over 200 diagrams.]

Electrical Laboratory Course for Junior Students. By R. D. Archibald, B.Sc., A.M.Inst.C.E., and R. Rankin, A.G.T.C., Stud.I.E.E., Assistants to the Professor of Electrical Engineering in the Glasgow and West of Scotland Technical College. 1s. 6d. net. Blackie.

[To replace MS. instruction sheets in the laboratory. 57 experiments; pointed explanations, with vigilant reference to practical applications of principle. Covers an elementary first year's evening course and part of a second year's course. Very serviceable.]

Physics, First Year. By Charles E. Jackson, M.A., formerly Open Mathematical Scholar of Queen's College, Oxford; Senior Physics Master, Bradford Grammar School. 1s. 6d. Methuen (Text-Books of Science).

["Suitable for use in secondary schools in which three or four hours per week are available" for Physics. Clear exposition; numerous examples (with answers); 76 experiments proposed; 51 diagrams. Excellent.]

DENT'S MODERN LANGUAGE SERIES.

General Editor—Professor WALTER RIPPMANN, M.A.

NINETEENTH EDITION (*completing* 150,000 *copies*). Extra fcap. 8vo. Price 2s.

DENT'S NEW FIRST FRENCH BOOK. By S. ALGE and W. RIPPMANN.

SPECIAL NOTE.—The Publishers propose to issue at an early date a new printing of this book, which has been completely reset. It should be distinctly understood, however, that the text has in no way been altered. Improvement has been effected by the production of the small Season Pictures in Colour, while the incorporation of Mr. NORMAN'S Supplementary Exercises will doubtless be much appreciated. These Exercises were hitherto issued separately at 6d.

SEVENTH EDITION (*completing* 39,000 *copies*). Extra fcap. 8vo. Price 2s.

DENT'S NEW SECOND FRENCH BOOK. By S. ALGE and W. RIPPMANN.

The above books are used in the principal Public Schools, Municipal Secondary Schools, and County Secondary Schools throughout the country. The scheme of study for junior students of Sydney University is based upon "Dent's First French Book."

PREMIÈRE GRAMMAIRE FRANÇAISE. By H. E. BERTHON, Taylorian Lecturer in French at the University of Oxford. Extra fcap. 8vo, 2s.

DENT'S FIRST EXERCISES IN FRENCH GRAMMAR. By Miss F. M. S. BATCHELOR. Extra fcap. 8vo, 1s. 4d.

DENT'S FURTHER EXERCISES IN FRENCH GRAMMAR. By Miss F. M. S. BATCHELOR. Extra fcap. 8vo, 1s. 4d. These Exercises are intended to accompany the *Première Grammaire Française.*

EASY FREE COMPOSITION IN FRENCH. By Miss L. M. BULL. Extra fcap. 8vo, 1s. 4d.

FREE COMPOSITION AND ESSAY WRITING IN FRENCH. By A. PRATT and ANTOINE PHILIBERT. Extra fcap. 8vo, 1s. 4d.

Eighth (English) Edition, completing 35,500 *copies.*

DENT'S NEW FIRST GERMAN BOOK. By WALTER RIPPMANN, S. ALGE, and S. HAMBURGER. Extra fcap. 8vo, 2s. 6d.

DENT'S GERMAN READER. By S. ALGE and WALTER RIPPMANN. Extra fcap. 8vo, 3s.

RIPPMANN'S FRENCH PICTURE VOCABULARY. *The First and Second Series now ready.* 1s. 4d. each volume.

RIPPMANN'S GERMAN PICTURE VOCABULARY. *The First and Second Series now ready.* 1s. 4d. each volume.

SOME RECENT ADDITIONS.

FABLES EN ACTION. By Miss VIOLET PARTINGTON. 1s.

EPISODES EN ACTION. By J. STUART WALTERS. 1s. 4d.

L'ENTENTE CORDIALE À LA CAMPAGNE. By CLÉMENCE SAUNOIS. 1s. 6d.

A FRENCH PHONETIC READER. By S. A. RICHARDS, B.A., Modern Language Master, County Secondary School, Hackney Downs. 1s. 6d.

THE SOUNDS OF ENGLISH. LES SONS DU FRANÇAIS. DEUTSCHE LAUTE. Three Charts, size 30 by 30 inches. Arranged by Professor RIPPMANN, M.A. Unmounted, 1s. net each; Mounted on Linen, 2s. net; Mounted on Linen and Roller, 3s. 6d. net each. *A detailed Prospectus may be had of the Publishers.*

DER GOLDENE VOGEL AND OTHER TALES. A Second Year German Reader. Edited by Prof. RIPPMANN, M.A. Extra fcap. 8vo, 1s. 4d.

EISENHANS AND OTHER TALES. A Second Year German Reader, with Exercises. By WALTER RIPPMANN. Extra fcap. 8vo, 1s. 4d.

THE TEACHING OF ENGLISH COMPOSITION. By Miss COVERNTON, English Mistress at St. Mary's College, Paddington. 1s. 6d. net.

A New and Complete Catalogue of Dent's Modern Language Series will be ready shortly, and can be had post free from the Publishers.

London: J. M. DENT & CO., 29-30 Bedford Street, W.C.

PRIZE DISTRIBUTION, MIDSUMMER, 1909.

Inexpensive Books IN Full Leather Bindings AND IN Artistic Half-Bindings.

These books are all suitable for stamping in gold.

The EDUCATIONAL SUPPLY ASSOCIATION issues a

Series of Sixty Volumes printed on Thin Opaque Paper,

Bound in Half Calf, Art Linen Sides,
at **2/9** per Volume net;

Bound in Whole Scarlet Leather, Gilt Back and Top,
at **2/-** per Volume net.

JUST ISSUED.

New Illustrated Catalogue of Leather Bound Books,

containing particulars of upwards of 1,600 different books sent post free on application.

A large selection of Reward Books Bound in Cloth is also on view in the Showrooms, and a Catalogue of these will be sent post free on application.

School Furniture made in Oak.

School Furniture can now be made in Oak at a small advance only on Pitch Pine prices. Oak is very durable and, either dull finished or varnished, has a very superior finish.

New Illustrated Catalogue sent post free.

The School Stationery

Manufactured by the Association is of exceptional quality, comprising stationery specially designed for

Science Work, Nature Study,
Plotting Graphs, Mathematics.

The Text Books

Comprised in the **Higher School Series** are specially adapted to the needs of Junior Scholars, and comprise books in the following subjects, viz.:—

Arithmetic, English History,
Geography, English Grammar.

MATHEMATICS.

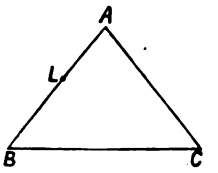
9442. (Artemas Martin, LL.D.)—A point is taken at random in the surface of a given triangle. Find the average area of the triangle cut off by a line passing through the random point.

Solution by W. Rigby, B.A.

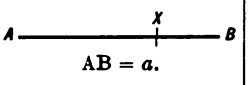
Let the line drawn at random cut one of the sides in L. Joining L to points in BC gives a series of triangles whose average area $= \frac{1}{2}\triangle BLC$, for the average position of the point in BC is the mid-point of BC.*

The average position of the point L is the mid-point of AB. Therefore average area of $\triangle LBC = \frac{1}{2}\triangle ABC$.

Therefore average area of triangle cut off by a random line $= \frac{1}{4}\triangle ABC$.



* X is a point taken at random in line AB. The average length of AX is given by



$$\int_0^a x\,dx \Big/ \int_0^a dx = \tfrac{1}{2}a^2/a = \tfrac{1}{2}a.$$

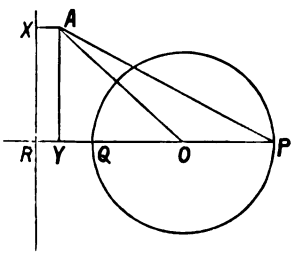
Therefore average position of X is midway between A and B.

16598. (M. T. Naraniengar, M.A.)—A is a fixed point. P is any point on a fixed circle. Show that the inverse of the fixed circle with respect to a circle of radius PA and centre P has for its envelope another fixed circle.

Solution by S. Narayanan, B.A., L.T.

If $PQ.PR = PA^2$, XR is the inverse of the circle with respect to P and radius PA.

Let O be the centre of the fixed circle, r the radius, and d the distance AO.



Now $PQ.PR = PA^2$;

therefore $2r(r + OY + YR) = AO^2 + OP^2 + 2OP.OY$,

i.e.,

$2r(r + OY + AX) = d^2 + r^2 + 2r.OY$;

therefore $2r(r + AX) = d^2 + r^2$;

therefore $AX = (d^2 - r^2)/2r = \text{constant}$.

Hence the envelope of XR is a circle with A as centre and radius $= (d^2 - r^2)/2r$.

16023. (*Communicated by* "Inquirer.")—A. starts from a point on a straight endless canal and walks 20 miles in a straight line in a random direction, and then camps for the night. Next morning he starts off in a random direction, and keeps walking in a straight line. What is the chance of his meeting the canal again before he has walked more than 20 miles?

Solution (?) *by* C. E. Youngman, M.A.

From the starting point O draw $2n$ lines, dividing the 180° at O into $2n+1$ equal parts, each of the value of θ, and suppose that A. on his outward walk has to take one of these lines. Then, if he takes the first line or the last, his chance of meeting the canal the next day is $(\pi - 2\theta)/2\pi$, that is, $(2n-1)/(4n+2)$. If he takes the second or the last but one, the chance is $(2n-3)/(4n+2)$; ...; if the n-th or the $(n+1)$-th, it is $1/(4n+2)$. These chances, all equally probable, form two arithmetical progressions, and their average is $n/(4n+2)$, which, when n grows infinite, gives the required probability $\frac{1}{4}$.

Over the breakfast table the argument might run: Suppose the canal goes east and west, and that the man, a *perfectly* average person, is on the north bank. Then on the first day he will, by the necessity of his nature, go either N.E. or N.W. North? No; north is an extreme, not an average. For the possible directions arrange themselves in pairs of equal effect, and the first pair is E. and W., the last N. Well, then, on the second day any direction from S.E. to S.W.—a quarter of the compass—will bring him back to the canal, but any direction in the other three-quarters will not; and the odds are 3 to 1 on failure.

It is not convincing. Is it sound?

16534. (James Blaikie, M.A.)—A rectangular parallelopiped has its length and breadth each equal to twice its height. Show that it can be cut into five parts which can be arranged so as to form a polyhedron bounded by six square and eight hexagonal faces. Also show that such polyhedra can be placed together so as to fill space.

Solution by B. C. Wallis, B.Sc. (Econ.), F.C.P.

Figs. 3 and 4 are drawn to twice the scale of Figs. 1, 2, 5, 6, 7.

Figs. 1 and 2 represent the polyhedron, edge $\frac{1}{2}$ inch, so as to show the octahedron from which it is developed by removing a square pyramid from each corner. A, B, E, F are hexagonal faces. C, D are square faces. *ab*, *cd*, *ef*, *gh* are diagonals of square faces.

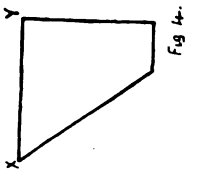


Fig 4.

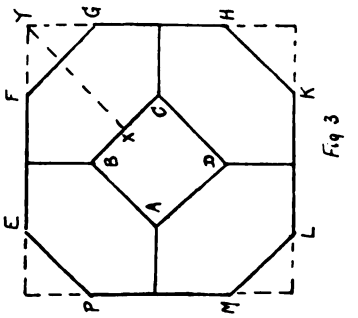

Fig 3

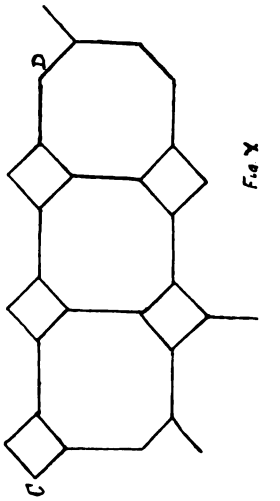

Fig 7

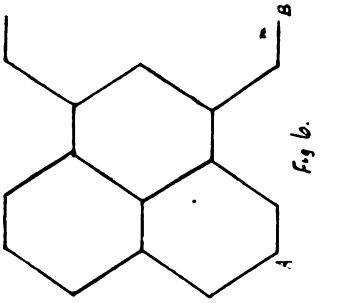

Fig 6.

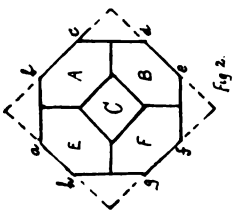

Fig 2.

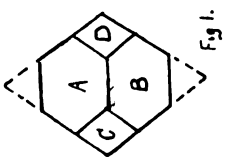

Fig 1.

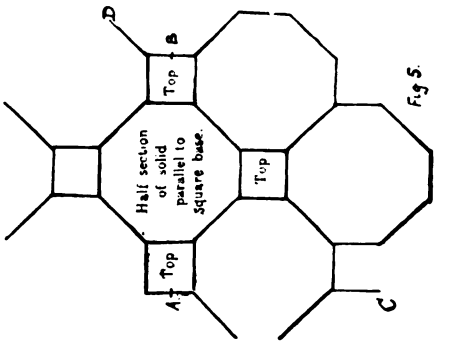

Fig 5

Fig. 3 represents the parallelopiped, height half the height of the polyhedron. Mark a square ABCD on the top square face, and the octagon EFG...MP on the bottom square face. Cut along the hexagonal faces, *i.e.*, in the planes of (i.) AB and PE, (ii.) BC and FG, (iii.) CD and HK, (iv.) DA and LM. This leaves half the polyhedron and four pieces, of which a section along XY is shown in Fig. 4. These four pieces have each a hexagonal face, and on these being arranged outwards the four pieces build up into half the polyhedron.

If a series of such polyhedra be placed on square faces, a second similar series will fit into the spaces left, and Fig. 5 shows a section across the tops of the first series.

Fig. 6 is a section along AB.

Fig. 7 is a section along CD.

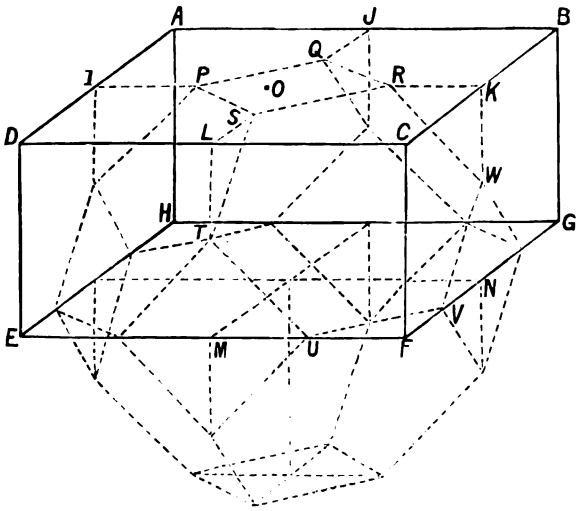
These figures prove that such polyhedra could fill space.

The following Solution is due to the Proposer:—

Let ABCDEFGH be the parallelopiped. Let I, J, K, L be the mid-points of AB, BC, CD, DA; O the centroid of ABCD; P, Q, R, S the mid-points of OI, OJ, OK, OL. Let M, N be the mid-points of EF, FG; U, V the mid-points of FM, FN; T, W the mid-points of LM,

Digitized by Google

KN. Then it is easily seen that RSTUVW is a plane hexagon passing through the centroid of the cube OLCKNFM, and dividing it into two

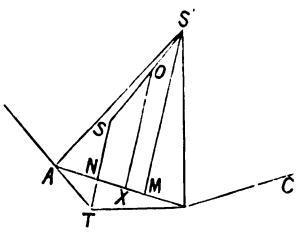


congruent polyhedra. If the half-cube CKRSLTUFVW be removed, and if equal and similar half-cubes be cut from the other three cubes which form the parallelopiped, these four parts can clearly be placed below the plane EFGH so as to form along with the unremoved part of the parallelopiped a tetrakaidecagon or 14-faced solid as shown in the diagram.

It is clear that such polyhedra fill space, as space can be filled with solids congruent to ABCDEFGH; and, if we consider two consecutive layers of such solids similarly cut to the one in the diagram, we see that A, B, C, D are each the centroid of a similar polyhedron touching one of the upper hexagons of the polyhedra in the diagram, and filling up space along with it and a similar figure standing above the square PQRS.

11298. (Professor NILKANTHA SARKAR.)—A number of light rigid rods are loosely jointed together at their extremities so as to form a closed polygon, and a force applied to each side perpendicular and proportional to it, their lines of action meeting in a point. Prove that, if equilibrium be maintained, the polygon will be inscribable in a circle, and, if S be the point through which the forces act, O the centre of the circumscribed circle, and SO be produced to S′ so that SS′ is bisected in O, the stress at any angular point of the polygon will be perpendicular and proportional to the distance of the point from S′.

Solution by SONTI V. RAMANUNTY, B.A.



Transfer the forces to act at the middle points of the sides introducing the required couples.

Let the polygon be ABC .... Let X be the mid-point of AB, Y of BC. Draw SN perpendicular to AB. Then, the moment of the resultant couple introduced

$$= \Sigma AB.NX = \tfrac{1}{2}\Sigma(SA^2 - SB^2) = 0.$$

Therefore the polygon is in equilibrium under the action of forces at the mid-points of the sides proportional to and acting perpendicularly to the sides.

Therefore, by Routh's *Analytical Statics*, Vol. I., Art. 133, the polygon is inscribable in a circle.

Let AT, BT be the directions of the reactions at A, B. Evidently they must meet on SN (at T).

Draw AS′, BS′ perpendicular to AT, BT cutting at S′. Draw S′M perpendicular to AB. Then, because the angles A, B are right angles, it can be easily shown that AN = BM; therefore NX = MX. Therefore, if O be the circum-centre, OX bisects SS′. Similarly OY bisects SS′. Therefore O is the mid-point of SS′. And, because the sides of the triangle ABS′ are perpendicular to the forces on AB, and because AB is proportional to force along SN, therefore S′A, S′B are proportional (and we know perpendicular, too, by construction) to the reactions at A, B.

16551. (Hon. G. R. DICK, M.A.)—Solve by simple quadratic methods and exhibit the roots of the biquadratic $x^4 + 4x^3 = 1$.

Solutions (I.) *by* HENRY RIDDELL, M.E., C. M. ROSS, *and* F. G. W. BROWN, B.Sc., L.C.P.; (II.) *by* Lieut.-Col. ALLAN CUNNINGHAM, R.E.; (III.) *by* Professor SANJANA, M.A.

(I.) $$x^4 + 4x^3 - 1 = (x^2 + 2x - 1)^2 - 2(x-1)^2.$$

Therefore $$(x^2 + 2x - 1) = \pm\sqrt{2}(x-1);$$

and we have two quadratics:

(i.) $x^2 + (2-\sqrt{2})x - (1-\sqrt{2}) = 0$; (ii.) $x^2 + (2+\sqrt{2})x - (1+\sqrt{2}) = 0$.

(i.) $x = -\frac{1}{2}\{(2-\sqrt{2}) \pm \sqrt{(10-8\sqrt{2})}\}$;

(ii.) $x = -\frac{1}{2}\{(2+\sqrt{2}) \pm \sqrt{(10+8\sqrt{2})}\}$.

[Mr. C. M. Ross remarks that the above equation is only a particular case of the type $x^4 + 2ax^3 + (b^2-a^2)^3/4b^2 = 0$,

which may be thrown into the form

$$\{x^2 + ax + \tfrac{1}{2}(b^2-a^2)\}^2 = \{bx + a(b^2-a^2)/2b\}^2.$$

This method of solution is given in Wolstenholme's *Problems*, No. 132.]

(II.) Taking $x = 1/y$, the equation becomes $y^4 - 4y - 1 = 0$. Assume this to be a product of two 2-ic factors $(y^2 + \alpha y + \beta)(y^2 + Ay + B)$.

Identifying these term by term,

$$\alpha + A = 0, \quad \alpha A + \beta + B = 0, \quad \alpha B + \beta A = -4, \quad \beta B = -1 \ldots (1,2,3,4).$$

Eliminating A gives

$$-\alpha^2 + \beta + B = 0, \quad \alpha(B-\beta) = -4, \quad \beta B = -1 \ldots\ldots (5,6,7).$$

Eliminating B gives $\alpha^2 = \beta - 1/\beta$, $\alpha(\beta + 1/\beta) = 4$ ..... (8, 9).

Eliminating α gives $(\beta + 1/\beta)^2(\beta - 1/\beta) = 16$ ..... (10).

Writing $\beta - 1/\beta = z$, equation (10) becomes $z^3 + 4z = 16$, the real root of which is $z = 2$, so that $\beta - 1/\beta = 2$. Hence

$$\beta = \sqrt{2} + 1, \quad B = -1/\beta = 1 - \sqrt{2}, \quad \alpha = \sqrt{2}, \quad A = -\sqrt{2},$$

so that the factors are

$$(y^2 + \sqrt{2}\,y + 1 + \sqrt{2})(y^2 - \sqrt{2}\,y + 1 - \sqrt{2});$$

the roots of which are (by ordinary 2-ic work)

$$y = 1/\sqrt{2}\{-1 \pm \sqrt{(-1-2\sqrt{2})}\}, \quad 1/\sqrt{2}\{1 \pm \sqrt{(2\sqrt{2}-1)}\};$$

two imaginary and two real. The reciprocals of these are the roots required ($x = 1/y$).

(III.) Adding $2x^2 - 4x + 1$ to the two sides, we have

$$x^4 + 4x^3 + 2x^2 - 4x + 1 = 2(x^2 - 2x + 1);$$

whence $$x^2 + 2x - 1 = \pm\sqrt{2}(x-1).$$

The roots of the given equation are the roots of these two quadratics: the expression to be added may be obtained by Ferrari's method.

Adopting Descartes' method, we may, from the form of the given equation, assume

$$x^4 + 4x^3 - 1 \equiv \{x^2 + (2+\sqrt{\alpha})x + p\}\{x^2 + (2-\sqrt{\alpha})x + q\}.$$

From this, by identifying coefficients, we get for α the cubic $(\alpha-4)^3 + 4\alpha = 0$, which gives $\alpha = 2$, so that $p = -(\sqrt{2}+1)$ and $q = \sqrt{2} - 1$; this is the same result as above. The reducing cubic $\alpha^3 - 12\alpha^2 + 52\alpha - 64 = 0$ can be transformed by the substitution $\alpha = 4(\theta + 1)$ to $4\theta^3 + \theta + 1 = 0$, which will be found to be the cubic obtained by employing Euler's solution by radicals.

11701. (Professor BÔCHER.)—Solve the differential equations—

$$\frac{d^2y}{dx^2} + \tfrac{1}{2}\left(\frac{1}{x-a} + \frac{1}{x-b}\right)\frac{dy}{dx} - \frac{1}{4(x-a)(x-b)}\,y = 0,$$

$$\frac{d^2y}{dx^2} + \tfrac{1}{2}\left(\frac{1}{x-a} + \frac{1}{x-b} + \frac{1}{x-c}\right)\frac{dy}{dx} + \frac{-3x+a+b+c}{16(x-a)(x-b)(x-c)}\,y = 0.$$

Solutions (I.) *by* Hon. G. R. DICK, M.A.; (II.) *by* G. N. WATSON, B.A.; (III.) *by* A. H. S. GILLSON.

(I.) (1) In the first equation put $x - \frac{1}{2}(a+b) = \xi\,[\frac{1}{2}(a+b)]$, and it takes the known form $$(\xi^2 - 1)\frac{d^2y}{d\xi^2} + \xi\frac{dy}{d\xi} - \tfrac{1}{4}y = 0.$$

The solution of this equation is

$$y = C_1 \sin(\tfrac{1}{2}\sin^{-1}\xi) + C_2\cos(\tfrac{1}{2}\sin^{-1}\xi);$$

or, replacing for ξ its value in terms of x, we get the general solution of (1) $$y = C_1 \sin\left(\tfrac{1}{2}\sin^{-1}\frac{2x-a-b}{a-b}\right) + C_2\cos\left(\tfrac{1}{2}\sin^{-1}\frac{2x-a-b}{a-b}\right),$$

C_1 and C_2 being two arbitrary constants.

(2) The second equation may be solved by the method (founded on one of Euler's) developed by Dr. J. H. Graf (*Mathematische Annalen*, Vol. XLV.). It consists in effect of setting

$$y = \int \frac{P(t-x)^n\,dt}{(t-a)(t-b)(t-c)},$$

with the condition $[P(t-x)^{n+1}] = 0$ between the limits.

For the equation

$$(x^3 + \alpha x^2 + \beta x + \gamma)\,d^2y/dx^2 - 2(n-1)(x^2 + \delta n + \epsilon)\,dy/dx + n(n-1)(x + 2\delta - a)\,y = 0$$

Digitized by Google

the following results are obtained :—

$$\frac{d\log P}{dt} = -(n-1)\frac{t^2+2t(a-\delta)+\beta-2\epsilon}{t^3+at^2+\beta t+\gamma}, \qquad y = \int \frac{(n-1)P(t-x)^n\,dt}{t^3+at^2+\beta t+\gamma},$$

with the condition $[P(t-x)^{n-1}] = 0$.

Comparing with the given equation, we find that we may take $n = \frac{1}{2}$, and we get $P = [(t-a)(t-b)(t-c)]^{\frac{1}{2}}$.

Now $[(t-a)(t-b)(t-c)(t-x)^{-3}]^{\frac{1}{2}}$

vanishes when the limits are two of the roots a, b, c.

Thus we get for the general solution

$$y = C_1\int_a^b [(t-a)(t-b)(t-c)]^{-\frac{1}{2}}(t-x)^{\frac{1}{2}}\,dt + C_2\int_a^c [(t-a)(t-b)(t-c)]^{-\frac{1}{2}}(t-x)^{\frac{1}{2}}\,dt,$$

where C_1 and C_2 are arbitrary constants.

(II.) (1) This is the differential equation satisfied by Riemann's P function

$$P\begin{Bmatrix} a & b & \infty & \\ 0 & 0 & \frac{1}{2} & x \\ \frac{1}{2} & \frac{1}{2} & -\frac{1}{2} & \end{Bmatrix} = (x-a)^{\frac{1}{2}}P\begin{Bmatrix} a & b & \infty & \\ 0 & 0 & 0 & x \\ -\frac{1}{2} & \frac{1}{2} & 1 & \end{Bmatrix}.$$

Hence one solution is $y = (x-a)^{\frac{1}{2}}$; hence, by symmetry, the general solution is $y = A(x-a)^{\frac{1}{2}} + B(x-b)^{\frac{1}{2}}$,

where A and B are arbitrary constants.

(2) Put $y = w(x-a)^{\frac{1}{2}}$, and the equation becomes

$$\frac{d^2w}{dx^2} + \frac{1}{2}\left\{\frac{2}{x-a} + \frac{1}{x-b} + \frac{1}{x-c}\right\}\frac{dw}{dx} + \left\{-\frac{1}{16}\frac{(a-b)(a-c)}{x-a}\right\}\frac{w}{(x-a)(x-b)(x-c)} = 0.$$

This is the equation satisfied by Riemann's P function

$$P\begin{Bmatrix} a & b & c & \\ \frac{1}{4} & 0 & 0 & x \\ -\frac{1}{4} & \frac{1}{2} & \frac{1}{2} & \end{Bmatrix},$$

so that, putting $z = \dfrac{(x-c)(b-a)}{(x-a)(b-c)}$, we have

$$w = AF(-\tfrac{1}{4}, \tfrac{1}{4}; \tfrac{1}{2}; z) + Bz^{\frac{1}{2}}F[\tfrac{1}{4}, \tfrac{3}{4}; \tfrac{3}{2}; z],$$

where F denotes the hypergeometric series of Gauss; hence (Forsyth, *Differential Equations*, p. 226)

$$w = A'[1+(1-z)^{\frac{1}{2}}]^{\frac{1}{2}} + B'[1-(1-z)^{\frac{1}{2}}]^{\frac{1}{2}},$$

so that $y = A''\left\{[(x-a)(b-c)]^{\frac{1}{2}} + [(x-b)(c-a)]^{\frac{1}{2}}\right\}^{\frac{1}{2}} + B''\left\{[(x-a)(b-c)]^{\frac{1}{2}} - [(x-b)(c-a)]^{\frac{1}{2}}\right\}^{\frac{1}{2}}$,

the A's and B's being arbitrary constants. [Rest in *Reprint*.]

16541. (W. Austin Sleigh, B.A. Suggested by Question 15977.)—If O, L, M be the centres of the circles SPS′, GC*g*, GC*t*, prove that the sum of the squares of the radii of these last two is half the sum of the squares of OG, O*g*.

Solution by the Proposer.

Clearly L, M, O are the mid-points of G*g*, G*t*, *tg*; hence GLOM is a parallelogram. Therefore $LG^2 + MG^2 = \frac{1}{2}(LM^2 + OG^2) = \frac{1}{2}(Og^2 + OG^2)$.

16594. (A. M. Nesbitt, M.A.)—If, within the angle A of a triangle ABC, two lines be drawn AL, AL′, equally inclined to AB and AC respectively, and meeting BC in L, L′; and if the same be done for the other angles, prove (1) that a conic S will pass through the six points L, L′, ...; (2) that a conic S′ will touch the six lines AL, AL′, ...; (3) that a conic may be drawn through the four intersections of S, S′, which shall also touch the sides of ABC; (4) that a conic may be drawn touching the four common tangents of S and S′ which shall also circumscribe ABC.

Solution by the Proposer.

If $y = lz$, $ly = z$ be the equations to AL, AL′, and so all round, the equation to S is $\Sigma x^2 - 2\Sigma\lambda yz = 0$, where $2\lambda = l + 1/l$, ..., and that to S′ is readily found to be

$$\Sigma[(1-\lambda^2)x^2] + 2\Sigma[(\mu\nu-\lambda)yz] = 0,$$

and the intersections of these lie on the conic $\Sigma\lambda^2x^2 - 2\Sigma\mu\nu yz = 0$, which touches the sides of ABC. Moreover, the tangential equation to S is $\Sigma(1-\lambda^2)p^2 + 2\Sigma[(\mu\nu+\lambda)qr] = 0$,

and that to S′ is $(1-\Sigma\lambda^2+2\lambda\mu\nu)[\Sigma p^2 + 2\Sigma\lambda qr] = 0$,

and the common tangents of these touch also the conic

$$\Sigma\lambda^2p^2 - 2\Sigma\mu\nu qr = 0,$$

which circumscribes ABC.

QUESTIONS FOR SOLUTION.

16677. (D. Biddle.)—A right hollow cylinder of length l and internal radius r has one extremity closed by a thin film. A parallel plane lies in the opposite direction at a distance nl from the film; and, if on this plane a circle be described having its centre on the axis of the cylinder and $R = (2n-1)r$, some part of the film will be visible through the tube, from any point within that circle. Find the mean area of film visible from points in any one such circle.

16678. (Pulinbihari Das, M.A.)—If

$$I = \int_0^{\frac{1}{4}\pi} (\log\sin x)^2\,dx \quad \text{and} \quad I' = \int_0^{\frac{1}{2}\pi} \log\sin x \log\cos x\,dx,$$

then $I + 2I' = 3\pi(\log 2)^2/2$ and $I - I' = \frac{1}{16}\pi^3$.

$$\sum_1^\infty \frac{[1.3.5\ldots(2n-1)]^2}{(2n+2)!}.$$

16680. (Professor E. Hernández.)—

$$\left.\begin{aligned} a_1x_1 + a_2x_2 + \ldots + a_nx_n &= a_1 \\ a_1x_2 + a_2x_3 + \ldots + a_nx_1 &= a_2 \\ \ldots\quad\ldots\quad\ldots\quad\ldots &\quad\ldots \\ a_1x_n + a_2x_1 + \ldots + a_nx_{n-1} &= a_n \end{aligned}\right\}.$$

étant un système des équations dont les coefficients $a_1, a_2, \ldots a_n$ forment une progression géométrique de raison g, montrer que l'on a

$$\frac{x_1}{a_1-ga_2} = \frac{x_2}{a_2-ga_3} = \ldots = \frac{x_n}{a_n-ga_1}.$$

16681. (Professor E. B. Escott.)—In the polynomial X^3-X-1 if we replace X by aX^2+bX+c, we may chose a, b, and c so that the polynomial has algebraic factors. In this way, factor completely X^3-X-1 when X = 47, 458, 322, also when X = 18, 395, 522.

16682. (T. Stuart, D.Sc.)—Prove that the number of properly primitive classes of the determinant $D = -\lambda = 1 \pmod 4$ when λ is a prime, is

$$[\tfrac{1}{8}(\lambda+1)]^{-1}B_{\frac{1}{4}(\lambda+1)} \text{ or } -[\tfrac{1}{8}(\lambda+1)]^{-1}B_{\frac{1}{4}(\lambda+1)} \bmod \lambda,$$

according as $\lambda = 7$ or $3 \pmod 8$, B_n being nth Bernoullian number.

16683. (Professor Neuberg.)—Éliminer les constantes a, b, c, m, n, p de l'équation $y = ae^{mx} + be^{nx} + ce^{px}$ en formant les dérivées y', y'', ...

16684. (R. F. Davis, M.A.)—Solve the equations

$$abc(y^2+z^2-x^2) + (b^2+c^2-a^2)(ayz+bzx+cxy) = 2bcP,$$
$$abc(z^2+x^2-y^2) + (c^2+a^2-b^2)(\ldots\ldots\ldots\ldots) = 2caQ,$$
$$abc(x^2+y^2-z^2) + (a^2+b^2-c^2)(\ldots\ldots\ldots\ldots) = 2abR.$$

16685. (R. J. Dallas.)—Given four non-intersecting lines in space; if a plane cut them in A_1, A_2, B_1, B_2, and A_1B_1, A_2B_2 meet in O, then O is the null point of the plane *when the four lines are all generators of one quadric*, so that, if the plane passes through a fixed point, all the points O lie on a fixed plane. Show, *if this hyperboloidal relation is not fulfilled*, that locus of points O, for all planes passing through a fixed point P, is a cubic surface, on which P is point of contact of a triple tangent plane. Explain the degeneration that takes place when the hyperboloidal condition is fulfilled.

16686. (Professor Langhorne Orchard, M.A., B.Sc.)—If the sphere $x^2+y^2+z^2 = 1$ moves with its centre in the plane of yz, find its envelope.

16687. (W. F. Beard, M.A.)—TQ, TQ′ are tangents to an ellipse, centre C, foci S, S′, such that the circle TQQ′ touches the ellipse again at P. If QQ′ meets the tangent at P at X, prove that (i.) XT touches the circle; (ii.) TP is half the central chord of curvature at P; (iii.) the centre of curvature at P lies on the circle TQQ′; (iv.) T lies on the circle SPS′; (v.) CP.CT = CS².

16688. (V. Ramaswami Aiyar, M.A.)—Given a conic Y, of focus S, semi-axis major a, and eccentricity e. With any point P as focus, and the minor axis of Y for directrix, a conic Y′ is described with eccentricity equal to PS/a. Show that triangles may be inscribed in Y′ so as to circumscribe Y; and that the pedal circles of these triangles with respect to P are all equal, their diameters being equal to PS/e.

16689. (C. E. Youngman, M.A.)—Through a point O in a triangle ABC passes a transversal DEF. Prove that the three circles through OD, OE, OF, touching in turn OA, OB, OC, are coaxal, meeting again at P; and when O is equidistant from BC, CA, AB, the circle ABC also goes through P.

16690. (S. G. Soal.)—Show that the three vertices of a triangle, its circum-centre, orthocentre, symmedian point, and the isogonal conjugate of its nine-point centre are seven points on a conic.

16691. (A. M. Nesbitt, M.A.)—A, B, C are three fixed points in a straight line, and XCY is a fixed line through C. Find two points P, Q, on XY, such that B shall be the in-centre of the triangle AXY.

Digitized by Google

16692. (I. ARNOLD.)—Given the difference of the sides, the perpendicular on the base, and the vertical angle, to construct the triangle.

16693. (T. K. VENKATARAMAN, M.A. Suggested by Quest. 16580.)—Find the necessary relation between the sides of a quadrilateral if the diagonals are perpendicular, and with that condition, show geometrically that all rectangles circumscribing the quadrilateral are similar.

16694. (Professor SANJÁNA, M.A.)—Prove geometrically that

$$\tan^{-1}(\sqrt{m^2+n^2}-n)/m+\tan^{-1}(\sqrt{m^2+n^2}-m)/n=\tfrac{1}{2}\pi.$$

16695. (F. G. W. BROWN, B.Sc., L.C.P.)—If, in a triangle ABC,

$$2(3b^2-2ac)\cos A\cos C=(5b-4c)(4c-3b)\cos B,$$

prove that the sides a, b, c are in Arithmetical Progression.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

10811. (D. BIDDLE.)—There are two concentric circles of known radius. On a diameter of the larger draw a right-angled triangle with apex on the circumference, so that a tangent to the smaller from the foot of the perpendicular (between apex and base) shall be parallel to one of the sides.

11403. (Professor RAMASWAMI AIYAR, M.A.)—If $u=0$ and $v=0$ be given equilateral hyperbolas, prove that, if any two conics of the system $au+bv+c=0$ touch each other, the point of contact lies upon a fixed circle; and the locus of their two points of intersection is a three-cusped hypocycloid; and all the straight lines represented by the system are tangents to this hypocycloid.

11573. (H. J. WOODALL.)—Required a linkage to describe a parabola of the nth degree, $y=x^n$, but particularly the curve of adiabatic expansion.

11647. (Professor CAYLEY, F.R.S.)—For what transcendental forms of the function ϕ does the equation $\phi(x)\,\phi(y)=1$ establish an algebraical relation between x and y?

[Professor Cayley states that he has no solution, but that the problem is really one of importance and that an obvious instance is $\phi(x)=e^x$, $e^x.e^y=1$, *i.e.* $x+y=0$.]

11817. (ELIZABETH BLACKWOOD.)—Forces act along generating lines of a hyperboloid at equidistant points of the principal circular section. Consecutive generators are of opposite systems, and the forces act in the positive direction of the generators. If the forces be equal and their number even, show that they are in equilibrium; if their number be odd, find resultant.

11832. (Professor NEUBERG.)—Trouver l'équation aux dérivées partielles d'une surface telle que la section par un plan mené par l'axe OZ soit une hyperbole ayant pour asymptotes OZ et l'intersection de son plan avec le plan XOY.

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Road, West Kensington, W.

Vol. XV. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, 89 *Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.*

THE LONDON MATHEMATICAL SOCIETY.

Thursday, June 10th, 1909.—Sir W. D. Niven, President, in the Chair.

The following papers were communicated :—

"On the Behaviour at the Poles of a Series of Legendre's Functions representing a Function with Infinite Discontinuities," Mr. F. J. W. Whipple.

"An Analogue of Pascal's Theorem in Three Dimensions," Mr. W. H. Salmon.

"Some Symbolical Expressions for the Eliminant of Two Binary Quantics," Mr. A. L. Dixon.

MATHEMATICAL BOOKS.
ANCIENT AND MODERN.
Catalogue on application. State wants.
GALLOWAY & PORTER, Booksellers, Cambridge.

NOW READY.

Demy 8vo, cloth, price 2s. 6d., free by post.
To Members of the College the price is 1s., or 1s. 6d. free by post.

THE CALENDAR
OF
THE COLLEGE OF PRECEPTORS
FOR 1909—10:

CONTAINING

All information respecting the objects and operations of the College, Lists of Officers, Examiners, and Members, the Regulations of the various Examinations, &c., with an Appendix containing the following Examination Papers:—

1. Papers set at Examination of Teachers for Diplomas, Summer, 1908.
2. Do. do. do. Christmas, 1908.
3. Papers set at Examination of Pupils for Certificates, Midsummer, 1908.
4. Do. do. do. Christmas, 1908.
5. Papers set at Professional Preliminary Examination, March, 1908.
6. Do. do. do. September, 1908.
7. Papers set at Lower Forms Examination ... ... Summer, 1908.
8. Do. do. ... ... Christmas, 1908.

*** Nos. 3, 4, 5, and 6 may be had separately, price, free by post, 7d. each set. Nos. 7 and 8, price, free by post, 4d. each set.

The Diploma Papers are to be had only in the "Calendar."

METHUEN'S SCHOOL BOOKS FOR THE NEW TERM.

Outlines of Physical Chemistry. By GEORGE SENTER, B.Sc. (Lond.), Ph.D. With many Diagrams. Crown 8vo, **3s. 6d.**

"It is the best text-book of small compass that can at present be obtained."—*Aberdeen Free Press.*

An Organic Chemistry for Schools and Technical Institutes. By A. E. DUNSTAN, B.Sc. (Lond.), F.C.S. With many Illustrations. Crown 8vo, **2s. 6d.**

First Year Physics. By C. E. JACKSON, M.A. With 51 Diagrams. Crown 8vo, **1s. 6d.**

A Preliminary Geometry for Beginners. Experimental and Practical. By NOEL S. LYDON. With Diagrams. Crown 8vo, **1s.**

A Short History of Greece. By WALTER S. HETT, B.A. With 3 Maps and 4 Plans. Crown 8vo, **3s. 6d.**

For Students reading for the Oxford and Cambridge Higher Certificate and similar Examinations.

A London Reader for Young Citizens. By F. W. G. FOAT, D.Litt., M.A. With 21 Illustrations and 8 Maps. Crown 8vo, **1s. 6d.** In 50 short sections, each forming a complete lesson.

"Altogether one of the best Readers of the kind we have ever seen; and that is saying much."—*The Teacher's Times.*

Examples in Elementary Mechanics, Practical, Graphical, and Theoretical. By W. J. DOBBS, M.A. With 52 Diagrams. Crown 8vo, **5s.**

Elementary Latin: Being a First Year's Course. By F. J. TERRY, B.A. Crown 8vo, Pupils' Edition, **2s.**; Masters' Edition, **3s. 6d.** net.

A School Latin Grammar. By H. G. FORD, M.A. Crown 8vo, **2s. 6d.**

Containing what is essential for boys of all Forms.

A Junior Latin Prose. By H. N. ASMAN, M.A., B.D. Crown 8vo, **2s. 6d.**

A History of Great Britain: From the Coming of the Angles to the Year 1870. By E. M. WILMOT-BUXTON, F.R.Hist.S. With 20 Maps. Crown 8vo, **3s. 6d.**

English Life Three Hundred Years Ago. By G. M. TREVELYAN. Edited by J. TURRAL, B.A. Crown 8vo, **1s.**

A Prose Book for Middle and Upper Forms of Secondary Schools.

Junior English. By F. J. RAHTZ, M.A., B.Sc. Crown 8vo, **1s. 6d.**

For Lower Forms of Secondary Schools.

SIX AGES OF EUROPEAN HISTORY. From A.D. 476 to 1878.

Edited by A. H. JOHNSON, M.A.

For Students beginning Foreign History in Higher Forms of Schools and Universities. Crown 8vo, **2s. 6d.** each volume.

The Dawn of Mediæval Europe, 476–918. By J. H. B. MASTERMAN, M.A. With many Maps. [*Ready Autumn.*

The Central Period of the Middle Age, 918–1273. By BEATRICE A. LEES, Somerville College, Oxford. With many Maps. [*Ready July 15.*

The End of the Middle Age, 1273–1453. By ELEANOR C. LODGE, Lady Margaret Hall. With many Maps. [*Now ready.*

Europe in Renaissance and Reformation, 1453–1659. By M. A. HOLLINGS, M.A. With many Maps. [*Now ready.*

The Age of the Enlightened Despot, 1660–1789. By A. H. JOHNSON, M.A., Fellow of All Souls'. With 11 Maps. [*Now ready.*

The Remaking of Modern Europe: From the Outbreak of the French Revolution to the Treaty of Berlin, 1789–1878. By J. A. R. MARRIOTT, M.A. With 10 Maps. [*Now ready.*

EDUCATIONAL WORKS
By A. K. ISBISTER, M.A., LL.B.
(Late Dean of the College of Preceptors).

Third Edition. 12mo, price 1s. 6d.

FIRST STEPS TO EUCLID: Comprising the Propositions of BOOK I., prepared for writing out, with the recapitulation of the steps of the Demonstration appended to each. Forming a Text-book for the above.

New Edition. 12mo, price 9d.

THE COLLEGE AND SCHOOL EXAMINER IN EUCLID, containing the Enunciations of all the Propositions in the College and School Editions, Questions on the Definitions, Arithmetical and Algebraical Demonstrations of the Propositions in Books II. and V., and a large collection of Geometrical Problems for Solution. Designed for Class and Self-Examination, and adapted to all Editions of Euclid.

Fifth Edition. Two Quarto Copy-Books, price 6d. each.

THE GEOMETRICAL COPY-BOOK. Arranged for writing out the Propositions of Euclid in the Abbreviated and Symbolical Form adopted in the Universities and Public Schools.

Ninth Edition. 12mo, price 1s.; or, with Answers, 1s. 6d.

UNITARY ARITHMETIC. Embodying the First Book of Arithmetic of the Irish National Board. With numerous additional Examples, and selections from recent Examination Papers; and a full exposition of the "Unitary" System or Method of Working Arithmetic *without rules.*

*** In this Edition, Questions in Proportion, Practice, Interest, Stocks, Partnership, Profit and Loss, &c., are, by the "Unitary," Method, solved by a single rule.

New Edition. 18mo, price 9d.

THE ELEMENTS OF BOOK-KEEPING, by SINGLE and DOUBLE ENTRY; with Practical Explanations and Exercises on the most useful Forms for Business.

COLLEGE OF PRECEPTORS.

(INCORPORATED BY ROYAL CHARTER.)

LECTURES FOR TEACHERS.

On Thursday, 30th of September, JOHN ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London, will commence a Course of Twelve Lectures on

"PRACTICAL PROBLEMS OF THE CLASSROOM."

The matters to be dealt with are such as interest all classes of teachers, and will be treated with that frankness that is possible in an unreported discourse, but is out of the question in a printed book. While the Lecturer will lose no opportunity of indicating how present educational conditions may be improved, he will take the present conditions as the basis and show how to make the best of things as they are. The Lectures will be copiously illustrated by references to actual experience in all kinds of Schools.

For Syllabus, see page 347.

The Fee for the Course is Half-a-Guinea.

Members of the College have free admission to this Course.

EXAMINATIONS.

Diplomas.—The next Examination of Teachers for the Diplomas of the College will commence on the 30th of August, 1909.

Practical Examination for Certificates of Ability to Teach.—The next Practical Examination will be held in October, 1909.

Certificate Examinations.—The Christmas Examination for Certificates will commence on the 7th of December, 1909.

Lower Forms Examinations.—The Christmas Examination will commence on the 7th of December, 1909.

Professional Preliminary Examinations.—These Examinations are held in March and September. The Autumn Examination in 1909 will commence on the 7th of September.

Inspection and Examination of Schools.—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

The Regulations for the above Examinations can be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary.*

INTRODUCTION AND NOTES TO

SCOTT'S IVANHOE.

By MICHAEL MACMILLAN, D.Litt.

London:
SIMPKIN, MARSHALL, HAMILTON, KENT, & Co., Ltd.

University Tutorial College.
LONDON.

(*Affiliated to University Correspondence College.*)

SEPTEMBER MATRICULATION.

Day Classes may be taken up at any time during August. A systematic Revision Class, meeting both morning and afternoon, commences Monday, August 23rd.

The official Pass List of the University for last September credits University Tutorial College with more than four times as many successes as any other Institution.

JANUARY MATRICULATION.

Annually for the last ten years about one hundred students of University Tutorial College have passed London Matriculation.

Morning, Afternoon, and Evening Classes commence Monday, September 13th. The Classes are conducted by high honourmen with wide teaching experience, and the Fees are as low as is compatible with efficiency.

PRIVATE TUITION DURING THE SUMMER VACATION.

Private Tuition may be obtained in subjects for London University, Oxford Responsions, Cambridge Previous, City and Guilds Entrance, Hospital and University Scholarships, Legal Prelim., College of Preceptors (Medical Prelim.), and other Examinations during the Summer Vacation at 32 Red Lion Square, Holborn, W.C.

Further particulars may be had from The PRINCIPAL,
UNIVERSITY TUTORIAL COLLEGE,
Red Lion Square, Holborn, W.C.

BURLINGTON CORRESPONDENCE COLLEGE.

Principal—Mr. J. CHARLESTON, B.A.
(Honours Oxon. and Lond.)

TUTORS.—The Staff includes Graduates of London, Oxford, Cambridge, and Royal Universities.

METHOD.—Thoroughly individual system, which ensures the closest attention to the needs of each student.

Rapid Preparation for:—

MATRICULATION, B.A. and B.SC., L.L.A., A.C.P. and L.C.P.

For Terms, Testimonials, &c., address—
THE PRINCIPAL,
Burlington Correspondence College,
BIRKBECK BANK CHAMBERS, LONDON, W.C.

Messrs. TRUMAN & KNIGHTLEY, LTD.,
Educational Agents,
158 to 162 OXFORD STREET, LONDON, W.

Directors:
S. A. TRUMAN. F. E. KNIGHTLEY.
JAMES HEARD, B.A.
(Trinity College, Cambridge).

Telegrams—"TUTORESS, LONDON."
Telephone—No. 1136 City.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

A.—EMPLOYMENT DEPARTMENT.

(i.) ASSISTANT MASTERS & TUTORS.

MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

(ii.) ASSISTANT MISTRESSES.

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

(iii.) LADY MATRONS AND HOUSE-KEEPERS.

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

B.—SCHOOL TRANSFER DEPARTMENT.

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

C.—PUPILS' DEPARTMENT.

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. *No charge is made for registration.*

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

UNIVERSITY OF EDINBURGH.

Chancellor: The Right Hon. A. J. BALFOUR, M.P., D.C.L., LL.D., &c.
Rector: The Right Hon. GEORGE WYNDHAM, M.P., LL.D.
Principal and Vice-Chancellor: Sir WILLIAM TURNER, K.C.B., D.C.L., LL.D., D.Sc., M.B., &c.
Secretary of Senatus: Professor Sir LUDOVIC J. GRANT, Bart., B.A., LL.D.

The ***Winter Session*** begins about the beginning of October, and closes about the middle of March; the ***Summer Session*** extends from about the beginning of May to July.

The University embraces ***Six Faculties,*** viz.: ***Arts, Science, Divinity, Law, Medicine and Surgery,*** and ***Music,*** in all of which full instruction is given and Degrees are conferred. There are many different avenues to the ***Arts Degrees,*** the graduation subjects embracing English, History, Modern Languages, Science, &c., besides Ancient Languages, Philosophy, Mathematics, &c. The Widening of the Arts Curriculum permits, to a greater extent than formerly, the Combination of Arts, Science, Medical or Special Studies, and it has been shown by successes of Edinburgh students in the Civil Service Examinations that it is possible to combine study for Degrees in Arts, Science, or Law with preparation for this and other Special Examinations. In addition to the Ordinary and Honours Degrees in Arts, the Higher Degrees of D.Litt., D.Phil., and D.Sc. are conferred. Education in Military subjects is given in connexion with the Scheme of allotment of Army Commissions to Graduates of the University. Degrees in ***Science*** (B.Sc. and D.Sc.) may be taken in ***Pure Science, Engineering,*** and in ***Public Health,*** and the Degree of B.Sc. in ***Agriculture*** and in ***Forestry.*** There are fully equipped Science Laboratories, and other necessary appliances, in all these Departments. The curriculum in ***Divinity*** affords a thorough training in Theological subjects, and in Hebrew, Arabic, and Syriac. The Degree of Bachelor of Divinity (B.D.) is conferred. The ***Law*** Faculty, besides furnishing the professional equipment necessary for those intending to practise in Scotland, contains Chairs in Jurisprudence and Public International Law, Constitutional Law and History, Roman Law, and Political Economy, as also Lectureships in other important branches of Law, and is thus adapted for students preparing for the Civil Service Examinations, and for legal, political, and administrative appointments generally. The Degrees of Bachelor of Laws (LL.B.) and Bachelor of Law (B.L.) are conferred. The Faculty of ***Medicine*** has a full curriculum in Medicine and Surgery, and is equipped with very extensive Laboratories and all other necessary appliances for Practical Teaching. Ample facilities are afforded for Clinical Instruction at the Royal Infirmary, Maternity Hospital, Royal Hospital for Sick Children, Hospital for Infectious Diseases, and Royal Asylum for the Insane. Four Degrees in Medicine and Surgery are conferred by the University, viz.: Bachelor of Medicine (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), and Master of Surgery (Ch.M.), and these Degrees qualify for practice throughout His Majesty's dominions, and for admission to the Naval, Military, and other Public Medical Services in the United Kingdom. A ***Diploma in Tropical Medicine and Hygiene*** (D.T.M. & H.) is conferred on Graduates in Medicine of the University, and a University ***Certificate in Tropical Diseases*** is also conferred on qualified Medical Practitioners who have attended Courses in the University on practical Bacteriology and Tropical Diseases. In ***Music*** also there is a full course of study for graduation, and the Degrees of Mus.B. and Mus.D. are conferred.

The University Staff consists of 41 Professors, 62 Lecturers, and over 50 Assistants and Demonstrators. The annual amount available for Fellowships, Scholarships, Bursaries, Prizes, &c., is about £18,660. Facilities are afforded for research in scientific and other subjects.

Women may attend the Classes in Arts, Science, Divinity, Law, and Music, and they are admitted to graduation in Arts, Science, Law, Medicine, and Music; the training for Degrees in Medicine being afforded by well equipped extra-academical Schools.

Information regarding Matriculation, the Curricula of Study for Degrees, &c., the Examinations for Fellowships, Scholarships, &c., may be obtained from the DEANS OF THE FACULTIES, or from the CLERK OF SENATUS; and full details are given in the University Calendar, published by JAMES THIN, 55 South Bridge, Edinburgh—price 3s. 6d. by post. The Preliminary and Degree Examination papers in each of the Faculties are also published by Mr. JAMES THIN, viz.—Arts and Science Preliminary papers and Bursary papers, 1s.; Medical Preliminary papers, 6d.; Degree papers: Arts, 1s.: Science, 9d.; Divinity, Law, Medicine, and Music, 6d. each.

By authority of the Senatus, L. J. GRANT, *Secretary of Senatus.*

KING'S COLLEGE FOR WOMEN.
(UNIVERSITY OF LONDON.)

The College is in Kensington Square. The Faculties represented are ARTS and SCIENCE. There are also two other departments, viz., HOME SCIENCE AND ECONOMICS and FINE ART. The more advanced students in Science attend classes at King's College.

For information and prospectus apply to the SECRETARY, King's College, Strand, W.C.

UNIVERSITÉ DE RENNES (France).

The Educational Times.

Compulsory Continuation Schools

THE Consultative Committee, after some fifteen months' hard labour, have produced their Report on Continuation Schools—a volume of nearly three hundred and fifty pages packed with matter calculated to induce serious reflection. The Scottish Education Bill of last year contained a clause requiring Local Authorities to provide continuation schools and investing them with powers to make by-laws compelling the attendance of young folk up to seventeen years of age. The Consultative Committee was charged to investigate the whole problem of continuation schools and in particular to advise on the applicability of the Scottish compulsory clause to England and Wales. The Committee ransack the records of the past two centuries: they go back to the Sunday schools of Jean Baptiste de la Salle in Paris in 1690 and to the first evening schools in England in 1711; and they come down to the schools established by some of the great firms of to-day for the young workers in connexion with their establishments. In the result, they find themselves compelled to recommend compulsion. Here we seem to be entering on a distinctive phase in the progress of our educational development.

It appears, then, that more than 200,000 children leave school under fourteen, and that somewhere about 2,000,000—ten times as many—do not see the inside of a school between fourteen and seventeen. The gross abuse of all these important formative years is all too obvious to every wakeful eye; and enterprising students of economics have made careful observations reducing the facts of limited but representative areas to definite statistical form. It is not merely that the specific facts learnt at school fade from the careless mind or evaporate into vacancy: the new practical acquisitions are generally of negligible, if not of negative, value, and the lack of direction and control tends to arbitrary change of occupation with intervals of idleness, with the disastrous consequence that no basis is established for later permanence and progress. Here, then, we are confronted with a melancholy waste of school training, a vast reduction of industrial efficiency, a lamentable deterioration of character, an inevitable obscuration of civic responsibility, and an incalculable augmentation of social discomfort and distress. We have unveiled to us what seems to be one of the more potent causes of the degeneration noted by sociologists in certain of the social areas and strata, especially in our large cities, and justly pronounced by them to be a grave and growing danger to the community.

Probably no thinking person doubts the general proposition, but it needs some familiarity with individual facts, or at least some imagination, to get beyond an apathetic acquiescence to a fruitful realization of the position. We offer two examples from the investigations of Mr. R. H. Tawney, Lecturer in Economics in the University of Glasgow. The first is the case of a boy that left school at eleven, and following are the particulars of his first six places:—

> Delivering milk at 4s. a week, stayed three months; left because of a quarrel. Message boy, 6s. and uniform, six months. Message boy, 7s., two months; "sacked" for destroying instead of delivering messages. Message boy, 5s., seven months; "found work too heavy." Van boy, 8s., over a year; left because of a "row." Weaving mill, working with drawer and serving him with yarn, 8s. 6d., two years; mill failed.

The next is the case of a boy that left school at twelve, and these are the particulars of his first six places:—

> Van boy, 5s., three weeks; left because "fed up." Van boy, 7s. 6d., four months; left because "tired of job." Lorry boy in brewery, 5s. one month; left because "tired of job." Message boy, 6s. 6d., one week; left because he was hurt, and was idle for six months. Driving van, 8s., six weeks; left because "he did not get enough for driving horses" (the substitution of boys for men as drivers is one of the complaints of the Carters' Union). Saw-mills, "drawing-off machine," 9s., three months; left because he wanted "more money," and went to be a "trace boy."

The first boy went through half-a-dozen places in four and a half years (11 to 15½); the second boy went through half-a-dozen places in less than a year and a half (12 to 13½), including half a year of idleness. They barely made a living. How much did they learn to fit them for any permanent or decently remunerative or in any sense effective place in the industrial organization? What were the moral effects of their occupations and of their associations? If these are typical examples, there needs no further argument. But it is not boys alone that are concerned: the Committee note that the industrial development is "proceeding at the cost of the exploitation of our girls as well as of our boys."

What is the remedy, then? Naturally, the Committee look around to discover the easiest means of amelioration. They turn first to the day schools. The size of the classes

Digitized by Google

should be reduced: that would issue in more thorough and durable learning. Children should attend up to thirteen without admissible exemption, whether full time or half time; and, after a short interval, exemption should be prohibited, with certain exceptions, up to the age of fourteen. In rural districts, however, girls that are required to help at home might be allowed to attend half time from thirteen to fifteen instead of full time up to fourteen. But no boy or girl should be allowed to leave the day school under sixteen, unless the parents can show that they are, and continue to be, suitably employed. The difficulty will be to accommodate these requirements with the necessities of parents and with the demands of employers; and perhaps the later school work will have to take on a more largely practical character in view of the openings in local industries. Junior employment registries are proposed, to furnish skilled advice to parents, managers, and teachers, in the selection of suitable occupations for the children and in the determination of such further courses of instruction as will help to qualify them for skilled employment; such registries to be allied with any future system of adult labour bureaux and to be subsidized by public funds. The general idea seems to be to make the most of the day-school facilities and to bring all the interested parties—parents, school managers, teachers, and employers—into intelligent co-operation for the preparation and guidance of the children into one or other line of useful and progressive work, and to shut them off from the roads that lead to indiscipline and idleness, futility, unemployment, distress, and not improbably crime.

Yet, with all the aid of available voluntary agencies, the Committee are driven to recommend compulsion, after the fashion of the Scottish clause. They would make it the statutory duty of the Local Education Authority to provide continuation schools for young persons up to the age of seventeen, to keep a register of all such persons, with a record of their occupations, and to make by-laws for compelling the attendance of such as are not otherwise receiving a suitable education. At the same time they would make it the statutory duty of employers to provide sufficient time for young persons in their employment to attend these schools, and to refrain from employing any young person that should fail to produce periodically a card vouching for his or her regular attendance at a continuation school Apart from the social difficulties of such a reform, which will require discreet and patient handling, there is the ever present difficulty of expense. It is calculated that fully £3,000,000 would be necessary for a year's operations, not including the cost of provision of premises. After all, this works out at less than a shilling a head per school week; and the training must be of the feeblest description if the investment fail to return an enormous percentage, apart altogether from moral and social amelioration.

NOTES.

In place of the system of apprenticeship "one finds," says the *Electrical Engineer*, "such an enormous expansion of technical education, and so rapid a multiplication of centres of technical instruction, that one is apt to pause to inquire whether the object of technical education, State-aided and otherwise, is not being defeated by teaching the 'art' of the various trades—that is, by communicating mere trade knowledge—instead of so directing instruction that it should exercise the brain power of the student." Our contemporary quotes Prof. Karl Pearson: "Mechanical skill, the trick of the trade," said Prof. Pearson, "may be learnt best in the workshop; facts and formulæ may be found in books; processes may be followed in the foundry and the weaving shed in a manner that can only be mimicked in the schools; but true 'scouting' can be learnt only from a master scout, and here arises the real value of a band of men trained to observe and reason. This is why we want scientific schools and men of science if the nation is to maintain its position." We want the highest development of pure science in the Universities, and of applied science in the technological institutions. When we come to the studies of artisans in evening classes, it seems plain that the tendency remarked by our contemporary requires to be carefully watched and counteracted. The difficulty is to keep the scientific aspect of a subject in due prominence, while at the same time attending adequately to the practical applications: so much depends upon the judgment of the teacher for a just balance. We are glad to learn that such classes "are very largely supported by manufacturers"; we suspect there is only too much room for still larger support. But there is another difficulty—the difficulty of the sensible manufacturer when his trained scientific man and his workman worry him with silly squabbles of mutual contempt. The workman may be pardoned for smiling at the practical ignorance of the student, but the student ought surely to have supercilious notions knocked out of him in the course of his training. There are not wanting indications that some independent inquiry into the whole system of technical instruction is needed to clarify the situation.

St. Paul's is to be cordially congratulated on its celebration of its quatercentenary. Whether it might historically claim a hoarier antiquity or not, one may safely predict for it many more centuries of eminent usefulness. Its close relations with Oxford naturally brought the Chancellor to officiate at the opening of the new science buildings. Every one will appreciate his reference to Mr. Walker as "one of the great public-school masters of the nineteenth century," and regret that Mr. Walker's health prevented his attendance. Lord Curzon said he was struck "by the almost unparalleled number of distinguished pupils turned out by St. Paul's"—Milton and Marlborough, the immortal Pepys, a couple of Lord Chancellors, a Speaker of the House of Commons, three great antiquaries, a score of bishops, and so forth. Really a large and rich foundation in the heart of the capital of the Empire might fairly be expected to take in and to turn out a not inconsiderable number of considerable personages in the course of four centuries. We confess we have no great sympathy with any but the most modest claim of great men by schools or other institutions in which they have happened to pass a year or two of their youth, unless formative influences are very specifically traced to the connexion. However, why should folk be downhearted?

Digitized by Google

Lord Curzon, fired by the familiar contemplation of "the men that do the work and sustain the fabric of the British Empire," proceeded to lash the pessimists. By all means lash the pessimists that cannot show solid reasons for their pessimism; but let us attend very carefully to the pessimists that base their outcry upon easily ascertained and indisputable facts. Without the least pessimism, one sometimes doubts whether self-laudation does not imperiously demand the lash. "Foreign critics," said Lord Curzon, "with all the advantages of their superior scientific equipment and excellent organization, are always coming to English public schools to see how they can combine with the great educational superiority which they enjoy that training in character, that sense of moral responsibility, that spirit of civic patriotism," and all the rest of it, "which are among the chief and honourable characteristics of the English public-school system." Indeed! Does Lord Curzon—or anybody else—believe for one moment that character, moral responsibility, civic patriotism, and so forth, are the monopoly of our public schools or of our own country either?

In view of demands for more and more Dreadnoughts and of other demonstrations of Imperial resolution or uneasiness, some remarks of Mr. J. T. R. Alexander in a lecture on "Student Life in a German University," recently delivered at Northwich Grammar School, deserve sober attention. "German University life," he justly said, "is of vital interest to all Englishmen that have the welfare of their country at heart." Its essential lesson touches us nearly. Mr. Alexander, who has been studying at Würzburg, claims to know "what the Germans are doing and something of what they hope to do," and he quite agrees that "England is in danger—great danger." In this way:

> The Germans (he said) had a well arranged plan for conquering the world, and were developing it with relentless tenacity, but that plan was to win not sea fights, but trade fights. They did not mean to invade this land with armed hosts, but they meant to win and to hold the trade of the world and the wealth that followed it. It was not a question to his mind as to whether war would break out between England and Germany. War was declared years ago when the great German ship "Kaiser und König" sailed up Southampton Water on her maiden voyage to New York. England had greeted Germany's attempt to become a manufacturing nation by the well known gibe, "Made in Germany." That great ship had been entirely produced in the Fatherland, and as she steamed past Portsmouth her crew hung out over her bows a great white sheet on which they had written in large letters the words, "Made in Germany." That was a declaration of war—the war which Germany meant, had meant, and had every right to mean. If they built fifty Dreadnoughts to each one of the Germans, the real danger would still be there. Germany was arming her people with the sword, and she was also arming them with highly trained intelligence. She meant to win by intelligence and to defend with the sword. England was increasing her armaments, but was not sufficiently arming the nation for the scientific and commercial war which was Germany's great effort. He was amazed that this nation did not realize more keenly the urgent need for a higher standard of general and specialized education in this country.

Whatever be the true diagnosis of Dreadnoughts, there can be no question about the necessity of strengthening the scientific and commercial defence. To this end the cost of a single Dreadnought, judiciously administered, would go a considerable way. Only we are so apt to be wise after the event. One gets tired of repeating an obvious lesson.

The British University Students' Congress, which was held the other week within the venerable precincts of the University of Durham, exhibited a useful activity, and suggested a higher significance than it has hitherto been credited with. The absence of representatives from Oxford and Cambridge is to be regretted: we should hope there is some better reason for it than the allegation that "the modernism of the movement prejudices against it Universities which wear with pride the rusty fetters of tradition"—some reason based rather upon other differences of a more substantial character. One of the grievances discussed throws a curious sidelight upon British and Continental academic estimates. Some British graduates—graduates of distinction, it is alleged—hanker after the degree of Ph.D. The privilege of exemption from attendance during two semesters (out of the full three years' course), which used to be granted in consideration of a British degree, was recently withdrawn by German and Swiss Universities. Neuchâtel and Zürich have again made the concession, but the Germans hold to their opinion that a British honours degree, or a double degree, should count only as a matriculation examination. The Congress, therefore, invokes the Foreign Office to bring Germany to reason. Another interesting point under discussion was the relative value of the lecture and tutorial systems. It seems clear enough that a professor cannot lecture efficiently to a mob of several hundred students of different stages of acquirement and ability, except upon the more general aspects of his subject. The tutorial method obviously brings teacher and pupil into more profitable relationship. It is anything but surprising, then, that the Congress carried a resolution in favour of a supplemental system of tutorial instruction after the model of the German and American seminar. The practical difficulty, as usual, will be the want of money to carry the plan into operation; but it will have to be got over somehow. The annual confabulation of students from diverse centres is good; better still is the influence of their discussions upon academic methods that usually arise without much consideration of the student and tend steadily to get stereotyped.

Last month we drew attention to Baron Kikuchi's elaborate exposition of the system and history of Japanese education. Now it is reported that substantial changes are imminent, under pressure of the general opinion that Japan cannot, under the present conditions, compete successfully with Occidentals. The greatest difficulty of all is found in the extreme complexity of the native language, which Baron Kikuchi has impressively illustrated. To this is added the effort of learning two Western languages — English and either German or French; and on the top of the linguistic drudgery comes the study of technical subjects. The consequence appears to be that a diligent student has little chance of graduating at an Imperial University till he is twenty-three or twenty-four, while a very large number consider themselves fortunate if they secure their degree before thirty. In many cases the labour of learning leads to exhaustion of physical power: "many students, after graduation at the University, find themselves quite unfit to enter upon the duties of life with the energy that is essential to success." Nor, after all, is efficiency in the prescribed studies always secured. We have heard of this sort of

Digitized by Google

experience before, outside Japan. So something will have to be thrown overboard to lighten the ship. The victim generally selected is one of the Western languages. The Minister of Education is said to be preparing to submit proposals of reform to the consideration of the High Council of Education.

SUMMARY OF THE MONTH.

THE programme of the Summer School of University Extension students, to be held at Oxford, July 30 to August 23, is disposed in three main sections: (1) the general scheme is intended to illustrate the place of Italy in world history and its contributions to literature, art, science and thought; (2) another section is devoted to political and economic science, including a course of lectures on "The Problem of Industrial Peace" and a course on "English Political Institutions"; (3) there is also a special section designed for foreign teachers, including lecture classes in phonetics and the English language. Finally, special classes have been arranged in practical map-making, in the theory and practice of teaching (in which Prof. Sadler will take part), and in the Italian language.

BEDFORD COLLEGE FOR WOMEN (University of London) celebrated the sixtieth anniversary of its foundation by a garden party at South Villa, York Gate, Regent's Park, where the new buildings are to be erected. It was founded in 1849 by Mrs. Elizabeth Jesser Reid. In the first session George Eliot and Miss Anna Swanwick were among the 193 students. Now there are over 300 students, a large proportion of them colonial and foreign. It is the only college for women that receives a Parliamentary grant (£4,000 a year, with a further special grant of £700 this year). The L.C.C. gives it a yearly grant of £800. The plans for the new buildings include lecture rooms and laboratories for four hundred students, study bedrooms for one hundred students, a library, a large assembly hall, a gymnasium, and an art school. The cost is estimated at £80,000, and £20,000 more will be needed to meet the increased annual expenditure. Towards the sum thus required Lady Tate has generously promised £10,000 for the library, and a bequest of £12,000 from the late Mr. James Turle will be applied to the building fund. It remains to collect £80,000, but, with so satisfactory a record of past performances, and so admirable a site for the college of the future, the Council have confident hope that their appeal will meet with a generous public response. A performance of the "Electra" of Sophocles in Greek, in aid of the Building and Endowment Fund, was given at the Royal Court Theatre on July 15, 16, and 17.

THE annual distribution of prizes of the North London Collegiate School took place on July 5, the Bishop of Bristol in the chair. The Head Mistress, in her report, enumerated many successes of present and past pupils. Miss Marjorie Long, who last year was equal to the Fourth Wrangler, has this year been placed with two men in the First Class of the Mathematical Tripos, Part II. Miss Violet Cooper is the only woman in Class I. of the Natural Science Tripos, and in the list of London graduates occur the names of many old North Londoners—four in First Class Honours. With the opening of the new buildings there are greater facilities for school clubs, and the Science Club is now divided into Photographic, Gardening, and Geographical Sections. The prizes were distributed by Miss Forrest Browne. The Chairman recalled the time, only forty-five years ago, when he was one of the privileged number of men to vote that girls should be admitted to the Cambridge Local Examinations. He was later entrusted with the scheme for allowing women students at Cambridge to take the Tripos Examinations, and he recalled the two occasions on which a woman had been Senior Classic and above Senior Wrangler. He impressed on the girls that, while now the highest opportunities for scholarship were open to them, yet they should remember that woman was the decorative element in the social circle, and he hoped they would be above all things womanly.

THE summer festival of the College for Working Women (7 Fitzroy Street) was held on July 3, the Bishop of London in the chair. The thirty-fourth annual report stated that during the past year there had been a slight increase in the number of students and a considerable one in the total attendances at the classes, so that the college evenings had always been bright and full of interest. The Bishop of London, after distributing the prizes and awards, warmly congratulated the students on their successes and encouraged his young hearers to persevere in the cultivation of their minds and intellects. In the pursuit of knowledge in the many and varied directions in which facilities were offered them at the College, new interests would be brought into their lives and a joy that would ever increase. In such pursuits rich and poor were on the same level of intellectual endowment, and East and West could there meet and find an equal delight and recompense.

SPEAKING at the Conference of the Association of Teachers in Technical Institutions, which was held in Liverpool, Mr. J. Wilson, of Battersea, the president, submitted that the salaries of technical teachers should be raised at least to the level of secondary school teachers. Further, having now become practically civil servants, they should participate in the usual advantages of a superannuation fund and security of tenure. Mr. Wilson outlined a scheme for linking the elementary school, the evening continuation school, and the technical school, remarking in passing that the evening school should be serious and strenuous, and not merely a feeble competitor of the cheap music-hall. He next suggested that a Royal Commission should be appointed to deal with the organization and co-ordination of technical education in relationship to primary and secondary education. The Conference agreed to a resolution declaring for the abolition of the half-time system, and stating that to fit students for the instruction provided in technical institutions it was desirable that no child should be allowed to leave the elementary school before it was fifteen years of age. The resolution further urged that special attention should be given to the teaching of practical arithmetic, elementary science, and to manual training. The Conference heartily approved the general principles embodied in the recommendations of the Minority Report of the Poor Law Commission, that it should be illegal to employ boys below the age of fifteen or any youth below eighteen for more than thirty hours per week, and that boys should be compelled to attend some suitable institute giving physical and technical training, for not less than thirty hours per week, at periods to suit the convenience of employers in different industries.

London. THE students of University College (says the *Guardian*, July 7) are to be congratulated on the methods adopted for raising funds for their new athletic ground, for they contrived to organize a bazaar which was in every sense worthy of the dignity of the College. Every faculty gave of its best, and art, science, and archæology were all pressed into the service. The familiar buildings in Gower Street presented a very unfamiliar aspect on three days of last week. The grey old columns were hung with roses, and the students blossomed forth in fascinating costumes of the Hogarth period. Slade pupils transformed themselves into "pavement artists" and solicited the modest sum of one penny for encouragement. X-rays were also at work for a consideration, and liquid air was in readiness to entertain as well as instruct. Among the most interesting of the "side-shows" were the scenes from "The Tempest" and "Twelfth Night" in English "as she was spoke" in Shakespeare's day, Indian *tableaux* from "The Light of Asia" and the "Ramayana," and the Homeric *tableaux* arranged by the Professors of Greek and Archæology. The bazaar brought some £2,000 towards the reduction of the debt on the athletic ground. The Treasurer and the Committee at University College would gladly receive £3,000 more.

Imperial College. THE new buildings of the Imperial College of Science and Technology, the first stone of which was laid by the King on July 8, will occupy about five acres, with a frontage of about 1,000 ft. towards Prince Consort Road and of about 190 ft. towards Exhibition Road. They will accommodate the mining, metallurgical, geological, and engineering departments. The architect is Sir Aston Webb, R.A.

Digitized by Google

Birmingham. THE new University buildings were formally opened by the King and the Queen (July 7). The Birmingham Charlottenburg, says the *Preston Guardian*, "in some respects is even in advance of its German rival. This workshop University is, so far as it goes, the finest equipped institution in the world. All the latest tools and machinery for its purposes have been supplied, and the thousand students already at work under the most skilled instructors will form the nucleus of the army which by and by will be streaming into the country and all over the Empire to build upon broader foundations our manufacturing supremacy. We cannot but think also that such a splendid school of teaching will have a marked influence upon other centres, in suggesting improvements that are needed to keep the methods and principles and results of training well abreast of modern needs as they themselves continually grow and expand. The effect, indeed, upon the whole industrial interests of the country will hardly be calculable, because it will be regularly augmenting in different places, at different times, in different ways, and in different spheres. The country will feel it and realize it without exactly understanding wherefore."

Bristol. JUST thirty-five years have elapsed since the movement was started for the foundation of University College, which has now practically been merged into the University. It was on June 11, 1874, that the public meeting was held at the Victoria Rooms at which the scheme, which had been projected by the Bishop of Hereford, then Head Master of Clifton College, was launched. The aim of the College, as then outlined, was to combine thorough technical training with general culture, and to afford instruction in ancient and modern history, languages and literature, in mathematics, in law and political economy, and in all such branches of science as could be applied to engineering, mining and metallurgy, manufactures, commerce, medicine, and pharmacy. But from the very outset the promoters had something more in view. Dr. Jowett, Master of Balliol, said the real object was the foundation of a local University, and he expressed his conviction that the citizens of Bristol, who were proud of its being a cathedral town, would be also no less proud of its being a University town. The ideas placed before the citizens in 1874 have now been realized. A start will be made with faculties of art, science, medicine, and engineering. Hitherto medicine and engineering have been carried on at University College under science, but they will now be given separate faculties. Arts will include classics, English literature, modern history, modern languages, Oriental languages, logic, economics, psychology, mathematics, and music; engineering will include civil, mechanical, electrical, mining, sanitary, and motor engineering; and the faculty of science will embrace experimental physics, chemistry, physiology, botany, and geology. The faculty of engineering will be carried on at Merchant Venturers' Technical College. It is provided that other faculties may from time to time be constituted by the University.

Aberdeen. A STATEMENT has been prepared on behalf of the Lecturers of the University of Aberdeen setting forth the case for fuller representation of their subjects on the Senatus. The matter is one which has engaged attention for some time and upon which strong feeling exists. The teaching arrangements of the University are determined by the Senatus, and under the new Acts Ordinance the powers of the Senatus are more extensive than before. The subjects taught by lecturers now bulk largely in the work of the University, but the lecturers have no seat on the Senatus, and, though they are represented on the Boards of Studies, this is held to be insufficient to secure proper attention to the interests of their subjects. The feeling has been intensified by the proceedings in connexion with the three-term session which comes into operation next winter. The complaint is that, in the arrangement of classes under the new Ordinance, the lecturers have not been fully consulted, and that matters in which they were vitally interested have been settled by the Senatus without reference to them.

Magee. MAGEE COLLEGE, Londonderry, has become affiliated with Trinity College, Dublin. It had been hoped in Belfast that Magee would become affiliated with the new Queen's University—a sectarian with a non-sectarian body. There is consequently not a little anxiety in Belfast as to the effect upon the University, and especially upon its Arts and Science faculties.

THE EDUCATIONAL LADDER.

CAMBRIDGE, GIRTON COLLEGE.—Pfeiffer Studentship (about £75): divided between Miss M. D. Brock (Classical Tripos, Part I., 1907, Class I., Division 3; Part II., 1908, Class II.) and Miss I. M. Massey (Medieval and Modern Languages Tripos, 1908, Class I., Distinction in French and German; 1909, Class II.). Studentship of £40: Miss M. Long (Mathematical Tripos, Part I., 1908, equal to Fourth Wrangler; Part II., 1909, Class I., Division 2). Fourth Year Scholarship of £40: Miss I. M. Mathews (Mathematical Tripos, Part I., 1909—old regulations—Class I., between Eighteenth and Nineteenth Wranglers). Sir Arthur Arnold Scholarship of £30: Miss H. M. Barnard (Classical Tripos, 1909, Part I., Class I., Division 3). Fourth Year Scholarship of £20: Miss M. E. Seaton (Medieval and Modern Languages Tripos, 1909, Class I., Distinction in French). Thérèse Montefiore Memorial Prize (about £66): Miss M. Long. Fanny Metcalfe Memorial Prize (£4. 10s.): Miss C. Morrison (Inter-Collegiate Examination in Modern Languages, 1909, Class I.). Pioneers' Prize for History (£2. 2s.): Miss E. E. Power (History Tripos, 1909, Part I., Class I.). Agnata Butler Prizes for Classics: Miss H. M. Barnard (£8) and Miss P. B. Mudie-Cooke (Inter-Collegiate Examination in Classics, 1909, Class I.) (£7).

CAMBRIDGE UNIVERSITY. — Charles Oldham Classical Scholarship: A. S. F. Gow, B.A., Scholar of Trinity. Burney Studentship: J. G. Walker, Jesus. Harkness Scholarship: B. Lightfoot, Scholar of Peterhouse. Craven Studentship: W. H. Duke, B.A., Scholar of Jesus. Craven Fund Grants: A. B. Adams, B.A., Scholar of Emmanuel; J. Fraser, B.A., Scholar of Trinity; and C. F. Taylor, B.A., Scholar of Emmanuel. Wiltshire Prize (Geology and Mineralogy): E. S. Pinfold, Scholar of Peterhouse; honourably mentioned, P. Stocks, King's. Studentship at the British School at Athens: Sidney W. Grose, B.A., Scholar of Christ's.

Jesus. — Kay Theological Scholarships: P. Gardener-Smith, B.A.; J. L. Beaumont-James, B.A.; C. E. O. Finch. Choral Exhibition: O. W. M. Shelton, Derby School.

St. John's.—Open exhibitions of £30 for two years.—For Classics: F. Kidd, Tonbridge School; F. B. Rees, Rossall School; G. L. Ritchie, Bedford Grammar School. For Mathematics: A. H. Rowell, Wellingborough College. For Natural Science: H. Davis, Birkbeck College; A. R. Gregory, St. Olave's Grammar School. Dowman Sizarships: F. B. Cavalier, St. Paul's School; W. M. N. Pollard, Denstone College; C. F. Smith, Birkenhead School. School Exhibitions: Dowman (Pocklington), E. H. Shepherd, Johnson (Oakham and Uppingham), E. E. Raven (Uppingham), Newcome (Grantham), K. S. Waters.

CANTERBURY, KING'S SCHOOL.—Junior King's Scholarships: H. Spence, G. R. Dawbarn, R. G. Crosse, all of King's School. Probationer King's Scholarships: R. A. F. Whistler (Cathedral Choir School, Worcester), L. W. H. Best (Mr. Hammond, Malvern House, Kearsney), B. W. Galpin (Junior King's School), R. J. Mowll (King's School), T. H. Keble (Mr. Holt, North Down Hill, Margate), G. K. Lawson (Mr. Hammond, Kearsney), D. Cockrem (Mr. Mackay, Shirley House, Watford). Entrance Scholarships: B. G. King (Mr. Waterfield, Temple Grove, Eastbourne), R. A. F. Whistler (Cathedral Choir School, Worcester), L. W. H. Best (Mr. Hammond, Kearsney). House Scholarships: D. Cockrem (Mr. Mackay, Watford), J. L. L. Johnston (Messrs. Campbell and Reece, Doon House, Westgate).

CARDIFF UNIVERSITY COLLEGE.—Science Research Scholarship, £150 (Royal Commissioners of Exhibition of 1851): Ernest Vanstone, B.Sc. Isaac Roberts Research Scholarship, £50: Ezer Griffiths, B.Sc.

CARNEGIE TRUST.—For the academic year 1909–10, there have been awarded 20 Fellowships, 30 Scholarships, and 69 Research grants—fully £8,000.

CHELTENHAM COLLEGE.—Scholarships: A. L. Pemberton, F. H. Savile, F. H. Tate, and H. E. D. Carter (Cheltenham College), C. E. Lucette (Chard Grammar School), D. R. G. Mackay (Mr. Gurney's, Brandon House, Cheltenham), D. G. McGregor and A. D. Roberts (Cheltenham College, P. G. E. Warburton (Mrs. White's, Marlborough House, Hove), B. F. C. Atkinson (Mr. Lasbrey's, Belmont House School, Blackheath), R. W. Copland (Cheltenham College, formerly Mr. Foster's, Stubbington), A. H. G. Cox (Cheltenham College, formerly Mr. Auden's, Glyngarth, Cheltenham), F. L. C. Hodson (Cheltenham College, formerly Miss Knapp's, Dursley), E. D. T. Roberts (Cheltenham College, formerly Mr. Vickers's, Scaitcliffe, Englefield Green), M. H. Gaitskell (Mr. Lushington's, Elstree), W. A. Gordon-Hall (Miss Watson Willis's, Glengorse, Eastbourne), and G. A. G. Young (Mr. Vaughan Pott's, Parkside, Ewell). James of Hereford Scholarship: H. P. Chapman (Hereford Cathedral School). Old Cheltonian Scholarship: J. V. H. Campbell (Mr. Trollope's, Tyttenhanger Lodge, St. Albans) and F. L. Eardley-Wilmot (Cheltenham College, formerly Mr. Haskoll's, Pelham House, Folkestone). Francis Wyllie Scholarship: A. D. Roberts (Cheltenham College). Special Army Scholarships: A. L. Pemberton, Southwood Scholar (Cheltenham Col-

Digitized by Google

lege), H. E. H. Carter, Dobson Scholar (Cheltenham College), and P. G. E. Warburton, Jex-Blake Scholar (Mrs. White's, Marlborough House, Hove).

ETON.—Foundation Scholarships: F. T. K. Caröe, A. Bevir, B. J. Hubbard, S. I. Fairbairn, C. C. Maud, G. Parker-Jervis, F. S. Pemberton, N. E. P. Sutton, W. A. P. Graham, P. S. Chattaway, R. C. Durnford, J. S. Nichols, W. E. C. James, J. H. Keeling, L. A. G. Cust, C. M. J. Villiers, G. C. K. Watson, J. T. Matthey, R. S. Prior, G. W. Kindersley, R. H. Donaldson.

LEAGUE OF THE EMPIRE.—Challenge Cup inter-all Secondary Schools of the Empire, with the £5. 5s. League of the Empire Prize: J. R. Aspinall, Crossley and Porter School, Halifax, England (age 14). Challenge Cup inter-all Primary Schools of the Empire, with the £3. 3s. League of the Empire Prize: Gertrude Horton, Capland Street Higher Grade School, Marylebone, London (age 13). The Essays will be printed in the August number of the *Federal Magazine*.

LONDON: NORTH LONDON COLLEGIATE SCHOOL.—Clothworkers' Leaving Scholarship, £50 a year for three years: Ethel Steuart. Platt Scholarships, £20 each: Lilian Jones (Classics); Gladys Misick (English and History); Kate Pearce (Mathematics); Edith Jacob and Jessie Willmott (Science); Catherine Cowell, Margaret Hodgson, Doris Swinburn, and Bertha Underwood (on the results of the School Leaving Examination, Matriculation standard).

LONDON UNIVERSITY.—Lindley Studentship, £100, tenable one year in the Physiological Laboratory of the University: Mary Taylor Fraser, B.Sc. University Studentship in Physiology. £50 for one year: Gerald Roche Lynch, Demonstrator of Chemistry, St. Mary's Hospital Medical School. Gilchrist Studentship in Modern Languages: Euphemia Leys Ramsay, B.A., of University College. University Medal at M.B., B.S. Examination, May, 1909: Cecil A. Joll, B.Sc., of University College, Bristol.

London (Royal Free Hospital) School of Medicine for Women.—The Fishmongers' Company has awarded a University Exhibition of £60 a year for three years to Miss Naomi Tribe, a student of the School.

Royal Holloway College. — Scholarships of £60 for three years: Miss M. M. Bone, English (Clifton High School and private study); Miss E. A. M. Hope, French (Bangor County School); Miss I. M. I. Twells, Mathematics (Perse School, Cambridge); and Miss G. L. Whitaker, Mathematics (Warwick High School). Scholarships of £50 for three years: Miss C. M. Baines, German (North London Collegiate School); Miss I. M. Burnett, Chemistry and Botany (North London Collegiate School); Miss E. Le Seeleur, French (Jersey Ladies' College); Miss G. E. Powers, Mathematics (City of London School); Miss A. Stephens, Botany and Chemistry (Camborne County School and private study); Miss L. M. Swinburn, English (North London Collegiate School); Miss L. E. Thomas, Botany, Chemistry, Physics (Clapham High School); and Miss T. E. M. Wright, History (St. Mary's College, Paddington). *Proxime accesserunt* Miss P. P. Duncan, English (Reigate High School); Miss E. Noble, English (Milham Ford School); Miss P. C. Inman, Mathematics (Blackheath High School); Miss D. L. Barker, German (Manchester High School); and Miss A. B. Askew, English (Fulham Secondary School).

University College.—Andrews Scholarships: for students of one year's standing, £30 each—Louise W. Stone (Classics); Eileen O'Rourke (Modern Languages); R. G. Lunnon (Mathematics and Science). Second year's scholarship, £20: D. M'Donald. Carey Foster Research Prize: Caroline Schneider. Cluff Memorial Prize (£15): T. C. Graves. Ellen Watson Memorial Scholarship of £15: F. Jackson. Archibald P. Head Memorial Medal: R. A. Pfleiderer. Heimann Silver Medal: L. A. Triebel (provisional). Hollier Scholarships (£60 each). Greek: No award. Hebrew (£30 each): A. B. Greenbaum and E. M. Levy, equal. Jessel Studentship: E. M. da C. Andrade. Joseph Hume Scholarships (£20 each): Jurisprudence, R. S. Carr; *proxime accessit* M. S. Levy.—Political Economy: Mabel C. Buer. Jews' Commemoration Scholarship, £15 a year for two years: A. E. Evans. John Stuart Mill Scholarship in Philosophy of Mind and Logic, £20: E. M. Page. Malden Medal and Scholarship: second year students—G. F. Forsey; third year students—T. J. Cash. Mayer de Rothschild Scholarship in Mathematics, £42: Marion Pick. Physics Research Studentships: £60, F. Simeon; £40, B. B. Baker. Quain Law Professor's Prize, £15: M. McQuirk for Essay on "The History, Form, and Effect of the most favoured Nation Clause in Treaties." Science Scholarship (Commissioners for the Exhibition of 1851): H. E. Watson, B.Sc. Slade Scholarships in Fine Art, £35 a year for two years: M. Gertler and F. A. Helps. Melvill Nettleship Prize for Figure Composition: Elaine T. Lessore and W. L. Claus, equal. Tuffnell Scholarship in Chemistry, £80 a year for two years: H. J. Page.

School of Economics.—Hutchinson Medal (for research work): C. Ryle Fay, D.Sc. Lond., Fellow of Christ's College, Cambridge.

LONDON: UNIVERSITY COLLEGE SCHOOL.—Major Scholarships: C. P. Wright (Grammar School, Bridgnorth) and A. M. Fleming (St. John's House, Hampstead). Minor Scholarships: C. W. Scott (Dunstable Grammar School), H. J. Newland (Broad Oak School, Northwood), and E. Geffen (University College School).

MARLBOROUGH.—Senior Scholarships: G. F. Squire and H. M. Batson, Middle Fifth; A. J. Hopkinson, Upper Fifth (Hon.); K. K. B. Hall, Lower Fifth; H. F. A. Turner, Lower Fifth (Berens Scholar); and L. H. Sanger Davies, Middle Fifth (Mathematics). Junior Scholarships: A. N. G. Peters, House Scholar (Mr. Daniel, Filey); G. R. S. Wilson (Mr. Branfoot, Ditchling); S. C. Woodroffe, Remove; C. W. Disbrowe, Shell (late from Mr. Grenfell, Parkgate); M. H. Goodall, Lower Fifth (late from Messrs. Wynne and Jenner, Limpsfield), H. M. Yeatman (Mr. Radcliffe, East Grinstead); and M. P. Grubb (Mr. Phillips, Lowestoft). Hon. Mentioned: J. W. Mallinson (Dulwich College Preparatory School). Modern School, Senior: D. J. St. C. Mullaby, Engineering Class. Authors' Scholarship: P. B. Stoodley, Upper Fifth. Modern School, Junior: D. H. M. Tucker (Cathedral School, Llandaff) and D. A. Homan, Modern Shell, equal.

OXFORD: LADY MARGARET HALL.—Gilchrist Fellowship: Miss Fede Mackenzie (First Class in Final Honour School of Natural Science).

OXFORD: SOMERVILLE COLLEGE.—Research Fellowship: Miss Barbara Freire-Marreco, formerly student of Lady Margaret Hall.

OXFORD UNIVERSITY.—Rebecca Flower Squire Scholarships for Honour Candidates for Ordination: C. B. Reynolds, Ireland Exhibitioner, Oriel, and B. de S. Scott, Keble.

The Goldsmiths' Company has awarded Senior Studentships for the encouragement of research to Bertram Lambert, M.A., Merton, and C. S. Gibson, B.A., Corpus. The Goldsmiths' Company's Exhibitions, 1909, have been awarded to L. Davies, Queen's; S. S. Horsley, Merton; E. C. Hyde, Jesus; and G. L. Marriott, Exeter (Classics and Divinity); J. Morgan, Jesus; and I. T. Pritchard, New (Mathematics and Divinity).

The Fishmongers' Company have appointed Mr. William Burridge, B.A., Christ Church, to the Mark Quested Exhibition for three years.

The Leathersellers' Company have elected George Guest Leve, Merton College, to Mr. George Humble's Exhibition; and Harold Sidney Arrowsmith, Wadham College, to Mr. Robert Rogers's Exhibition.

The following have been adjudged by the examiners in the Theory, History, and Practice of Education to be worthy of distinction:—George E. Fawcus, B.A., New College; David C. Somervell, B.A., Magdalen; and Ethel G. Romanes, Lady Margaret Hall. Satisfied the examiners: Meredith Atkinson, B.A., Keble; Guy W. Morris, B.A., St. John's; Olive C. Coldwell, Somerville College; Mabel A. S. Elliott, B.A., Alexandra College, Dublin; Eleanor M. Plumer, King's College, London; Lavinia D. Smith, B.A., Wellesley College, Mass., U.S.A.; Ada M. Stopher, B.A., London; and Gertrude M. Thatcher, Society of Oxford Home Students.

Brasenose. — Colquitt Exhibition: Cyril H. A. Porter, St. Edmund's School, Canterbury. Natural Science Scholarship: Sydney W. F. Underhill, Winchester College.

Christ Church.—History Scholarship: H. L. Maddock, King Edward's School, Birmingham.

Magdalen.—Academical Clerkship (bass voice): Leslie Winterbottom, Exeter Cathedral School.

St. John's.—Dean Mansel Exhibition (Divinity and Hebrew): Edward J. Lee, non-collegiate.

Worcester.—Scholarships: J. P. Higgs, St. Edward's School, Oxford (Classics), and J. C. Masterman, Royal Naval College, Dartmouth, and private tuition (Modern History). Exhibitions: E. B. Cobbold, Ipswich School (Classics); C. A. S. Mathias, Repton School (Modern History): G. F. Timpson, Mill Hill School (German); F. R. H. Englefield, Mill Hill School (German); G. C. Dunlop Hill, Dean Close School, Cheltenham (Classics); E. B. Nelson, King's School, Canterbury (Classics); and R. T. Cole, St. Paul's School (Classics).

RADLEY. — Entrance Scholarships (in alphabetical order): Adams (Messrs. Knowles and Dauglish, Cothill), Banks-Williams (Mr. Nunns, Newton Abbot), Coller (Mr. Tindale, Hurst Court), Hoyle (late of Mr. Parry, Stoke House), Nugee (Mr. Buckland, Laleham), Smith (Mr. Palmer, St. Leonards). Exhibitions: Brown (Mr. Lynam, Oxford), Donaldson (Dr. Williams, Summerfields), Lane Joynt (Mr. Lushington, Elstree), S. Hill (Messrs. Richardson and Ridgeway, Broadstairs).

ST. ANDREWS UNIVERSITY. — Science Research Scholarship (Royal Commissioners of Exhibition of 1851), £150 a year for two years: Thomas Blackadder, M.A., B.Sc. The Commissioners have, by special resolution, renewed for a third year the Science Research Scholarship at present held by John Weir, M.A., B.Sc. In both cases, the subject is Chemistry.

STONYHURST.—Open Scholarships, tenable for two years: "Arundell," E. Bamford (from Wimbledon College); "Senior," C. Taunton; "Dobson," E. O'Duffy; "Junior," W. Waddington.

TONBRIDGE. — Entrance Scholarships:—New Judd Scholarships:

Digitized by Google

H. A. J. Parsons (Mr. H. T. Storrs, Shirley House, Shirley House, Old Charlton), K. H. Moore (Mr. J. W. E. Pearce, Merton Court, Sidcup), W. R. Cobb (the Rev. H. C. V. Snowden, St. Peter's, Thanet), J. D. Greenway (the Rev. S. I. W. Shilcock, St. Winifred's, Kenley, Surrey), and S. Farquharson (Mr. W. R. Mills, Highfield, Liphook). Judd Scholarship: M. A. Read (Tonbridge School). Foundation Scholarships: A. W. K. Brackett (Tonbridge School), S. E. Booth (Mr. G. H. Philbrick, Clare House, Beckenham), E. H. F. Morris and C. M. Simpson (Tonbridge School), C. J. O. Daubeny (Mr. C. W. Trask, St. Christopher's, Bath), and C. G. Lachlan (Mr. A. S. Tabor, Cheam School, Surrey).

WESTMINSTER.—Entrance Scholarships:—Resident King's Scholarships: S. L. Holmes, from Mr. Pearce's, Ealing; R. E. D. Cargill, from Westminster School; K. T. D. Wilcox, from Westminster School; T. R. Dawson, from Mr. Mallam's, Sydenham; C. A. Crow, from Mr. Grégoire's, Bath; A. F. Waterson, from Mr. Murray's, Walmer; M. A. Phillimore, from Mr. Humphry's, Southborough; R. R. Sedgwick, from Westminster School; G. A. N. Dickenson, from Westminster School; W. H. V. Nelson, from Mr. Harris's, West Worthing; and Praelectus: R. V. G. Tasker, from Mr. Waterfield's, Eastbourne. Non-Residential Scholarships: A. C. V. Miles, from Westminster School; H. A. Carless, from Westminster School. Exhibitions of £30: A. G. Pite, from Messrs. Chater and Hoffgaard, York Place; A. S. Macpherson, from Mr. Trollope's, St. Albans. Exhibitions of £20: L. C. Gates, from Messrs. Haskoll and Edgington, West Folkestone; D. H. Kitchin, from Thornbury Grammar School.

THE TREASURES OF HERCULANEUM.

PROF. WALDSTEIN, of Cambridge, speaking at a conversazione held in connexion with the recent Conference of the Classical Association of Ireland in Dublin, insisted that the highest goal of education was culture—the love and pursuit of things of the mind for their own sake. The development of science in the past century (he said) had been wonderful, but the nineteenth century would be known for a proportional and similar advance in the historical sciences. It was only in our time that the past had become a real possession, the possession of their mentality, and the classical world was of all the greatest possession. No special study had contributed more to the knowledge of the ancient classical world from one point of view that was not previously known so thoroughly than the department of archæology, the study of ancient monuments, and of the great art of the past. Excavations had opened up to us new splendours, it had given back two thousand years of which we had known practically nothing. No site, he proceeded, could so fully realize that enlarged conception of the classical world as could the site of Herculaneum. The treasures that had already been found, and, still more, those that they had a right to expect to find there, would prove those excavations to be fuller of the glories that ancient Greece had to give us than any other excavations. The great catastrophe of the year 79 A.D., so disastrous to the inhabitants, had been one of the greatest benefits to modern study; and so wonderfully was everything preserved that the buried towns of Campania promised greater yields to the archæologist than all the great sites of Greece. The yield of bronzes alone was greater than all the yields of Athens, Delphi, and Olympia put together; and, when they came to manuscripts, seventeen hundred more or less complete manuscripts had been found in one villa alone in Herculaneum—a site which, he mentioned, was far more important than that of Pompeii, for it was better preserved, and the greater suddenness of the catastrophe there had meant that the inhabitants left everything untouched, whereas the inhabitants of Pompeii had had time to carry away many of their treasures, and in some cases even returned for others. Herculaneum was a cultured place—a summer resort for the wealthy Romans—whereas Pompeii was a small commercial provincial town. Continuing, the Professor described the great international movement for carrying out the excavations (which would be costly, because there existed a modern town built over the site), and said that one day, when all was ready, the vulgar Chauvinism of the time stepped in and stopped it all. The scheme, however, was not dead yet. Having shown and explained a number of slides depicting the principal discoveries, Prof. Waldstein said he had only given them some idea of the wealth they might hope for one day when Herculaneum was excavated. They would agree that there was hope for much more, and they ought all to unite in their efforts to bring to light the treasures which were the heritage of civilized life in the West.

COLLEGE OF PRECEPTORS.

HALF-YEARLY GENERAL MEETING.

THE ordinary half-yearly General Meeting of the members of the Corporation was held at the College on Saturday, July 17.

The Secretary having read the advertisement convening the meeting, Prof. ADAMS was appointed Chairman.

The Report of the Council was laid before the meeting and was taken as read, a copy having previously been sent to every member. It was as follows:—

REPORT OF THE COUNCIL.

The Council beg to lay before the members of the College the following Report of their proceedings during the past half-year:—

1. During the past half-year a Course of Twelve Lectures on "The Psychological Bases of Teaching and Education" has been delivered by Prof. J. Adams, M.A., B.Sc., F.C.P. A Course of Twelve Lectures on "Practical Problems of the Classroom" will be given by Prof. Adams in the autumn.

2. The Christmas Examination of Teachers for the College Diplomas was held in the first week in January, and was attended by 527 candidates—355 men and 172 women. During the past half-year the Diploma of Fellow has been conferred on one candidate, that of Licentiate on 34, and that of Associate on 172, who had satisfied the prescribed conditions.

3. The number of entries for the Midsummer Certificate and Lower Forms Examinations is 4,760. The Professional Preliminary Examination was held in the first week in March, and was attended by 329 candidates.

4. During the past half-year the Council have conducted the Inspection and Examination of six schools by Visiting Examiners.

5. The Council have again conducted the Examinations of the Newfoundland Council of Higher Education which were held at 108 Centres in the last week in June. There has been a substantial increase in the number of entries for these Examinations.

6. At the Members' Meetings held during the past half-year the following Lectures have been given:—"On the Government of Children, with special reference to Rewards and Punishments," by Prof. J. J. Findlay, M.A.; "The Educational Value of Play," by Mr. J. L. Paton, M.A.; "The Dangers of Illustration in Class Teaching," by Prof. J. Adams, M.A., B.Sc., F.C.P. At the April Meeting there was a Discussion on "The Relations between Head Masters and Assistant Masters," which was opened by Mr. W. J. Addis, M.A. Reports of the Lectures and Discussions have been published in *The Educational Times*.

7. During the past half-year eighteen new members have been elected; one name has been removed from the list, and notice has been received of the withdrawal of five. The Council regret to have to report the death of following members:—Mr. W. B. Anthony, A.C.P., Mr. H. C. Bowen, Mr. F. Dermont, Mr. W. H. Harris, Mr. C. E. T. Laker, Rev. J. H. Newnum.

8. In accordance with the request of the last General Meeting, the Council have been engaged in considering whether by any methods the work and usefulness of the College may be increased. The Council, however, have not yet been able to complete their consideration of important questions which have been raised in the course of the inquiry, and they desire, therefore, to postpone their report on the whole matter until the next ordinary General Meeting of the members of the College.

9. The Council are glad to be able to report that the Federal Council are arranging for a Conference of Associations of Teachers, to be held in the autumn, at which it is hoped that agreement may be secured among all sections of teachers as to the constitution of a Registration Council, and that substantial progress may thus be made towards the establishment of a new Register.

In reference to paragraph 9, Mr. EASTERBROOK explained that the Federal Council, consisting of representatives of several associations of teachers, had decided that it was advisable to hold in the autumn a general Conference of representatives of educational associations, which should be presided over by some leading public man, for the purpose of arriving at an agreement, as as far as possible, among all sections of teachers as to the constitution of a Registration Council. He wished to correct a mistaken impression that appeared to have arisen, that the Federal Council had in some way been instrumental in bringing about the collapse of Dr. Gow's Committee. This was certainly not the case, and it was only after Dr. Gow's Committee had decided not to proceed any further, that the Federal Council had determined to take up the work and endeavour to bring it to a successful issue. If it were simply a question of arranging for the establishment of a Register of secondary teachers, there

would probably be no great difficulty in coming to an agreement, but the Act of Parliament required a general register of all classes of teachers, and this greatly complicated the problem.

In reply to questions put by Mr. SOUTHEE and Mr. STORR, Mr. EASTERBROOK said that all bodies which could be regarded as educational associations, whether primary, secondary, or technical, would be invited to send representatives to the proposed Conference.

The report of the Council was adopted.

The DEAN then presented his report, which had been printed and circulated among the members attending the meeting. It was as follows:—

THE DEAN'S REPORT.

In addition to the general statement of the examination work of the College during the past half-year, which has been embodied in the Report of the Council, I have now to submit to you, in detail, the statistics and results of the various examinations.

The Midsummer Examination of candidates for Certificates took place on the 29th June to the 3rd July at 125 Local Centres and Schools. In the United Kingdom the Examination was held at the following places:—Abingdon, Athlone, Balham, Banagher, Bath, Belfast, Birmingham, Birr, Blackpool, Boston Spa, Bridgnorth, Brighton, Bristol, Bruff, Budleigh Salterton, Bury St. Edmunds, Buttevant, Cahir, Cardiff, Carlisle, Carmarthen, Carnarvon, Chapelizod, Charleville, Cheltenham, Chichester, Clapham, Coleford, Congleton, Cork, Croydon, Devonport, Dublin, Dumfries, Ealing, East Grinstead, Eccles, Edinburgh, Exeter, Eye (Suffolk), Falmouth, Felixstowe, Fethard, Folkestone, Forest Hill, Goudhurst, Grimsargh, Grove Ferry, Hawkhurst, Herne Bay, Highgate, Horsmonden, Huddersfield, Hunstanton, Inverurie, Kanturk, Kilfinane, Leeds, Lerwick, Liverpool, London, Lostock Gralam, Maidstone, Manchester, Mansfield, Margate, Melton Mowbray, Merthyr Tydfil, Middlesbrough, Midleton, Mountmellick, Newcastle-on-Tyne, Newquay, Nottingham, Orrell, Penarth, Pencader, Pentre, Plymouth, Porth, Portsmouth, Richmond (Surrey), Rochester, Rugeley, Ruthin, St. Leonards-on-Sea, Scorton, Seaford, Sheffield, Skegness, Southampton, Southport, Stoke-on-Trent, Streatham Hill, Sunderland, Taplow, Taunton, Waterford, Wellington (Salop), Westcliff-on-Sea, West Hartlepool, Weston-super-Mare, Weybridge, Wigton, York. The Examination was also held at Gibraltar, Constantinople, Gwelo and Bulawayo (Rhodesia), Colombo (Ceylon), Nassau (Bahamas), and Georgetown (British Guiana).

The total number of candidates examined (not including 149 examined at Colonial Centres) was 3365—2317 boys and 1048 girls.

Taking the Christmas and Midsummer Examinations together, the total number of candidates examined during the year ending Midsummer, 1909 (not including those who attended the supplementary examinations in March and September), has been 8198.

The following table shows the proportion of the candidates at the recent Midsummer Examination who passed in the class for which they were entered:—

	Examined.	Passed.	Percentage.
First Class [or Senior] ...	387	185	48
Second Class [or Junior].	1333	715	54
Third Class	1250	892	71

The above table does not take account of those candidates who obtained Certificates of a lower class than that for which they were entered, nor of those (395 in number) who entered for certain subjects required for professional preliminary purposes.

The number of candidates entered for the Lower Forms Examination (not including 101 examined at Colonial Centres) was 1011—479 boys and 532 girls. Of these 846 passed, or 84 per cent.

At the Professional Preliminary Examination for First and Second Class Certificates, which was held on the 2nd to 4th of March, in London and at nine Provincial Centres, viz., Birmingham, Bristol, Cardiff, Edinburgh, Inverness, Leeds, Liverpool, Manchester, and Newcastle-on-Tyne, 329 candidates presented themselves.

On the results of the Christmas Examination of Teachers, 1 candidate obtained the Diploma of Fellow, 34 that of Licentiate, and 141 that of Associate.

Practical Examinations to test Ability to Teach were held in February and May. At these Examinations 9 candidates presented themselves, and 8 obtained Certificates.

Dr. DICKINSON remarked on the unusual difficulty of the Second Class Arithmetic Paper, consisting as it did almost entirely of questions in problem form. He contended that the absence of plain straightforward questions, especially in an obligatory paper, was calculated to discourage young candidates at the outset and to place them at a disadvantage.

The DEAN said his attention had already been directed to the matter referred to by Dr. Dickinson, and that the character of the paper had been taken into account in marking the answers.

The report was adopted.

A vote of thanks to the Chairman concluded the proceedings.

ADJOURNED MEETING OF THE COUNCIL OF THE COLLEGE OF PRECEPTORS.

AN adjourned meeting of the Council was held at the College, Bloomsbury Square, on July 17. Present: Prof. Adams (Vice-President) in the chair, Dr. Armitage Smith, Mr. Barlet, Rev. J. O. Bevan, Rev. J. B. Blomfield, Mr. E. A. Butler, Mr. Charles, Mr. Eagles, Mr. Easterbrook, Mr. Eve, Miss Jebb, Mr. Kelland, Dr. Maples, Mr. Milne, Dr. Moody, Mr. Starbuck, and Prof. Foster Watson.

The Diploma of Fellow was granted to Mr. B. L. K. Henderson, who had satisfied the prescribed conditions.

The following books had been presented to the Library since the last meeting of the Council:—

By the GENERAL MEDICAL COUNCIL.—Minutes of the General Medical Council January-June, 1909.

By E. ARNOLD.—Jones and Blomfield's Elementary Mechanics of Solids and Fluids.

By G. BELL & SONS.—Ashton's Senior English Grammar; Chaffey's Bell's First German Reader.

By A. & C. BLACK.—Varley's The Story of Hampshire.

By BLACKIE & SON.—Blackie's English Authors for School Reading (2 vols.); Blackie's English Texts (3 vols.); Blackie's Masters of English Literature (6 vols.); Barter's Book of Sonnets; Gould's Souvestre's Le Serf; Major's Moral Instruction (Advanced Stage).

By the CAMBRIDGE UNIVERSITY PRESS.—Cambridge Higher Local Examination Papers, June, 1909; Pearson's Euripides' Phoenissae.

By W. B. CLIVE.—Matriculation Directory, No. 52, June, 1909.

By MACMILLAN & CO.—Fowler's Tennyson's English Idylls and other Poems; Marchant's Thucydides, Book III.

By METHUEN & CO.—Williamson's Gospel according to St. Luke; and Junior English Grammar.

By the OXFORD UNIVERSITY PRESS.—Elford and Heaton's Practical School Gardening; Herbertson's Elementary Geography, Vols. I. and III.; Mulliner's Tennyson's English Idylls and other Poems, and Tennyson's Shorter Poems and Lyrics.

By ALSTON RIVERS.—De Tizac's Modern French Reader; Joerg and Joerg's Modern German Reader.

By RIVINGTONS.—Borchardt's Practical Arithmetic; Florian's First Book of German Oral Teaching; Lechner's Easy Readings in German; Savory's Muellenbach's Johannissegen; Williams's First Latin Book.

Calendar of Edinburgh University.

Calendar of the University of the Cape of Good Hope.

THE Rev. J. A. L. Airey, M.A., Rector of St. Helen's, Bishopsgate, has died at an advanced age. He was Second Wrangler in 1846, and for some time Chief Mathematical Master and Master of the Modern Side at Merchant Taylors' School.

DULWICH COLLEGE Old Boys will learn with regret of the death of the Rev. Canon Carver, who was Head Master there for twenty-five years. He was born in 1826. After leaving Trinity College, Cambridge, where he had a most distinguished career, he became a master at St. Paul's School. He was appointed to Dulwich College in 1858, and under his control the College was raised to the position of one of the leading public schools in the country. After his retirement, in 1883, he was made an Honorary Canon of Rochester Cathedral. His charm of manner and keen personal interest in his pupils endeared him to all who were brought under his influence.

MR. CYRIL JACKSON, Chairman of the Education Committee, and Mr. Cyril S. Cobb, the Vice-Chairman, write from the L.C.C. Education Office, Victoria Embankment, to make an appeal on behalf of the three open-air schools carried on in London—at Birley House, Lordship Lane; Montpelier House, Kentish Town; and Shrewsbury House, Woolwich. The medical officers of the County Council have certified in respect of each child that he or she cannot obtain proper benefit from the instruction given in the ordinary school. Left there, they are a burden to themselves and to their fellow scholars, and are the despair of the teachers. It has been abundantly proved that these children can be restored to physical and mental strength by the special treatment given in the open-air school. These schools have received the unanimous approval of education and medical experts. The schools must at once be closed unless the money is forthcoming to meet the charges in respect of food and small expenditure for boots, where these are essential for the preservation of health. The restoration to health and the educational progress of these children are at stake. £1,000 is urgently wanted to meet outstanding liabilities and carry the schools on to the end of October.

SCIENCE TEACHING IN PUBLIC SCHOOLS.

A REPORT on "Science Teaching in Public Schools represented on the Association of Public Schools Science Masters" has been issued by the Board of Education as an educational pamphlet (17). It is based on material collected from various schools, or obtained in conversation or correspondence with various science masters, and was prepared by Mr. O. H. Latter, of Charterhouse, who has acted as general editor. Mr. Latter states that a circular of questions was sent to 71 schools and colleges, that useful replies were received from 46, while 24 made no response, and one definitely refused to supply information.

After a review of the early development of science teaching in certain schools, the report states (says the *Times*) that, of the external influences which helped science to establish its position among the subjects of study, the most potent factor was the ever-increasing importance attached to science subjects in examinations conducted by the Universities. Much also was due to committees of inquiry appointed at various times by the British Association, and notably to the committee which recommended at the Bath meeting in 1888 "that chemistry should be taught in schools, first and mainly on account of the mental training it affords, and secondly for the sake of its applications and its direct bearing on the facts of everyday life." In the twenty-one years that have elapsed the science teaching in our public schools has been revolutionized. During recent years a great effect has been produced by the inclusion of science on terms more favourable than previously in the examinations necessary for admission to the Army. This reform of the Army examinations has led to a great increase in the number of boys learning science in the Army classes and military sides of the schools, thus throwing a strain on both science staff and accommodation such as to compel attention. The outcome of this has been the augmentation of the science staff and the erection of new laboratories and science classrooms by many schools.

The total number of boys in the 46 schools which replied to the circular is approximately 14,714, and of these about 9,013, or just over 61 per cent., are receiving more or less training and instruction in science as part of the regular school course. This is the percentage of boys who are actually learning science at the moment, but probably of those who pass through our public schools at the present time about 90 per cent. are compelled to take a longer or shorter course of science. Of the 1,011 masters employed in the schools concerned, 112 are engaged virtually in teaching science only. In 26 of the schools there is complete division into classical and modern sides, often accompanied by subdivision into Army class, mathematical, engineering, and science sides. Ten of the schools are chiefly classical, but have modern sides or their equivalent in the upper forms, while ten have no definite line of cleavage. In these last, however, the proportion of boys actually learning science at a given time is over 68 per cent. of the total number. "It is thus evident that differentiation into classical and modern sides is by no means essential; indeed, it is probable that in the absence of such differentiation it is possible to employ science as a medium of general education more easily and efficiently than when the utilitarian demands and semi-technical training of a special modern side make themselves felt." It is satisfactory to find, says the report, that in very few schools is there no science taught on the classical side, and that in only a few is it made an alternative—usually for Greek or German.

A very satisfactory and encouraging feature brought to light by the inquiry is the recognition of the claims and importance of science by the governing bodies and other authorities responsible for the administration of public school finances. Laboratories and classrooms specially designed and equipped for science teaching are the rule. At least one chemical laboratory is found in every one of the 46 schools, and at least one separate physical laboratory in 45. Direct experimental work performed by the boys themselves is now a universal practice, at any rate when once the systematic course is reached, and the number of boys doing no practical work in the laboratories is very small. Specialization in science is seldom allowed until a boy has reached the upper half of the school. The motive which leads to the forsaking of other subjects is generally to obtain the preliminary training required for some scientific profession, such as engineering or medicine, and frequently to compete for a science scholarship at a University,

MORE IMPERIAL AID FOR EDUCATION.

MR. MARSHALL JACKMAN, Vice-President of the National Union of Teachers, speaking recently at Bath, the Mayor of Bath in the chair, said educationists consider that too little is spent on education in this country, while rate-payers think that too much is spent on education out of the rates. Both statements he contended were true. The Royal Commission on Local Taxation were unanimously of opinion that education was a national service, and in a high degree. Some people desired that education should be entirely a national charge. If education were entirely controlled and financed by the Board of Education, it would become bureaucratic, stereotyped, and lacking in initiative. The emulation created by Local Authorities under the old School Board system or under the present system of municipalization of education, and the introduction into the administration of level-headed business men instead of the expert and leisured doctrinaire, were the causes of the great advance made during the last forty years. Few educationists would like to see the local control of education entirely eliminated; and with local control there must be local charges. The vexed question that required settling was the question of the proportion of these local charges. According to the latest figures available, elementary education cost £21,500,000, of which £11,750,000 were supplied by grants from the Exchequer. The remainder came from local rates, fees, endowments, &c. Large as these grants from the Exchequer might appear, they were quite inadequate and were very badly allocated. Although Imperial grants for elementary education had more than trebled themselves during the last twenty years, the grants to-day afforded less effective relief to the rate-payer than they did twenty years ago. The additional grants had only replaced decreases of income from other sources, or had been swallowed up by the cost of added responsibilities imposed on localities by Parliament and an increased school population. The annual Subject Grants per head remained much the same to-day as they were twenty years ago. The total amount of these annual grants in 1886 was £2,988,228, and in 1907 they had increased to £5,670,773, but the average attendance of the children had increased from 3,438,425 to 5,303,229. The Fee Grant gave no effective relief to the rate-payer, but relieved the parents from the payment of fees; in fact, the total amount received to-day by Local Authorities in fees and fee grants was less per head than the fees were in 1895. During the last seven or eight years additional assistance had been given from the Exchequer in aid of voluntary schools and of necessitous School Board districts. Under the Bill of 1902 this Aid Grant was paid over to the new Local Education Authorities and very largely increased. The Aid Grant in 1901 amounted to £825,000; in 1906 it had increased £2,428,674, but this exceedingly large increase in aid from the Exchequer did not assist the rate-payers at all. On the contrary, the responsibility of taking over the voluntary schools which accompanied the increase in the Aid Grant caused an enormous increase in the rates. Between 1901 and 1906 the rates had increased by £3,150,000. During the same period the increase in the cost of staffing of the schools amounted to £4,500,000. Some of this increase was quite a legitimate burden to throw on certain localities which had been escaping their obligations. While agreeing with the placing of the voluntary schools on the rates, Mr. Jackman contended that this enormous burden should not have been placed on the localities without much more central aid. The present Government had no right to shelter themselves behind the faults of the previous Government. They probably realized this, for they intended to accompany their Bill of 1906 with an extra Exchequer grant. Moreover, the Government had already pledged themselves to assist Local Authorities in the new charge recently thrown on the rates in connexion with medical inspection. Mr. McKenna, in the House of Commons, and Lord Crewe, in the House of Lords, when the Administrative Education Bill was going through the House, definitely promised a grant to meet the extra charge that medical inspection would throw on the localities. The present Budget gave indication of large surpluses in the future. The public should insist that some of this money should go in relief of local education burdens. But not only was more money required, but a distinct alteration in the method of allocation of grants. The central aid should (1) relieve the localities substantially, (2) reduce inequalities, and (3) encourage improvement.

For the ANHYDROUS
LAYING of DUST
USE (As recommended in the Education Department Blue Book)
The unequalled ODOURLESS, or powerful GERMICIDAL
FLORIGENE
(A REGISTERED NAME suggested by FLOOR—HYGIENE)

On all School, Laboratory, Library, Museum, Studio, Office, and other Floors—Wood, Linoleum, Stone. Concrete, &c.,
EARLY in the VACATION for best results.

Three times a year only necessary, as each application lays the dust for two to six months, or longer, according to wear.

No Scrubbing (unless preferred) or Sprinkling of any kind—therefore no injurious moisture—the ordinary daily sweeping alone required to clean the floors.

Books, Furniture, Apparatus, &c., are less likely to soil, and seldom require dusting or cleaning—labour greatly reduced.

"Florigene" has been awarded the
BRONZE MEDAL of the ROYAL SANITARY INSTITUTE,
and a well-known **Medical Officer of Health** has reported:—

"I consider **'Florigene'** an excellent preparation when applied to the floors of Public Institutions, Schools, and other buildings for 'weighting' and laying dust and dirt."

An eminent Bacteriologist has also favourably reported on the powerful Germicidal Disinfectant properties of **"Florigene"** No. 2.

A School Principal writes:—"Your **'Florigene'** is excellent. I wish we had known of it before. My servants are loud in its praises, as no dust whatever arises when they are sweeping the schoolrooms. It saves labour, adds greatly to our comfort, and the absence of dust in the air of schoolrooms, and on books and shelves, must be very beneficial to our health. We would not be without it on any account."

Send for particulars, **Bacteriological, Medical,** *and other Reports and Testimonials to the Sole Manufacturers—*

CURRENT EVENTS.

Fixtures.

A SUMMER School of the Psychology of the Child and of Methods of Learning in Junior Classes and Kindergartens will be held at the Home School, Bishopswood Road, Highgate, N., August 2–14. Courses similar to those held in previous years at the Froebel Educational Institute.

* * *

THE Summer School of University Extension Students at Oxford runs from July 30 to August 23.

* * *

THE Holiday Course for Foreigners arranged by the London University Board for the Extension of University Teaching, and directed by Prof. Rippmann, will run on to August 13.

Honours.

THE University of Cambridge has conferred the honorary degree of LL.D. on Dr. Hermann Diels, Professor of Classical Philology in the University of Berlin.

* * *

IN connexion with the Darwin centenary celebrations Dr. Francis Darwin has been elected a foreign member of La Société Hollandaise des Sciences, Haarlem, and a member of the American Philosophical Society; and Prof. Sir George Darwin and Dr. Francis Darwin have been elected corresponding members of the Senkerbergische Naturforschende Gesellschaft, Frankfort, hon. members of the Societas Caesarea Naturae Curiosorum Mosquensis (commonly known as the Société Impériale des Naturalistes de Moscou), hon. members of the University of Moscow, and members of the Kaiserliche Leopoldinisch-Carolinische Deutsche Akademie, Halle. The last-named academy was the first of foreign academies to honour Charles Darwin by making him a member in the year 1857.

* * *

THE University of Durham has conferred the honorary degree of D.C.L. on the Archbishop of York, Sir Hugh Bell, Professors Turner and Firth (Oxford), and the Rev. J. F. Hodgson, Vicar of Witton-le-Wear, one of the oldest graduates of the University; also the honorary degree of M.A. on Mr. William John Hardy, Major W. F. Hessey, and Mr. F. H. Pruen (Secretary of Armstrong College).

* * *

THE University of Dublin has conferred the following honorary degrees:—

D.Sc.: Ernest William Hobson, Cambridge.
D.Litt.: The Rev. James Cooper, D.D., Professor of Ecclesiastical History, Glasgow; Arthur Surridge Hunt, D.Litt. Oxon.

* * *

THE University of Manchester has conferred the following honorary degrees:—

D.Litt.: Mrs. Sidney Webb.
M.A.: Charles E. Bellyse Russell, of the Heyrod Street Lads' Club.
M.Com.: Richard Curtis Barnes.

* * *

THE University of Birmingham has conferred official degrees on three new members of the staff: M.Sc., Prof.

Digitized by Google

J. Cadman (Mining); M.A., Prof. Granville Bantock (Music), and Prof. E. de Selincourt (English).

* * *

THE University of Leeds has conferred the honorary degree of LL.D. on the Archbishop of York, and on Col. T. W. Harding (President of the Health Congress); and the honorary degree of D.Sc. on Sir J. Crichton-Browne and Major Ronald Ross.

* * *

THE University of Edinburgh has conferred the honorary degree of LL.D. upon the Right Hon. George Wyndham, M.P., Lord Rector of the University, and upon Mme. Curie.

* * *

THE honour of knighthood has been conferred on Mr. James Henry Yoxall, M.A. Oxon. and Cantab., M.P., General Secretary of the N.U.T.; and on Mr. Samuel Dill, M.A., D.Litt., Professor of Greek, Queen's College, Belfast, formerly High Master of Manchester Grammar School.

* * *

MR. HENNIKER HEATON, M.P., Mr. E. H. Stone, Dr. G. E. Shuttleworth, Prof. W. J. R. Simpson, M.D., Prof. E. Wilson, the Rev. Prof. A. Nairne, and Mr. C. D. Webb have been elected Fellows of King's College, London.

* * *

MR. JOHN WILFRED JENKINSON, M.A., B.Sc., formerly Classical Scholar of the College, has been elected to an ordinary Fellowship at Exeter College, Oxford, for distinction in scientific research (Biology).

* * *

A PORTRAIT of the late Marquis of Ripon, Chancellor of the University of Leeds, by Sir H. von Herkomer, has been presented to the University on behalf of members of the Court and staff and other friends.

* * *

A PORTRAIT of Dr. Stroud, who recently resigned the Cavendish Chair of Physics in Leeds University, has been presented to the University by friends and past students. The artist is Mr. W. Llewellyn.

Endowments and Benefactions.

LORD STRATHCONA has given £100,000 to McGill University, of which he is Chancellor—£90,000 to complete the Medical Faculty Buildings, £10,000 to the fund for augmentation of the salaries of professors.

* * *

ALL SOULS COLLEGE, Oxford, will give £500 to the Bodleian (catalogue); £200 a year for three years towards the fund for the Lecturer on Economic History; £200 a year for three years for the teacher of Political, Constitutional, or Economic History or Theory to classes of working men under the Joint Committee for Working Class Education; £200 a year for three years for a Lecturer in Private International Law; and £300 for three successive courses of lectures on Foreign History.

* * *

MAGDALEN COLLEGE, Oxford, will give £250 to the Bodleian; £250 to the University Museum; £50 to Dr. Macray's pension; £100 to increase the collections of the Antiquarium and Fine Art Galleries; £150 to augment the stipend of the Lincoln and Merton Professor of Classical Archæology and Art; £100 to augment the stipend of the Sherardian Professor of Botany; £100 to augment the stipend of the Professor of Pathology; and £50 towards a stipend for a Professor of French Literature. The augmentations of stipends are to continue from year to year so long as they may be needed.

* * *

MESSRS. J. HENRY SCHRÖDER & CO. have given £20,000 for the permanent endowment of a Schröder Professorship of German at Cambridge.

THE Drapers' Company have renewed their grant of £2,000 for the purposes of the work of the Department of Applied Mathematics at University College, London; and the Mercers' Company have made a grant of £500 to the Physiological Department of the same College.

* * *

THE Drapers' Company have raised their gift towards the Library of Cardiff University College from £10,000 to £16,000.

* * *

MR. ALEXANDER ELDER has increased his endowment of the Liverpool Chair of Naval Architecture from £12,500 to £20,000.

* * *

MR. DAVID DAVIES, M.P., Plasdinam, has offered to provide a dining-hall (for 50 professors and 300 students), together with common rooms for the staff and the students, &c., at Aberystwyth University College, provided the College authorities build a hostel for one-third of the men students. The cost is estimated at £8,000.

* * *

DR. JOHN HALL, a Graduate of Glasgow University, has left some £35,000, subject to a life interest, to the University for the foundation of tutorial fellowships in surgery, medicine, and midwifery.

* * *

MR. CHARLES BRUCE, Edinburgh, has intimated his intention of giving £5,000 to the University of Edinburgh to found a Lectureship in Banking.

* * *

MR. JOHN CORY has promised £2,000 to the building fund of Cardiff University College on condition that the whole remaining debt of £35,000 be cleared off by October 14, when the new buildings will be opened.

* * *

THE Leys School, Cambridge, has received from two anonymous donors £4,000, to establish two scholarships of £60 a year, tenable at Cambridge University.

* * *

THE heirs of the late Herr Heinrich Lanz, head of the Mannheim Engineering firm, have given 1,000,000 marks for the establishment of an Academy of Sciences at Heidelberg, which will stand in the same relation to the University as the similar institutions in Leipzig and Göttingen stand to the Universities in those cities.

Scholarships and Prizes.

LINCOLN COLLEGE, OXFORD, offers a Scholarship in Modern History (£80). Examination, December 7. An Exhibition (about £30) may be awarded in the same subject. No limitation of age.

Appointments and Vacancies.

THE Belfast University Commissioners have made the following appointments in the Queen's University, Belfast:—

Professorships.—Modern History: Mr. F. M. Powicke, M.A. Oxon. and Manc., Senior Assistant Lecturer in History, Manchester University. * * *

Mr. Clarence J. Forth, M.A. Cantab., B.Sc. Lond., Senior Master, Woolwich Polytechnic Secondary School, has been appointed Head Master of the new Secondary School, Goole.

* * *

Mr. A. J. Spilsbury, M.A., Senior Classical Master, City of London School, has been appointed Head Master of Aske's Haberdashers' School, Hampstead.

* * *

Mr. A. H. Webb, B.A., B.Sc., Head Master of Theobald's Grammar School, Needham Market, has been appointed Head Master of the new County Secondary School at Stowmarket, to be opened in September next.

* * *

Mr. Harvard Arundal, B.A., Principal of Dudley Pupil-Teacher Centre, has been appointed Head Master of the new Leiston Higher Elementary School.

Miss E. V. Ellis (Medieval and Modern Languages Tripos, Cambridge) has been appointed Head Mistress of the Brighton Municipal Secondary Girls' School.

* * *

An Assistant Lecturer in the Departments for the Training of Men Teachers for Elementary and Secondary Schools, Cardiff University College, is required. Apply to Mr. J. Austin Jenkins, B.A., Registrar, by August 31.

* * *

An Assistant Mistress is required for the County School for Girls, Folkestone. Initial salary, £100 to £110. Particulars from Mr. James Quick, Technical Institute, Folkestone. Applications to be lodged with Miss E. M. Ewart, M.A., Head Mistress of the School, by August 4.

* * *

Several of the masters of the Royal High School, Edinburgh, are retiring: Mr. Johnston Smith, Senior Mathematical Master; Dr. Cran, Senior French Master; Mr. Whyte, Senior English Master. Also Sergeant-Major Parker, Head of the Gymastic Department.

* * *

McMaster University, Toronto, requires Lecturers: (1) in French, (2) in Greek and German, (3) in History, (4) in Mineralogy and Geology. Initial salaries, 1,000, 1,000, 1,200, 800 dols. respectively. Also for Woodstock College, Woodstock, Ontario (boys, residential), a Master of French and German: initial salary, 700 dols. and residence. And for Moulton Ladies' College, Toronto, a Mistress of English and Junior subjects: initial salary, 400 dols. and residence. Apply to Mr. A. C. McKay, c.o. *Toronto Globe* Office, 222 Strand, London, W.C.

Literary Items.

The *Illustrated London News* has been giving a series of supplements treating of the industries in our great cities. The articles convey much information, both historical and technical, in an attractive form, and are very usefully supplementary to the ordinary text-book of geography.

* * *

The July number of *Child Study* has an able article on "Aims and Methods of Child Study," by Prof. Findlay, as well as other papers based on practical investigation.

* * *

The *International* for July offers two excellent educational papers: (1) "The 'New Education' in France," by Ferdinand Buisson, Member of the French Parliament, ex-Ministerial Director of the Educational Department; (2) "Higher Grade Schools in Denmark," by Helger Begtrup, of Copenhagen.

* * *

Mr. H. B. Henderson, assistant master at Rugby School, has written an introduction to the study of moths and butterflies for the Rugby School Natural History Society, entitled "The Scaly-Winged." It will be published immediately by Messrs. Christophers.

* * *

Messrs. D. Appleton & Co. promise immediately "Modern Educators and their Ideal," by Tadusu Misawa, Ph.D., a Graduate of the Tokio Imperial University and Honorary Fellow in Psychology at Clark University. The volume will give a general idea of the educational views of philosophers and reformers of modern times upon which present-day education bases its ideals and practices.

General.

The first stone of the new buildings of the Imperial College of Science and Technology was laid by the King, who was accompanied by the Queen (July 8).

In recent years [said the King] the supreme importance of higher

Digitized by Google

scientific education has, I am happy to say, been fully recognized in England, and as time goes on I feel more and more convinced that the prosperity, even the very safety and existence, of our country depends on the quality of the scientific and technical training of those who are to guide and control our industry.

* * *

THE new University buildings at Birmingham were formally opened by the King, who was accompanied by the Queen (July 7).

For the wonderful progress of higher education in this country [said the King] we have largely to thank the great Universities established in our principal cities. No nobler object for munificence can be found than the provision of the necessary equipment for such education—an equipment which, in view of the diverse and elaborate requirements of the modern schemes of instruction, must be costly, but without which these schemes, however carefully designed, will prove fruitless.

* * *

THE King visited Marlborough College and Rugby School. At Rugby he inaugurated (July 3) a memorial to Dr. Temple—"the famous Head Master who, as Archbishop, placed the crown upon his head."

Rugby [said the King] is notable not only for its success in scholarship, not only for its men of letters, but even more for its high ideals of honour and manliness and public spirit, and all those qualities that make our public schools the finest places of education in the world.

* * *

THE new buildings of the Merchant Venturers' Technical College, Bristol, were opened by Lord Reay (June 24). The College will house the Engineering Faculty of the new University of Bristol.

If there is one thing more than another upon which I should like to lay stress [said Lord Reay] it is the secondary school. If there is one branch of education which we in England have, perhaps, neglected more than another it is secondary education.

* * *

ST. PAUL'S SCHOOL celebrated its fourth centenary by the opening of new science buildings by Lord Curzon of Kedleston (July 7). "But the real interest of St. Paul's," says a correspondent of the *Times*, "is that it could, if it would, in two years more, of certain knowledge celebrate its eight hundredth anniversary, and might with historical probability have celebrated its millenary twenty-three years ago. For St. Paul's School is one of the oldest of London institutions—older than everything else in London except the Chapter of St. Paul's, and as old as that."

* * *

THE new Engineering Laboratories at Manchester University were opened by Sir Alexander Kennedy, C.E., LL.D. (July 15).

* * *

BRADFIELD COLLEGE celebrated (July 16) the hundredth anniversary of the birth of the Founder (Rev. Dr. Stevens), and the fiftieth anniversary of its becoming a Public School. Dr. Gray was appointed Head Master in 1880 and Warden in 1881 on the resignation of the Founder. The boys then numbered 53; now they number over 300. Some eight hundred guests attended the commemoration.

* * *

THE five hundredth anniversary of the foundation of the University of Leipzig was celebrated July 28–31.

* * *

THE inauguration of Dr. Abbott Lawrence Lowell as twenty-fourth President of Harvard University will take place on October 6 and 7.

* * *

THE Orient Line of Mail steamers to Australia have offered to grant annually free first-class return passages to a limited number of graduates from the Universities of Sydney, Melbourne, and Adelaide, desirous to visit Europe to continue their studies. The selection is left to the discretion of the Councils of the Universities.

THE POSITION OF THE ASSISTANT MASTER IN FRENCH SECONDARY SCHOOLS.

By F. G. HANKS, B.A. Lond., Taunton.

AT a moment when the question "Should we be Civil Servants?" is engaging the serious attention of teachers in secondary schools, and organized inquiry into the conditions of service abroad is being instituted by the A.M.A., a short sketch of the position occupied by the French *professeur* as Civil servant or *fonctionnaire* may be welcome and instructive. It may help a little way towards a solution of the all-important questions: Would the teachers themselves be gainers or losers by adopting such a system? Would the system lead to greater efficiency in secondary education? Any small excursions beyond the limits of such inquiry may, we hope, be justified by giving a more complete picture of existing conditions in France.

French secondary education is administered by the Ministère de l'Education Publique. Its schools are the *lycées nationaux* and the *collèges municipaux*. The fundamental difference between these two classes of schools is that the *lycées* are maintained by funds voted annually in the National Budget, while the *collèges* can look to this source for a part only of their income, being dependent for the greater part on funds voted in the Local Budget. The programmes followed by both classes of schools are practically identical; but salaries in the *collèges* rule slightly lower, and, for economic reasons, the *collèges* are not infrequently understaffed.

Before passing to the actual figures of salaries it will be well to see what preparation and qualifications are required to become *professeur* in these schools, and what is the method of appointment. The preliminary scholastic career of the average *professeur* will have been somewhat of this order:—(1) Education in *lycée* or *collège* up to the age of eighteen or nineteen, finishing by taking his *baccalauréat*. (2) If possessed of sufficient means, he now spends two to three years in attendance at a University (*Faculté*) to obtain his Licence (about equal to Hons. B.A.). If means are lacking for this purpose, he may get himself nominated as *maître répétiteur* or *maître d'études* in a *collège*—a light post, with no teaching but only supervision duties, and with equally light remuneration, but which provides him with board and lodging in the school and affords free time for attending the courses at the nearest *Faculté* until he secures his *licence*. (3) Armed with this diploma (*Licencié*) he can now seek enrolment on the teaching staff of a *collège*, but not of a *lycée*. (As a matter of fact, there are so many *licenciés* that all cannot at once be nominated *professeurs* in the *collèges*, and a large number pass into the *lycées* as *maîtres d'études*, to continue preparation for a higher examination—*l'agrégation*.)

If our friend is still blessed with sufficient funds, he will follow neither of these paths, but will spend another two or three years of yet harder grind, perhaps at the Ecole Normale Supérieure of Paris, in order to become *agrégé*. To obtain this coveted diploma—at least equal to M.A., and to which our nearest equivalent is a "double-first"—he must pass in every part of the branch he selects: philosophy, history, classics, modern languages, as the case may be. He may now be nominated at once *professeur* in a *lycée*. A partial success, however, stands him in good stead, as he can then become *professeur* in a *collège*, and after five years' service therein can be nominated to a *lycée*. The ordinary *licencié* can secure such advancement only after ten years' service in a *collège*, and then only on the recommendation of an Inspector-General.

Now for the method of appointment to posts. A *professeur* is nominated to school so-and-so by the State (Ministry of Education). He can change schools only on making application to the *Ministère* (our Board of Education, a translation sufficiently eloquent to need no further hints of difficulties), and he needs to feel certain of sufficient *piston politique* to secure the post he demands before making such application.

The Ministry has the right to send a *professeur* to any part of France or her colonies by invoking "les nécessités de service"—an ominous formula which is used to soften down the causes, only too often political ones, which may necessitate the removal of a *professeur* to a school in some distant town. In any case, these "déplacements par nécessité de service" are considered as a punishment, and are, relatively speaking, infrequent.

The scale of salaries in *collèges* and *lycées* is:

	Collèges.	Lycées.	
Class.	*Licenciés.*	*Licenciés.* (After 5 years' service in *Collège*, plus partial success in *Agrégation*, or recommended after 10 years in *Collège*.)	*Agrégés.*
6th	2,500 frs. (£100)	2,800 frs. (£112)	3,700 frs. (£148)
5th	2,900 frs. (£116)	3,200 frs. (£128)	4,100 frs. (£164)
4th	3,300 frs. (£132)	3,600 frs. (£144)	4,500 frs. (£180)
3rd	3,700 frs. (£148)	4,000 frs. (£160)	4,900 frs. (£196)
2nd	4,000 frs. (£160)	4,400 frs. (£176)	5,300 frs. (£212)
1st	4,400 frs. (£176)	4,800 frs. (£192)	5,700 frs. (£228)
Hors Classe, 6,200 frs. (£248)			

Until last year *professeurs* were promoted from one class of salary to the next as follows:—50 per cent. of the promotions were made according to duration of service; the other 50 per cent. were made by selection, on the recommendation of the head of the school and of the Inspector-General. Nowadays, only 15 per cent. are promoted by selection; the rest pass automatically from one class to the next in this way: from the sixth to the fifth class after four years' service; from fifth to fourth after five years; from fourth to third after six years; from third to second after seven years; from second to first after seven years. No one can be promoted by selection unless he has spent a minimum of two years in the sixth class, three years in the fifth, four years in the fourth, five years in the third, five years in the second, so that promotion by selection can give at most only a two years' advantage to a *professeur* over his colleagues promoted according to duration of service. This is the first great victory the *Fédération* of French teachers boast of having secured.

A pension is granted to teachers at sixty years of age with a minimum of thirty years' service. The teacher contributes 5 per cent. of his salary and the first one-twelfth of each increase of salary. The State votes annually the necessary funds for management, and, I believe, supplies the deficit existing between contributions and payments. The teacher can demand his pension at sixty years of age at the earliest; he then receives per annum thirty-sixtieths, thirty-one-sixtieths, thirty-five- to forty-sixtieths of his last salary according to whether he has given thirty, thirty-one, thirty-five or forty years of service—*e.g.*, a *licencié* in a *lycée* who has reached Class I. after forty years' service will receive forty-sixtieths of 4,800 francs = 3,200 francs £128) per annum—a very favourable case. The present arrangement is not in high favour with teachers, and the *Fédération* is working hard to make this pension obtainable after twenty-five years' service.

These facts afford a striking contrast between the organized system of secondary education in France, with its classified, docketed, highly qualified servants who can only attain their position after years of strenuous work, and our own lack of an organized system, our haphazard methods of recruiting our forces. Whether such a systematized yoke would sit easily upon our free and independent necks must be left to general judgment. A few final remarks on matters of personal observation may be of interest.

Under the French system "officialdom" thrives and flourishes. It is not a little alarming in a French *lycée* to find oneself receiving orders from (1) the Proviseur, (2) the Recteur, (3) the Surveillant—from whom may we long be spared!—while (4) on all internal and household arrangements and receipt of salary one has to consult M. l'Econome. The social status of the French *professeur* is on an equality with that of other professional men; but, as our figures showed, he is far from being as rich—a condition of things with which we can fully sympathize. An average number of teaching hours per week for a *professeur* would be twenty, and in giving this figure as an average the error is probably on the large side.

With regard to the effects that being a Civil servant, with a secured position and future, exerts upon effort and initiative, it is not easy to give a decided opinion. Naturally it resolves itself, for the most part, into a *personal equation*. There are many *professeurs* who reduce both effort and initiative to the strictest minimum, and as many others who go to the opposite extreme. Still, it may be instructive to quote a proverbial saying in France: "Le fonctionnaire est une bonne grosse bête à l'engrais"—"a good animal for fattening."

There can hardly fail to be a great temptation for a man who has expended a great part of his best energies in attaining the high diplomas that are necessary for a French *professeur* to accept, with contented ease, the assured tenure of his position, the certainty of increasing salary, the prospect of a pension at a fixed time, and to sit tight, finding out what is the "irreducible minimum" of effort that may satisfy the powers that be. Yet, as that minimum is not an unknown quest among us who have not even the good excuse of a secured position to offer, that question, as was said before, resolves itself into a personal equation.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the opinions expressed by our correspondents.*—Ed., *E.T.*]

"HEAD MASTERS AND ASSISTANTS."

Too Much Lower Form.

To the Editor of "The Educational Times."

Sir,—The short letter of "A Second Master" in your July issue refers to the difficulties of rightly regarding the teaching of the younger boys in a school. In my earlier experience—now fifty to sixty years past—I realized this difficulty until I met C. Pearson Mason at the very instructive and enjoyable meeting of the College of Preceptors at Canterbury, under the generous and genial ægis of Canon Mitchinson. Pointing out the difficulties of retaining the services of a really efficient man for these boys—ranging from eight to twelve years of age—Mr. Mason told me he had discovered this, and found an efficient remedy in employing a lady teacher for this class. I at once adopted his method and found it in every way good. You get in a lady teacher more experience, commonly more tact, more sympathy with her class, more satisfactory results, and a satisfaction with her employment which leads to long engagements. Practically, I had only three of these lady helps in twenty-eight years, and each and all of these were a decided success.

Another point suggested by the letter of "A Second Master," and one which I regarded as of prime importance during my forty years' experience (1848–1888) at the head of a large resident school, is that of *class masters versus subject masters*. I reasoned thus: a master can always teach best the subject he knows best and in the teaching of which he has had the larger experience. It is not profitable to a school to employ A. to teach a subject whilst B., who knows it better and can teach it more effectively, is possibly employed in teaching some other subject of which possibly he knows less and is a less effective teacher. Again, in a school worked by class masters there is the frequent complaint regarding failures that they are due to the defective work of the master below who has sent the boy up. This trouble is avoided by working a school with subject masters. Then every master is himself only responsible for the condition of a boy on remove, and the tenure of his post must be contingent on the efficiency of his work: and any man who is worth his salt will feel pride in the efficiency of his work and the progress of his boys.

Again, Nature revels in variety: training her structures up from the mineral, through the vegetable and animal worlds, her variations are infinite and marvellous. And in man, the highest outcome of her creative powers and the most highly differentiated, these variations culminate. There never has been, there never will be, two human beings alike. These variations are vividly apparent in a school, and strivings here, as elsewhere in the human fabric, for uniformity of thought or action are futile and often lead to antagonistic feeling. Where this exists between master and boy, the educational efforts of the master and the studious toils of the boy are sadly marred. In the case of class masters, the boy so circumstanced gets little or no relief and his education is gravely retarded. But when the school is ordered for subject masters, the boy presently passes from the gloom of antagonism to sunshine, warmth, and sympathy, and his losses are reduced to a minimum.—I am, Sir, &c.,

Thomas Wyles.

July 6, 1909.

THE GERMAN HIGHER SCHOOLS.

THERE is perhaps no sphere of German education which embodies more of the results of expert deliberation and of official nurture, or over which has been waged more acute controversy (says a writer in the *Glasgow Herald*), than that of so-called "higher schools." Even to-day this part of the system is by no means in a fixed or settled state, but reflects from time to time the varying influences of reform, conservatism, and compromise. And yet these higher schools have compelled the respect and almost universal admiration of foreign educational critics who attribute to the steady stream of highly developed intelligence which for the last two generations has issued from them no inconsiderable share in the industrial and commercial advancement of Germany. Before, however, we proceed to the details of the Prussian secondary system, there are certain considerations to be borne in mind if we would adequately appreciate its underlying principles.

Educational Differentiation.

The best German opinion firmly believes in the doctrine of a sound general education, and is decidedly averse from premature specialization; but at the same time it constantly tends to associate closely any particular sphere of work with the course of education best suited, according to experts, to afford it a preliminary preparation. Thus there is scarcely an occupation, scarcely a grade in the occupation, but is reached through some definite propædeutic type of education. The workman, the foreman, and the directing head in a business, each advances towards his position and status along a pretty definite educational groove. In Germany life is apt to be more distinctly demarcated than with us, and there is much less there than in more democratic countries of a youth entering at an early age some occupation which may have been casually adopted, and for which he may have received little specialized training, and ultimately rising to the top of the ladder by sheer force of grit and brains. One would therefore look for considerable differentiation in the educational activities of Germany; and, what with technical schools, commercial schools, continuation and trade schools of all kinds, not to speak of distinctive types of secondary schools, this is actually what we find.

The Grip of the State.

It is further necessary to realize the remarkably firm hold exercised by the State over the higher schools. This power it exerts by granting highly valued privileges to approved schools, offering at once a strong inducement for the youth of the country to pursue higher studies, and retaining in her own hands the right to prescribe the lines these studies must follow. Of these privileges, the most important is the granting of what is called the "Zeugniss für den einjährig-freiwilligen Militärdienst"—the certificate entitling the holder to serve for one year in the Army as a volunteer, paying his own expenses, rather than serve for two years as a paid conscript. The value of this certificate extends far beyond its military significance. It has come to be regarded almost as a social imprimatur; it marks off the educated from the uneducated. The status of "a one-year man" is a prize much sought after by the German youth, and sometimes even more by the German youth's parents. Moreover, the certificate has come to possess a definite value in the business world, the possession of it being made a condition of appointments by all the leading firms. To secure this certificate, a boy must have completed a six years' course of secondary education in an approved school. Such a course begins at or about the pupil's ninth year of age, and may be completed either in a six-year school or in a nine-year school. In either case an examination called the *Abschlussprüfung* has to be passed. Another privilege offered by the State through the medium of the higher schools is admission to the Universities, the completion of various types of secondary education being made the condition of entrance to the various faculties, so that in this way the State controls the approaches to all the learned professions. Similarly, permission to prepare for almost all important Civil Service appointments is granted only to those completing certain stages of an approved type of higher education; and, generally speaking, this system of privileges gives to the Central Authority in Germany a power and an extent of jurisdiction which we can with difficulty realize. Bearing in mind, then, the high differentiation of school types, and the close hold maintained by the State over education, we may now consider in outline the Prussian system of higher schools.

System of Administration.

The stage of education which we are to deal with includes, roughly, what we mean by intermediate and secondary education for boys, and something more. With the higher education for girls—and they are taught in separate schools—we shall not concern ourselves beyond remarking that German girls' schools are by no means in the same high state of development as those for boys. But first a word as to administration. The central authority is the Ministerium, having for its Parliamentary chief the "Minister for Religious, Instructional, and Medical Affairs." The general supervision of educational matters is in the hands of this department, or, rather, of a section of this department, presided over by permanent officials, to whom is joined a Committee of Advisers (*Räte*). A great deal of the actual work of administration, however, is devolved by the Central Authority on Provincial Committees (*Provinzial Schulkollegien*), of which there is one in each of the Prussian provinces. These committees consist of a few carefully selected experts appointed by the Department and presided over by the *Oberpräsident* of the Province. They exercise a general supervision over the higher schools, inspect them, appoint or transfer the teachers, regulate what text-books are to be used, and frame rules for the leaving examinations. In fact, it is the function of these experts to see that the higher schools are maintained in a high state of efficiency, and a recent American critic has expressed the view that they constitute the mainstay of the Prussian higher-school system.

Classes and Types.

Of the higher schools some, called "Royal" (*Königliche*), are State schools pure and simple; others are founded and maintained by municipalities and communities; others are partly State, partly municipal; while some are purely private foundations. Over the instructional arrangements of all schools the State keeps complete control, and no private school is permitted to continue the efficiency of which, as tested by inspection, falls below the level of State institutions. When a municipality establishes higher schools of its own, these are generally managed by a composite School Committee, called a *Schuldeputation*, and much of the technical detail is entrusted to a paid expert official. In the city of Berlin there are seven "Royal" or State higher schools and forty-two municipal higher schools doing different types of secondary work.

It has been remarked that the higher schools fall into clearly defined types, and it is necessary now to consider briefly what these types are. It is possible to regard them from two points of view. We may consider either the kind of curriculum professed or the extent of that curriculum. From the first point of view the schools differ according as they offer (*a*) a purely classical education; (*b*) a semi-classical education; (*c*) a purely modern education, or, to be more exact, according as they teach (*a*) both Latin and Greek, (*b*) Latin without Greek, (*c*) neither Latin nor Greek, but modern languages, with mathematics and science. In each type a linguistic training forms the basis of instruction, though, of course, languages are not the only subjects taught.

Curricula.

As regards the extent of curriculum, each of these types is found in a complete nine years' form and in a shortened six years' form. The purely classical school with a nine years' course is called the *Gymnasium*, the semi-classical school of similar extent is called the *Realgymnasium*, and the nine-year purely modern school is called the *Oberrealschule*. In each type the pupils begin at nine years of age, and, if they continue to the end, they remain, as a rule, nine years at least. As showing, however, how much longer the pupils remain in Prussian high schools than in ours, the following figures are instructive. For the year 1906–7, over all the *Gymnasien* in Prussia, there completed the full curriculum (or, as the Germans put it, "were declared ripe"), 238 pupils at 17 years of age, 1,426 at 18 years, 1,672 at 19 years, 1,126 at 20 years, 1,057 at 21 or over.

As one might have expected, there grew up a demand for a course of secondary instruction less extended than nine years, and in consequence there has come to be recognized a clearly defined course of six years' duration. This six years' course, or what might roughly be termed an intermediate course, may be undergone either in distinct six-year schools, or simply by taking the first six years of a nine-years' school. That is to

Digitized by Google

say, at the end of the sixth year in the complete secondary schools there is a natural break (or, as others say, an unnatural break) in the curriculum. What has led especially to the recognition of this shorter six years' secondary course is the fact that this is the condition required for the examination for the "one-year military service" certificate, and naturally a large number of students do not continue their secondary education beyond this stage.

It should be added that the shorter six years' course may be either (*a*) purely classical, or (*b*) semi-classical, or (*c*) purely modern. The six-year schools of the purely classical type are called *Progymnasien*, of the semi-classical type *Realprogymnasien*, and of the purely modern type *Realschulen*. This last type is the most predominant on the purely modern side. The names of these different kinds of school are at first somewhat confusing to the foreigner; but it is sufficient if we keep clearly in mind that a higher school in Germany offers a clearly defined type of education, devised under expert opinion to meet peculiar needs. What the German parent of the upper and middle classes has to decide for his boy (and that, too, at the early age of nine) is not what side of a school he shall enter—*e.g.*, the classical side or the modern side—but to what type of school he is to be sent, whether to a wholly classical school, or to a wholly modern school, or to a type representing a compromise between these two.

AN OPPORTUNITY FOR THE PIOUS BENEFACTOR.

THERE is no more striking symptom of the educational ferment in the midst of which we are living (says the *Morning Post*) than the discovery on the part of Universities and colleges that they cannot meet the demands made upon them with their existing endowments, and their constant appeals for increased assistance. Their financial hunger is in every way an encouraging symptom. One cannot have a Renaissance in art, or science, or education, or anything else, without paying for it, and the appeals which flood the Press are a testimony not only to what remains to do, but to what has already been done, to improve secondary education, to a widened spiritual horizon, to the pressing upwards of new classes with new intellectual needs which cry to Universities and colleges for satisfaction. But in the meantime the strain upon existing institutions is very severe, and all the more severe because English University education occupies to-day a somewhat unstable equilibrium between public maintenance and private generosity. In Germany Universities are financed by the State Governments to the amount of considerably over a million pounds per annum, and if they lose something in elasticity and independence they gain much in security. In America a use has been found for the millionaire; he has been placed between the shafts and taught that if he is to justify his existence he must subscribe liberally to education, with the result that, though much more public money is spent on University education in America than in England, it is a bagatelle compared with the huge sums given by private persons.

In England University education has been starved by the State: the £200,000 a year which is (speaking roughly) the whole sum given both by National Departments and Local Authorities to English Universities and colleges is not a fifth of the amount spent by public bodies in Germany and America on the same object. But it has not as yet been able to rely with any certainty on the pious benefactor, who is ready enough to endow hospitals, or charities, or institutions which undertake to relieve some visible (and sometimes unrelievable) distress, but who has apparently not yet learned that the expenditure which builds up future generations is at least as laudable as the expenditure which softens the suffering of the present. There are, no doubt, brilliant exceptions—exceptions which make one hope that their attitude may in time become the rule. But the worst of it is that even when gifts are made to University education by private generosity the number of competitors for them is so large that they do not always go to the places which need them most, and that the net result is sometimes very far from that which would be aimed at if national efficiency were the sole consideration. Oxford, for example, which to-day receives from endowments an annual income of a quarter of a million, appeals for £250,000 more, and has already got £150,000, because of its great prestige and because it can draw on the loyalty of a moneyed class. But how difficult it is for the newer Universities to raise money, even though they are situated in wealthy industrial towns! How difficult it is to get endowments for subjects which are not of immediate practical utility! How almost impossible, above all, to get money for the education of women!

These considerations must inevitably come home with great force to any one who glances at the position of the various women's colleges, as set forth in the appeals that from time to time appear, and of which the public has recently been reminded by the movement for increased endowments on the part of Bedford College. The income of such colleges is usually almost incredibly small. The fees must be low in order to admit students whose financial resources are slender, and their endowments, apart from fees, are almost non-existent. At Girton, for example, the fees to cover all expenses of education, residence, and examinations amount to only just over £100 per annum, while the income from endowments, apart from special scholarships, is less than £400. At Bedford College for Women, which is one of the constituent colleges of London University, the average annual amount of fees for instruction and residence is about £100 for a resident student, for a day student £26 to £48, according to the course pursued. It receives a small annual grant from the London County Council in return for keeping free places for a certain number of its scholars, and between £4,000 and £5,000 a year from the Treasury; but apart from these it is without endowments. Both these institutions (to mention only two of several colleges for women) are, as might be guessed from a bare statement of their financial position, urgently in need of increased funds to meet the building expenses entailed upon them by the inevitable increase in the number of students, who at Bedford have grown in the last five years from 224 to 296. It is surely difficult to imagine any more deserving object for the generosity of those who have money to spare for promoting high public ends than the endowment of women's education at these or similar colleges. Both Bedford College and Girton have, each in its own way, been pioneers in the matter of women's education, the former in being the first college to offer scholarships and fellowships to women, the latter in the inauguration for women of residential University life. On the value of the work which they have performed it would be a kind of pedantry to speak. The days when the movement was militant are long since over, and nobody beyond a few eccentrics now doubts that women need a University education as much as men or that they can turn it to as good a purpose. The women of distinction who have passed through Girton in its short forty years' existence are too numerous to mention, while the way in which a single college can influence an important and delicate branch of the public service is shown by the single fact that out of the fifteen women factory inspectors in Great Britain considerably more than a third were educated at Bedford College. At a time when both the demand for trained women in every kind of education and administrative work and the supply of women willing to seize opportunities for qualifying themselves for such work are increasing, it is little less than astonishing that such institutions should be hampered even temporarily by lack of funds.

Perhaps one of the reasons why wealthy men do not come forward with their offerings is that they are under the impression that the full cost of education ought to be covered by the fees charged, and that the cry for endowments is an indication of wasteful finance. This is a common delusion; but it is a delusion nevertheless. The truth is that University education never has been and never can be self-supporting, in the sense of obtaining from the students payments sufficient to set aside for capital expenditure upon the extension and repair of buildings or the acquisition of new sites to accommodate a growing body of learners. Moreover, every advance in science increases the cost of University education. The fifteenth-century student might limit his anxieties to straw and candles. But the governing body of a modern college has to maintain the costly plant of laboratories, libraries, and lecture rooms, and in a populous city that alone absorbs a sum which is many times the tiny endowment of most women's colleges. When, therefore, a college such as Bedford College, with the approval of the Senate of London University, is asking for a sum of £75,000 to enable it to provide accommodation for an increased number of students, it can claim that its need of money is due to the very success of the work which it has accomplished in the last sixty years. Women's education, unlike that of men, has never yet been properly endowed in this country, and no one will have a greater claim to the gratitude of posterity than the far-sighted benefactor who does for it what the generosity of a more pious, though a poorer, age did in the past for Oxford and Cambridge.

REVIEWS.

THE FOUNDER OF ST. PAUL'S SCHOOL.

A Life of John Colet, D.D., Dean of St. Paul's, and Founder of St. Paul's School. With an Appendix of some of his English writings. By the late J. H. Lupton, D.D., formerly Sur-Master of St. Paul's School, and Fellow of St. John's College, Cambridge. New edition. 8s. 6d. net. George Bell.

In connexion with the four hundredth anniversary of St. Paul's School, Messrs. George Bell & Sons have opportunely issued a new edition of Dr. Lupton's comprehensive and sympathetic life of the great founder of the institution. The first edition appeared some twenty-two years ago, and, though Dr. Lupton's account of the foundation of the school has not been universally accepted by other scholars, this part of the work remains unchanged, as not materially affecting the biography; nor has the additional information gained about Colet himself since 1887 been held to require or to justify any searching revision of the book. Curiously enough, Dr. Lupton does not expressly state (so far as we have observed) when Colet was born; but, as he died in 1519 at the age of fifty-three, the date is 1466. He was the son of Sir Henry Colet, who came from the Hale, near Wendover, Bucks, and, as a prosperous mercer, became Lord Mayor of London (1486 and 1495), and of Christian Knyvet, or Knevet, who was highly connected on both sides of her family. Over the school life of Colet there hangs much uncertainty, but Dr. Lupton expounds at length what he might, could, would, or should have studied. Colet certainly studied at Oxford, but where and what is not very clearly determined; so Dr. Lupton again expatiates on the probabilities and possibilities. Colet then travelled on the Continent, and once more he has left few tracks; but, once more, Dr. Lupton speculates. Colet is next found lecturing at Oxford "publicly and gratuitously upon St. Paul." It is easy enough for a comparatively rich man to lecture gratuitously upon anything. However, it was here that he came into contact with Erasmus, who thus describes him: "He seemed like one inspired. There was a loftiness and dignity in his mien almost more than human. His voice, his looks, his whole aspect were changed, and seemed to grow upon you as the enthusiasm carried him along." Before his Oxford work, he had gained preliminary experiences in several benefices, readily found for him by his influential relatives; the list, Dr. Lupton admits ruefully, "looks a culpably long one," and he does not excuse it when he produces the longer list of Colet's immediate predecessor in the deanery of St. Paul's. It was the way of the times—and perhaps of other times. Dr. Lupton leaves us (if we mistake not) to find out by inference that Colet became Dean of St. Paul's in 1504; but he describes very fully "the great work done, and the still greater work attempted," by the new Dean.

A St. Paul's (Cathedral) School was already in existence. "It seems clear that it had tended to become more and more a purely singing school, in which interludes and similar performances could be conveniently prepared, while the grammatical or literary side of the education given had not been equally sustained." Yet why should Colet not have developed this school, instead of proceeding to found a new one? Dr. Lupton finds the reason in the obstructiveness of Dr. Lichfield, the Chancellor (Magister Scholarum) of his time, under whose immediate control the cathedral grammar school was placed. Anyhow, about the year 1509, Colet, who had become a tolerably rich man by succeeding to his father's estates, began the foundation of a school "in the east end of Paul's Church, for a hundred and fifty-three to be taught free in the same." Why the odd number of 153? Colet has left a memorandum in these words: "Of halidayes and halfe halydayes all noumbred togyther in whiche ys no teachinge ther be yn the hole yere vii^{xx} and xiij"—that is, 153. Dr. Lupton gives other suggestions; but it does seem curious if Colet had determined the number of his free scholars by the number of the days of the year on which there was no schooling at all. However, the school was freely open, without restriction of locality, "to the erudycion and profyte of chyldren," "of all nacions and countres indifferently," but naturally Colet hoped for "my countrey men Londoners specially." "Over the revenues, and the entire management," Erasmus significantly adds: "he set neither priests nor the bishop nor the chapter (as they call it) nor noblemen, but some married citizens of established reputation. And, when asked the reason, he said that, though there was nothing certain in human affairs, he yet found the least corruption in them." Dr. Lupton pays a well-deserved tribute to the management of the Mercers' Company. "The large scale on which Colet planned his school is deserving of notice no less than the liberality and foresight displayed in his ordinances." Dr. Lupton "cannot find evidence, so early as 1510, of any other school with so large a number as 153 boys in attendance, and three masters engaged in teaching them." "Winchester had but seventy scholars, with sixteen choristers besides. Eton had seventy, and still fewer choristers." In prescribing the subjects of instruction, Colet showed "wide and liberal views, not untinged with severity." Dr. Lupton quotes Colet's drastic words:—

> All barbary, all corrupcion, all laten adulterate, which ignorant blynde folis brought into this worlde, and with the same hath distayned and poysenyd the old laten spech and the varay Romayne tong which in the tyme of Tully and Salust and Virgill and Terence was vsid; whiche also seint Jerome and seint Ambrose and seint Austen and many hooly doctors lernyd in theyr tymes—I say that fylthynesse and all such abusyon which the later blynde worlde brought in, which more rathyr may be callid blotterature thenne litterature, I vtterly abbanysh and exclude oute of this scole, and charge the Maisters that they teche all way that is the best, and instruct the children in greke and redyng laten, in redyng vnto them suych auctours that hathe with wisdome joyned the pure chaste eloquence.

While insisting on "good literature, laten and greke," and especially such authors as had the "veray Romayne eliquence joynyd with wisdome," he would also have "specially Cristyn auctours that wrote theyre wysdome with clene and chast laten other (either) in verse or in prose." The appointment of William Lily, one of the best, if not the very best, of the half-dozen men in England capable of teaching Greek, to the office of High Master, "gave to St. Paul's the proud distinction of being the first school in which Greek was publicly taught in England after the revival of letters." One of Colet's humane provisions for his scholars was: "I will they use no kokfighting, nor rydyng aboute of victory." If the masters' stipends were not to be augmented as in many another school by "cock-penny, victor-penny, potation-penny, or any other whatsoever it be," they were still on a liberal scale for the age, a scale that shows Colet's high estimation of their office.

Dr. Lupton's biography not only marshals and appreciates all the materials available in 1887 for the personal and official life of Colet, but affords luminous views of the whole panorama of learning and of learned men within the sphere in which Colet moved. No doubt Colet had his imperfections—Dr. Lupton disposes of a good few depreciatory allegations—but he was nevertheless a good man and a high-minded citizen. Erasmus grieved for his death—"a death so bitter to me," he wrote, "that the loss of no one for the last thirty years has afflicted me more. . . . In the public interest, I cannot but lament the loss of so rare a pattern of Christian piety, so unique a preacher of Christian doctrine." He would "not suffer the memory of such a man to die out among posterity," and wrote his life as well as he could on the materials within his reach.

THE APOTHEOSIS OF DEBT.

An Empire in Pawn. Being Lectures and Essays on Indian, Colonial, and Domestic Finance, "Preference," Free Trade, &c. By A. J. Wilson. (10s. 6d. net. Fisher Unwin.)

The age of chivalry is not yet gone. The realms of finance and politics are not perhaps the likeliest of places to look for knights-errant, spear in rest, ready to redress wrong at all hazards and to maintain right against all odds. Still, in sober fact, such has been the attitude of Mr. A. J. Wilson for the past generation, whether as financial editor of great London dailies or as proprietor and editor of the *Investors' Review*. No public man of our time has more steadily and strenuously fought for sane public policy and for clean financial and commercial dealing. The chapters of the present volume range over the whole field of finance, public and private; and though they are mostly reprints from earlier works, or from later issues of the *Investors' Review*, the principles remain unchanged and the discussion is just as fresh to-day as ever it was. Mr. Wilson is regarded as a pessimist—a financial Cassandra; but he sets out his reasons explicitly and forcibly, and it is vastly easier to fling an epithet at him than to grapple with his arguments. The burden of his jeremiad is the gross abuse of credit. "My contention," he says, "has always been the simple one that debt is a cancerous disease and morally deadly in the course of time alike for the nation and the individual; and, inasmuch as the age we live in is distinguished above all that have gone before

Digitized by Google

it as the age of credit, which means debt, it follows that the peril is the greatest ever seen, and it grows in intensity—the peril to our civilization and liberties." One must survey the whole Empire and figure out the details in order to form any rational "conception of the extent to which our civilization has been created by and is buoyed upon debt." "By help of credit we have carried on our wars, created our iron highways, cleansed and beautified our cities, and enlarged our dominions; and now credit is called in to assist us in keeping our unemployed from dying of starvation." Our national and local debts run deep into ten figures, and "all over the Empire the same process has been in operation—in India, in Canada, in Australasia, in whatever spot the British flag is hoisted"; "nowhere in the world has the process of enslavement by debt been more actively in operation than in South Africa since the close of the last war."

If the credit-woven obligations of the populations embraced within the limits of the great British Empire be all added together, it will be found no exaggeration to say that these populations are expected to sustain the charges imposed by a compulsory mortgage load of some £4,000,000,000 sterling. In other words, from £150,000,000 to £200,000,000 is expected to be furnished out of the product of the people's labour each year in the way of debt interest, and all in addition to the ordinary cost of government, which is likewise increasing fast. For the multitude, no matter what the population may be—and of whites it is well under 60,000,000—this must mean augmenting misery, no matter how science and invention may come to their help, no matter what the advantages gained may be, and the misery will more and more find its expression in political unrest, in quack nostrums to cure social anomalies, and, it may be, in efforts at revolt.

There is the problem. It is more than twenty years since Mr. Wilson propounded it, and he faces squarely the retort that his predictions of approaching financial confusions have not yet come true, and may therefore turn out to be false after all. The obvious answer is that the anticipated disaster has been staved off by continual application of further doses of credit. "The centre of the whole system of enslavement through debt," he says, "is London. All rests upon the old country and her credit-generating machinery, and I was too eager to see the end of a deadly usage, it must be admitted; so that I did not properly measure the resources of the home-distiller of market credit, of what is called money, by whose help the *dénouement* has been pressed back; but the end will only be the more disastrous when it does come." The system depends on the presupposition of eternal prosperity. The moment our prosperity receives a serious check, the significance of Mr. Wilson's argument will be ruefully realized.

We leave the reader to follow Mr. Wilson through his examination of the financial expedients and conditions of the various parts of the Empire. The subject is too important for any one that has at heart the true interests of the country to fail to study his chapters in detail. The style is direct and breezy, and always piquant; and, if there is occasional bitterness, the facts and arguments will amply explain and condone it. The volume is most opportune and, to our mind, of the highest importance.

EQUATIONS.

"Cambridge Tracts in Mathematics and Mathematical Physics." —No. 6, *Algebraic Equations.* By G. B. Mathews, M.A., F.R.S. No. 10, *An Introduction to the Study of Integral Equations.* By Maxime Bôcher, B.A., Ph.D. (2s. 6d. net each. Cambridge University Press.)

The subjects treated in both these numbers of a noteworthy series are of fundamental importance and great mathematical interest. Each is discussed with expert skill and likely to attract the notice of students of advanced mathematics, to many of whom both should prove very helpful.

In the earlier tract Prof. Mathews considers the theory of algebraic equations, discussing it on the lines followed by Evariste Galois. The selected basis of treatment is preferred by the author to the method of Abel, inasmuch as it gives, as far as is possible, a specially clear algebraical analysis of the system of roots which satisfy any given equation with numerical coefficients. Indeed, Abel's method is, by reason of its less lucid and precise character, passed over by the writer, and the decision to omit its full discussion gives less restricted opportunities for the introduction of valuable illustrative examples in the course of a short tract such as the present one. Half of the brief treatise before us is occupied by its opening chapter, in which the author undertakes the detailed investigation of the theory of Galoisian Groups and Resolvents, dealing in the first instance with the theory as applied to the cubic equation with arbitrary coefficients, and subsequently taking up the general problem as attacked by Galois. Clearly worded demonstrations, free from other than inherent difficulties, are given of the essential theorems. Chapters ii. to iv. may be looked on as applications of the general theory to particular types of equations. Cyclical, Abelian, and Metacyclical equations are discussed in succession, while the fifth and last chapter of the booklet is devoted to the consideration of solutions by standard forms. A number of short notes, chiefly bibliographical, close the necessarily brief, but very valuable, tract.

Prof. Bôcher also treats of the theory of certain equations, but here the equalities which form the subject of investigation are such as exist between functions occurring under one or more signs of definite integration. Hence arises the distinctive epithet *integral.* The attention of mathematicians was called comparatively recently to equations of this type, and history repeats itself in connexion with them, since the research owes its prosecution, if not its origin, to the fact that equations of the kind presented themselves in the process of investigating definite mechanical problems, as, for example, that which Abel set himself—namely, the converse of the following: "Given the *shape* of a smooth curve in a vertical plane, down which, to its lowest point, a particle slides from rest, to find the whole *time* of descent." The author of the tract follows essentially the course of historical development, and presents to his readers in very concise form the various steps in the argument, as he gradually builds it up, wisely commencing with a number of preliminary propositions in integral calculus which bear on the later portions of the text, but the deferred proofs of which would tend to break the continuity of the main theory. The author endeavours—and it would appear that he does so very successfully—to render his tract valuable to at least two distinct classes of reader: (1) to the leisured and earnest student of mathematics, who may by its means acquire thoroughly a knowledge of the groundwork of the subject, and thus prepare himself for a more exhaustive study of it; and (2) to the reader whose chief object it is to be acquainted with results as distinct from the rigid proofs on which they rest. For the latter the arrangement of the work provides a careful and well defined summary, whilst to the former the argument, as it proceeds from point to point, will unfold itself very forcibly. The index provided enhances the value of the pamphlet, both for purposes of reference to its own pages and by furnishing a list of mathematicians who have contributed, directly or indirectly, to the investigation of these equations.

GENERAL NOTICES.

MATHEMATICS.

Advanced Arithmetic and Elementary Algebra and Mensuration. By P. Goyen. (3s. 6d. Macmillan.)

The publication serves as a new edition of the author's earlier work, "Higher Arithmetic and Elementary Mensuration." At the same time, even a merely superficial comparison of the volumes in question shows at once that the present issue is in no sense a reprint of its predecessor. The contents of the latter have undergone rearrangement, and very considerable alteration and amplification, so that in its present form the work reflects the modern ideas with regard to mathematical teaching and the principle of correlation. Chapters on the notation of algebra, on its elementary rules, and on equations stand at the opening of the new treatise, and index notation introduced into the study of decimals leads readily to the treatment of the principles of logarithms, which forms the subject of early subsequent sections. Diagrams help to illustrate methods of procedure, and graphs find a place, as in nearly all the recent text-books.

Algebra. By Charles Davison, Sc.D. (6s. Cambridge University Press.)

A lucid treatment of the subject, in which the matter discussed is arranged as a course suitable for the junior and middle forms of secondary schools. The rules of the science are deduced principally from those of arithmetic, in accordance with the generally accepted view that this method furnishes the simplest as well as the natural introduction to the study of algebra. A full consideration of the early bookwork has been purposely omitted as being beyond the comprehension of the beginner, but the author believes that in other respects a sufficiently close discussion of the theory has been undertaken. The light of graphical work lends its aid to the treatment of equations, where those considered include not only linear and quadratic expressions, but also such as involve powers and products of the variables of more than two dimensions. The volume contains a very large selection of exercises, the answers to which are furnished.

Digitized by Google

Intermediate Geometry. By Alex. Leighton, M.A., B.Sc., F.E.I.S. (1s. 6d. Blackie & Son.)

A compact little volume containing a great deal of very useful information, and providing a combined course in experimental, practical, and theoretical geometry likely to give valuable assistance to teachers of the subject. In scope the work embraces the geometry required of candidates for a number of University entrance examinations and others of approximately similar standard.

SCIENCE.

Elementary Science for Pupil Teachers. Physics Section, by W. T. Clough, A.R.C.Sc. Lond., F.C.S., Fellow of the Physical Society, Head of the Physical Department, East Ham Technical College. Chemistry Section, by A. E. Dunstan, B.Sc. Lond., F.C.S., L.C.P. (Hons.), Head of the Chemical Department, East Ham Technical College. (2s. Methuen—"Text-Books of Science.")

In both sections the exposition is concise and lucid, the principles are illustrated by well chosen experiments, and suitable exercises and examples are provided as practical tests. The volume is illustrated by numerous diagrams closely pertinent to the text. An excellent introductory manual.

Elementary Statics. By W. G. Borchardt, M.A., B.Sc., Assistant Master, Cheltenham College, formerley Scholar of St. John's College, Cambridge. (4s. 6d. Rivingtons.)

Mr. Borchardt introduces the student to the fundamental ideas of the science of mechanics by presenting some of the historical experiments from which it has been evolved; he takes care to give experimental illustrations before plunging into theoretical expositions; and he uses graphical methods with discretion and effect. The principles are concisely and lucidly set forth, and there is an abundance of discriminating exercises and papers, the answers being appended. 262 figures. A most attractive and efficient text-book.

Practical Physics. By Lionel M. Jones, A.R.C.Sc., B.Sc., F.C.S., Head Master of the Central Secondary School, Birmingham. (3s. Longmans.)

Mr. Jones here provides a systematic course of practical work in physics, in which the essentials of the subject are developed from the work of the pupils themselves. "A pupil working the course, assisted by explanations and natural extension of the work on the part of the teacher, would obtain a thorough grasp of the foundations of heat, light, and electricity, and a good working knowledge of the methods of investigation in these subjects." The course has been in use in Mr. Jones's school for several years with pupils from fourteen to seventeen years of age, and every experiment described in the volume has been performed by the pupils in his laboratory. The work is thoroughly good. Plenty of exercises are proposed, and sets of general revision exercises are appended. The illustrations are numerous and effective.

Messrs. Crosby Lockwood & Son issue a fifth edition of *Practical Building Construction*, by John Parker Allen, Professional Associate of the Surveyors' Institution, formerly Lecturer on Building Construction at the Armstrong College of Science, Newcastle-on-Tyne (7s. 6d. net.). The work is a comprehensive "handbook for students preparing for the examinations of the Science and Art Department, the Royal Institute of British Architects, the Surveyors' Institution," and similar bodies; and it is "designed also as a book of reference for persons engaged in building." The volume has been revised to keep pace with advancing ideas, and it has been considerably enlarged. Over 1,200 illustrations.

ENGLISH LITERATURE.

The Foreign Debt of English Literature. By T. G. Tucker, Litt D., Professor of Classical Philology in the University of Melbourne. (6s. net. George Bell.)

Prof. Tucker intends his "unpretentious chapters" to furnish "the ordinary student, who has not yet given the matter any particular thought, a first assistance in realizing the interdependence of literatures." He takes up successively Greek, Latin, French, and Italian literature (with an intervening chapter on "Literary Currents of the Dark Ages"), outlines each of them in their main forms of expression, and traces the influences of each, direct and indirect, upon English literature. The influences of Spanish, German, Celtic, and Hebrew literature are exhibited on a much smaller scale. Nine synoptical tables, mostly devoted to the principal literatures of Europe, ancient and modern, and elaborately constructed, are most useful collateral aids. Inevitably, the matter is severely compressed, and the various summaries are but "epitomes with a special object." They are very ably presented, no doubt: but the inexorable difficulty remains, that the epitomes have a very different meaning to the reader ignorant of the literatures from what they have to the accomplished writer or to any other scholar fairly familiar with them at first hand. However, the volume will be most suggestive to sincere learners and may lead them to extend their interest to a closer acquaintance with the subjects treated. Perhaps that is about all that such a work than be reasonably expected to effect. The style is clear and simple, and the matter is handled with adequate knowledge and efficiency.

"The Shakespeare Library: The Shakespeare Classics." General Editor, Prof. I. Gollancz, Litt.D. (2s. 6d. net each. Chatto & Windus.)

This important series consists of reprints embodying the romances, novels, and plays used by Shakespeare as the direct sources and originals of his plays. We have three more volumes: (1) *The Sources and Analogues of "A Midsummer Night's Dream,"* compiled by Frank Sidgwick; (2) *The Chronicle History of King Leir*, edited by Sidney Lee, Litt.D.; and (3) *The Taming of a Shrew*, edited by F. S. Boas, M.A. Introductions, notes, and (where necessary) glossaries illustrate and explain the texts, and the relations to Shakespeare's plays are cautiously and judiciously indicated. The volumes furnish most valuable collateral matter for the study of the plays, and they are very tastefully got up.

Selections from Early American Writers, 1607–1800. Edited by William B. Cairns, Assistant Professor of American Literature in the University of Wisconsin. (5s. net. Macmillan.)

In a handy volume of about five hundred pages Prof. Cairns illustrates by typical passages in prose and in verse the course of American literature from the evergreen Captain John Smith down to Charles Brockden Brown. The historical, social, and religious events and experiences of the people give a varied and quaint colouring to the literary expression. The volume may be largely appealed to for illustration of the general history. Perhaps there is not much to learn from the style, yet it often seems very appropriate to the matter, and usually adds piquancy. A most interesting volume, compiled with great care and good judgment.

MODERN LANGUAGES.

"Omega Press Series."—(1) *Heath's Practical French Grammar.* By W. H. Fraser, B.A., and J. Squair, B.A., Professors of the Romance Department, University of Toronto. (3s. 6d.) (2) *Practical French Composition for Middle and Senior Classes.* By J. E. Mansion, B. ès L., Royal Academical Institution, Belfast. (2s.)

These are both very good books for their several purposes, but we have seen them before. They now reappear in the livery of the Omega Press, but are substantially unchanged.

Siepmann's Primary French Course, Part III. By Otto Siepmann, Head of the Modern Language Department at Clifton College. (2s. 6d. Macmillan.)

The present volume comprises a reader, questions for oral practice, exercises in grammar and composition, and test papers, with lists of words and phrases. It is the completion of a great series developed in the course of the past seven years, the guiding principle being "the coordination of conversational, grammatical, and literary teaching, with a view to establishing modern languages as one of the most complete instruments of education." The plan is excellent, and it is very thoroughly worked out. If the labour imposed upon the pupil seems arduous, it is to be remembered that the mastery of French is an exceedngly difficult task, and brings a very ample reward.

A First Book of German Oral Teaching. By A. R. Florian, M.A., formerly Demy of Magdalen College, Oxford, Assistant Master at the Manchester Grammar School. (3s. 6d. Rivingtons.)

Mr. Florian sets out forty-six passages for reading, and appends to each questions, grammatical material, and exercises. Then he gives a series of prose and verse passages for reading, without apparatus, and a series of "reproduction exercises" directly referred to the more advanced half of the first group of reading passages. The outlines of formal grammar are gathered together in a subsequent section, and vocabularies are appended. The work is thoroughly practical, and the design is worked out patiently and efficiently. It should be a strong force in the hands of a capable teacher.

L'Inglese Imparato da Sè, con la Pronuncia Fonetica. Redatto da G. Dalla Vecchia. (1s. Marlborough.)—The book follows the regular plan of the well known "Self-Taught Series"—first, classified vocabularies; next, the essential elements of grammar, with exercises (and key); then, conversations of a practical character on a vast variety of subjects. The pronunciation of the English as phonetically depicted has a weird aspect; but it will readily be understood and will be very helpful to Italian learners of English. The work is capably executed.

Messrs. Marlborough also publish a fourth edition of *French Pronunciation made Easy* by M. H. Hébert. The work has been rewritten, enlarged, and rearranged. The explanations are full and clear, and some continuous reading exercises (with key) are appended. The volume should be very serviceable to learners that are not within reach of the living French voice.

HISTORY.

An Introductory History of England. By C. R. L. Fletcher, formerly Fellow of All Souls and Magdalen Colleges, Oxford. Vols. III. and IV. (5s. each. Murray.)

Mr. Fletcher continues his work from the Restoration to the beginning of the Great War (1660–1792), and then on to the Battle of Waterloo (1815), and there he proposes to stop. The records of the past century "can hardly be accounted History, for fair judgments on such events will be impossible: we need a distance and a perspective before we can form anything approaching a fair judgment on the men and events of the Past." Mr. Fletcher himself illustrates the dictum in occasional remarks, and he does well to stop betimes, otherwise he would probably develop into a bitter pamphleteer. "With the exceptions of the Eman-

Digitized by Google

cipation of the Catholics and the Dissenters and of the introduction of Free Trade," he writes, "I have little sympathy with any of the 'Reforms' and 'Movements' of the nineteenth century." How he would deal with Irish affairs may be gathered from his citation of Grattan's outburst—"We will avenge ourselves by sending into the ranks of your Parliament and into the very heart of your Constitution *one hundred of the greatest scoundrels in the Kingdom*"—as a remarkable example of "prophetical foresight." The words he italicizes are equally viperous and unjust. The dangers to British rule in India after 1849, he says, "would come either from tribes beyond the Himalayan frontier, from mutiny in our Native Army, or—incomparably the worst of the three—from Radicals in the British Parliament and Press." Was it the Himalayan frontier? Why was there mutiny? Is the government of any part of the Empire to be exempted from parliamentary and public inquiry and criticism? "The baleful skill with which the leaders of the [American] revolt played their cards has seldom been equalled," writes Mr. Fletcher; "the most disgusting hypocrite of the lot is perhaps Benjamin Franklin." We vainly look for the essential causes of the French Revolution; Mr. Fletcher tilts blindly at "anarchy" and "Radicalism." He no doubt seizes the outstanding points of the history and treats them in a brisk and unconventional style; but these later volumes need to be read very critically, with a lively distrust of the author's political insight and judgment.

(1) *History of Mediæval Civilization, and of Modern to the end of the Seventeenth Century.* (2) *History of Contemporary Civilization.* By Charles Seignobos, Doctor of Letters of the University of Paris. (5s. net each. Fisher Unwin.)

We have already noticed the first volume of this series, the "History of Ancient Civilization." The present volumes continue the outline on the same plan, seizing the main points and presenting them with such effectiveness as the narrow space permits. The work seems to us to improve in grasp and pointedness as it advances: these two volumes are much more satisfactory than the first, the author appearing to be upon more familiar ground. They convey in a compendious form a comprehensive and instructive impression of the varied and gradual development of the principal elements of civilization in the more advanced countries of the world. "The history of civilization," Dr. Seignobos cheerfully concludes, "should teach us to have confidence in the future."

EDUCATION.

The Law concerning Secondary and Preparatory Schools. By Alick H. H. Maclean, of the Middle Temple, Barrister-at-Law. (15s. net. Jordan.)

While dealing with all the legal aspects of secondary schools, Mr. Maclean also embodies in his work the common law and the statutes relating to schools in general, and discusses various branches of the law that frequently concern schools, though not expressly relating to them. The subjects are systematically disposed and adequately treated, though the full bearings of decisions must still, of course, be sought in the legal library. More important statutes and Board of Education regulations are placed in appendixes. The volume is an instructive repertory of legal information on the whole subject.

Législation de l'Enseignement, Primaire et Secondaire, en Angleterre. Par Frédéric Péron, Docteur en Droit, Licencié ès Lettres, Rédacteur au Ministère de l'Instruction Publique. (Paris: Henri Jouve, 15 rue Racine.)

"Il est difficile, pour comprendre et apprécier les institutions anglaises, de se servir, comme point de comparaison, des institutions françaises correspondantes." However, Dr. Péron manages to understand and to appreciate the development of our educational system (if system it is) and to explain it lucidly to his countrymen. A single summary chapter brings the story down to 1870, after which the successive Education Bills are treated in considerable detail. Dr. Péron has gone to trustworthy sources for his information. His volume forms an instructive record of what has been done and attempted, the conflicts over the more recent measures being very fully narrated.

Mrs. Ennis Richmond, Principal of West Heath School, Hampstead, sends us a number of lectures and papers on the virtues of Co-education: (1) *A Natural Education;* (2) *For Our Daughters,* a Plea for the Co-education of Our Boys and Girls; (3) *Two Aspects of the Co-education of Boys and Girls;* (4) *Public Schools and Co-education;* (5) *Why not Co-education?*—"In speaking of co-education hitherto," she says, "I have based my right to speak at all on the fact that I had been for twenty-five years closely connected with the management of boys' schools, and had brought out of that connexion the conviction not so much that co-education was right as that separate education was wrong." The system of co-education, she holds, "is necessary for the free development of boys and girls into young men and young women all through their growing years, but especially necessary between the ages of fourteen and eighteen." The discourses are well worth patient consideration.

The Board of Education has issued a new edition (1908) of Matthew Arnold's *Reports on Elementary Schools,* 1852–1882, with additional matter and appendixes, and with an introduction by F. S. Marvin, M.A., one of H.M. Inspectors of Elementary Schools (1s., Wyman). The price is merely nominal. These Reports are remarkably live, yet full of instruction and suggestion.

The Girls' School Year Book (*Public Schools*)—the fourth annual issue (2s. 6d. net, Swan Sonnenschein)—provides a record, comprehensive and concise and careful, of all matters of essential interest to parents and schoolmistresses in connexion with the secondary education of girls. Besides schools in a narrow sense, it deals with the various departments of higher instruction and future occupation suitable for women, and offers a considerable quantity of collateral information of a useful character. We hope this annual will continue to flourish.

The growing interest in education is to some extent evidenced by the fact that librarians are making special catalogues of their books and pamphlets on the subject. Thus, the Public Libraries Committee of Newcastle-upon-Tyne have issued a considerable *Education Catalogue,* digesting the educational works in their libraries in lists that render consultation as easy as possible. It is interesting and gratifying to observe the number and the variety of the works catalogued.

PRACTICAL MANUALS.

Educational Woodworking for Home and School. By Joseph C. Park, State Normal and Training School, Oswego, New York. (4s. 6d. net. Macmillan.)

The book "is intended to be used under the direction of a skilled instructor who has sufficient technical knowledge and ability to lead his pupils to become capable in this line of work." This explains the omissions of elements that might have been expected if the book had been addressed to workers without teachers. Successive Parts describe and explain (1) wood-working tools, (2) wood-working machines, (3) wood (in outlines), (4) fastening devices used in wood construction, (5) wood-finishing, and (6) wood-turning; and there are useful appendixes. Directions and exercises are given; and there are 263 figures.

School Gardening. By W. Francis Rankine. (1s. Pitman.)

Mr. Rankine explains in simple and clear language the best way to go about school gardening, and the reasons for the procedure he recommends. "Theory without practice is useless, and practice without theory is a drawback: the greatest measure of success is realized by the gardener who possesses a well balanced knowledge of both." Besides, school gardening must be done educationally, and that involves the reasons for doing this and not doing that. Mr. Rankine treats of the soil, manures, tools, seeds, vegetables and fruits, grafting, pruning, &c. An excellent little book, handy, well printed and got up, and liberally and efficiently illustrated.

Colour-Sense Training and Colour Using. By E. J. Taylor, Sharneyford Council School, Bacup. (1s. 6d. net. Blackie.)

Mr. Taylor cannot claim completeness for his little manual, but he does claim "to suggest to his colleagues in the teaching profession a rational, scientific, and highly practical method of colour-sense training from the dawn of consciousness onwards through the one and continuous process of development," and also to present to his fellow art students "in a clear, logical, and possibly attractive form such knowledge of the fundamental facts underlying the science as will enable them, if not to become great colourists, at least to avoid mistakes." He develops his subject progressively in concise and lucid form. There are seventeen coloured diagrams. A very capable and suggestive work.

Common-Sense Needlework. By Miss Jane A. Fleming, Green Lane Council School, Leeds. (3s. 6d. net. E. J. Arnold.)

Miss Fleming accentuates two points: (1) the necessity for continued motion in sewing, and (2) the application of school exercises to home work, that is to say, the art of mending or repairing. She finds that, under her system, "girls (*a*) love sewing, (*b*) can mend sensibly, and (*c*) have in many cases got a desire for garments made by their own hands." This is good hearing, and should be made a note of. The explanations of the ordinary branches of needlework are ample and clear; miscellaneous exercises are proposed; ornamental work is exhibited, as well as the processes of repairing, and "suggestions" for preparing sewing lessons added. A graduated syllabus of needlework, readily adaptable to any school or class, and embodying all the exercises in the "suggestions," will be found very helpful. There are 183 illustrations, and the work is admirably printed and got up. An exceptionally able and common-sensible work.

RELIGIOUS AND MORAL.

"Cambridge Bible for Schools and Colleges."—(1) *The Two Books of the Kings.* Edited by William Emery Barnes, D.D., Fellow and Chaplain of Peterhouse, Hulsean Professor of Divinity, Examining Chaplain to the Bishop of London. (3s. 6d. net.) (2) *The Book of Esther.* Edited by the Rev. A. W. Streane, D.D., Fellow of Corpus Christi College, Cambridge. (1s. 6d. net.) (Cambridge University Press.)

Both volumes are admirably edited. The introductions and notes judiciously select such points as are suitable for the stages of study contemplated, and the scholarship is of the first quality.

"Cambridge Greek Testament for Schools and Colleges."—*The Epistles of Paul the Apostle to the Colossians and to Philemon.* Edited by A. Lukyn Williams, B.D., Vicar of Guilden Morden and Examining Chaplain to the Lord Bishop of Durham. (3s. Cambridge University Press.)

On nine pages of Greek text Mr. Williams writes sixty-six pages of introduction and 191 pages of notes—an exhaustive treatment of a

Digitized by Google

tolerably difficult subject, very suitable for reference or for detailed private study, but rather disproportioned for school, if not also for college, use. The introductions offer an ample and scholarly treatment of all important points, and the notes, exegetical and grammatical, are exceptionally thorough.

Sermons, Doctrinal, Philosophical, Critical, and Educational. By the Rev. Joseph Miller, B.D. First Series. (5s. Rivingtons.)

Mr. Miller has already given proof of his scholarship and laboriousness in the four volumes of his comprehensive "Historical and Speculative Exposition of the Thirty-nine Articles." The present volume contains thirty-three sermons—thoughtful, suggestive, and earnest—on a wide range of subjects. The style is somewhat heavy, though probably lightened by the arts of delivery. Ten of the sermons are taken from, or suggested by, German or French writings.

HINTS FOR THE HOLIDAYS.

Holidays Abroad is a charmingly illustrated booklet describing concisely a series of tours in less known districts of Holland, North Germany, the side valleys of the Rhine, the Belgian Ardennes, and the Tyrol, easily and inexpensively reached by the Great Eastern Railway Company's Harwich route to the Continent.

"The Syndicate of Initiative" for Calvados (10 rue de Bernières, Caen) are circulating a booklet of *Rambles through Normandy*, and "will be happy enough if they may be of any use by guiding you in the visit round one of the finest French departments." The booklet offers attractive itineraries, with numerous illustrations.

A very full illustrated pamphlet on "*French Holiday Courses by the Seaside*, organized under the patronage of the Alliance Française and with the approbation of the Rector of the University of Caen," is likely to attract students of French to Villerville (near Trouville) for holiday studies. Inquiries should be addressed to the Director of the Courses, Prof. L. Bascan, Directeur, Ecole Supérieure, Rambouillet (S.-et-O.).

The Art Publishing Company (Norfolk Street, Strand, W.C.) sends us a seductive booklet published by the Paris-Orléans Railway Company, describing the historic and romantic parts of France served by this railway — Touraine, Auvergne, Brittany, the Pyrénées, &c. A very interesting chapter on the primitive methods of travel in France is appended. The illustrations are numerous and excellent. Holiday-makers in these parts may obtain all necessary information from the Administration of the Paris-Orléans Railway Company, 1 Place Valhubert, Paris (Bureau du Trafic-Voyageurs).

FIRST GLANCES.

Science.

Chemistry, Physical Exercises in. By Dr. W. A. Roth, a.o. Professor of Physical Chemistry in Greifswald. Authorized Translation by A. T. Cameron, M.A., B.Sc. 6s. net. Constable.

[Elementary; "connects training experimental method with the conclusions derived from the results." Revised throughout by the author, who has also made numerous additions. Forty-nine diagrams. Most useful.]

Elementary Practical Science, Notes of Lessons on. By Robert Bunting, Head Master of the "Acland" Higher Elementary School, London, N.W. 3s. 6d. Pitman.

[To devolop faculty of observation; "enormous number of experiments" (652); 11 figures. Evidently based on large and thoughtful experience. Extremely serviceable.]

Elementary Science for the Certificate Examinations: Introductory Section. Edited by William Briggs, LL.D., M.A., B.Sc., F.C.S., Principal of the University Correspondence College. 2s. 6d. Clive.

[Course of Elementary Physics in Chemistry, practical and theoretical. Able exposition; simple and suitable experiments; abundant exercises (with answers).]

Elementary Science, A Teacher's Course of. Part I.: Physics and Chemistry. By Frank Belton, B.Sc. 3s. 6d. Pitman.

[For the Preliminary Certificate and the Certificate Examinations. Full and careful exposition; numerous questions and exercises appended; 228 figures.]

Mechanics, Elementary. By C. M. Jessop, M.A., formerly Fellow of Clare College, Cambridge, Professor of Mathematics in Armstrong College, Newcastle-on-Tyne, and T. H. Havelock, M.A., D.Sc., Fellow of St. John's College, Cambridge, Lecturer in Applied Mathematics in Armstrong College. 4s. 6d. George Bell.

[Dynamics and statics. Based on part of Prof. Jessop's "The Elements of Applied Mathematics," which has been rearranged, largely rewritten, and somewhat enlarged by Dr. Havelock. Numerous exercises (with answers); 178 figures. Able treatment.]

English Texts.

Bell's Literature Readers.—(1) Fights for the Flag (Fitchett). (2) Deeds that won the Empire (Fitchett). (3) The Little Duke (Miss Yonge). 1s. each. George Bell.

Blackie's English Classics.—(1) Adonais (Shelley). 2d. (2) The Palace of Art, and Ulysses (Tennyson). 2d. (3) A Dream of Fair Women, and Tithonus (Tennyson). 2d. (4) Childe Harold's Pilgrimage, Canto IV. (Byron). 6d. All edited by David Frew, B.A., with judicious notes.

Dent's The Temple Continuous Readers (edited by Clifford Dent).—(1) Rollo at Work, and Rollo at Play (Jacob Abbott). (2) Gulliver's Travels (Swift). (3) The Heroes (C. Kingsley). (4) Grimm's Fairy Tales. (5) The Story of Drake (edited by M. T. Yates, LL.D.). 6d. each. Illustrated.

Longmans' Class-Books of English Literature.—(1) Tales of Troy, by Andrew Lang, with six illustrations by H. J. Ford and a map. (2) Tales of the Greek Seas, by Andrew Lang, with seven illustrations by H. J. Ford. (3) Selections from "Short Studies on Great Subjects" (Froude), with introduction and notes by J. Thornton, M.A.

Marshall's (Horace) The Carmelite Classics.—(1) The Prologue to Piers Plowman, edited by C. T. Onions, M.A. Lond., of the Oxford English Dictionary. 3d. (2) Illustrations of English Literature from Wyatt to Webster, edited by C. L. Thomson, Examiner in English for the Advanced Scholarships of the London County Council. 1s. 4d. (3) Illustrations of English Literature from Herrick to Dryden, edited by G. B. Sellon, English Mistress, Baker Street Church of England High School for Girls. 1s. 4d. (4) Illustrations of English Literature from Carlyle to Stevenson, edited by C. L. Thomson. 1s. 4d.

[Excellent representative selections.]

Nelson's Short Stories in English Literature.—(1) Sesame and Lilies (Ruskin). (2) Boswell's Life of Johnson—Selected Passages. 6d. each. Frontispiece.

Oxford (Clarendon Press) Select English Classics (edited by Q.).—(1) Charles Lamb—Selected Essays. 3d. (paper). (2) Scenes from Marlowe's Plays. 4d. (cloth).

Oxford Plain Texts.—(1) Gray's Elegy and Odes. (2) Coleridge's Rime of the Ancient Mariner, and Christabel. (3) Byron's Childe Harold's Pilgrimage, Canto I. (4) The same, Canto II. (5) The same, Canto III. (6) The same, Canto IV. (7) Keats's Isabella, and The Eve of St. Agnes. (8) Matthew Arnold's Sohrab and Rustum. (9) Matthew Arnold's Balder Dead, and Mycerinus. 4d. each (cloth). Clarendon Press.

Stead's The Penny Poets.—(1) Longfellow's Evangeline. (2) Longfellow's Shorter Poems. Edited by R. S. Wood.

French.

Dent's Les Classiques Français (edited by H. Warner Allen).—Julie; ou, La Nouvelle Héloïse (Rousseau). Edition abrégée, avec Préface de Frank A. Hedgcock. 1s. 6d. net.

[Judiciously abridged; good introduction. Portrait.]

La Deuxième Année de Français. Written and edited by F. B. Kirkman, B.A. Oxon, with the assistance of Ch. M. Garnier, Professeur Agrégé au Lycée Henri IV, Paris, and W. H. B. Leach, M.A., Head Master of Penrith Grammar School. 2s. 6d. A. & C. Black.

[Readings on French subjects; elaborate exercises; grammar; vocabulary. Very carefully and effectively worked out; self-contained.]

L'Entente Cordiale. Par J. Bonhomme and J. Bull. 2d. Andrews (2 Harmsworth Street, S.E.).

[Common phrases classified; English and French in parallel columns.]

Methuen's Simplified French Texts.—Le Conscrit de 1813 (Erckmann-Chatrian). Adapted by H. Rieu. With vocabulary. 1s.

Molière, The Temple.—(1) Dom Garcie de Navarre; ou, Le Prince Jaloux. (2) Sganarelle, ou Le Cocu Imaginaire. Edited by F. Spencer. 1s. 6d. net each. Dent.

[Preface, glossary, &c. Charming edition.]

Murray's French Texts.—Chronique du Règne de Charles IX (Mérimée). Adapted and edited by Ernest Weekley, M.A., Professor of French, University College, Nottingham. 1s. 6d.

My Little French Friends. By Lina Oswald. Illustrations by Jean Bakewell and others. 2s. Moring.

[Interesting matter in generous type. Should be very attractive to young folk.]

Oxford Modern French Series (edited by Leon Delbos, M.A.)—Jeanne d'Arc (Michelet). Edited by J. H. Sacret, M.A. Oxon., Lecturer in History, University College, Reading. 2s. Clarendon Press.

Phrases, French, for Advanced Students. By Edward J. Kealey, B.A., Modern Language Master, Ampleforth College, York. 1s. 6d. Pitman.

[A very helpful collection, well chosen.]

Rivingtons' Direct Method French Texts (Intermediate).—Chez les Sauvages (Sandeau, La Roche aux Mouettes). Edited by W. G. Hartog, B.A. Lond., Lecturer in French, University College, London.

Siepmann's Primary French Course, Parts I. and II., Key to the Exercises in. By C. A. Jaccard, Lic. ès Lettres, Assistant Master at Clifton College. 3s. 6d. net for each Part. Macmillan.

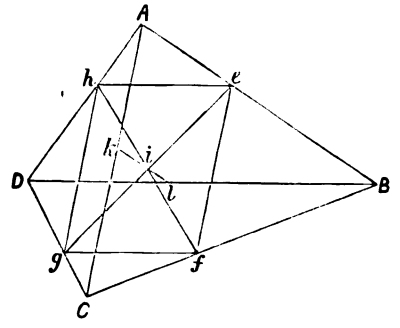
MATHEMATICS.

11604. (J. TATE, M.A.)—The sides AB, BC, CD, DA of a spherical quadrilateral formed by arcs of great circles are divided internally at E, F, G, H respectively so that

$$\sin AE \sin BE = \sin CF \sin BF = \sin CG \sin DG = \sin AH \sin DH = \lambda.$$

Prove that the arcs EG, FH intersect in a point I lying on the arc KL, where K and L are the middle points of the diagonals, and that, if the diagonals be equal, $\sin KI \sin LI = \lambda$.

Solution by M. T. NARANIENGAR, M.A.



This follows from the property of the *spherical mean centre*. It may also be proved thus: — Let small letters denote the projections of capital letters on the corresponding chords.

Then

$Ae/eB = \sin AE/\sin EB = \lambda$, &c. [since OAB is isosceles].

Also $Ak/kC = Dl/lB = 1$.

Now, in the tetrahedron ABCD, it is readily seen that *efgh* is a parallelogram, and that its centre lies on *kl*.

[This may be statically inferred by imagining masses 1, λ, 1, λ at A, B, C, D respectively, whose centre is in *kl*, *eg*, and *hf*.]

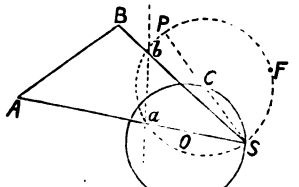
Thus, the point I lies on KL.

Again, if the diagonals AC and BD of the spherical quadrilateral be equal, $Ok = Ol$; therefore, as before,

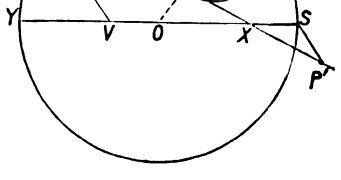
$$\sin KI/\sin LI = ki/li = \lambda.$$

14609. (R. C. ARCHIBALD, M.A.)—Prove the following relations between the cardioide and the three-cusped hypocycloid or tricuspide:—(i.) The envelope of the parabolas, with foci on a cardioide and always tangent to two fixed lines drawn at pleasure through its cusp is a tricuspide. (ii.) A cusp S of a tricuspide and its opposite vertex V are joined. Any tangent to the tricuspide intersects this line SV in X. With centre V and radius VX, a circle is described which cuts the tangent again in P. The locus of P is a cardioide.

Solution by C. E. YOUNGMAN, M.A.



(i.) Let the circle (O) be the base of the cardioide, S the cusp, and SA, SB the two fixed lines; A and B being so determined that the mid-points of SA and SB lie on (O). Consider two consecutive parabolas: they must have a third common tangent, *ab* suppose, cutting SA, SB at *a* and *b*; and the circle S*ab* will go through their foci FF′, *i.e.*, will touch the tangent to the cardioide at F; hence its centre C will lie on (O). Draw the diameter SCP; then P is concyclic with SAB, and *a*, *b* are its projections on SA, SB; but the parabolas have the same envelope as their common tangent *ab*, the pedal line of P in SAB, and this envelope is by Ferrers's theorem a tricusp circumscribing the nine-point circle of SAB.



(ii.) Let D be the point of contact of the fixed and rolling circles of the tricusp, $OS = 3a$, and $SOD = \theta$. Then we know that the tangent PQX makes $\angle PXO = \frac{1}{2}\theta$, and

$$OX = a \sin \tfrac{3}{2}\theta \sin \tfrac{1}{2}\theta = a(2\cos\theta + 1);$$

therefore

$$VP (= VX) = 2a(1 + \cos\theta);$$

and angle $PVY = \theta$; therefore P describes a cardioide with cusp V.

Similarly, if we take P′ on the tangent so that $SP' = SX = 4a - VX = 2a(1 - \cos\theta)$, P′ describes a cardioide having cusp S and vertex V; equal to the other one.

It is easily shown that $QX = XP'$.

15956. (W. W. ROUSE BALL.)—The Proposer desires to restate the question (*cf. Educational Times*, for March, 1906) as follows:—In 1850

Digitized by Google

Mr. Kirkman proposed as a problem the determination of 7 arrangements of 15 schoolgirls, each arrangement consisting of 5 sets of triplets, so that no two girls will occur together in any triplet more than once. The question was discussed by numerous mathematicians, notably by the author, Cayley, and Sylvester, and several solutions have been given. The generalized problem consists in finding $\frac{1}{2}(3m-1)$ arrangements of $3m$ things, each arrangement consisting of m sets of triplets, so that no two things will occur together in any triplet more than once. This has been solved for various values of m, in particular when $m = 1, 3, 5, 7, 9, 13, 15$. It seems probable that there is a solution when $m = 11$. Can any readers of *The Educational Times* give the solution when $m = 11$?

Solution by HENRY E. DUDENEY.

(*Continued.*)

Referring to my previous articles on this problem (see *Educational Times*, June, 1908, and *Reprint*, New Series, Vol. XIV., pp. 97, &c., and Vol. XV., pp. 17, &c.) readers will doubtless be interested to know that I have at last succeeded in solving it generally for n schoolgirls, where n is of the form $6m+3$. For any such number of girls a solution is always possible, and the reason why the problem has baffled mathematicians for sixty years is simply this: we have all been trying to generalize from the entirely exceptional case, 15! The new pose that I exhibited in my last article for the case of 21 girls, far from being peculiar to that number, actually turns out to be the regular pose in which an arrangement for any number may be given, with the solitary exception of 15 girls! The reason why it will not work for 15 is that the number is too small to admit of the triplets being posed in the manner required by a number of its particular form. It is, of course, not surprising to find that the general pose is frequently not the simplest one for a particular number, but I will deal with that point later. At present I want to show that a solution may always be found in this particular pose whether the other methods break down or not—with that one exception of 15 girls.

The general law is briefly this. The girls may always be divided into the three sets, a, b, and c, each with suffixes 1, 2, 3, ..., $\frac{1}{3}n$ and the pose will always be in this form:—$\frac{1}{3}n$ days produced cyclically from a single day; and $\frac{1}{2}(n-3)$ days all distinct, but the successive triplets on any day produced cyclically from a single triplet. A reference to my solution for 21 girls will make this perfectly clear. The following are my solutions for 9 and 27 girls respectively, posed in this general manner.

9 SCHOOLGIRLS.

1st day ... $a_1\ b_2\ a_3 \mid b_1\ c_2\ b_3 \mid c_1\ a_2\ c_3$

4th day ... $a_1\ b_1\ c_1 \mid a_2\ b_2\ c_2 \mid a_3\ b_3\ c_3$

27 SCHOOLGIRLS.

1st day ... $a_8\ a_7\ a_5 \mid b_2\ b_3\ b_5 \mid c_5\ c_7\ c_1 \mid a_4\ b_8\ a_9 \mid b_1\ c_4\ b_6 \mid c_6\ a_2\ c_9 \mid a_1\ b_4\ c_3 \mid a_3\ b_9\ c_6 \mid a_6\ b_7\ c_2$

10th day ... $a_1\ b_1\ c_1 \mid a_2\ b_2\ c_2 \mid a_3\ b_3\ c_3 \mid a_4\ b_4\ c_4 \mid a_5\ b_5\ c_5 \mid a_6\ b_6\ c_6 \mid a_7\ b_7\ c_7 \mid a_8\ b_8\ c_8 \mid a_9\ b_9\ c_9$

11th day ... $a_1\ b_8\ c_9 \mid a_2\ b_9\ c_1 \mid a_3\ b_1\ c_2 \mid a_4\ b_2\ c_3 \mid a_5\ b_3\ c_4 \mid a_6\ b_4\ c_5 \mid a_7\ b_5\ c_6 \mid a_8\ b_6\ c_7 \mid a_9\ b_7\ c_8$

12th day ... $a_1\ b_6\ c_2 \mid a_2\ b_7\ c_3 \mid a_3\ b_8\ c_4 \mid a_4\ b_9\ c_5 \mid a_5\ b_1\ c_6 \mid a_6\ b_2\ c_7 \mid a_7\ b_3\ c_8 \mid a_8\ b_4\ c_9 \mid a_9\ b_5\ c_1$

13th day ... $a_1\ b_3\ c_5 \mid a_2\ b_4\ c_6 \mid a_3\ b_5\ c_7 \mid a_4\ b_6\ c_8 \mid a_5\ b_7\ c_9 \mid a_6\ b_8\ c_1 \mid a_7\ b_9\ c_2 \mid a_8\ b_1\ c_3 \mid a_9\ b_2\ c_4$

It will be seen that the first day will always produce, by cyclical permutation of the suffixes, $\frac{1}{3}n$ days in all. The other days will obviously simply repeat themselves. Now, although the pose of the lines for the days is constant, the actual formation of the triplets will depend on whether n is of the form $18q+3$, $18q+9$, or $18q+15$. We will call these the "first," "second," and "third" types, and remember that in the third type q must be an integer, in order to exclude the case of 15. An example of the first type is 21 and a reference to it will show that on the first day every triplet contains a, b and c except the three, aaa, bbb, and ccc. In the next example of this first type, 39, every triplet will be abc, except aaa (twice), bbb (twice), and ccc (twice). In the case of 57 every group will be abc, except aaa (thrice), bbb (thrice), and ccc (thrice). And so on. In the second type, of which the above 9 and 27 are examples, we always get on the first day the three triplets aba, bcb, and cac (never more than once), with the aaa, ..., increasing in number as we advance, as before. Thus 45 will consist of aaa, ... (twice), aba, ... (once), and the remaining groups abc. I will now give my solution for the case of 69, which is of the third type.

69 SCHOOLGIRLS.*

1st day ... $a_7\ b_{14}\ a_{13} \mid b_{20}\ c_2\ b_{16} \mid c_{10}\ a_{21}\ c_8 \mid b_{13}\ a_{23}\ b_{15} \mid c_5\ b_{11}\ c_{22} \mid a_{11}\ c_{18}\ a_{15} \mid a_5\ a_4\ a_{18} \mid a_{10}\ a_8\ a_3 \mid a_{17}\ a_{14}\ a_6 \mid b_{10}\ b_7\ b_{21} \mid b_{22}\ b_{17}\ b_9 \mid b_{18}\ b_{19}\ b_2 \mid c_4\ c_3\ c_{17} \mid c_{12}\ c_{16}\ c_{23} \mid c_{11}\ c_{14}\ c_{19} \mid a_{20}\ b_6\ c_{21} \mid a_1\ b_5\ c_9 \mid a_2\ b_1\ c_{20} \mid a_9\ b_{12}\ c_{15} \mid a_{22}\ b_4\ c_1 \mid a_{16}\ b_3\ c_{13} \mid a_{12}\ b_{23}\ c_6 \mid a_{19}\ b_8\ c_7 \mid$

24th day ... $a_1\ b_1\ c_1 \mid a_2\ b_2\ c_2 \mid a_3\ b_3\ c_3 \mid$, ..., ...,

25th day ... $a_1\ b_3\ c_{15} \mid a_2\ b_4\ c_{16} \mid a_3\ b_5\ c_{17} \mid$, ..., ...,

26th day ... $a_1\ b_{21}\ c_5 \mid a_2\ b_{22}\ c_6 \mid a_3\ b_{23}\ c_7 \mid$, ..., ...,

27th day ... $a_1\ b_7\ c_{20} \mid a_2\ b_8\ c_{21} \mid a_3\ b_9\ c_{22} \mid$, ..., ...,

28th day ... $a_1\ b_{18}\ c_{16} \mid a_2\ b_{19}\ c_{17} \mid a_3\ b_{20}\ c_{18} \mid$, ..., ...,

29th day ... $a_1\ b_{22}\ c_{23} \mid a_2\ b_{23}\ c_1 \mid a_3\ b_1\ c_2 \mid$, ..., ...,

30th day ... $a_1\ b_{19}\ c_{14} \mid a_2\ b_{20}\ c_{15} \mid a_3\ b_{21}\ c_{16} \mid$, ..., ...,

31st day ... $a_1\ b_{17}\ c_{10} \mid a_2\ b_{18}\ c_{11} \mid a_3\ b_{19}\ c_{12} \mid$, ..., ...,

32nd day ... $a_1\ b_9\ c_{17} \mid a_2\ b_{10}\ c_{18} \mid a_3\ b_{11}\ c_{19} \mid$, ..., ...,

33rd day ... $a_1\ b_{15}\ c_6 \mid a_2\ b_{16}\ c_7 \mid a_3\ b_{17}\ c_8 \mid$, ..., ...,

34th day ... $a_1\ b_{20}\ c_{22} \mid a_2\ b_{21}\ c_{23} \mid a_3\ b_{22}\ c_1 \mid$, ..., ...

In cases of this type we shall get on the first day that set of six triplets aba, bcb, cac, bab, cbc, aca (never more than once), together with the aaa, ... (increasing in number as we advance, as in the other types) and the remainder of the triplets of the form abc. Now it will be seen why 15 is an exceptional case. To solve it by the general method that set of six triplets must occur, but it obviously cannot do so since it involves 18 girls, and we have only 15 to walk out together.

[Rest in *Reprint*.]

9442. (ARTEMAS MARTIN, LL.D.)—A point is taken at random in the surface of a given triangle; find the average area of the triangle cut off by a line passing through the random point.

Note by D. BIDDLE.

Dr. Artemas Martin's Question 9442 does not seem to me to be adequately solved on p. 291 (see *The Educational Times* for July 1st, 1909; see also *Reprint*, Vol. XVII., New Series, p. 17), since the Solver has assumed that the join of two random points on the *perimeter* is equivalent to a line drawn at random through a point selected at random on the *surface* of the triangle. Coordinates, x on the base, y perpendicular thereto from the points in order, and then θ ranging from 0 to π, should be used for all possible directions of the random line through each such point, and for finding the area of the triangle cut off. Then, x and y having their obvious limits, integration does the rest. Taking the centroid of the given triangle as its representative point, no straight line drawn through that point cuts off less than four-ninths or more than a half of the triangle, in triangular form. But I do not say that this is indicative of the answer.

11580. (Professor SYLVESTER.)—Prove that the norm of the 8-valued function $1+[f+(f^2-1)^{\frac{1}{2}}]\,[g+(g^2-1)^{\frac{1}{2}}]\,[h+(h^2-1)^{\frac{1}{2}}]$ is sixteen times the square of the discriminant of $x^2+y^2+z^2+2fyz+2gzx+2hxy$.

Solution by T. MUIR, LL.D.

The statement of Sylvester's unproved theorem is not quite accurate: the ternary quadric referred to should be

$$x^2+y^2+z^2-2fyz-2gzx-2hxy.$$

Putting $1+[f+(f^2-1)^{\frac{1}{2}}]\,[g+(g^2-1)^{\frac{1}{2}}]\,[h+(h^2-1)^{\frac{1}{2}}]=0$,

we have $[g+(g^2-1)^{\frac{1}{2}}]\,[h+(h^2-1)^{\frac{1}{2}}]=-f+(f^2-1)^{\frac{1}{2}}$,

whence $f+gh+g(h^2-1)^{\frac{1}{2}}+h(g^2-1)^{\frac{1}{2}}+(g^2-1)^{\frac{1}{2}}(h^2-1)^{\frac{1}{2}}=(f^2-1)^{\frac{1}{2}}$.

Squaring both sides of this, we obtain an equation of the form

$$2w+2x(g^2-1)^{\frac{1}{2}}+2y(h^2-1)^{\frac{1}{2}}+2z(g^2-1)^{\frac{1}{2}}(h^2-1)^{\frac{1}{2}}=0 \quad \ldots\ldots\ (\alpha),$$

where $w, x, y, z = gh\mathrm{P}+\gamma^2\theta^2,\quad h\mathrm{P}+g\theta^2,\quad g\mathrm{P}-h\gamma^2,\quad \mathrm{P}+gh,$

if we put γ, θ, P for $(g^2-1)^{\frac{1}{2}}$, $(h^2-1)^{\frac{1}{2}}$, $f+gh$. From this equation (α) by multiplying by $(g^2-1)^{\frac{1}{2}}$, $(h^2-1)^{\frac{1}{2}}$, $(g^2-1)^{\frac{1}{2}}(h^2-1)^{\frac{1}{2}}$ we obtain three like equations, and, eliminating the radicals from the set of four, we find

$$2^4 \begin{vmatrix} w & x & y & z \\ x\gamma^2 & w & z\gamma^2 & y \\ y\theta^2 & z\theta^2 & w & x \\ z\gamma\,\theta^2 & y\theta^2 & x\gamma^2 & w \end{vmatrix} = 0,$$

the determinant in which can be shown to be equal to

$$\begin{vmatrix} 1 & -h & -g \\ -h & 1 & -f \\ -g & -f & 1 \end{vmatrix}^2.$$

It is of interest to note that the four-line determinant above mentioned is resolvable into a product of squares even when γ, θ, P are any quantities whatever. To see this, perform the operations

$$\mathrm{col}_1 - gh\,\mathrm{col}_4,\quad \mathrm{col}_2 - h\,\mathrm{col}_4,\quad \mathrm{col}_3 - g\,\mathrm{col}_4,$$

---

* The problem for the cases of 69 and 93 girls is solved by Mr. O. Eckenstein on pp. 76 and 77 of *Reprint*, New Series, Vol. XVI., and his solutions for the cases of 57 and 75 girls immediately follow the present article.—EDITOR.

Digitized by Google

remove the factors θ^2-h^2, γ^2-g^2; perform the operation $\text{ro}\,w_4-\text{P}\,\text{row}_1$; remove the factor $\gamma^2\theta^2-\text{P}^2$; on the three-line determinant now reached perform the operation

$$\text{col}_1+g(h^2-\theta^2)\,\text{col}_2+h(g^2-\gamma^2)\,\text{col}_3,$$

and remove the remaining factors θ^2-h^2, γ^2-g^2, $\gamma^2\theta^2-\text{P}^2$. The result is thus found to be $(\theta^2-h^2)^2(\gamma^2-g^2)^2(\gamma^2\theta^2-\text{P}^2)^2$.

When θ, γ, P have the special values $(h^2-1)^{\frac{1}{2}}$, $(g^2-1)^{\frac{1}{2}}$, $f+gh$, this becomes $1.1.[g^2h^2-g^2-h^2+1-(f+gh)^2]^2$,

i.e., $(1-2fgh-f^2-g^2-h^2)^2$,

as before.

16387. (James Blaikie, M.A.)—ABCD is a tetrahedron in which all the edges are tangents to the same sphere meeting it at the points L, M, N, P, Q, R on BC, CA, AB, DA, DB, DC; prove that

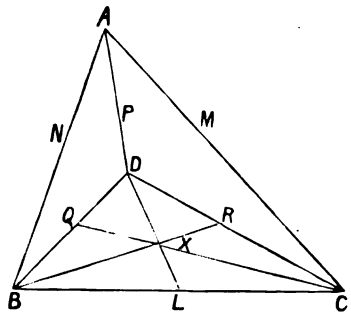
(1) $AB+CD=AC+BD=AD+BC$,

(2) LP, MQ, NR are concurrent.

Solutions (I.) *by* S. T. Shovelton, M.A.; (II.) *by* V. Madhavarao, M.A., Jagat Chandra Pal, *and* M. T. Naraniengar, M.A.; (III.) *by* M. S. Venkataranga Aiyar.

(I.) 1. Since the points of contact of the edges with the sphere are also the points of contact of the inscribed circles of the various triangles, we have

$$\begin{aligned}AD+BC&=AP+PD+BL+LC\\&=AN+DR+CR+BN\\&=AB+CD.\end{aligned}$$



2. The lines DL, BR, CQ are concurrent. Let their point of intersection be X, and let Y, Z, W be the corresponding points in the faces opposite B, C and D respectively.

Then the plane ADL contains the lines AX, DW and PL,

,,	ABR	,,	AX, BY and NR,
,,	ACQ	,,	AX, CZ and MQ,
,,	BCP	,,	BY, CZ and PL,
,,	CDN	,,	CZ, DW and NR,
,,	DBM	,,	DW, BY and MQ.

Therefore each of the lines AX, BY, CZ and DW meets the other three and they are therefore concurrent.

Further, each of the lines PL, MQ, NR meets each of the lines AX, BY, CZ, DW; and, since these lines are not co-planar, it follows that the seven lines are concurrent.

It would appear that the proposition as set by the Proposer is a special case of a larger theorem which might be stated as follows:—"If points P, Q, R, L, M, and N be taken on the edges DA, DB, DC, BC, CA and AB of a tetrahedron such that in each face of the tetrahedron the lines joining the vertices to the points on the opposite sides are concurrent, then the lines AX, BY, CZ, DW, PL, MQ, NR are concurrent, X, Y, Z, W being the points of concurrence of the lines in the faces opposite A, B, C, and D respectively."

It is interesting to notice that the lines BC, MN, QR, YZ are concurrent and similarly for the other edges. These six points of concurrence lie by threes on four straight lines in a plane, and this plane is the polar plane of the intersection of PL, MQ, NR with respect to any conicoid passing through P, Q, R, L, M, and N.

(II.) (1) follows from the relations

$AM=AN=AP$, $BN=BL=BQ$, $CL=CM=CR$, $DP=DQ=DR$.

To prove (2), let particles be placed at A, B, C, D, whose masses are inversely as the lengths of the tangents from the points to the sphere. Then the C.M. of the particles at A and D is P, and the C.M. of those at B, C is L. The C.M. of the four particles is on PL. Similarly it is on QM, and on RN. Therefore the C.M. of the four particles is the point of concurrence. [Rest in *Reprint*.]

16628. (Professor Cochez.) — α, β, γ étant les racines de $x^3+px+q=0$, calculer

$$(\alpha^2-\beta^2)(\alpha^2-\gamma^2)+(\beta^2-\alpha^2)(\beta^2-\gamma^2)+(\gamma^2-\alpha^2)(\gamma^2-\beta^2).$$

Solutions (I.) *by* W. Austin Sleigh, B.A.: *and* T. K. Venkataraman, M.A.; (II.) *by* Edith J. D. Morrison, M.A.; (III.) *by* C. M. Ross.

(I.) The given expression

$$\begin{aligned}&=\Sigma\alpha^4-\Sigma\beta^2\gamma^2=(\Sigma\alpha^2)^2-3\Sigma\beta^2\gamma^2\\&=\{(\Sigma\alpha)^2-2\Sigma\beta\gamma\}^2-3\{(\Sigma\beta\gamma)^2-2\alpha\beta\gamma(\Sigma\alpha)\}=4p^2-3p^2=p^2.\end{aligned}$$

(II.) α, β, γ being roots of $x^3+px+q=0$, to calculate $\Sigma(\alpha^2-\beta^2)(\alpha^2-\gamma^2)$,

$$\begin{aligned}\Sigma(\alpha^2-\beta^2)(\alpha^2-\gamma^2)&=\Sigma\alpha^4-\Sigma(\beta^2+\gamma^2)\alpha^2+\Sigma\beta^2\gamma^2\\&=2s_4-(s_2)^2+(\Sigma\beta\gamma)^2-2\alpha\beta\gamma(\Sigma\alpha)\\&=-2ps_2-s_2^2+p^2\quad\text{(by Newton's theorem)}\\&=4p^2-4p^2+p^2\qquad,,\qquad,,\\&=p^2.\end{aligned}$$

(III.) Since α, β, γ are the roots of $x^3+px+q=0$, then

$$\alpha+\beta+\gamma=0,\quad \alpha\beta+\beta\gamma+\gamma\alpha=p,\quad \alpha\beta\gamma=q\ \ldots\ldots\ (1, 2, 3),$$

From (1), $\alpha+\beta=-\gamma$;

therefore $\alpha^2-\beta^2=-\gamma(\alpha-\beta)$ and $\alpha^2-\gamma^2=-\beta(\alpha-\gamma)$.

Hence

$$\begin{aligned}\Sigma(\alpha^2-\beta^2)(\alpha^2-\gamma^2)&=\Sigma\beta\gamma(\alpha-\beta)(\alpha-\gamma)\\&=\Sigma\beta\gamma[\alpha^2-\alpha(\beta+\gamma)+\beta\gamma]=\Sigma\beta\gamma[2\alpha^2+\beta\gamma]\\&=2\alpha\beta\gamma\Sigma\alpha+\Sigma\beta^2\gamma^2=2\alpha\beta\gamma\Sigma\alpha+\{\Sigma\beta\gamma\}^2-2\alpha\beta\gamma\Sigma\alpha\\&=\{\Sigma\beta\gamma\}^2=p^2.\end{aligned}$$

11584. (Professor Hudson, M.A.)—Assuming that a mass of liquid contained in a vertical cylinder can rotate about the axis of the cylinder, under the action of gravity only, in such a manner that the velocity at any point of the liquid varies inversely as the angular velocity of its distance from the axis of the cylinder, find the form and position of the free surface.

Solution by R. Gardner.

Let ω be angular velocity of a point distant x from the axis; then ωx is the linear velocity of the point; but, by the given condition, the linear velocity is a/ω, a being a constant; therefore

$$\omega^2x=a\ \ldots\ldots\ (1).$$

The equation to the plane curve whose revolution generates the free surface of the liquid is known to be

$$gy=\int\omega^2x.dx\ \ldots\ldots\ (2).$$

Hence, by (1) and (2), we have $gy=ax$, a linear equation.

The surface is therefore conical, and, if r is the radius of the cylinder, the vertex of the cone is at a distance $2ar/3g$ below the surface of the liquid when at rest.

16436. (M. S. Narayana, M.A.)—In any triangle (1) from the formula $b^2\sin 2C+c^2\sin 2B=2bc\sin A$, deduce that

$$\cos\tfrac{1}{2}B+\cos\tfrac{1}{2}C-\cos\tfrac{1}{2}A=4\cos\tfrac{1}{4}(\pi-A)\sin\tfrac{1}{4}(\pi-B)\sin\tfrac{1}{4}(\pi-C);$$

(2) prove that

$$(b\cos^2B+c\cos^2C)\cot 2(B+C)=(b\cos^2B-c\cos^2C)\cot 2(B-C).$$

Solution by W. Austin Sleigh, B.A.

(1) $$\begin{aligned}&\cos\tfrac{1}{2}B+\cos\tfrac{1}{2}C-\cos\tfrac{1}{2}A\\&=2\cos\tfrac{1}{4}(B+C)\cos\tfrac{1}{4}(B-C)-\sin\tfrac{1}{4}(B+C)\\&=2\cos\tfrac{1}{4}(B+C)[\cos\tfrac{1}{4}(B-C)-\sin\tfrac{1}{4}(B+C)]\\&=4\cos\tfrac{1}{4}(\pi-A)\sin\tfrac{1}{4}(\pi-B)\sin\tfrac{1}{4}(\pi-C)\end{aligned}$$

on simplification.

(2) Writing the question in the form of a fraction; then, by componendo and dividendo, on reduction, we have

$$\cos B\cos 2C=\cos 2B\cos C;$$

i.e., $(\cos B-\cos C)(2\cos B\cos C-1)=0$;

therefore $\cos B=\cos C$ or $\cos B\cos C=\frac{1}{2}$.

But $\cos B\cos C\neq\frac{1}{2}$; therefore $\cos B=\cos C$; therefore $B=\pm C$.

But $B\neq -C$; therefore $B=C$; *i.e.*, $A+2B=180$

is the condition necessary for question to be correct.

16623. (G. N. Watson, B.A.)—Prove that

$$1+\sum_{n=1}^{\infty}\left\{\frac{1.3.5\ldots(2n-1)}{2.4.6\ldots(2n)}\right\}^3=\{\Gamma(\tfrac{1}{4})\}^4/4\pi^2,$$

where Γ denotes Euler's gamma-function.

Solution by the Proposer.

It is known that, when $k\leqslant 1/\sqrt{2}$,

$$1+\sum_{n=1}^{\infty}\left\{\frac{1.3\ldots(2n-1)}{2.4\ldots(2n)}\right\}^3(2kk')^{2n}=4K^2/\pi^2,$$

where K denotes the first complete elliptic integral (mod k) and k' is the complementary modulus (see *Quarterly Journal of Mathematics*, Vol. xxxix, p. 32). Putting $k=k'=1/\sqrt{2}$, and making use of the result of Legendre that $K(\text{mod}\,1/\sqrt{2})=\{\Gamma(\frac{1}{4})\}^2/4\sqrt{\pi}$, we obtain the result required at once.

16664. (R. F. Davis, M.A.)—The product of 76 and 83 is 6308. Were this product 6378 its digits would have been the same as those of its factors. Determine two two-figure numbers having this property.

Solution by Lt.-Col. Allan Cunningham, R.E., *and* W. F. Beard, M.A.

This Question is most easily solved by "trial," *i.e.*, by examination

Digitized by Google

of a small multiplication table. These five suitable numbers ($N = pq$) have been found—

$N = 1260, \quad 1395, \quad 1827, \quad 2187, \quad 6880$
$pq = 21.60, \quad 15.93, \quad 21.87, \quad 27.81, \quad 80.86.$

Note.—The Proposer furnishes two other numbers giving solutions of the Question, namely, $1530 = 30.51$, $1435 = 35.41$.

16627. (Professor E. B. Escott.)—For what values of d will the following equations have equal roots?—

$$bx + cy + az = d, \quad cx + ay + bz = d, \quad xy + yz + zx = d.$$

Additional Solution by M. T. Naraniengar, M.A., *and* R. F. Davis, M.A.

Evidently $d = 0$ or $(ab + bc + ca)$ will give the equal roots $x = y = z = 0$; or $x = a$, $y = b$, $z = c$ respectively. But, eliminating y and z and forming the quadratic in x, we see that the condition for equal roots is of the form $Ad^2 + Bd = 0$.

Hence the values of d in question are 0 and $(ab + bc + ca)$.

QUESTIONS FOR SOLUTION.

16696. (Leonard J. B. White.)—Given a series of decreasing angles $\theta_1, \theta_2, \theta_3, \ldots$, any one of which is connected with the preceding by the relation $e^{\theta_n \tan\alpha}\cos(\alpha + \theta_n) = e^{-\theta_{n-1}\tan\alpha}\cos(\alpha - \theta_{n-1})$, where α is an unknown constant. Required α in terms of θ and θ_n only. (The solution $\theta_n = -\theta_{n-1}$ is excluded.)

[N.B.—The problem suggested itself in the course of the investigation of the motion of a pendulum moving in a large arc under the influence of a resistance varying as the square of the velocity.]

16697. (S. Narayana Aiyar.)—Show that

$$\int_0^\infty \frac{e^{ar\cos\theta}}{(1-2r\cos\theta+r^2)^{\frac{1}{2}m}}[\sin A + \theta.\cos A]\frac{d\theta}{\theta(1+\theta^2)} = \tfrac{1}{2}\pi e^{ar}(1-r)^{-m},$$

where $A = n\theta + ar\sin\theta + m\tan^{-1}\dfrac{r\sin\theta}{1-r\cos\theta}$.

16698. (T. K. Venkataraman, M.A.)—Investigate the conditions under which the curves represented by the equations

$$\frac{dx}{p_1x+q_1y+r_1z+s_1} = \frac{dy}{p_2x+q_2y+r_2z+s_2} = \frac{dz}{p_3x+q_3y+r_3z+s_3}$$

are (1) plane, (2) indeterminate.

16699. (Professor Neuberg.)—Trouver l'équation différentielle des coniques passant par trois points donnés (x_1, y_1), (x_2, y_2), (x_3, y_3).

16700. (G. N. Watson, B.A.)—Prove that

$$\tfrac{1}{2}(n+1)[2^{n+1}+2+3^n] = 3^{n+1} + {}_{n+1}C_2.B_1.3^{n-1} - {}_{n+1}C_4.B_2.3^{n-3} + {}_{n+1}C_6.B_3.3^{n-5} - \ldots,$$

where $B_1, B_2, \ldots$ denote Bernoulli's numbers.

16701. (Lt.-Col. Allan Cunningham, R.E.) — Show that most numbers of form $N = (y^{16}-1)$ have at least six factors. State the exceptions.

16702. (Professor E. B. Escott.)—In the recurrent series

n : 0 1 2 3 4 5 ...
V_n : 3 0 2 3 2 5 ...,

whose scale of relation is $V_{n+3} = V_{n+1} + V_n$,

prove that when V_n and V_{-n} have a common factor p, the period of the residues of $V_m \pmod p$ is $3n$.

16703. (Professor Sanjána, M.A.)—(*a*) Show that when $10n+5$ is not a power of 5, $(x^{10n+5}-1)/(x-1)$ has three factors at least, n being a positive integer and $5x$ a perfect square.

16704. (A. M. Nesbitt, M.A.)—If J be the sum of n positive quantities of which a is one, prove that $\Sigma\, a\,(s-a) > n/(n-1)$ unless all the quantities are equal.

16705. (Hon. G. R. Dick, M.A. Suggested by Question 16392.)—The orthocentre O of a triangle ABC inscribed in a cardioide (as in Question 16392) is the cusp of the cardioide. Prove that

$$\sin AOX + \sin BOX + \sin COX = 0,$$

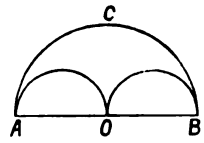
OX being the axis of the cardioide.

16706. (W. F. Beard, M.A. Suggested by Question 16467.)—Prove that, if a rectangular hyperbola circumscribed about a triangle, touches one of the altitudes, the triangle must be right-angled.

16707. (Professor Nanson.)—Two triangles Δ_1, Δ_2 are polar and the triangle Δ is self-polar to the same conic. If Δ, Δ_1 are inscribed in or circumscribed about a conic, so are Δ, Δ_2.

16708. (C. E. Youngman, M.A.)—In a rectangular hyperbola, if normals at A, B, C meet at P, the nine-point circle of ABC subtends a constant angle at P.

16709. (Professor Cochez.)—On donne une $\frac{1}{2}$ circonférence de diamètre AOB. Sur les rayons OA et OB on décrit des $\frac{1}{2}$ circonférences. (1) Inscrire un carré dans le triangle curviligne AOBCA. (2) Calculer le côté de ce carré en fonction du rayon R de la circonférence AB.



16710. (J. Blaikie, M.A.)—At H, the orthocentre of an acute-angled triangle ABC, HK is drawn perpendicular to the plane ABC such that HK is a mean proportional between the segments into which any one altitude is divided by the orthocentre. Prove that the three sides of the triangle, the three altitudes, the three medians, and the three bisectors all subtend right angles at K.

16711. (D. Biddle.)—Given the in-circle and lines representing the differences, $a-b$, $b-c$, construct the triangle.

16712. (W. Gallatly, M.A.)—A Simson line making angles $\theta_1, \theta_2, \theta_3$ with the sides of ABC, prove that its equation is

$$a\alpha\cot\theta_1 + b\beta\cot\theta_2 + c\gamma\cot\theta_3 = 0.$$

16713. (Sonti V. Ramanunty, B.A.)—Prove that the medial triangles of a spherical triangle and its polar triangle are in perspective.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

11481. (Professor Crofton, F.R.S.)—A hexagonal frame is stiffened by three diagonal braces, joining each pair of opposite joints. The condition that it shall be possible for the frame to be *self-strained*, that is, in a state of internal stress, without the action of any external forces, is either (1) that the six joints shall lie on a conic section, or (2) that the three diagonals shall meet in a point, that is, that the hexagon shall be circumscribed about a conic section. A frame of less than six joints, containing only the number $(2n-3)$ of bars requisite for stiffness, cannot be *self-strained* (unless three joints lie in a straight line).

11483. (Professor Ramaswami Aiyar, M.A.)—A number of particles describe a conic U so that their velocity at any point $P = \mu.CD.V^{\frac{1}{2}}$, where μ is a constant, CD the semi-diameter conjugate to CP, and V is the power of the point P with respect to a given conic V. (1) Prove that the line joining any two of the particles always touches a conic of the system $U + \lambda V$, and their directions of motion intersect upon the reciprocal of this conic with respect to U; and (2) deduce therefrom Poncelet's theorems.

11621. (Professor Matz.)—Points P, Q, R are taken at random on the sides of a triangle ABC; the chance that the area of the triangle PQR will be greater than $(n+\frac{1}{4})$ of the triangle ABC (n being positive and $< \frac{3}{4}$) is

$$(-4n)/4 - \tfrac{1}{4}(12n+1)[\log 4/(4n+1)] + 8n^{\frac{1}{2}}[\tfrac{1}{3}\pi - \tan^{-1}(2n)^{\frac{1}{2}}].$$

11686. (Rev. T. P. Kirkman, M.A., F.R.S.)—x and k are any numbers equal or not. Imagine all the partitions of x that have fewer than $k+1$ parts (= places) to be once written, and then made k-plets by addition, where required, of zeros. Call these k-plets the filled k partitions of x. Requested along with the proof of the following, the name of its first propounder. Theorem: The sum of all the permutations of the filled k-partitions of x is the k-th coefficient in $(1+1)^{x+k-1}$.

11654. (Professor de Longchamps.)—L'équation

$$Ax^m + mBx^{m-1} + \tfrac{1}{2}[m(m-1)]Ax^{m-2} + \tfrac{1}{6}[m(m-1)(m-2)]Bx^{m-3} + f_{m-4}(x) = 0,$$

dans laquelle $f_{m-4}(x)$ désigne une fonction entière quelconque, du degré $m-4$, a, au moins, deux racines imaginaires.

11674. (R. W. D. Christie.)—Solve, by a simple quadratic equation, $x^2 + y = a$, $x + y^2 = b$; and test the method by assuming $a = 52$, $b = 16$.

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss Constance I. Marks, B.A., 10 Matheson Road, West Kensington, W.

Vol. XV. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, Francis Hodgson, 89 *Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.*

ORA MARITIMA SERIES

EDITED BY

Professor E. A. SONNENSCHEIN, D.Litt.

Published by Messrs. SWAN SONNENSCHEIN & CO., Ltd., London, and THE MACMILLAN CO., New York.

Each of the Readers in this series consists of a continuous story written in the language to be studied, and so constructed as to form the basis of a systematic study of Grammar. They thus combine the interest and vitality of a real story with a thorough training in the fundamentals of the language concerned. The series at present contains the following volumes:—

NEW VOLUME. NOW READY.

AM RHEIN. A GERMAN STORY FOR BEGINNERS, with Grammar and Exercises in Conversation, Free Composition, and Translation. By Professor KARL WICHMANN, Ph.D. Crown 8vo, price **2s.**, subject to discount.

The scene of the story is laid in a country parsonage on the Rhine; in the latter part of the book the story of Siegfried and the Nibelungen is recounted.

ORA MARITIMA. A LATIN STORY FOR BEGINNERS, with Grammar and Exercises. By Professor SONNENSCHEIN. Twentieth Thousand. Crown 8vo, price **2s.**, subject to discount.

The scene of the story is laid on the South Coast of England and includes a sketch of the Ancient Britons and of Caesar's invasions of Britain.

OPINIONS.

"The most attractive introduction to Latin that has come under my notice, and I have seen most of them in the secondary schools which I inspect."—JOHN KERR, LL.D., late H.M. Chief Inspector of Schools and Training Colleges in Scotland.

"The book is just A1, clearly right in conception, and admirably executed."—P. A. BARNETT, M.A., H.M. Chief Inspector for the Training of Teachers.

"I have used *Ora Maritima* in actual teaching, and have found it both interesting and instructive to the pupil."—Professor J. P. POSTGATE, Litt.D.

PRO PATRIA. A LATIN STORY, being a sequel to *Ora Maritima*, with Grammar and Exercises to the end of the Regular Accidence. By Professor SONNENSCHEIN. Tenth Thousand. Crown 8vo, price **2s. 6d.**, subject to discount.

The story includes a sketch of the history of Britain under the Romans and Saxons, down to the introduction of Christianity. The latter part of the story recounts the history of the Boer War down to June, 1900.

OPINIONS.

"The books are admirable, and under the guidance of a skilful teacher their use in class is followed by excellent results."—Professor MICHAEL E. SADLER, LL.D., Manchester.

"I have had both books prescribed for use in our earliest standards. They were acknowledged by the Committee which passed them to be unequalled for the interesting way in which they presented the subject. I think no praise is too high for them."—W. G. WEDDERSPOON, M.A., H.M. Inspector of European Schools and Training Colleges, Burma.

THE GREEK WAR OF INDEPENDENCE. The Story of the War of Independence (1821–1827) is told in classical Greek for the use of beginners, with Notes and Exercises. By C. D. CHAMBERS, M.A. Crown 8vo, price **3s.**, subject to discount.

OPINIONS.

"Felicitous in design and able in execution. There is, in our opinion, a future for books of this type—books classical in language and modern in subject matter. As a specimen of Mr. Chambers's skill in reproducing the grave Thucydidean style, the account of Byron's arrival in Greece is excellent."—*The Journal of Education.*

"Most ably planned and most successfully executed. It gives reality and interest to the early study of Greek."—*Educational Times.*

"A most valuable school book. The narrative is bright and interesting, and well illustrated with maps and photographs. We strongly recommend the book to all schoolmasters."—*The Oxford Magazine.*

"The text makes a capital reader."—*Guardian.*

THE PARALLEL GRAMMAR SERIES

Now includes **Grammars of English, French, German, Welsh, Latin, and Greek,** each consisting of Two Parts—I. ACCIDENCE, II. SYNTAX—varying in price from **1s.** to **2s. 6d.** each Part.

The Series also includes **Readers and Writers** for **French, German, Latin, and Greek,** together with **Exercises in English** at from **1s.** to **1s. 6d.** each.

Single Copies of any volume will be sent post free to any Teacher on receipt of half its published price. Keys to the Latin and German Readers and Writers may be had by Teachers direct from the Publishers.

RECENT OPINIONS FROM

The Head Master of King Edward's School, Birmingham:—

"The Latin Accidence of the 'Parallel Grammar Series' is in use throughout the King Edward's School, Birmingham, and the Greek Accidence on the Classical Side. I am distinctly of opinion that one and the same Accidence should be prescribed in every school learning the language, and that the 'Parallel Grammar' Accidences are the right ones to prescribe. Grammatical curiosities are relegated to their proper place, and the normal inflexions of the language are presented in a clear and orderly manner without sacrificing practical convenience to the supposed requirements of scientific philology. When the Greek and the Latin Accidence of this series are used side by side, the further economy effected by the 'Parallel' system is realized."—R. CARY GILSON, M.A., Head Master of the Schools of King Edward VI. in Birmingham; late Assistant Master at Harrow, and Fellow of Trinity College, Cambridge. (Feb. 26, 1904.)

The Head Mistress of the Wimbledon High School for Girls:—

"The Parallel Grammars—English, Latin, Greek, French, and German—have been used in this School, each from the time of its publication. These Grammars are acknowledged to be in the front rank as regards scholarship, and they have also the merits of clearness and compactness. The Parallel method is important as leading to a real grasp of principles and economizing the learner's time. The result of using the Parallel Grammars exclusively has in the case of this School been altogether satisfactory, and, where pupils of linguistic talent were concerned, admirably successful."—EDITH HASTINGS, Head Mistress of the Wimbledon High School for Girls. (Feb. 23, 1904.)

SWAN SONNENSCHEIN & CO., Limited, 25 High Street, Bloomsbury, W.C.

ENGLISH HISTORY

A History of England for use in Schools. By ARTHUR D. INNES, M.A. Complete in one volume. Or, in three parts:—Part I, to 1509 A.D.; Part II, 1509–1714 A.D.; Part III, 1689–1901 A.D. A separate Part is also issued containing the period "From the Wars of the Roses to the Death of Elizabeth."

Crown 8vo with 13 maps and 8 plans 4s 6d Parts 2s each

"Mr. Innes writes more especially for the middle and upper forms of schools, and he covers the whole space of English history, with a vigilant regard to proportion and to the educational value of historical teaching. He writes with great spirit and vividness, as well as with simplicity and lucidity, and he is remarkably well furnished with the latest results of historical inquiry. Appended are six admirable summaries—constitutional, ecclesiastical, Scottish, Irish, Indian, and Colonial; half-a-dozen careful genealogical tables; a glossary of technical terms, political phrases, &c.; a chronological summary, and an index. The work is exceptionably capable and useful."—*Educational Times*

ENGLISH GRAMMAR

The Elements of English Grammar. With a Chapter on Essay Writing. By A. S. WEST, M.A., Trinity College, Cambridge.

Extra fcap. 8vo 2s 6d

"A good solid book, which has had wide popularity. This edition contains a new section 'On Essay Writing,' which strikes us as thoroughly practical, and supplying a needed protest against preciosity and allusiveness."—*Athenæum*

An English Grammar for Beginners. By the same Author.

1s

"It is a capital little work which we can heartily recommend."—*Schoolmaster*

CAMBRIDGE COUNTY GEOGRAPHIES

The Syndics of the Cambridge University Press are publishing, under the general editorship of Dr. F. H. H. GUILLEMARD, a series of County Geographies suitable for general use as hand-books to the various counties and for use in secondary schools and the upper classes of elementary schools.

Now ready **SOMERSET** **By F. A. KNIGHT** **Price 1s 6d**

UNIFORM WITH THE ABOVE

Norfolk. By W. A. DUTT.
Suffolk. By W. A. DUTT.
Kent. By GEORGE F. BOSWORTH, F.R.G.S.
Essex. By GEORGE F. BOSWORTH.
Surrey. By GEORGE F. BOSWORTH.
Sussex. By GEORGE F. BOSWORTH.

Each volume gives an account of the history, antiquities, architecture, natural history, industries, and physical, geographical and general characteristics of the county, and each has two coloured maps, one physical and the other geological, and a large number of illustrations.

Applications from Teachers for specimen copies should be addressed to E. T., Cambridge University Press, Fetter Lane, London, with a statement as to the number of copies likely to be required if the books are adopted for school use.

CLASS LISTS

OF CANDIDATES WHO HAVE PASSED THE CERTIFICATE EXAMINATION OF THE COLLEGE OF PRECEPTORS.—MIDSUMMER, 1909.

The list of successful candidates at the Colonial Centres will be published in the October number of "The Educational Times."

[*Throughout the following Lists, bracketing of names implies equality.*]

PRIZES.

General Proficiency.

FIRST CLASS [or SENIOR].

1.	Dow, E. F. P. (*Isbister Prize.*)	Polytechnic Commercial Secondary School, Regent Street, W.
2.	Wetz, H. J. D. (*Pinches Prize.*)	St. Aloysius' College, Hornsey Lane, N.
3.	Druett, L. H.	Stationers' Company's School, Hornsey, N.
	Raymond, L. W.	Dunheved College, Launceston.

SECOND CLASS [or JUNIOR].

1.	Absalom, H. W. L.	Portsmouth Boys' Secondary School.
2.	Thiemann, W. M.	Highbury High School, N.
3.	Rundell, R. C.	Portsmouth Boys' Secondary School.
4.	Steed, A. D.	Portsmouth Boys' Secondary School.

THIRD CLASS.

1.	Dotto, Alfred.	Christian Brothers' College, Gibraltar.
2.	Clark, L.	St. Joseph's College, Dumfries.
3.	Delbanco, J. R.	University School, Southport.
4.	Dotto, Augustine.	Christian Brothers' College, Gibraltar.

English Subjects.

FIRST CLASS.

1.	Gain, Miss R. M.	Sacred Heart Convent, Barnes.
2.	Down, Miss E. M.	Girls' Secondary School, Devonport.
	Wetz, H. J. D.	St. Aloysius' College, Hornsey Lane, N.

Mathematics.

FIRST CLASS.

1.	Swords, W. J.	Municipal Secondary School, Devonport.
2.	Peace, J. N.	Penistone Grammar School.

Modern Foreign Languages.

FIRST CLASS.

1.	Boger, H.	St. Joseph's College, Beulah Hill.
2.	Wetz, H. J. D.	St. Aloysius' College, Hornsey Lane, N.

Classics.

FIRST CLASS.

1.	Wynne-Jones, E. I.	Ruthin Grammar School.
2.	Essex, V. W.	Hawkesyard College, Rugeley.

Natural Sciences.

FIRST CLASS.

[Not awarded.]

Taylor Jones Prize for Scripture History.

FIRST CLASS.

1.	Armstrong, Miss L. C.	Girls' Secondary School, Devonport.
	Duncan, Miss I. M. C.	The Friends' School, Mountmellick.

Pitman Medals for Shorthand.

1.	Whelan, R. P. (*Silver Medal.*)	St. Aloysius' College, Hornsey Lane, N.
2.	Williams, G. O. (*Bronze Medal.*)	St. Aloysius' College, Hornsey Lane, N.

The following is a List of the Candidates who obtained the FIRST and SECOND PLACES in each Subject on FIRST CLASS PAPERS. (Only those who obtained Distinction are included.)

Scripture History.

1.	Armstrong, Miss L. C.	Girls' Secondary School, Devonport.
	Duncan, Miss I. M. C.	The Friends' School, Mountmellick.

English Language.

1.	Williams, Miss D. C.	Girls' Secondary School, Devonport.
2.	Pickering, Miss M.	Wigton School.

English History.

1.	Duncan, Miss I. M. C.	The Friends' School, Mountmellick.

Geography.

1.	Gain, Miss R. M.	Sacred Heart Convent, Barnes, S.W.
	Raymond, L. W.	Dunheved College, Launceston.

Arithmetic.

1.	Swords, W. J.	Municipal Secondary School, Devonport.

CLASS LIST — BOYS.

N.B.—The small italic letters denote that the Candidate to whose name they are attached was distinguished in the following subjects respectively :—

a. = Arithmetic.
al. = Algebra.
b. = Botany.
bk. = Bookkeeping.
ch. = Chemistry.
d. = Drawing.
do. = Domestic Economy.
du. = Dutch.
e. = English.
f. = French.
g. = Geography.
ge. = German.
geo. = Geology.
gm. = Geometry.
gr. = Greek.
h. = History.
he. = Hebrew.
i. = Italian.
l. = Latin.
lt. = Light and Heat.
m. = Mechanics.
ma. = Magnetism & Electricity.
ms. = Mensuration.
mu. = Music.
nh. = Natural History.
p. = Political Economy.
ph. = Physiology.
phys. = Elementary Physics.
s. = Scripture.
sc. = Elementary Science.
sh. = Shorthand.
sp. = Spanish.
tr. = Trigonometry.
w. = Welsh.
z. = Zoology.

The small figures [1] and [2] prefixed to names in the Second and Third Class Lists denote that the Candidates were entered for the First and Second Classes respectively.

In the addresses, Acad. = Academy, C. or Coll. = College, Coll. S. = Collegiate School, Comm. = Commercial, Conv. = Convent, Elem. = Elementary, End. = Endowed, Found. = Foundation, H. = House, Hr. = Higher, Inst. = Institute, Int. = International, Inter. = Intermediate, Poly. = Polytechnic, Prep. = Preparatory, P.T. = Pupil Teachers, S. = School, Sec. = Secondary, Tech. = Technical, Univ. = University.

FIRST CLASS [or SENIOR].

Honours Division.

Dow, E.F.P. *g.ms.f.d.*

Lectures for Teachers
ON THE
SCIENCE, ART, AND HISTORY OF EDUCATION.

PRACTICAL PROBLEMS OF THE CLASSROOM.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London.

The Second Course of Lectures (Thirty-seventh Annual Series) will commence on Thursday, September 30th, at 7 p.m.

The matters to be dealt with are such as interest all classes of teachers, and will be treated with that frankness that is possible in an unreported discourse, but is out of the question in a printed book. While the Lecturer will lose no opportunity of indicating how present educational conditions may be improved, he will take the present conditions as the basis and show how to make the best of things as they are. The Lectures will be copiously illustrated by references to actual experience in all kinds of Schools.

SYLLABUS.

I. (*Sept.* 30.) *The Practical in Teaching:* nature of theory: its inevitableness: rule of thumb itself based on a theory: relation of theory to experience: practical dangers of lack of theory and of excess of theory: the doctrinaire and the empiric: the pedagogic type of mind: illustrations from actual school experience.

II. (*Oct.* 7.) *Organization:* relation between curricula and organization: organization by "sides": the "form" system and its modifications: "sets": the specialist system: the synchronous system: combination of systems: co-education: relations between head and assistants: visiting teachers: prefects and delegated authority.

III. (*Oct.* 14.) *Time-Tables:* length of whole school day: relation between class work and preparation work: arrangements of the major divisions of the day: theory of fatigue and its application to (*a*) rest-intervals, (*b*) sequence of studies, (*c*) length of study periods at different stage, and for different subjects, (*d*) relation between physical exercise and mental effort. Form in which time-tables should be drawn up—rigidity and elasticity.

IV. (*Oct.* 21.) *Nature of the Class:* various bases of classification in schools: psychological nature of class: difference from group of individuals: minimum number of pupils to form a psychological class unit: the fallacy underlying the phrase "average pupil": sympathy of numbers: disintegration and redintegration of class: coaching versus class teaching: advantages of the class teacher: schematic preparation.

V. (*Oct.* 28.) *Discipline:* various meanings of term: special sense of *control:* basis of discipline: authority: place of consciousness in the maintaining of discipline: personality: fabled power of the eye: George Nidiver: different ideals of class discipline: "talking": relation between discipline and class work: possibility of teaching on the discipline of another: the "discipline master."

VI. (*Nov.* 4.) *Teaching as Presentation:* presentation swallows up all the other steps in the mind of the specially practical teacher: basis on which presentation must be built: relation of teacher's mental content to pupil's mental content: mental focus: the inference point, the inference zone, and the gaping point: turning fact into faculty: the growing point.

VII. (*Nov.* 11.) *The Socratic and the Heuristic Method:* fundamental resemblances and differences in the two: the three stages in the Socratic process: law of internal harmony: confrontation: relation of both methods to the *Zielangabe:* subjects suitable for each of the methods: dangers of each method: relation to the ordinary work of the class: illustrations from actual class work.

VIII. (*Nov.* 18.) *The Concentric Method and Correlation:* the method in relation to "rapid impressionism": illustration from Geography teaching: the test of a good "concentric" text-book: in ultimate analysis all teaching is concentric: correlation the complement of the concentric method, but not limited to this application: selection of "core" subjects: extravagances of correlation: illustrations from American school syllabuses: results of actual experiments in the application of correlation.

IX. (*Nov.* 25.) *Teaching Devices:* anticipatory illustration: the vacuum: mistake-traps: rule and exception: the awful example: the use of the standard: fixing the alternative: mnemonics, legitimate and illegitimate: definition of cram: benevolent and malignant cram: the arithmetical challenge.

X. (*Dec.* 2.) *The Use of the Blackboard:* special appeal to the visual pupils: kind of writing suited for blackboard: rough work not necessarily slovenly work: different uses of pictures and diagrams on board: mechanical aids to blackboard drawing: coloured chalks: the optics of the blackboard: eyestrain, and how to prevent it: excessive use of blackboard.

XI. (*Dec.* 9.) *Note-making and Note-taking:* note-making by teacher: new demands: old form and new: legitimate and illegitimate notes by teacher: the lecture versus the text-book: notes by pupils (*a*) from lecture, (*b*) from other sources in the way of rudimentary research: dangers of ordinary system of note-taking in school: relation of age of pupils to amount of note-taking: revision of note-books.

XII. (*Dec.* 16.) *Under the King and over Us:* a study in superiors: teacher's relation to the various powers that be: how to serve many masters without being disloyal to any: how to interpret official documents: lesson of the shepherd's dog: the art of compromise: the fundamental agreement: the authorities as allies.

FEES FOR ADMISSION.

Half-a-guinea for the whole Course. Two shillings for a single Lecture.

*** The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

LECTURES FOR TEACHERS.

On Thursday, 30th of September, JOHN ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London, will commence a Course of Twelve Lectures on

"PRACTICAL PROBLEMS OF THE CLASSROOM."

The matters to be dealt with are such as interest all classes of teachers, and will be treated with that frankness that is possible in an unreported discourse, but is out of the question in a printed book. While the Lecturer will lose no opportunity of indicating how present educational conditions may be improved, he will take the present conditions as the basis and show how to make the best of things as they are. The Lectures will be copiously illustrated by references to actual experience in all kinds of Schools.

For Syllabus, see page 358.

The Fee for the Course is Half-a-Guinea.

Members of the College have free admission to this Course.

EXAMINATIONS.

Diplomas.—The next Examination of Teachers for the Diplomas of the College will commence on the 27th of December, 1909.

Practical Examination for Certificates of Ability to Teach.—The next Practical Examination will be held in October, 1909.

Certificate Examinations.—The Christmas Examination for Certificates will commence on the 7th of December, 1909.

Lower Forme Examinations.—The Christmas Examination will commence on the 7th of December, 1909.

Professional Preliminary Examinations.—These Examinations are held in March and September. The Autumn Examination in 1909 will commence on the 7th of September.

Inspection and Examination of Schools.—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

The Regulations for the above Examinations can be obtained on application to the Secretary.

UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)

Principal—Sir H. R. REICHEL, M.A., LL.D.

Next Session begins October 5th, 1909. The College Courses are arranged with reference to the Degrees of the University of Wales; they include most of the subjects for the B.Sc. Degree of the London University. Students may pursue their first year of Medical study at the College. There are special Departments for Agriculture (including Forestry) and Electrical Engineering, a Day Training Department for Men and Women, and a Department for the Training of Secondary and Kindergarten Teachers.

Sessional fee for ordinary Arts Course, £11. 1s.; for Intermediate Science or Medical Course, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. There is a Hall of Residence for Women Students: fee, from Thirty Guineas for the Session.

At the Entrance Scholarship Examination (held in September) more than 20 Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition.

For further information and copies of the various Prospectuses apply to

JOHN EDWARD LLOYD, M.A.,
Secretary and Registrar.

ABERDARE HALL, CARDIFF.—RESIDENCE FOR WOMEN STUDENTS OF THE UNIVERSITY COLLEGE OF SOUTH WALES AND MONMOUTHSHIRE.

Principal—Miss KATE HURLBATT.

Fees £42. 10s., £36, and £32 per annum. College tuition fees £10 per annum. Scholarships of £40, £25, and £20, and Exhibitions of £10, awarded on the result of Scholarship Examination of University College, Cardiff, to be held in September. Students prepare for the B.A. and B.Sc. Degrees of the University of Wales, and a Medical School and Department for Secondary, Elementary, and Kindergarten Training are attached to the College. Students with recognized academic qualifications can enter in October or January, for one year's Secondary Training Course. Apply to the PRINCIPAL.

JOINT AGENCY FOR WOMEN TEACHERS,

74 GOWER STREET, LONDON, W.C.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Welsh County Schools Association.)

THIS Agency has been established for the purpose of enabling Teachers to find work **without unnecessary cost.** All fees have therefore been calculated on the **lowest basis** to cover the working expenses.

No Registration Fees are charged to members of the above Associations, and their Commissions are reduced.

Hours for Interviews:

11 a.m. to 1 p.m., and 3 to 5 p.m.;
Saturdays, 11 a.m. to 1 p.m., and 2 to 3 p.m.

When possible, special appointments should be arranged.

Registrar, Miss ALICE M. FOUNTAIN.

THE JOINT SCHOLASTIC AGENCY.

23 Southampton Street, Bloomsbury Square, W.C.

Managed by a Committee of Representatives of the following Bodies:—

HEAD MASTERS' CONFERENCE.
INCORPORATED ASSOCIATION OF HEAD MASTERS.
COLLEGE OF PRECEPTORS. TEACHERS' GUILD.
INCORPORATED ASSOCIATION of ASSISTANT MASTERS.
ASSOCIATION OF TECHNICAL INSTITUTIONS.
ASSOCIATION OF PREPARATORY SCHOOLS.
WELSH COUNTY SCHOOLS.

Registrar: Mr. E. A. VIRGO.

The object of this Agency is to render assistance at a minimum cost to Masters seeking appointments. The lowest possible fees are therefore charged.

A PROSPECTUS will be sent ON APPLICATION.

Interviews (preferably by appointment) 12 p.m.–1.30 p.m. and 3 p.m.–5.30 p.m. Saturdays, 12 p.m.–1 p.m.
Telephone—City 2257.

BEDFORD COLLEGE FOR WOMEN (UNIVERSITY OF LONDON),

YORK PLACE, BAKER STREET, LONDON, W.

Principal—Miss M. J. TUKE, M.A.

Lectures are given in preparation for all Examinations of the University of London in Arts, Science, and Preliminary Medicine; for the Teachers' Diploma, London; the Teachers' Certificate, Cambridge; and for the Cambridge Higher Local Examination.

Six Laboratories are open to Students for Practical work.

There is a special course of SCIENTIFIC INSTRUCTION IN HYGIENE, designed to furnish training for Women Factory and Sanitary Inspectors, and Teachers of Hygiene.

The ART SCHOOL may be attended by Students who are not taking other subjects at the College.

A single Course in any subject may be attended.

Regular Physical Instruction is given free of cost to Students who desire it, by a fully qualified teacher.

RESIDENCE.

Accommodation for about 40 Resident Students is provided in the College. The College has opened, as an additional residence, South Villa, Regent's Park, where further accommodation for 15 Students is provided. South Villa is about five minutes' walk from York Place, and has large gardens available for Students of the College.

Full particulars on application to the PRINCIPAL at the College

DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.

Head of the Department—Miss MARY MORTON, M.A.

The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge.

Students are admitted to the Training Course in October and in January.

One Free Place (value £26 5s.), one Scholarship of the value of £20, and a limited number of Grants of £10, are offered for the Course beginning in January, 1910.

They will be awarded to the best candidates holding a degree or its equivalent in Arts or Science.

Applications should be sent to the HEAD OF THE DEPARTMENT, not later than December 1st.

THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN.

Principal—Miss M. H. WOOD, M.A., Lit.D., Girton College, Cambridge Classical Tripos.

A residential College providing a year's professional training for Secondary Teachers.

Preparation for the London and the Cambridge Teachers' Diploma. Ample opportunity for practice in teaching science, languages, mathematics, and other subjects. Fees £65 to £75. Admissions in January and September.

For particulars apply—The PRINCIPAL, Training College, Cambridge.

THE MARIA GREY TRAINING COLLEGE FOR WOMEN TEACHERS

offers a full Course of Professional Training to Ladies who desire to become Teachers in Secondary Schools or in Kindergartens. Students are admitted in September and January.

TEN SCHOLARSHIPS, covering tuition fees, are offered to candidates residing in the Administrative County of Middlesex who wish to prepare for teaching in Secondary Schools, besides various Scholarships open to University Graduates. For further particulars as to qualifications for entrance, terms, Scholarships, Hall of Residence, &c., apply to the Principal, Miss ALICE WOODS, at the College, Salusbury Road, Brondesbury, N.W.

THE INCORPORATED

FROEBEL EDUCATIONAL INSTITUTE,

TALGARTH ROAD, WEST KENSINGTON, LONDON, W.

158 to 162 OXFORD STREET, LONDON, W.

Directors:
S. A. TRUMAN. F. E. KNIGHTLEY.
JAMES HEARD, B.A.
(Trinity College, Cambridge).

Telegrams—"TUTORESS, LONDON."
Telephone—No. 1136 City.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

A.—EMPLOYMENT DEPARTMENT.

(i.) ASSISTANT MASTERS & TUTORS.
MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

(ii.) ASSISTANT MISTRESSES.
MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

(iii.) LADY MATRONS AND HOUSE-KEEPERS.
MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

B.—SCHOOL TRANSFER DEPARTMENT.

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

C.—PUPILS' DEPARTMENT.

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. *No charge is made for registration.*

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

Lectures and Classes will be resumed on October 1st.

ST. BARTHOLOMEW'S HOSPITAL
and COLLEGE.
(UNIVERSITY OF LONDON.)

The MEDICAL SCHOOL is a fully recognised School of the University in the Departments of (1) PRELIMINARY SCIENCES; (2) INTERMEDIATE MEDICAL STUDIES; and (3) ADVANCED MEDICAL SUBJECTS.

In the DEPARTMENT of PRELIMINARY SCIENCES, full and complete courses of instruction in BIOLOGY, CHEMISTRY, and PHYSICS, are given throughout the year by lecturers recognised and approved by the University.

NEW LABORATORIES have recently been constructed for Chemistry and Physics.

WINTER SESSION begins Oct. 1, 1909.

For a Handbook, giving full information, apply to The Dean, St. Bartholomew's Hospital, E.C.

UNIVERSITY OF ABERDEEN.

FACULTY OF MEDICINE.

WINTER SESSION, 1909-1910.

The WINTER SESSION commences on Thursday, 14th October, 1909. The PRELIMINARY EXAMINATION will commence on September 10th.

The Degrees in Medicine granted by the University are:—Bachelor of Medicine (M.B.), Bachelor of Surgery (Ch.B.), Doctor of Medicine (M.D.), Master of Surgery (Ch.M.). They are conferred only after Examination, and only on Students of the University. A Diploma in Public Health is conferred after Examination on Graduates in Medicine of any University in the United Kingdom. The total cost for the whole curriculum, including Hospital Fees and Fees for the Degrees of M.B. and Ch.B., is usually about £150. Bursaries, Scholarships, Fellowships, and Prizes, to the number of fifty, and of the aggregate annual value of £1,180, are open to competition in this Faculty.

A Prospectus of the Classes, Fees, &c., may be had on application to the SECRETARY OF THE MEDICAL FACULTY.

The University also grants the following Degrees:—In Arts: Doctor of Letters, Doctor of Philosophy, and Master of Arts. In Science: Doctor of Science, Bachelor of Science (in Pure Science and in Agriculture). In Divinity: Doctor of Divinity (Honorary) and Bachelor of Divinity. In Law: Doctor of Laws (Honorary), Bachelor of Laws (LL.B.), and Bachelor of Law (B.L.).

Particulars may be had on application to the SECRETARY of the University.

WESTMINSTER HOSPITAL
MEDICAL SCHOOL.

MASON'S NEW ENGLISH GRAMMARS.

Revised in Accordance with Modern Requirements.

By A. J. ASHTON, M.A., Senior English Master, Kelvinside Academy, Glasgow, Examiner in English to the College of Preceptors.

Now ready. Completing the series.

MASON'S SENIOR ENGLISH GRAMMAR.

Crown 8vo. 376 pages. 3s. 6d.

This volume is based on the forty-first edition of Mason's "English Grammar," and while retaining all the characteristic features of that work, includes much supplementary matter, and is adapted to the requirements of Training Colleges and of the highest classes in Secondary Schools.

The other volumes in the Course are:

MASON'S JUNIOR ENGLISH GRAMMAR. 125 pages. 1s.

MASON'S INTERMEDIATE ENGLISH GRAMMAR. 218 pages. 2s.

In the Press. Crown 8vo. 3s. 6d.

LATIN OF THE EMPIRE.

(PROSE AND VERSE.)

Selected for use in Schools and Colleges by W. KING GILLIES, M.A., B.A. (Oxon.), and A. R. CUMMING, M.A., Classical Masters in the High School of Glasgow.

With an Introduction by J. S. PHILLIMORE, M.A., Professor of Humanity in the University of Glasgow.

In this volume the editors have gathered a wide selection from the Post-Augustan writers. It is intended to follow the use of "The Latin Reader," by Messrs. Gillies and Anderson, which has already been widely adopted.

Crown 8vo. 211 pages. With brief Notes and Vocabulary. 2s.

A LATIN READER.

(VERSE AND PROSE.)

By W. KING GILLIES, M.A. (Glas.), B.A. (Oxon.), and
HECTOR J. ANDERSON, M.A. (Edin.), B.A. (Oxon.), Inspector of Training Colleges, Cape Colony.

"Verse and prose; good matter chosen from wide area. Provides easy and interesting reading for the second and third years. Some pertinent notes are added. Very useful."—*Educational Times.*

Crown 8vo. With very numerous Illustrations. 1s. 6d.

PRACTICAL GEOGRAPHY

FOR SECONDARY AND SUPPLEMENTARY SCHOOLS.

By J. MILLER, M.A., Science and Mathematical Master, Kilsyth Academy, and WM. MILLER, M.A., D.Sc., Ph.D., Senior Science Master, Dollar Institution.

The present text-book is an attempt to present to the pupil in as elementary form as possible the principles of Map construction and Map reading. The scope of the work is such as may be suitable for a three years' course and has been co-ordinated as far as possible with the instruction generally given in a concurrent Science and Mathematical course.

NEW VOLUMES OF THE CAMBRIDGE MATHEMATICAL SERIES.

In the Press. Price 4s. 6d.

ELEMENTARY MECHANICS.

By C. M. JESSOP, M.A., late Fellow of Clare College, Cambridge, Lecturer in Mathematics at Armstrong College, Newcastle-on-Tyne, and T. H. HAVELOCK, M.A., D.Sc.,
Fellow of St. John's College, Cambridge, Lecturer in Applied Mathematics at Armstrong College.

This is a new edition, recast in form, of Jessop's "Applied Mathematics." In addition to the whole having been thoroughly revised and largely rewritten, the order of the sections has been considerably altered, new portions of the subject have been introduced, and many fresh examples added. The hydrostatical portion will be issued in a separate volume.

Now ready. Crown 8vo. Price 4s. 6d.

Practical Solid Geometry.

By the Rev. PERCY W. UNWIN, M.A., Assistant Master at Cheltenham College.

This Book is intended to provide the general student with a carefully graduated course of instruction, which shall educate him to "think in space" and to deal with each problem on its own merits rather than to attempt its solution by methods suggested by a set of hard-and-fast rules.

Now Ready. Crown 8vo. 3s. 6d.

Experimental Mechanics for Schools.

By FRED CHARLES, B.A.,
and
W. H. HEWITT, B.A., B.Sc., A.R.C.S.

London: GEORGE BELL & SONS, York House, Portugal Street, W.C.

BLOOMSBURY SQUARE, LONDON, W.C.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

PRACTICAL PROBLEMS OF THE CLASSROOM.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London.

The Second Course of Lectures (Thirty-seventh Annual Series) will commence on Thursday, September 30th, at 7 p.m.

The matters to be dealt with are such as interest all classes of teachers, and will be treated with that frankness that is possible in an unreported discourse, but is out of the question in a printed book. While the Lecturer will lose no opportunity of indicating how present educational conditions may be improved, he will take the present conditions as the basis and show how to make the best of things as they are. The Lectures will be copiously illustrated by references to actual experience in all kinds of Schools.

SYLLABUS.

I. (*Sept.* 30.) *The Practical in Teaching:* nature of theory: its inevitableness: rule of thumb itself based on a theory: relation of theory to experience: practical dangers of lack of theory and of excess of theory: the doctrinaire and the empiric: the pedagogic type of mind: illustrations from actual school experience.

II. (*Oct.* 7.) *Organization:* relation between curricula and organization: organization by "sides": the "form" system and its modifications: "sets": the specialist system: the synchronous system: combination of systems: co-education: relations between head and assistants: visiting teachers: prefects and delegated authority.

III. (*Oct.* 14.) *Time-Tables:* length of whole school day: relation between class work and preparation work: arrangements of the major divisions of the day: theory of fatigue and its application to (*a*) rest-intervals, (*b*) sequence of studies, (*c*) length of study periods at different stage, and for different subjects, (*d*) relation between physical exercise and mental effort. Form in which time-tables should be drawn up—rigidity and elasticity.

IV. (*Oct.* 21.) *Nature of the Class:* various bases of classification in schools: psychological nature of class: difference from group of individuals: minimum number of pupils to form a psychological class unit: the fallacy underlying the phrase "average pupil": sympathy of numbers: disintegration and redintegration of class: coaching versus class teaching: advantages of the class teacher: schematic preparation.

V. (*Oct.* 28.) *Discipline:* various meanings of term: special sense of *control:* basis of discipline: authority: place of consciousness in the maintaining of discipline: personality: fabled power of the eye: George Nidiver: different ideals of class discipline: "talking": relation between discipline and class work: possibility of teaching on the discipline of another: the "discipline master."

VI. (*Nov.* 4.) *Teaching as Presentation:* presentation swallows up all the other steps in the mind of the specially practical teacher: basis on which presentation must be built: relation of teacher's mental content to pupil's mental content: mental focus: the inference point, the inference zone, and the gaping point: turning fact into faculty: the growing point.

VII. (*Nov.* 11.) *The Socratic and the Heuristic Method:* fundamental resemblances and differences in the two: the three stages in the Socratic process: law of internal harmony: confrontation: relation of both methods to the *Zielangabe:* subjects suitable for each of the methods: dangers of each method: relation to the ordinary work of the class: illustrations from actual class work.

VIII. (*Nov.* 18.) *The Concentric Method and Correlation:* the method in relation to "rapid impressionism": illustration from Geography teaching: the test of a good "concentric" text-book: in ultimate analysis all teaching is concentric: correlation the complement of the concentric method, but not limited to this application: selection of "core" subjects: extravagances of correlation: illustrations from American school syllabuses: results of actual experiments in the application of correlation.

IX. (*Nov.* 25) *Teaching Devices:* anticipatory illustration: the vacuum: mistake-traps: rule and exception: the awful example: the use of the standard: fixing the alternative: mnemonics, legitimate and illegitimate: definition of cram: benevolent and malignant cram: the arithmetical challenge.

X. (*Dec.* 2.) *The Use of the Blackboard:* special appeal to the visual pupils: kind of writing suited for blackboard: rough work not necessarily slovenly work: different uses of pictures and diagrams on board: mechanical aids to blackboard drawing: coloured chalks: the optics of the blackboard: eyestrain, and how to prevent it: excessive use of blackboard.

XI. (*Dec.* 9.) *Note-making and Note-taking:* note-making by teacher: new demands: old form and new: legitimate and illegitimate notes by teacher: the lecture versus the text-book: notes by pupils (*a*) from lecture, (*b*) from other sources in the way of rudimentary research: dangers of ordinary system of note-taking in school: relation of age of pupils to amount of note-taking: revision of note-books.

XII. (*Dec.* 16.) *Under the King and over Us:* a study in superiors: teacher's relation to the various powers that be: how to serve many masters without being disloyal to any: how to interpret official documents: lesson of the shepherd's dog: the art of compromise: the fundamental agreement: the authorities as allies.

FEES FOR ADMISSION.

Half-a-guinea for the whole Course. Two shillings for a single Lecture.

*** The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

MR. EDWARD ARNOLD'S LIST.

THE LATEST FRENCH BOOKS.

Arnold's Modern French Book. I. Edited by H. L. HUTTON, M.A., Chief Modern Languages Master at Merchant Taylors' School. viii + 198 pages. Crown 8vo, cloth, **1s. 6d.**

Arnold's Modern French Book. II. Edited by H. L. HUTTON, M.A. **2s.**

These books are written on reformed methods, and contain a series of graduated Reading Lessons, followed by a carefully arranged *Questionnaire*, with Exercises for retranslation. At the end is an outline of French Grammar and a French-English Vocabulary.

Grammaire Française à l'Usage des Anglais. Par E. RENAULT, Ancien Étudiant à la Sorbonne; Bachelier de l'Enseignement spécial; Officier d'Académie; Assistant Lecturer at the University of Liverpool. viii + 353 pages. Crown 8vo, **4s. 6d.**

Petite Grammaire Française à l'Usage des Anglais. Par E. RENAULT. Crown 8vo, cloth, **1s. 6d.** (For Junior Classes.)

Elements of French Composition. By J. HOME CAMERON, M.A., Lecturer in French in University College, Toronto, Canada. viii + 196 pages. Crown 8vo, cloth, **2s. 6d.**

Arnold's Lectures Françaises. Four Volumes. Books I. and II. Edited and Arranged by JETTA S. WOLFF. Books III. and IV. Edited and Arranged by M. A. GEROTHWOHL, Litt.D. Illustrated with Reproductions of Paintings by French Artists. Book I., **1s. 3d.**; Books II., III., IV., **1s. 6d.** each.

The intention of this series is to supply choice extracts from French writers and poets either as a substitute for, or as a complement to, the reading of the prescribed texts. The variety of the sources whence the selections have been drawn should add both to their value as "unseens" and to their interest as representative specimens of French style from "le grand siecle" down to the present day.

ARNOLD'S ADVANCED FRENCH SERIES.

Introduction, Historical Notes, and a few Exercises in French Composition. Crown 8vo, cloth, **1s. 6d.**

De l'Angleterre. Par Madame DE STAËL. Edited by W. G. HARTOG, B.A., Lecturer in French at University College, London.
These chapters from "Considérations sur la Révolution Française" form a fascinating study of England as it appeared to this brilliant Frenchwoman in 1813.

Causeries de Lundi. Par SAINTE-BEUVE. Edited by A. W. TRESSLER, M.A., Assistant Master at Charterhouse.
Selected essays from the great French critic, including *Qu'est-ce qu'un Classique.*

Le Coup d'État. Par VICTOR HUGO. Edited by J. W. LONGSDON, M.A.
An abridgment of that magnificent piece of invective, *Napoléon le Petit.*

Le Français Chez-lui. A French Reader on Reform Lines, with Exercises on Grammar for Junior and Middle Forms. By W. H. HODGES, M.A., Senior Modern Language Master at St. Lawrence College, Ramsgate; and P. POWELL, B.A., Assistant Master at Wellington College. **1s. 3d.**

The Alphonse Daudet Reading Book. Récit biographique et Extraits de ses Œuvres. Edited by JETTA S. WOLFF, Author of "Les Français en Ménage," &c. **1s. 6d.**

ARNOLD'S FRENCH READING BOOKS.—REFORM SERIES.

The feature of these six volumes is that in addition to the notes and vocabulary there is a set of exercises, chiefly in the form of questions and answers in French, modelled upon the text of the narrative. This innovation promises to prove very popular.

L'Apprenti. By EMILE SOUVESTRE. Edited by C. F. HERDENER, Lecturer in Modern Languages, Durham University. **1s.**

Richard Whittington. By Madame EUGENIE FOA. **And Un Conte de l'Abbé de Saint-Pierre.** By EMILE SOUVESTRE. Edited by C. F. HERDENER. **1s**

Mémoires d'un Âne. By Madame DE SÉGUR. Edited by LUCY E. FARRER, B.A., formerly Assistant Lecturer at the Bedford College for Women, London. **1s.**

Le Manuscrit de ma Mère. By LAMARTINE. Edited by LUCY E. FARRER. Only authorized English Edition. **1s.**

Les deux Prisonniers. Abridged from "La Bibliothèque de mon Oncle." By RODOLPHE TÖPFFER. Edited by W. H. HODGES, M.A., St. Lawrence College, Ramsgate. **1s.**

Contes de Fées. By Madame LEPRINCE DE BEAUMONT. Edited by T. KEEN, M.A., Boys' High School, Glasgow. **1s.**

EDWARD ARNOLD,

FROM MESSRS. METHUEN'S NEW SCHOOL BOOKS

NOTICE.—Messrs. METHUEN'S New Educational Catalogues are just ready, and will be sent post free on application.

THE DAWN OF MEDIÆVAL EUROPE, 476-918. By J. H. B. MASTERMAN, M.A., Professor of History at Birmingham University. With many Maps. Crown 8vo, 2s. 6d. [*Six Ages of European History.*

This Volume completes the Series entitled **SIX AGES OF EUROPEAN HISTORY. From A.D. 476 to 1878,** edited by A. H. JOHNSON, M.A., intended for Students beginning Foreign History in the Higher Forms of Schools and Universities. The Series has attracted widespread interest owing to the low price of publication (**2s. 6d. each volume**) and the eminence of the authors. The other volumes are:—

The Central Period of the Middle Age, 918-1273. By BEATRICE A. LEES, Somerville College, Oxford. With many Maps.

The End of the Middle Age, 1273-1453. By ELEANOR C. LODGE, Lady Margaret Hall. With many Maps.

Europe in Renaissance and Reformation, 1453-1659. By M. A. HOLLINGS, M.A. With many Maps.

The Age of the Enlightened Despot, 1660-1789. By A. H. JOHNSON, M.A., Fellow of All Souls. With 11 Maps.

The Remaking of Modern Europe: From the Outbreak of the French Revolution to the Treaty of Berlin, 1789-1878. By J. A. R. MARRIOTT, M.A. With 10 Maps.

A CONSTITUTIONAL HISTORY OF ENGLAND. By A. M. CHAMBERS. Crown 8vo, 6s.

The book is meant primarily for use in the Upper Forms in Schools and for students beginning more advanced work.

ENGLISH LITERATURE FOR SCHOOLS. By E. E. FIRTH. With 4 Maps. Crown 8vo, 2s. 6d. [*Junior School Books.*

The importance and the style of the various writers are shown, many illustrations of their works are given, and the reader thus gains a knowledge of the style of the great writers.

BY ROAD AND RIVER. A Descriptive Geography of the British Isles. By E. M. WILMOT-BUXTON, F.R.Hist.S. With 12 Illustrations and 12 Maps. Crown 8vo, 2s.

This geography is suitable to children in the Lower Forms of all grades of Schools. It aims at making them familiar with the scenery and most striking features, political, historical, and literary, of their land, by the process of making imaginary journeys throughout the different districts of these islands. The text is fully illustrated by photographs and outline maps.

JUNIOR HISTORY EXAMINATION PAPERS. By W. O. P. DAVIES. Fcap. 8vo, 1s. [*Junior Examination Series.*

STORIES FROM THE OLD TESTAMENT. By E. M. WILMOT-BUXTON, F.R.Hist.S. Crown 8vo, 1s. 6d.

These stories have been told in the simple and dignified words of the Bible, with brief explanations where necessary, and selected so as to show the continuity of the Divine dealings with the Hebrew people in preparation for the revelation of the New Testament. [*Beginners' Books.*

A SYSTEMATIC GEOGRAPHY OF THE BRITISH ISLES. By GEORGE W. WEBB, B.A. With Maps and Diagrams. Crown 8vo, 1s. [*New Geographical Series.*

This book—one of a new geographical series—provides for a study of the geography of the British Isles on logical lines, as recommended by the Board of Education.

Four New Volumes in Methuen's "Simplified French Texts."

Edited by T. R. N. CROFTS, M.A. Fcap. 8vo, 1s. each.

EDMOND DANTÈS. Adapted from A. Dumas' "Monte Cristo." By M. CEPPI.

D'AJACCIO À SAINTE-HÉLÈNE. Adapted from A. Dumas' "Napoléon." By F. W. M. DRAPER.

M. DE BEAUFORT À VINCENNES. Adapted from A. Dumas' "Vingt Ans Après." By P. B. INGHAM, B.A.

DEUX CONTES: La Justice Sommaire, Bois d'Ébène. Adapted from P. MÉRIMÉE'S "Mateo Falcone" and "Tamango," by J. F. RHOADES.

METHUEN & CO., 36 Essex Street, London, W.C.

Now Ready.

A NEW AND THOROUGHLY REVISED EDITION (containing nearly 80 additional pages) of

DE FIVAS' NEW GRAMMAR OF FRENCH GRAMMARS.

ENLARGED BY THE ADDITION OF CAREFULLY CHOSEN

GRADUATED FRENCH TEXTS FOR PREPARATORY READING AND TRANSLATION.

Foolscap 8vo, 474 pages, price 2s. 6d., cloth. (KEY, 3s. 6d.)

"The Fifty-seventh Edition of the 'New Grammar of French Grammars' shows a most thorough revision, with considerable enlargement. . . . Its new lease of life will be a very long one."—**Educational Times.**

BOOKS FOR TECHNICAL STUDENTS.

PRACTICAL BUILDING CONSTRUCTION. A Handbook for Students preparing for Examinations, and a Book of Reference for persons engaged in Building. By J. P. ALLEN, formerly Lecturer on Building Construction at the Armstrong College of Science, Newcastle-on-Tyne. Fifth Edition. Revised and Enlarged. 596 pages, with over 1,300 Illustrations. Medium 8vo, **7s. 6d.** net. [*Just published.*

AN ELEMENTARY MANUAL OF BUILDING INSPECTION; or, How to Become a Building Inspector. By WM. R. PURCHASE, Building Inspector to the Borough of Hove, Author of "Practical Masonry." 128 pages. With 9 Plates of Diagrams. Crown 8vo, **2s. 6d.** net. [*Just published.*

THE PRINCIPLES OF ALTERNATING CURRENTS. For Students of Electrical Engineering. By EDGAR T. LARNER, A.I.E.E., of the Engineering Department, G.P.O., London. 144 pages, with 69 Illustrations. Crown 8vo, **3s. 6d.** net. [*Just published.*

FIELD TELEPHONES FOR ARMY USE; including an Elementary Course in Electricity and Magnetism. By Lieut. E. J. STEVENS, D.O., R.A., A.M.I.E.E., Instructor in Electricity, Ordnance College, Woolwich. With Illustrations. Crown 8vo, **2s.** net.

PRACTICAL COAL-MINING. An Elementary Class-Book. By T. H. COCKIN, M.Inst.M.E., Lecturer on Coal-Mining at Sheffield University College. 440 pages, crown 8vo, **4s. 6d.** net.

London: CROSBY LOCKWOOD & SON,
7 Stationers' Hall Court, E.C., and 121a Victoria Street, S.W.

USE EARLY IN THIS VACATION (TO OBTAIN BEST RESULTS)

For the ANHYDROUS

LAYING of DUST

(As recommended in the Education Department Blue Book)

The unequalled ODOURLESS, or powerful GERMICIDAL

FLORIGENE

(A REGISTERED NAME suggested by FLOOR—HYGIENE)

On all School, Laboratory, Library, Museum, Studio, Office, and other Floors—Wood, Linoleum, Stone, Concrete, &c.

Three times a year only necessary, as each application lays the dust for two to six months, or longer, according to wear.

No Scrubbing (unless preferred) or Sprinkling of any kind—therefore no injurious moisture—the ordinary daily sweeping alone required to clean the floors.

Books, Furniture, Apparatus, &c., are less likely to soil, and seldom require dusting or cleaning—labour greatly reduced.

"Florigene" has been awarded the

BRONZE MEDAL of the ROYAL SANITARY INSTITUTE,

and a well-known **Medical Officer of Health** has reported:—

"I consider **'Florigene'** an excellent preparation when applied to the floors of Public Institutions, Schools, and other buildings for 'weighting' and laying dust and dirt."

An eminent Bacteriologist has also favourably reported on the very powerful Germicidal Disinfectant properties of **"Florigene"** No. 2.

A School Principal writes:—"Your **'Florigene'** is excellent. I wish we had known of it before. My servants are loud in its praises, as no dust whatever arises when they are sweeping the schoolrooms. It saves labour, adds greatly to our comfort, and the absence of dust in the air of schoolrooms, and on books and shelves, must be very beneficial to our health. We would not be without it on any account."

Send for particulars, **Bacteriological, Medical,** *and other Reports and Testimonials to the Sole Manufacturers—*

Part I.—A generalised Arithmetic in which letters are employed to represent Natural Numbers, and the idea of Algebraic Form is introduced. Parts II. and III.—Zero and Negative Numbers and Fractions are considered. These two new classes of numbers are defined so that the expressions $a-b$ and a/b may always have a meaning.

A COURSE OF PLANE GEOMETRY FOR ADVANCED STUDENTS. Part I. By CLEMENT V. DURELL, M.A. 5s. net.

MATHEMATICAL GAZETTE.—"Deserves to be widely known; we wish it every success, and hope that it will become generally adopted, for it is a good book."

A FIRST BOOK OF BOTANY. By ELIZABETH HEALEY, A.R.C.Sc. Illustrated. 1s. 6d. [*First Books of Science.*

THE COUNTRY HOME.—"Very unlike the dry little text-books on botany which were provided for the unfortunate beginner some years ago is the present small volume. . . . Instead of being disheartened at the outset, as in the old days, the child is led on gradually to get an intelligent grasp of the subject. . . . The practical work set at the end of each chapter is well thought out and should tend to make pupils self-reliant."

The Educational Times.

Hegel as Educationist.

A SEASONABLE subject of meditation for holiday time is furnished by "Hegel's Educational Theory and Practice"—an able, painstaking, and interesting little volume by Mrs. Mackenzie, the Professor of Education at University College, Cardiff, which has just been published in soberly attractive form by Messrs. Swan Sonnenschein & Co. (3s. net.). It may be that there are "unmistakable signs of a growing demand for a more idealistic interpretation of education," in reaction from "philosophic positions which are utilitarian or realistic in character"; and it may be that there is a "large and increasing number of those who fail to find full satisfaction" in Herbart's precepts and practice ("the Herbartian philosophy" is a somewhat different affair). But, however that may be, we cordially welcome Mrs. Mackenzie's exposition, which "aims at bringing the educational views and work of Hegel under the notice of teachers and of others who believe that philosophy has a direct bearing upon life and education"—that is to say, of all of us that do any thinking on the subject of education at all. We do not anticipate that the claims of Hegel will cause any discomfort to the Herbartians. As Mrs. Mackenzie herself points out, there is no getting any one theorist to cover the whole ground; and none but narrow devotees will find any difficulty in applying the best counsels of both Herbart and Hegel without friction or collision. We bargain for peaceful co-operation, the emphasis varying with the value of each theorist's contribution to educational theory.

Mrs. Mackenzie reviews the life of Hegel with special reference to his early education and to his career as a schoolmaster. His Swabian origin may account for his union of meditative depth with energetic practicality; and the death of his mother when he was thirteen may have deepened his gravity and studious earnestness. From seven to seventeen he was a pupil at the Stuttgart Gymnasium, where the course of study was almost entirely linguistic and literary—too much linguistic, he himself records. For six years he was a private tutor; for seven more he was Privatdozent and Professor Extraordinarius at Jena; for another year he was a newspaper editor. It was not till he had passed his thirty-eighth year that he became Rector of the Nürnberg Gymnasium, where he laboured till he was close on forty-six. His real educational experience, then, must be placed in those seven and a half years. Indeed, "it is only by careful study of his general philosophical writings, his letters, and the addresses which he delivered as Rector of the Nürnberg Gymnasium, that we are able to discover and to piece together, as it were, the theory that underlay his practice." If "much of his pedagogy would be almost unintelligible unless studied in the light of his philosophic theory," and if, as Prof. J. S. Mackenzie tells us in his introductory note to the present volume, "there are very few who could affirm that they have grasped his significance," though "for several generations and in many lands—assuredly not least in ours—the attempt to understand him has been pursued with vigour," then we realize how precarious is the argument from his philosophy to his pedagogy. The relation of Herbart's philosophy to his pedagogy is a suggestive parallel. And, in any case, the dates of comparison require to be stringently kept in view. The main data must evidently be sought in the Nürnberg period. Hegel, strangely enough, left no special treatise on education.

Hegel, says Mrs. Mackenzie, "is one of the very few who have really succeeded in securing for education a clearly defined place in a philosophy of life, which is, after all, perhaps the most vital necessity for a true theory of education." It may be doubted whether the effacement of most other educationists is justified in order to place Hegel in so very splendid an isolation; but, anyhow, such was his educational outlook. "To Hegel the term education always implied a liberation—a liberation of the spirit implicit in man from the bonds of Nature—and is to be effected largely by man's own efforts, but in childhood and youth mainly through the help of parents, teachers, books, and other influences. This liberation implies the use of definite means—*e.g.*, instruction, discipline, &c., and the art of using these means he terms pedagogy. 'Pedagogy is the art of making man moral: it regards man as one with Nature and points out the way in which he may be born again, in which his first nature may be changed into a second—a spiritual nature—in such a way that the spiritual nature may become habitual to him.'" Education, then, is the process of con-

Digitized by Google

verting a child from an implicitly rational to a consciously rational being. According to Hegel, "the principle of the universe is spiritual, and man is one with the universe, although not at first aware of this unity." Education, then, "appears as a necessary part of the process of realizing this unity of the individual with the higher, universal life, and is thus, in a sense, involved in the scheme of evolution." After all, the threatened Herbartian may ask how far the special theory of Hegel is necessary to the practical results. Admitting fully, as Mrs. Mackenzie puts it, that "self-conscious humanity owes it as a duty to each child born into the world that he shall be placed under suitable conditions of intellectual, moral, and physical growth," cannot this be done—is it not (at least attempted to be) done?—without any conscious regard to the specific philosophical theory of Hegel? We are all for the dispersion of ignorance, for the awakening of the child's mind, for his fullest appreciation of his relations to the world about him; but is Hegel's particular view a necessity of educational salvation? If not, is it anything more than a particular philosophical expression of what everybody means by education, or, at any rate, of what is attained by the usual—even the Herbartian—processes?

On the importance attached by Hegel to education in general, however expressed, there need be no disagreement. In natural course we come to the period—say the stage of secondary school education, the stage most familiar in practice to Hegel—when "the full life of the community and the State becomes possible to the individual as he breaks away from the limitations of his pure natural individual life—loses himself to find himself once more in the great life of the world." "It is this belief in the necessity for self-estrangement—of losing one's life to find it—of breaking away from the natural in order to become at home in the intellectual and the spiritual, that distinguishes Hegel's point of view from that of others who have applied the idea of evolution to education." Well, but does this really mean more than that a boy's thinking expands as he grows—that he has to do more thinking in the secondary than in the elementary school? True, Hegel regards it as absolutely necessary that the boy should realize that the process of self-estrangement has taken place. But, if the demand for separation is, as Hegel says, "so necessary that it shows itself in us as a universal and well known and recognized impulse," and if it has actually taken place, is it very likely that the boy fails to realize the change? In the main, it is to be remarked, this self-estrangement is an intellectual process only: "the world of feeling is left undisturbed, nothing should be allowed to interfere with those 'individual bonds which unite soul and spirit, feeling and thought, in holy friendship with life, faith, love, and trust.'" Is this indeed wise counsel? And in any case will the inner world of feeling obligingly rest quiescent—at any rate in regions not under German discipline?

Our classical friends will rejoice that Hegel regarded the classics "as offering best opportunities for self-estrangement"—there is no malicious intention in the expression—"and at the same time an almost endless store of noble thoughts and ideas" (the less worthy authors and passages being, no doubt, judiciously put away). "It is pretty certain that Hegel considered that a thorough classical education made the best possible basis for every kind of professional work"—a hard saying for the modern world. However, while insisting on a sound linguistic foundation, he was chiefly concerned for the moral and intellectual training and the mastery of the literature. Our Moral Educationists will rejoice that he found moral and religious instruction (including the beginnings of philosophy) feasible, and capable of affording guidance and inspiration as well as intellectual training. Indeed, he consistently gave the first place to "those subjects which had most direct bearing upon the development of intellect and character." Still, he had an open mind for other subjects, and "did all he could to encourage the introduction of more practical science work in his school, and that in spite of the fact that it was essentially a classical school." Unfortunately, "there is nothing to indicate that Hegel had any special teaching devices"—any method distinct from the current German practice.

Of course, all educationists will be interested to follow the details in Mrs. Mackenzie's attractive book—details necessary to clothe the mere skeleton of principles to which we have referred. It is to be considered, also, how far Hegel's known or inferred principles would have been extended in application under new developments. A mind like his would not have failed to respond to the fresh facts and views that have come into educational prominence since his time. Meantime we are grateful to Mrs. Mackenzie for definitely presenting Hegel in the educational arena, and hope that her exposition will be widely read and pondered.

NOTES.

Sir Philip Magnus did good service in heading the very influential deputation to the Chancellor of the Exchequer from the Secondary Schools Association (supported far more widely than actually represented by schools) on the effect of the proposed land taxes on the income, present and prospective, of endowed schools. Clause 25 of the Finance Bill, as modified by the amendments tabled by the Chancellor of the Exchequer, would read thus:

(1) No reversion duty or undeveloped land duty under this Part of this Act shall be charged in respect of land or any interest in land held by any governing body constituted for charitable purposes, while the land is occupied and used by that body for the purposes of that body, and increment value duty shall not be collected on any periodical occasion in respect of any such land or interest in land held for the purposes of such a body, whether it is occupied or used by that body or not, without prejudice, however, to the collection of the duty on any other occasion. The expression "governing body constituted for charitable purposes" includes any person or body of persons who have the right of holding, or any power of government of, or management over, any property appropriated for charitable purposes.

(2) This section shall apply to land held by a registered society as if the purposes of the society were charitable purposes. In this provision the expression "registered society" means any society or body of persons who are registered, or whose rules are certified or registered, by a Registrar of Friendly Societies in pursuance of any Act of Parliament, and who are restricted by their rules from dividing any part of their funds amongst their members.

Sir Philip Magnus pointed out clearly and cogently that the three land taxes would seriously affect the income of a large number of secondary schools, and would to that extent lessen the efficiency of the education they now provide; and he asked that the property of such schools in land should be quite unambiguously and wholly exempted from the opera-

Digitized by Google

tion of Part I. of the Finance Bill. Sir William Anson urged the importance of the surroundings of the great public schools for the health and character of the boys, the uncertainty of the amount of the proposed tax on undeveloped land, and the contrast between the contribution of the Government to secondary and to elementary education. Other speakers drove home the injury likely to be done to the efficiency of the schools. Sir Robert Chalmers, who attended in place of Mr. Lloyd George, who was inevitably detained in the House, expressly reassured the deputation that playgrounds would be excluded from taxation; but he was unable to say anything as to property beyond premises in actual use for school purposes. Meantime the consideration of Clause 25 is postponed. There can be little doubt, however, that the contentions of the deputation will prevail. Educational bodies that exist for public purposes and for the benefit of the community as a whole, and not for private profit, ought certainly to be exempt from taxation.

Lord Morley has received a chorus of approval for establishing a bureau for the supervision and direction of Indian students resident in London. There can be no doubt that there ought to be some institution, or at any rate some person or persons invested with responsibility, for the guidance of Eastern students temporarily here. The environment is very different from what they have been accustomed with; the experience and judgment and self-control of many of the young men, never before tested, are exposed to severe trials; and the effects of lapse are easily disastrous. We trust, of course, that Lord Morley's plan will be thoroughly successful. The men that come over with scholarships—say forty or fifty, in the meantime—will practically have no option but to report themselves and to keep in formal touch with the official bureau: the authorities that send them will see to that, and the Indian Government will see that they see to it. But will there be attendance where there is no compulsion? That is to say, will the great majority of Indian students have recourse to the bureau? And if not, how can it be regarded as a success? No Englishman will doubt the general competence or the fairmindedness of the Educational Adviser. But the facts remain that his experience in India was in connexion with a Mohammedan institution; that the recent official favour of Mohammedans is silently resented by many Hindus and others; and that officialism in every form is suspect and avoided. We do not know how far such feelings of Indian students are made known to Lord Morley, but there they are, and they have to be reckoned with. The judicious management of the bureau may do much to overcome eventually the distrust that now exists—a distrust that is very intelligible under present conditions, and that has nothing to do with disloyalty or sedition or revolution. In the Inns of Court, where the largest numbers of Indian students congregate, it would hardly be possible to find a man that is disloyal; but it would be equally difficult to find a man that is not "agin the Government." The new institution offers no cure for reasoned and reasonable political dissatisfaction. The problem is to get all such men in touch with a judicious adviser, and it seems a problem that is by no means easy of solution. The Inns, indeed, might easily solve it if they cared to give their minds to it.

Though one is always glad to witness the energetic promotion of education in all lines and in all countries, one cannot but regard it as somewhat curious that, when educational funds are so urgently needed at home, and not least (if we may judge from recent appeals) at Oxford and Cambridge, a committee of Englishmen, and prominently of Oxford and Cambridge men, should call lustily to the intelligent British public for a cool couple of hundred thousand pounds sterling to found a University in China. The surprise is not materially diminished when we learn that, much as denominational feeling operates in this country when education is on the *tapis*, yet "three considerable Christian colleges—English and American, of different denominations—have all expressed a keen desire to federate round a central professoriate founded on the lines" suggested by the Committee. However, the idea is to establish a University in the Wuhan towns—"the ideal site for an institution which is to exercise the widest possible influence on the New China of the future." Our readers will not suspect any malicious reflexion on their geographical knowledge if we explain that "the most central and commanding site in China is that of Hankow, Hanyang, and Wuchang—known collectively as the Wuhan towns, situated on the Yang-tse-Kiang, at the point of intersection of the great waterway and railway systems of China." Western education, it seems, is being eagerly absorbed by the youth of China, but it brings with it great dangers: "it destroys the old religious and moral sanctions, and puts nothing in their place"—a sufficiently severe reflexion upon Western education. So "the students must reside in colleges or hostels under some kind of moral discipline and supervision"; the various Christian bodies controlling the hostels would severally "provide religious instruction within their walls on the lines of their own denomination"; the professors, though not subject to religious tests, must be in complete sympathy with Christian ideals; and yet, somehow, "the students would not necessarily be Christian, nor would they be unduly influenced to become such." It is not clear what they are to become. There is quite enough indiscrimination and money in the country to float this well meant scheme, in the belief that it will "bring the highest traditions of Western education into the heart of China, and so promote that fusion of the best in Eastern and Western thought," &c., "which is of such vital importance for the whole human race." If "a central University is a supreme need of China," the Chinese may be safely trusted to establish it for themselves in their own way.

President Faunce, of Brown University, is a bold man. He has been telling a Convention in New York State that American Universities are manufacturing an alarming proportion of graduates that are illiterate. He is reported (by the New York correspondent of the *Daily Telegraph*) to have said this:

I would like to see the colleges of the country join in an effort to induce the American people to write and speak the English tongue decently. The colleges are not doing it now. It is a fact that the colleges of this

Digitized by Google

country are sending out illiterates. Many of our college seniors cannot write a decent business letter, and large numbers of them cannot express themselves in writing so as to be understood. We Americans should link our minds and hearts and hands in an effort to preserve this mother tongue, which is our definite intellectual heritage. We should prize the English speech and English literature, and pass on this heritage of the past to the children of the future.

Other educationists are said to explain that "it is the American voice that needs the greatest training." They quote Mr. W. D. Howells: "The blemish of American womanhood is their speech; they too frequently twang and whine and whiffle and whinny, and manage their voices carelessly and lazily." But all such commentary only emphasizes the allegations of President Faunce. What is to be done, then? To import plenty of English teachers from this side of the Atlantic, and to develop the custom of sending American children to be educated in English primary schools, says the correspondent, "are the remedies suggested by some reformers." Reformers, indeed! Mrs. Partington with her mop in face of the incoming Atlantic. The thing simply can't be done. Willy nilly, the language will develop naturally in its different environment. The only sensible remark reported is attributed to Miss Hetty Green, Wall Street's lady financier: "The speech that's good enough for me is good enough, I guess, for my son." That, we guess, is so—and will be so—in spite of University Presidents and all other sapient "reformers." But, whatever forms American English may develop, college seniors should certainly be able to write "so as to be understood."

Mr. Asquith's reception *ad portas* at Winchester College acquired a certain distinction from the fact that the last eminent visitor so received was Mr. Gladstone, a quarter of a century before. The happy manner of the Prime Minister's reply to the welcome extended to him by the Prefect of the Hall has been generally recognized; but the humour of his overpowering claim to the *ius trium liberorum* has not always been appreciated. At Rome the *ius trium liberorum* was not "the privilege of a father of three," or of a father at all. It was the privilege of a *mother* of three—a statutory privilege under the Empire down to the time of Justinian, first exempting such a woman from certain disabilities to take under a will, then extended to enable her, in preference to certain other relatives, to succeed such of her own issue as died intestate, and afterwards variously restricted. But the familiar expression was a tempting basis for a humorous turn.

SUMMARY OF THE MONTH.

In the House of Commons, on August 10, Mr. Bridgeman asked the President of the Board of Education if any scheme for the formation of a Teachers' Register is being considered by the Board of Education; and, if not, whether the Board will themselves formulate a scheme.

Mr. Runciman: Schemes for the composition and formation of a Teachers' Registration Council have been submitted to the Board by representatives of certain Associations of Teachers and have for some time been under consideration. It has transpired, on the publication of those proposals, that a considerable number of persons and bodies in the teaching profession regard them as quite inadequate for the constitution of a Council representative of the teaching profession. I understand that a comprehensive conference of various branches of the teaching profession is to be convened in the early autumn to consider alternative proposals, and I think the Board of Education would be well advised to await the result of their deliberations and to consider any recommendations which they have to make.

Mr. Tyson Wilson asked the President of the Board of Education, on August 11, if he was aware that, by the present system of selecting candidates for admission into residential training colleges, a number of student teachers who had proved themselves excellent teachers and who had passed the examinations which qualified them as candidates for admission into those colleges, were unable to gain admission; that many of them were unable to get a situation as teacher, and that many of them, owing to their parents not being in a position to give them tuition until there was a vacancy in a training college, had to give up all hope of becoming teachers, and had to accept employment of a nature for which they were not so well qualified; and whether, under those circumstances, he would take steps to secure that when a student teacher had proved an efficient teacher it shall be a recommendation for admission into a training college.

Mr. Runciman: A large number of new training colleges have been provided during the past few years, and others are in course of erection. I am aware, however, that notwithstanding this increase the available accommodation is not sufficient to provide for all qualified candidates who apply for admission. Inquiries which the Board have instituted tend to show that no widespread difficulties peculiar to student teachers have yet arisen, and special arrangements have been made, I think successfully, to meet as far as possible such difficulties as have been brought to their notice. I do not think it would be advisable to require training college authorities to give a preference to student teachers over other candidates in filling their vacancies, as the honourable member appears to suggest in the last paragraph of his question.

Elsewhere we refer to the deputation from the Secondary Schools Association to the Chancellor of the Exchequer. The Universities also claim total exemption from the land taxes of the Finance Bill, their deputation on June 16 basing the claim on the ground of performance of a national service. The amendments to Clause 25, while removing ambiguities, still leave liability. Under the present proposals the Universities will, under Clause 6, receive a partial exemption from the increment tax, as corporate bodies, and will be liable to this duty only when they sell or lease their property. If the Universities were to lease cricket ground to a college, such ground would be liable to duty. The exemption in the case of the undeveloped land tax is also partial. Land retained by the Universities which is described as used and occupied will be free from the tax as long as it is used and occupied for educational purposes, but no longer. In the case of Universities and colleges and their precincts, such land would include libraries, museums, laboratories, botanic gardens, college gardens, and athletic grounds. On the other hand, any undeveloped land held by such bodies in the neighbourhood of towns or elsewhere, which is ripening for building, would be subject to the tax; it is not always possible for a University or a college to keep such land in their own hands; it is argued that it is illogical to tax University or college property where it is situated at a distance and cannot be occupied by the University or college; and it is pointed out that taxation will mean a heavy drain upon University and college resources.

At the annual prize distribution at University College School, Hampstead, Dr. Spenser, the Head Master, reported that there were 375 boys in the school, and that, whilst all proper provision was made to enable the scholars, without premature specialization, to gain scholarships at the older Universities, the school had steadily set itself to bear its part in the development of the great University of London, and to help to make it worthy of the great city in which they lived. The Lord Mayor, having distributed the prizes, said that for seventy-seven years the school had done good and useful work in Gower Street, and it had been matter for regret to the city that they had had to make a move to the suburbs, as St. Paul's School and Christ's Hospital had done. When the King, accompanied by the Queen, some two years ago had opened their new buildings, his Majesty had proclaimed by his action his good opinion of the work performed by the school, and had given them an impetus for future effort. He was pleased to notice that in the curri-

Digitized by Google

culum the modern side of education took such prominence. And it was, perhaps, a matter of regret that other schools did not follow the example. For his part, he considered a boy should not devote too much of his early days to the study of languages, which came in a very small degree into requisition in his future life. An appeal had been made to the Corporation for financial help towards the great expense incurred by the removal of the school to Hampstead; he could not help thinking that the City of London, which had always shown such interest in education, would not fail them in their appeal.

The Board of Education has formulated a scheme for the government of St. Olave's and St. Saviour's Grammar School, Southwark. The new scheme provides for total exemptions from tuition fees to an extent of not less than 5 per cent. of the boys admitted to the school, for clever boys who have previously attended public elementary schools, preference to be given to the sons of people residing in the district.

At the twenty-first annual meeting of the Society of Art Masters, held in the lecture theatre of the Victoria and Albert Museum, Mr. J. Fisher, who presided, said that at no period in the Society's history had there been a greater desire or a greater effort made to forward the interests of art education and of art masters than at present. The non-representative character of the new Teachers' Registration Conference claimed attention last year, and the Council had succeeded in their efforts to obtain a seat on the Conference for a qualified representative of art teaching. The constitution of the Consultative Committee of the Board of Education was unsatisfactory, as art masters had no direct representation. The serious example set by the Board had had its effect on Local Education Authorities, and the teaching of art was almost entirely unrepresented. The result in the majority of cases was the starvation of art education. The necessity for the establishment of a Ministry of Art was beyond question. The interests of art required Government responsibility, encouragement, and organization. Mr. Fisher drew attention to the necessity which existed for a diploma for those holding the art master's qualification, and commended to members the desirability of endeavouring to obtain the consent of the various Universities to establish a Faculty of Pure and Applied Art.

The new Technical College provided by the generosity of the Leathersellers' Company in Tower Bridge Road will be opened on October 1 by the Lord Mayor. It has been erected on land on which once stood the tannery where the famous "Bacon's butts" were manufactured. The freehold cost nearly £10,000, and the building and equipment of the college will require a similar sum, so that altogether the new Technical College represents a gift of £20,000 from the Leathersellers' Company in the cause of technical education. For fifteen years a technical school of leather manufacture has been carried on at Herold's Institute, Bermondsey, where two hundred day students from thirteen countries of the world and a thousand evening students have passed through a technical course. But the Institute was handicapped by its position, by its want of space, and by its antiquity of construction. In the new Technical College every requirement of training will be met. The college is equipped with all the plant and machinery necessary for instruction in every branch of leather manufacture, and comprises a practical model heavy leather tannery capable of dealing with thirty hides per week. There is also a light leather tan-house large enough to deal with over three hundred skins per week; a dye-house fitted with drums, paddles, trays, and striking-out tables; a machine shop for the finishing of light and heavy leathers; and a small currying shop. The equipment is capable of turning out leather on a small scale, not with the idea of competing with existing tanneries, but in order that the students, for fifty of whom accommodation is provided, shall be able to combine scientific and practical training side by side. The scientific training will include bacteriological and microscopical examination of leather, raw skins, and tanning materials.

At the close of the Oxford Summer Meeting the foreign representatives presented an address to the Delegacy, acknowledging the educational advantages of the gathering and its splendid success. Mr. J. A. R. Marriott, the Secretary to the Delegacy, in reply, said that never in the whole history of the movement had there been anything approaching a meeting of the present magnitude. Upwards of seventeen hundred tickets had been issued. The Delegacy wished to have the opinion of the students on two points: (1) whether they were in favour of a limitation of numbers; and (2) what subject they favoured for the meeting of 1911. One suggestion before the Delegacy was that the subject should be "The Expansion of the British Race throughout the World." The summer meeting of next year would be held under the auspices of the Cambridge Syndicate at York, from the middle of July to the middle of August, while the regular summer school would be at York. The Delegacy were proposing to organize a strict vacation course, not at all on the scale of the summer meeting and very little resembling it.

The development of the secondary-school system of India is discussed by the Director-General of Education in India in his Report. There are (he says) three leading conditions which, in the main, determine the grade, the content, and the quality of secondary education in India. These are (1) that boys leave school on attaining the age of sixteen or on attaining a standard of instruction which ordinary boys can reach by that age; (2) that English is the medium of instruction in the two or three top classes; (3) that the total expenditure of secondary schools averages Rs.25·5 annually for each scholar. No substantial change has taken place in the first of these conditions during the period under review. There was, at the beginning of the quinquennium, no minimum age limit for entrance to the Universities except at one, where the limit was sixteen; but the standard of examination for entrance to the Universities and the courses of study in the schools were arranged upon the basis of enabling boys of not more than average ability to pass from school to college at the age of sixteen. Three Universities have now fixed sixteen as the minimum age limit for entrance and two have fixed fifteen. The use of English as the medium of instruction in the upper classes of secondary schools is mainly the result, perhaps a necessary result, of its use as the medium of examination for entrance to the University, and it is also a means of avoiding the expense of duplicating the staff of teachers in places where more than one vernacular is spoken. This involves as a consequence that secondary schools must undertake the heavy task of putting the younger boys in command of so much English, by the age of about thirteen or fourteen, as to enable them to receive nearly all their instruction in that language—a linguistic accomplishment which can only be attained by great inroads upon the total school time available. The secondary schools have long suffered from a period of financial depression, and, although their claims upon the public purse have met with more liberal recognition in the last few years, yet, when the increase of pupils is taken into account, the State is now doing proportionately less for secondary education than twenty years ago. There has been, since the year 1887, an increase in the number of pupils at secondary schools for boys from 272,000 to 473,000, being an increase of 201,000 pupils in twenty years. During the quinquennium the public funds devoted to secondary education have gradually increased from Rs.21,69,000 to Rs.31,30,000. The expenditure of public funds upon secondary education, which twenty years ago stood at the rate of Rs.7·5 a head per annum now stands at the rate of Rs.6·6 a head. Put into English money, the sum which is spent from public funds, both provincial and local, upon 473,000 scholars in secondary schools is £208,668.

Official statistics of the attendance at German Universities during the summer term of this year (says the Berlin correspondent of the *Times*) show that, out of 51,700 students, 3,921 are foreign subjects. The number has increased more or less steadily since 1880. There was a temporary decline two years ago in consequence of the stringent measures which were applied to Russian immigrants into Prussia, but considerably more than one-third of the foreign students are now Russian. The number of American students also shows a marked increase, largely due to the recent admission of women to Prussian Universities. A large number of students now come from the East, and especially from Japan. The number of English students is 155. The increase in the number of students of medicine, which is now 1,181, has been far more rapid than the increase in any other Faculty. It is noteworthy that both Berlin and Leipzig now attract many more students than Heidelberg, which was for many years the most popular of German Universities for foreign students.

We record with much regret the death of Mr. A. H. Beesly, M.A., a younger brother of Prof. Beesly, at the age of seventy. He was a scholar of Wadham, and was *proxime accessit* for the University Prize that Mr. Bryce won with his famous essay on "The Holy Roman Empire." The whole of his teaching life was spent at Marlborough under Dr. Bradley and Mr. Bell, and he devoted himself unreservedly to the work of the school, taking immense interest in the games of the boys and in the school magazine. He published a "Life of Sir John Franklin," a translation of the first two books of the "Annals" of Tacitus, a short history of Rome in the time of the Gracchi, Marius, and Sulla, and a metrical version of the "Hecuba" of Euripides under the title of "The Trojan Queen's Revenge." On relinquishing the work of teaching, he established himself in a house which he had built at Marlborough, and devoted himself, so far as his health allowed, to literary work, while retaining all his interest in the affairs of the school. His publications included two volumes of verse (which were generally recognized as showing a striking gift for the composition of spirited ballads), and an elaborate "Life of Danton."

The untimely death of Mr. Herbert Francis William Tatham by a fall in the Alps has caused widespread sorrow at Eton and among Old Etonians. To his pupils he was a patient, humorous, and kindly teacher and friend; he was to a larger circle an unrivalled performer as "wall" in the wall game of football. He was joint author, with Mr. Arthur Benson, of the well known book of short biographies, "Men of Might," and he took his share in editing some of the Eton school classics; but those familiar with his rare wit and rich humour were hoping that he might one day find leisure for some wider and more enduring literary work. He was educated at Eton and at Cambridge, where he took a First Class in both parts of the Classical Tripos. He was only forty-seven.

UNIVERSITIES AND COLLEGES.

London. A report by Prof. Karl Pearson was presented to the Senate, showing the progress of the work of the Francis Galton Laboratory for National Eugenics during the past sixteen months. Much labour has been bestowed on the study of pedigrees and the collection and collation of information on various aspects of heredity and environment; and numerous lectures have been delivered and papers published not only by members of the Laboratory staff, but by other contributors to its work. The Senate voted their cordial thanks to Sir Francis Galton for a further donation of £500 for the maintenance of the Laboratory, and recorded their high appreciation of the services rendered by Prof. Pearson, under whose supervision the work is carried on. Mr. David Heron and Miss E. M. Elderton were reappointed respectively Galton Research Fellow and Galton Research Scholar for a year from next February.

A series of White Papers has been issued dealing with the transfer of the Faculties (other than that of Theology) of King's College to the University of London, under the provisions of the King's College, London (Transfer), Act, 1908. It is provided that the new official name of King's College shall be "University of London, King's College," and that the University shall, as far as its means and other duties permit, maintain and develop the departments of the College for teaching and research in wide academic culture, including preliminary and intermediate, but not advanced, medicine. No teaching, however, in subjects pertaining exclusively to the faculty of Theology shall be given. A professorial advisory board will be formed, and the Senate may appoint Fellows. The Rev. A. C. Headlam, D.D., Principal of the College, becomes first Dean. Statutes have been made relating to the Theological Department of the College. A series of statutes has also been issued dealing with the transfer to the University of the department of King's College carried on in Kensington for the higher education of women, and its new official name is "University of London College for Women." Arrangements are made for the instruction of women in Theology and Religion. Miss Hilda D. Oakley, M.A., the present Vice-Principal of the Women's Department of King's College, becomes the first Warden of the College. King's College School, Wimbledon, being also affected by the Act, statutes are issued for its constitution and management.

London and the Workers. In connexion with the movement for the higher education of workpeople a Joint Committee has been formed, under the authority of the Senate of London University—with seven members representing the University and seven representing labour organizations. All the appointments to this Committee have not yet been made, but Mr. C. W. Bowerman, M.P. (London Society of Compositors), Mr. Jenkins Jones (General Secretary of the Amalgamated Society of Engineers), Mr. J. J. Dent (President of the Working Men's Club and Institute Union), and Miss Madams (Co-operative Society) are among those who will represent labour. The scheme is to extend to London the system of tutorial classes which has worked so well with the co-operation of Oxford University in other parts of the country. A conference of intending students and delegates is to be held as early as possible in September, and it is hoped to start this winter with three tutorial classes, to be held in Central, North-East, and South-West London.

"No class," according to a report signed by Mr. D. J. Shackleton, M.P., Prof. D. H. MacGregor, and Mr. A. Mansbridge, "should consist of more than thirty students, of whom at least twenty-six should be workpeople in the strictest sense; the remaining four might well be school teachers. The classes last for three years, and comprise twenty-four two-hour lessons each winter, with twelve fortnightly essays. Each student pledges himself to attend, unless illness, employment, or (if he be an official) meetings of his trade union intervene. There is no age limit, but no one under eighteen would be admitted. The subjects asked for have so far been mainly industrial history and economics, but literature has also had a place. Out of these classes many fine scholars will arise. If these are approved of by the class members as men who will be true to their fellows, and will serve the common good, forgetting individual advancement, they should be enabled to proceed from the class to a period of study at the University itself. These scholars will not attempt to prepare themselves for the professions; their object will be to gain knowledge for the illumination of the dark places in industrial and social life."

An important principle laid down by the Joint Committees is that the teachers should actually teach in the Universities. This, it is held, completes the scheme, because it ensures that the lessons that the teachers learn shall not be lost, but shall pass into the ordinary teaching of the Universities. The fees are quite nominal.

Bristol. The Committee formed for the purpose of providing a Hall of Residence for the women students of the University of Bristol announce that, mainly owing to the generosity of two ladies unconnected with Bristol (one of whom, besides making a large contribution, has guaranteed a sum of £2,000), they have been enabled, with the aid of a grant from the University, to purchase Clifton Hill House for their purpose. The necessary alterations are now being made, so that students may be received at the beginning of next term in October. A further appeal for contributions will be made in the autumn to enable the Committee to complete the equipment of the Hall, to repay the guarantee, and to fulfil their promise to the University to maintain the Hall for a period of two years from next October. The treasurer of the fund is Mr. Hugo Mallet, of Goldney House, Clifton.

Scottish Universities and the Carnegie Trust. In connexion with the Carnegie Trust for the Universities of Scotland an important proposal is at present under consideration for the establishment of residential hostels. Under the terms of the trust half of the revenue, or roughly £50,000, is devoted to the payment of fees. The amount actually required for this purpose varies. Some years ago the demands made were so heavy that they threatened to exceed the available revenue, and the Trustees, in order to safeguard themselves and reduce the pressure on the fund, imposed more stringent conditions upon the applicants. In the year ending September 30, 1908, the payments of fees amounted to £44,199. It has now been suggested that this method of assisting deserving students should be modified, if not abandoned, and a system of residential hostels be established in its stead. University residences for students have been started in several of the Scottish centres by private or semi-public endeavour, and they are considered to serve a very useful purpose; for the lack of any common social life is one of the defects of the

Digitized by Google

Universities here, and it is felt that it would be well if there could be some approach to the residential system which is the feature of Oxford and Cambridge. This view has been emphasized by the entrance of large numbers of women students, and in some cases lady wardens have been appointed to exercise an oversight over these girls—for in many instances they are little more than schoolgirls—and see that they were living in suitable rooms and advise and assist them in friendly manner.

The proposal now under consideration is that the Carnegie Trustees should undertake the provision of residences and that part of the money at present devoted to the payment of fees should go to this purpose. Accommodation in these hostels would take the place of the assistance now given by the payment of fees, and, by thus introducing the residential system on a large scale, the Carnegie Trust would be able to effect a far-reaching and desirable improvement in Scottish University life. A number of the trustees are understood to view the proposal with favour, but several take strong exception to this change in the operation of the trust. The latter hold that, however desirable hostels may be in themselves, it is not for the trustees to divert their funds to this purpose. They also lay stress on the fact that many students prefer to live in private rooms and that independence in this respect has almost become a tradition in the Scottish Universities; and they hold that the trustees, in the administration of their money, must take account of this and not select a scheme which, however desirable on various grounds, would run counter to the conditions of the time and possibly prejudice the rights of the student who preferred to live by himself. The proposal is the subject of considerable discussion at present, and the outcome will be awaited with interest.

Ireland. At a recent meeting of the Senate of the newly established National University, Archbishop Walsh, Chancellor, in the chair, the question of compulsory Irish was brought forward by Dr. Hyde in the form of a resolution, that the Senate should ordain "That a suitable proficiency in the Irish language and in the history of Ireland should be required from all candidates for entrance, and for the non-specialized courses of the University." This was ruled out of order, inasmuch as it called on the Senate to make a regulation relating to examinations, which the Senate was expressly prohibited from making without report from the General Board of Studies, and the General Board of Studies could not exist until after the dissolution of the Royal University. In reply to a request from the Irish County Councils' General Council that the Senate should receive a deputation urging that the Irish language should be made an essential subject in the programme of the University, the Registrar was directed to state that, under the provisions of the Charter, no matter connected with the curriculum or subjects of examination of the National University could be effectively considered until the General Board of Studies shall have been constituted, which Board could not be constituted until after the dissolution of the Royal University—that is to say, until some date probably not earlier than the end of October—and to add that the Senate would be prepared to receive the deputation at the first meeting held after the dissolution of the Royal University.

Saskatoon. Saskatchewan is starting its University in the city of Saskatoon. The intention of the governors is to begin with the erection of the Agricultural College, as they believe their first duty is to provide for the scientific education of the farmers' sons. This structure will embrace a dormitory building suitable for 150 students, together with farm and machinery buildings suitable for a fine agricultural college. The Arts Building will come next. The completed scheme is on a generous scale; but large tracts of land are set apart in the West for educational purposes, and, as it is increasing in value all the time, Saskatchewan educationists believe that by the time their University plans are fully developed they will have all the money they require to carry out the above programme. The land for the University and adjacent buildings affiliated with it measures one mile long by half a mile wide, and the remainder of the thousand acres embraced in the whole area at the governors' disposition will be devoted to the agricultural college and farm, which will be affiliated with the University. The different religious denominations, including the Roman Catholic, will have representatives on the Board of Governors, and denominational colleges to be erected by the Anglicans, the Methodists, the Presbyterians, and the Roman Catholics will be grouped around the central University and affiliated with that institution. The Church of England is already making preparations to erect its theological hall within the shadow of the provincial University. Dr. Walter Murray, of the University of Dalhousie, Halifax, is to be the first President of the University.

THE EDUCATIONAL LADDER.

Aldenham.—Leaving Exhibitions: H. M. Sale (Exhibitioner of Christ's College, Cambridge), A. Roscoe (Scholar of King's College, Cambridge), J. S. Boulter (Scholar of Keble College, Oxford), A. C. Blyth (Exhibitioner of Christ's College, Cambridge, and Tancred student), and J. N. Barstow (Sizar of Magdalene College, Cambridge). Senior Platt Studentships: C. R. Jackson, B. M. Bauer, T. Frederick, E. W. Reading, T. N. Rich, and B. W. Wilson. The value of the scholarships held by G. C. F. Mead, W. L. McNair, and K. W. M. Pickthorn was increased.

London: City of London School.—Classical Senior Open Scholarships: H. C. Oakley and S. Ratainsky; Junior, A. P. Davis and D. H. Avis; the Modern Senior Open, W. H. Easty; the Junior, E. E. Caws; the Science Junior Open, T. W. Kiddle; the Abbott, F. P. Cheetham (winner also of an exhibition of £30 a year at St. John's College, Cambridge, a Finnis Memorial Prize, and a Beaufoy Shakespeare Prize); the Alston Science, S. I. Levy (winner also of a £60 Scholarship at St. John's, Cambridge, the Senior John Carpenter History Prize, a Stewart Memorial Prize, the Beaufoy Medal for Shakespeare Study, and a medal for gymnastics); the Fourth Beaufoy, R. W. James (winner also of a Scholarship of £80 a year at St. John's, Cambridge, the Beaufoy Mathematical Prize, a Stewart Memorial Prize, and Alderman Hale's Medal for Chemical Science); the Carpenter, M. Posener; the City of London Asquith, R. A. Fraser (winner also of a Scholarship of £80 a year for Mathematics at Pembroke College, Cambridge, Dr. Conqueror's Gold Medal, and a Beaufoy Prize for Shakespeare Study); the Lambert Jones, R. A. Attfield (winner also of an exhibition of £20 at Selwyn College, Cambridge, a Finnis Memorial Prize, and a Beaufoy Shakespeare Prize); the Masterman, C. Robbins (winner also of a John Carpenter History Prize and a James Innes Prize for Political Economy); the Mortimer Exhibition, W. E. Dumbrill; Sir D. Salomon's Scholarship, C. N. Spero; St. Thomas's Medical, G. A. Bird; Sir William Tite's, L. Spero; the Fishmongers', T. J. Dannhorn (winner also of a Scholarship of £40 a year for Classics at Caius College, Cambridge, Sir James Shaw's Classical Prize, the Mowlem Prize for English, the Medal for Elocution, Sir Marcus Samuel's English Essay Prize, a Mortimer English Prize, and Dr. Phillips's Latin Verse Prize); Jews' Commemoration, G. Robbins; Lionel van Owen Scholarships, F. N. Reed, A. G. Willett, C. W. Bloomfield, and B. M. Schonberg.

London: St. Paul's.—Classical Exhibitions: H. F. Jolowicz, £70 a year for 4 years; N. E. Hardy, £60 a year for 4 years; E. C. Sturdy, £40 a year for 4 years; P. A. Tharp and H. W. Willis, £30 a year each for 4 years. Mathematical Exhibitions: J. H. Clarke, £70 a year for 4 years, and M. Segal, £50 a year for 4 years. With the first mathematical exhibition also goes the Keen Scholarship of £26 for one year. Science Exhibitions: A. L. Bacharach, £50 a year for 4 years, and M. Sinha, £40 a year for 4 years.

London University.—University Entrance Exhibitions: G. M. Bennett, Clacton College; R. M. Clark, Southend Secondary School; J. T. Davies, Llanelly County School; J. E. Stephenson, the College, Winchester. St. Dunstan's Exhibitions (awarded by the St. Dunstan's Educational Foundation): Eileen O'Rourke (Arts), City of London School for Girls and University College; Kathleen Parker (Science), Mary Datchelor School. Reid Scholarship for Women: no award. City Parochial Scholarship: William Payne, Birkbeck College. Ouseley Memorial Scholarship (£50 each for one year): Hindustani, Claud H. Field; Persian, Sigmar Hillelson; Chinese, G. W. Shipway (King's College). University Scholarships.—Classics: no award. French: Daisy Elizabeth Fenner, Birkbeck College; Olive Wright, East London College. German: Margaret S. Gadney, Royal Holloway College; Louis A. Triebel, University College. English: Edward J. Thompson, Wesleyan College, Richmond; Mary A. Baker, Royal Holloway College; Winifred O. Hughes, University College. A University Scholarship is divided between Miss Baker and Miss Hughes. History: Mabel H. Mills, Bedford College for Women (Derby Scholarship; but disqualified from receiving the emoluments, being a Gilchrist Scholar); Ella M. R. Swain (Derby Scholarship); Dorothy F. Cheetham-Strode. Elementary Psychology and Logic: John C. Flower, New College and London School of Economics; Malcolm M. Thomson, University College. Mathematics: Robert G. Lunnon, University College (Sherbrooke Scholarship); Cecil W. Gilham, East London College. Physics: Lewis Simons, King's College (Neil Arnott Scholarship). Chemistry: John E. Brimley, East London College (Neil Arnott Scholarship);

Digitized by Google

Hubert H. H. Howard, East London College. Botany: no award. Geology: Disney A. Wray, South-Western Polytechnic Institute.

Bedford College for Women.—Reid Scholarship in Arts: Z. M. Downes, Clapham High School. Old Pupils' Scholarship: E. E. M. Birch, Notting Hill High School. Pfeiffer Scholarship in Science: W. G. C. Hurst, Streatham High School. In the Training Department; Scholarships of £20, H. B. Harding, B.A. Wales, and D. Soothill (Newnham), Medieval and Modern Languages Tripos, Cambridge, Class II.; Bursary of £10, M. G. Madell, B.A. Lond.

London School of Economics and Political Science.—Shaw Research Fellowship (100 guineas a year for two years): Charles K. Hobson, Trinity College, Cambridge.

Oxford Local Examinations.—Seniors: Exhibitions (£30), for boys, E. Bamford, Wimbledon College; for Girls, K. W. Smith, Culcheth Hall, Bowdon (Misses Lang). Silver Medal of the Royal Geographical Society: A. A. A. Gross, Municipal Secondary School, Barrow. Bronze Medal: M. D. Rigg, Park School, Preston. Cobden Club Prize, G. G. Walsh, Boulevard Municipal Secondary School, Hull. Juniors: Scholarship of £10 (offered by the Delegates), for boys, H. E. Macklin and A. J. Moorat (both of Wimbledon College), equal; for girls, C. A. Williams, George Dixon Secondary School, Birmingham. Royal Geographical Society's Medals: H. M. Marsden, Hutton Grammar School, Preston, and M. Bailey, Wigan Grammar School. Preliminary: O. R. Orchard, Secondary School, Poole, and J. Carroll, St. Francis Xavier's College, Liverpool, tie for top place.

Oxford University. — Aubrey Moore Studentship: Owen G. R. Williamson, Honorary Scholar of Hertford. Liddon Studentships: George H. Fendick, B. A., Exeter, and Stanley T. Collins, B.A., Scholar of Wadham.

Reading: University College.—Open Scholarships: In Arts, John H. Tombling; in Science, Thomas H. Burnham; in Agriculture, Clifford S. Weight; in Music, Douglas W. Clarke (Composition), Elsie S. Metcalf (Singing), Evelyn Sharp (Composition), Rosalie M. Stokes (Pianoforte).

HOW TO DISTRIBUTE PRIZES.

We quote from the lively *Western Journal of Education*, with a chastened sense of our national and individual ponderosity. Unfortunately, the example presented by our contemporary is rather late for this season; but prospective distributors of prizes may pigeonhole it against future opportunities of public distinction. The Ione High School in Amador County is the scene; the presentation of diplomas to thirteen "graduates" at its "closing exercises" for the session is the occasion; Mr. E. W. Perkins, the Clerk of Board, is the performer. Our contemporary describes:—

This function of handing over graduating diplomas I have witnessed many a time and oft for, lo, these many multiplied years—but never did I dream that it could be done with the liveliness and cheer that Mr. Perkins gave. It had always been solemn to the verge of the funereal—stiff, formal, ceremonious. Not so with Mr. Perkins. The poor graduates are usually scared stiff by the enormous and portentous gravity of the occasion. But not this time.

Mr. Perkins is a druggist by trade—a tall, slender man, with a pale, scholarly face, curly hair, and a deliciously droll and humorous smile. He stepped out in front with an armful of diplomas.

"May, come here," he said, beckoning to the first of the graduates. "I'm going to make it as hard for you as I can"—with a wink that made the audience laugh. He shook hands cordially with May, gave her a diploma and a big bunch of flowers, and then beckoned authoritatively to the next of the dignified seniors—a young man this time.

"Mike," said he, "the jig is up! Here's your sheepskin." And "Mike" received his flowers, his handshake, his diploma, and his cordial smile, amid the plaudits of the multitude.

George came next. "Ladies and gentlemen"—taking him familiarly by the arm and leading him to the front, "this young man is chockful of steam—a balloon full of gas. When he goes off he'll certainly shake a hole in the world somewhere!" And George escaped to his seat while the audience roared.

When "Charley" came forth, the crowd applauded and continued to applaud—he was a little boy and was evidently a general favourite. After vainly attempting to be heard, Mr. Perkins gave it up, and locking arms with the boy, nodded and winked and smiled at him and with him at the audience—shook hands with him, gave him his flowers and the coveted paper—and pushed him back into place, with the people still clapping their hands.

And so it went. Was it not naive and refreshing? A contrast to the funereal embarrassment of similar occasions elsewhere? At the close some one called for "Three cheers for Perkins." Future dignitaries who have this ceremony to perform may take a hint.

They may! For further encouragement, we could have wished to reproduce the portrait of this original distributor, with the familiar and genial legend, "This is Perkins."

FROM GINN & COMPANY'S LIST.

GOOD HEALTH.

By F. G. JEWETT.

Revised for use in English Schools by **ALICE RAVENHILL**, F.R.San.I., Lecturer London University Extension Board. Designed for pupils from ten to twelve years of age, treating of hygiene rather than anatomy or physiology, special emphasis being laid upon personal hygiene. Fully Illustrated. 171 pages. Price 1s. 6d.

THE MOTHER TONGUE.

By G. L. KITTREDGE and S. L. ARNOLD.

BOOK I.—Specially Revised for use in English Schools by John W. Adamson, B.A., Professor of Education, King's College, London. **LESSONS IN SPEAKING, READING, AND WRITING ENGLISH.** xiv+294 pages. Illustrated. Price 1s. 6d.

Opinions of His Majesty's Inspectors:

"I should be very glad to see it in use in all our schools."

"I do not know of any better method of teaching English than that so carefully developed in 'The Mother Tongue.'"

"The most practical text-book I know for teaching the Mother Tongue."

BOOK II.—ELEMENTARY ENGLISH GRAMMAR, WITH LESSONS IN COMPOSITION. xxii+417 pages. Price 3s.

BOOK III.—ELEMENTS OF ENGLISH COMPOSITION. xx+431 pages. Price 4s. 6d.

SELECTIONS from STANDARD FRENCH AUTHORS. Edited by O. G. Guerlac. Selections from the works of such writers as Molière, Pascal, La Fontaine, Victor Hugo, Bossuet, Voltaire, Rousseau, and Renan. With Notes, Vocabulary, and Biographical Sketches. 220 pages. Price 2s. 6d.

DIX CONTES MODERNES. Edited by H. A. Potter. Specimens of current French with English Paraphrases at end of book for retranslation. 95 pages. Price 1s. 6d.

GLÜCK AUF. A First German Reader. By M. Müller and C. Wenckebach. Intended primarily for beginners. The central idea of the book is to introduce the student at once to facts, ideas, and sentiments which are in close relation to German life. 235 pages. Price 3s.

FIRST YEAR GERMAN. By W. C. Collar. The aim of this book is to lay out in orderly progression for beginners, having not less than four lessons a week, one year's work in speaking, reading, and writing German. The facts and usage of the language are exhibited first in each lesson; then follow observations, rules, and practice. Selections in prose and poetry are freely interspersed, and at the end of the book are massed to the amount of forty pages. 336 pages. Price 4s. 6d.

MATERIALS FOR PRACTICAL GERMAN CONVERSATION. Edited, with Introduction, Notes, and Vocabulary, by L. Fossler. An attempt to surround the pupil with an atmosphere of everyday German as actually spoken. 255 pages. Price 3s.

ELEMENTARY GERMAN FOR SIGHT TRANSLATION. By R. C. Ford. Planned for use as soon as classes are able to take up easy reading. 43 pages. Price 1s.

PRINCIPLES OF PHYSICS. By A. P. Gage, Revised by A. W. Goodspeed. A thorough Revision of Gage's "Principles of Physics," made in accordance with the latest developments in Physical Science. 547 pages. Illustrated. Cloth. Price 6s. 6d.

THE BLAISDELL PHYSIOLOGIES.

THE CHILD'S BOOK OF HEALTH. A First Book of Hygiene, presenting easy lessons for Junior Classes. 1s.

A Supervisor of Schools says: "A book to be read by every boy and girl of ten years and upwards."

HOW TO KEEP WELL. Simple, teachable, and replete with Suggestions for Teachers. Price 2s.

OUR BODIES, AND HOW WE LIVE. Simple in style, with no attempt at scientific discussion. Adapted for the Higher Standards. Price 3s.

HOW TO TEACH PHYSIOLOGY. Handbook for Teachers. Price 6d.

BOOKS SENT ON APPROVAL TO TEACHERS.

Complete Catalogue post free on application.

WALL PICTURES. Four of the Illustrations reproduced separately in black and white. They can be had in two styles—1. Mounted on linen, 3s. 6d. net each. 2. Mounted on linen, varnished, taped, and with moulding at top and roller at foot, 6s. net each.

THE FIRST SIXTY LESSONS PHONETICALLY TRANSCRIBED. By D. L. SAVORY, M.A., Lecturer at the University of London. 1s.

FABLES EN PROSE ET EN VERS.
With Oral and Written Exercises, Questionnaire, Grammaire, and Illustrations. 2s. 6d.

MELANGES FRANCAIS.
An Elementary Reader for the Second and Third Years of French Instruction. With Oral Exercises in French, containing Questionnaires, Grammaire, Exercices écrits, a complete French-English Vocabulary, and Illustrations. 2s. 6d.

ANECDOTES ET RECITS.
A Reader for Elementary and Middle Forms. With Oral Exercises in French, Questionnaires, Grammaire, Exercices écrits, Passages for Retranslation based on the Text, a French-English Vocabulary, and Illustrations. 2s. 6d.

LECTURES ET CONVERSATIONS FRANCAISES. With Oral and Written Exercises in French. 2s. 6d.

PAGES CHOISIES DES GRANDS ECRIVAINS. A more advanced book for French Reading and Conversation. With French Notes and Oral Exercises. 1s. 6d.

POETICAL FRENCH READER.
Selections from the Poems of LA FONTAINE, RACINE, CORNEILLE, MOLIÈRE, CHÉNIER, HUGO, and DE VIGNY. With Biographical Sketches, Notes, and Exercises. 2s. 6d.

GRAMMAIRE FRANCAISE PRATIQUE, BASEE SUR LA METHODE INDUCTIVE. 3s. 6d.
Part I., forming a complete Elementary Grammar, may be had separately, 2s. 6d.

A FIRST BOOK OF ORAL (or Written) FRENCH PROSE COMPOSITION. With Notes. Designed to follow Part I. of "Grammaire Française." 1s.

LECTURES SCIENTIFIQUES.
A French Reader for Science Students. 5s.

FRENCH TEXTS.
With Notes, Exercises in French, Passages for Retranslation, &c., Questionnaires, and Illustrations. Each Volume, 1s.

Beginners' Texts. 6 Vols.	*A detailed List will gladly be supplied on application to Messrs. Rivington.*
Junior Texts. 10 Vols.	
Intermediate Texts. 9 Vols.	
Comedies. 6 Vols.	

By A. A. SOMERVILLE, M.A.,
Assistant Master at Eton College.

A PRIMER OF FRENCH GRAMMAR.
For Preparatory Schools and the Lower Forms of Public Schools. Crown 8vo, 2s. net.

PRIMARY FRENCH EXERCISES.
For Preparatory Schools and the Lower Forms of Public Schools. Adapted to the "Primer of French Grammar." Crown 8vo, 1s. 6d. net.
The Primer of French Grammar and Exercises may also be had in One Vol., 3s. net.

GRAMMAIRE FRANCAISE ELEMENTAIRE.
A l'Usage des Elèves Anglais. Crown 8vo, 1s. 6d.
These books form volumes of "RIVINGTONS' MODERN FRENCH SERIES," of which a detailed List will gladly be supplied on application.

RIVINGTONS' DIRECT METHOD ELEMENTARY GERMAN TEXTS

Edited by D. L. SAVORY, M.A., Lecturer in the University of London, Goldsmiths' College; formerly Assistant Master at Marlborough College; Author of "A First German Reader," &c. Small crown 8vo, each Volume 1s. 6d.

***Das Gespensterschiff.** By WILHELM HAUFF.
***Die Geschichte des jungen Herrn Anton.** By HEINRICH SEIDEL.
***Krambambuli.** By MARIE VON EBNER-ESCHENBACH.
* These three Volumes have Vocabulary in each and Illustrations.

Der Dachs auf Lichtmess. By W. H. RIEHL.
John Wells. By FRIEDRICH GERSTACKER.
Johannissegen. By ERNEST MUELLENBACH.

"Mr. Savory is very skilful in his choice of modern stories for his series of elementary German Texts. . . . There are no better text-books for the believer in the Direct Method than this series. All the stories are well chosen, and the accompanying Questions and Exercises are admirably arranged to give the pupil the maximum of mental training and practice in conversation."—*Guardian.*

"Mr. Savory's name is a guarantee for good work, and this is certainly the best piece of work of the kind he has done. The exercises cover everything necessary in the way of conversation, inflection, word-building, and word-use."—*Modern Language Teaching.*

"Teachers of German will appreciate this series."—*Schoolmaster.*

"The print is very large and clear, the vocabulary complete, and the illustrations good. We can confidently recommend the books of this series to all English students of German, and it should meet with a wide circulation among teachers and taught."—*Catholic Times.*

"Good reading, carefully edited, well printed and substantially bound."—*Educational Times.*

"A series that should commend itself to teachers by reason of its thoroughly practical character."—*Scotsman.*

FIRST BOOK OF GERMAN ORAL TEACHING. By A. R. FLORIAN, M.A., Assistant Master at Manchester Grammar School. Crown 8vo, 3s. 6d. [*Just Published.*
A book on the Direct Method, written throughout in German. The lessons are followed immediately by Questions, Grammar, and Exercises. The grammar is reduced to essentials, but is thoroughly dealt with. Besides the lessons there is a selection of pieces for reading and of poems. Reproduction exercises—beginning after the twentieth lesson—have been added in a separate section.

SCIENCE AND ART EXAMINATIONS.

(BOARD OF EDUCATION.)

"This series has won a high reputation for the practical and scientific manuals it provides for students."—*Practical Teacher.*

Books for the First Stage.

GEOMETRY.—PRACTICAL PLANE AND SOLID. By G. F. Burn. *Second Edition.* 2s.

BUILDING CONSTRUCTION. By Brysson Cunningham, B.E., Assoc.M.Inst.C.E. *Second Edition.* 2s. 6d.

MATHEMATICS. Containing all the Algebra and Euclid required. Edited by Dr. Wm. Briggs, M.A., B.Sc., F.R.A.S. 2s.

MECHANICS OF SOLIDS. By F. Rosenberg, M.A., B.Sc. *Fifth Edition.* 2s.

MECHANICS OF FLUIDS. By G. H. Bryan, Sc.D., F.R.S., and F. Rosenberg, M.A., B.Sc. *Second Edition.* 2s.

SOUND, LIGHT, AND HEAT. By John Don, M.A., B.Sc. 2s.

MAGNETISM AND ELECTRICITY. By R. H. Jude, M.A., D.Sc. *Second Edition.* Revised. 2s.

INORGANIC CHEMISTRY (Theoretical). By G. H. Bailey, D.Sc., Ph.D. Edited by Dr. Wm. Briggs, M.A., B.Sc., F.C.S. *Third Edition.* 2s.

INORGANIC CHEMISTRY (Practical). By F. Beddow, D.Sc., Ph.D. *Second Edition.* 1s.

ORGANIC CHEMISTRY (Systematic Practical). By G. M. Norman, B.Sc., F.C.S. 1s. 6d.

BOTANY. By A. J. Ewart, D.Sc., Ph.D. *Second Edition.* 2s

STEAM. By J. W. Hayward, M.Sc., A.M.I.Mech.E. *Second Edition.* 2s.

PHYSIOLOGY, HUMAN. By G. N. Meachen, M.D., B.S. (Lond.). 2s.

BIOLOGY (SECTION I.). By W. S. Furneaux. 2s.

PHYSIOGRAPHY (WHOLE). By A. M. Davies, D.Sc., A.R.C.S., F.G.S. 2s.

PHYSIOGRAPHY (SECTION I.). Edited by R. Wallace Stewart, D.Sc. (Lond.). 2s.

HYGIENE. By R. A. Lyster, M.D., B.Sc., D.P.H. *Fourth Edition.* 2s.

ELEMENTARY SCIENCE OF COMMON LIFE (Chemistry). By W. T. Boone, B.A., B.Sc. 2s.

Detailed List of the above, including Books for the SECOND STAGE, post free on application.

UNIVERSITY TUTORIAL PRESS, Ld., Drury Lane, London, W.C.

CURRENT EVENTS.

Fixtures.

On September 30 Prof. Adams will deliver, at the College of Preceptors, the first of a course of twelve lectures to teachers on "Practical Problems of the Classroom." The course will be of assistance to students who are preparing for the Examinations for the College Diplomas.

* * *

The following courses for teachers have been arranged at University College, London:—(1) "Greek Art, with Special Relation to the Collections in the British Museum," by Prof. E. A. Gardner, beginning October 16, at 11 a.m.; (2) "Latin Literature," by Mr. L. Solomon, beginning October 11, at 6 p.m.; (3) "The Phonetics of English," by Mr. D. Jones, beginning October 11, at 5.30 p.m.; (4) "French Phonetics," by Mr. D. Jones, beginning October 7, at 6.30 p.m.; (5) "The British Empire: its Past, its Present, and its Future," by Prof. A. F. Pollard, beginning October 14, at 6 p.m.; (6) a Seminar Course on "The Materials for English History and Biography," by Prof. A. F. Pollard, beginning October 14, at 8 p.m.; (7) "Mathematical Drawing," by Dr. L. N. G. Filon, beginning October 13, at 6 p.m.; (8) "The Results obtained by Experimental Psychology concerning the Intellectual Processes," by Dr. C. Spearman, beginning October 8, at 6 p.m.; (9) a Training Course in School Hygiene, by Prof. H. R. Kenwood and Dr. H. Meredith Richards, beginning October 6, at 7 p.m.

* * *

The following County Council Lectures for Teachers will be given at Bedford College for Women next term:—"Goethe's Life and Work" (delivered in German), by Prof. J. G. Robertson, Ph.D., M.A., B.Sc., on Saturdays, at 11 a.m., beginning October 9; "The Hygiene of Common Life" (lectures followed by demonstrations), by Mr. J. S. Edkins, M.A., M.B., on Tuesdays and Thursdays, at 6.30 p.m., beginning October 7. In connexion with the Hygiene Course of the College, Mr. Alfred Milnes, M.A., will give a course of lectures on Economics in the Michaelmas Term.

* * *

The Lord Mayor will open the new Leathersellers' Technical College in Tower Bridge Road on October 1.

* * *

The National Federation of Rate-payers will hold a two days' Conference on Educational Reform in London early in October.

Honours.

The University of Oxford conferred the honorary degree of D.C.L. upon the Marquis di San Giuliano, the Italian Ambassador, on the occasion of his delivering the inaugural address at the University Extension summer meeting.

* * *

The long list of honorary degrees conferred on occasion of the celebration of the quincentenary of Leipzig University includes the names of the King of Saxony, the Grand Dukes of Baden and of Hesse, Count Zeppelin, Mr. Roosevelt, Mr. Bryce, and Herr Gerhart Hauptmann (dramatist).

Digitized by Google

THE University of Geneva has conferred the honorary degree of D.Litt. upon Mrs. Frederika Macdonald, author of "A New Criticism of J. J. Rousseau."

Endowments and Benefactions.

THE Gilchrist Trustees have granted £50 to the library of the Bedford College for Women, to be expended on the Classical Department; and Prof. Carveth Read, M.A., has given £20 to the Psychological Department of the College.

* * *

A MEDICAL Research Scholarship, £100 for one year, open every third year, has been founded in Manchester University in memory of the late Dr. Ashby. The scholarship will be offered next year.

* * *

THE late Dr. Edmund W. Clarke, M.D. Edin., B.Sc., of Chesterfield, after other bequests, has left the residue of his property to found a Medical Bursary in the University of Edinburgh.

* * *

THE late Mr. Cornelius C. Cuyler, banker, New York, has left £20,000, with the reversion of several million dollars, to Princeton University.

Mr. Cuyler's uncle, the late Mr. M. K. Jessup, of New York, recently left to Princeton University property valued at over a million pounds.

Scholarships and Prizes.

TWO Martin White Scholarships in Sociology, each £35 for two years, are offered by the University of London. Apply (not more than three testimonials and three references) to the Academic Registrar by September 25.

* * *

A MITCHELL Studentship of £100 will be awarded to a graduate or undergraduate of the University of London possessing the necessary City qualifications in order to study and investigate some definite feature of business or industrial organization at home or abroad. Applicants should state their age, place of education, degrees, and other academic qualifications, if any, and the business, if any, in which they are engaged. Applications (with three references) should reach the Academic Registrar by September 14.

* * *

TWO Exhibitions of £30 a year for three years (with an addition on graduation) are offered by the Clothworkers' Company to non-collegiate students who are preparing for honours and for orders at Cambridge University. Apply to the Censor, Fitzwilliam Hall, by October 1.

Appointments and Vacancies.

MR. WILLIAM HENRY HADOW, M.A., Mus.Bac., Fellow and Tutor of Worcester College, Oxford, has been appointed Principal of Armstrong College, Newcastle-on-Tyne.

* * *

THE REV. HERBERT ARMITAGE JAMES, D.D., Head Master of Rugby School since 1895, has been elected Master of St. John's College, Oxford.

* * *

Literary Items.

MESSRS. RIVINGTONS announce for publication during this month "First Latin Lessons" for preparatory and secondary schools, by C. M. Dix, M.A.; and a further instalment of "Notes on British History," by William Edwards, M.A. (as well as adaptations of the series to junior classes). They are also issuing separately the examples in Mr. Borchardt's "Practical Arithmetic for Scholars."

* * *

"THE Pageant of English Poetry" is to be added immediately by Mr. Frowde to the "Oxford Poets" and to the "Oxford Standard Authors Series." It is a collection of 1,150 poems and extracts from poetical works, written by upwards of three hundred poets from the earliest to the present times.

Mr. Frowde also announces interesting fresh additions to the "Oxford Higher French Series" and to the "Oxford Modern French Series." The French classics edited in these valuable series already exceed sixty in number.

* * *

MESSRS. WILLIAMS & NORGATE are publishing "The Chemistry and Literature of Baryllium," by Prof. C. L. Parsons, B.Sc., New Hamphire College; and a comprehensive work on "Elementary Chemistry"—descriptive, mathematical, and experimental—by Frederic B. Emery, M.A.

General.

THE University of St. Andrews is beginning to make preparations for the celebration of its five-hundredth anniversary. It was founded by charter from Bishop Wardlaw on February 27, 1411–12, confirmed by Pope Benedict in 1413; but lectures had already been in progress in 1410.

* * *

THE National Assembly of Iceland is reported to have decided to establish at Reykjavik a University with four faculties and sixteen professors and lecturers.

* * *

PROF. ARTHUR J. EVANS, the distinguished archæologist, has accepted an invitation to stand for Oxford University in opposition to Lord Hugh Cecil.

* * *

A NEW Labour College is to be founded at Oxford on a thoroughly socialistic basis—an outcome of the recent "students' strike" at Ruskin College.

* * *

THE REV. DR. MACDERMOTT, of Belmont, has petitioned the Lord-Lieutenant of Ireland in Council to disallow the statutes of the Queen's University, Belfast, in so far as they permit the teaching of Scholastic Philosophy in the University.

TUDOR EDUCATION.

By Professor FOSTER WATSON, M.A., University of Wales, Aberystwyth.

II.—THE EDUCATION OF BOYS.

IN the preceding article (*The Educational Times*, October, 1907) I presented Vives's views on the education of girls. I gave that first because treatises on the education of girls in Tudor times are rarer than those on the education of boys. However, Vives expresses himself in more detail in dealing with the training of boys. In some ways this treatise is one of the most important of Tudor educational documents, not inferior in interest to that of Erasmus. Prof. W. H. Woodward has given an English rendering of Erasmus's treatise. Now—for the first time, I believe—is presented an English translation of Vives's tractate:—

JOANNES LODOVICUS VIVES
To CHARLES *the son of* WILLIAM MOUNTJOY.

Since I have desired to show to your Father (a most distinguished man, adorned in the highest degree with every kind of virtue) how much he was loved by me, and how he has always treated me with singular benevolence, I determined to write something for you on the beginning of your studies, in which all the virtue and method of erudition should show themselves as does the sap in the seed of future plants and fruits. I took pains not to overwhelm you by the copiousness of precepts, or to deter you by needless difficulties. Everything has been adapted, as far as it was possible to do so beforehand, to the capacity of your age, or that of a slightly older age than yours. In sending you this little book I think of it as going to your Father, the maintenance of whose own character and the promotion of the education of yours are his care, as much as the continuance of his life, so that he may love you, if you so turn out, as he desires, to be a thoroughly honourable and learned man. For this purpose this little book has been put in your hand to follow it out with intellect and industry. Farewell, and imitate the example which you have at home of your extremely wise Father. —London, 1523.

Religion.

Since wisdom, virtue, and knowledge come from God alone, it is fitting that the first entrance to all these should be through God, towards Whom it behoves thee always to comport thyself with the greatest piety, and in His affairs to bear a most religious mind, nor to carry out any work of His in a light, sluggish, or perfunctory manner.

Work.

Since God does not give His gifts to idle people, there is need of labour and diligence in the pursuit of letters and virtue.

Memory.

Know that memory is the treasure of all erudition, and that, if it is lacking, all labour is superfluous, as if you were to pour

Digitized by Google

water into a wide-mouthed jar perforated at the bottom. But no one has a memory so unfortunate that he cannot make it tolerable if he develops it by practice. For there is nothing which gives more joy if work and labour is applied to it than memory, whilst nothing is more easily corrupted or perishes that memory if allowed rest and ease. Therefore every day something should be learned by heart, even when it is not necessary,* merely lest a torpor should attack the memory, than which there is no more pernicious a disease. Sound health contributes to a sound memory; therefore be on your guard, in the first place, against repletion, against drunkenness, against immoderate amount of wine, against strong beer (*cereuisia*), and against lying on a couch.

The Tutor.

The teacher is no less to be loved, esteemed, revered than a father. Truly teachers bear a certain image of our fathers to us, for you can receive no greater kindness than that of being made more scholarly (*eruditus*) and better morally—for to these two gifts nothing in life can be compared. Add to this, if you love your teacher, you learn more easily. You will then never despise what he says, nor neglect his behests. Always in your mind accord dignity to the teacher, and treat his words as oracles. Do not merely love him, but strive to be loved in return by him, that so he will teach you the more diligently. By obeying his precepts closely and modestly, and by observing, honouring him in all he says or does, or esteems in life or speech, so act that he will feel that you also approve it. If he disapproves anything, then do you also shun it. Listen to him intently—to his words, his forms of speech, note down his opinions, and make yourself as far as possible, like him; take him for example, because when the teacher shall see this he will take pains that you shall not possibly receive from him any thing which would be unworthy of imitation.

Fellow-pupils.

Fellow-disciples are, as it were, brothers (*fratrum loco*). For you are born from the same master, as if from the same father. You are bound by the sanctity of literature not less than that of blood. Therefore you should wish their welfare no less than that of brothers. If one is more learned than thyself, do not hate him for this reason, but applaud his ability and strive to be equal to him in learning and virtue, even to surpass him, so that a like approval may be thine.

Emulation.

Do not strive enviously, or with malevolence, against those better or wiser than thyself, but with virtue, honour, zeal. Do not look down on those inferior to thyself; rather help and raise them that they may grow strong to climb up. For thou thyself art neither worse nor less skilful if thou hast others equal to thee: but then are so much the better thyself if others have risen upwards by thy assistance. But, if all are ignorant, there will be no one even to understand, and much less admire, what is good in thee. It is certainly splendid to contend with the good; it is very splendid to improve on them, if it be done in a right way and by means of virtue, and without any sort of deceit.

Making Notes.

Make a book of blank leaves of a proper size. Divide it into certain topics, so to say into nests (*nidos*). In one, jot down the names of those subjects of daily converse, *e.g.*, the mind, body, our occupations, games, clothes, divisions of time, dwellings, foods; in another, rare words, exquisitely fit words; in another, idioms, and *formulae dicendi*, which either few understand or which require often to be used; in another, *sententiae;* in another, joyous expressions; in another, witty sayings; in another, proverbs; in another, difficult passages in authors; in another, other matters which seem worthy of note to thy teacher or thyself. So that thou shalt have all these noted down and digested. Then will thy book alone know what must be read by thee, read, committed, and fixed to the memory, so that thou mayst bear in thy breast the names thus written down, which are in thy book and refer to them as often as is necessary. For it is little good to possess learned books if your mind is unfurnished for studying them.

Industry in Writing.

Take care that thou hast a practised hand in writing. Never go to the lessons of thy teacher unprovided with pen and paper, so that thou let not fly by thee any elegant, rare, or necessary word, or a useful *formula loquendi*, or a significant, weighty, or wise saying. Then do thou at once, having heard it, enter it into thy treasures. So wilt thou prepare for thyself the greatest riches of erudition, and these within a short space of time.

Reading.

Do not read any book without selecting passages in the same way as I have said in speaking of the tutor's conversation. Never read any thing with a loitering mind, or a mind intent on other things; let it be intently fixed on the reading, in which these points are to be considered; words, *formulae loquendi*, and ideas. Consider carefully what words are applied by the writer to explain the subjects on which the author treats, what idioms, what forms of speech. Then the matter itself must be observed, what the author means by the language he uses. One by one you must consider what you can single out, what retain, what turn to use (*in usum tuum vertas*).* Always have pen and paper that you may write out notes of what you admire and what delights you. So, too, those points which cause you delay, mark them out, so that you can get them resolved by your teacher or fellow-pupil.

Questioning.

Do not be ashamed to ask questions concerning what you do not know. For this is not disgraceful. It is ignorance which is disgraceful. Do not wish to persuade others that you know what you do not know. You will then deceive yourself, not the others, and when you are thus caught in your ignorance, it will raise a laugh against you.

Correction.

Take care not to forget what you see blamed or corrected, not only in yourself, but also in others. Never let it be necessary to be blamed twice for the same sort of fault. Make use of the mistakes you see in others to your own improvement. For a wise man often amends his own life by the errors that he sees in the lives of others.

Conversation (sermo).

Speak yourself as you hear the instructed speak, or as you read in Latin writers. Shun the words which you consider of doubtful value both in speech and in writing, unless first you have got to know from your teacher that they are Latin. With those who speak Latin imperfectly, whose conversation may corrupt your own, rather speak English or any other language in which there is not the same danger. Converse gladly with those who are wise and fluent. No pleasure is greater than to hear those who, in their speech, have instantaneous balm (*praesentanea medicamenta*) for all the ailments of the mind.

Style.

Repeated practice is the best master for the attainment of good style, and the fashioner of speech. In the beginning use not only words taken from Latin authors, but also short sentences collected from them. They should be so aptly put together that for the most part they are another's. But little by little you will mix your own composition until the time when your stage of erudition has developed, your writing can become all your own. First write few words at a time, but with accuracy, so that you may observe not how much, but how well it, is done. For, as the practice increases, you will retain the carefulness. Speed and facility will be produced by exercise so that you will come to write at the same time with ease and excellence.

Authors (for conversation).

In the meantime, whilst thou canst not at thy age judge concerning the value of authors, I give you my opinion on those authors who are to be esteemed especially from the point of view of increasing the richness of vocabulary, and for increasing knowledge of subject-matter. For daily conversation Terence is of great importance. Cicero made considerable use of him. Indeed, on account of the charm and gaiety of speech in his plays many thought they were written by nobles of the highest families. Also the letters of Cicero, especially those to Atticus, teach much and may render ready practice for purposes of conversation. For in them the conversation is pure and simple, such as Cicero himself used with his wife, his children, his servants, his friends, at dinner, in the bath, on his couch, in the garden. There are, too, the familiar "Colloquies" written by Erasmus, which are as pleasant as they are useful. These are of no small importance, since Erasmus is a man of cultivated and refined intellect. The letters of the younger Pliny may supply many ideas (*sententias*) of any kind of letter, which the writer of letters may need. They seem as if they had been composed almost so as to describe a few events, very much like Cicero. On the other hand, they differ from his treatment in the times con-

* *Cf.* Prof. Wm. James.

* *Cf.* Prof. Laurie.

Digitized by Google

cerned. The opinions expressed are often charming and afford material for enriching the expression in letter-writing. The letters of Politian have much the same characteristics except that sometimes they have been composed with too great carefulness, whereby they are somewhat more laboured. Their writer has taken pains that nothing should be included which is not polished in the highest degree. On this account he will not let pass by any good word which he can appropriate. An anxiety of this kind is not very conducive to composition, suitable for epistles. There are, too, the letters of Philadelphus, which have more verbosity than grace, and the pleasantries of Calentius. If you have time, you may read Apollinaris Sidonius and Apuleius' "Asinus" and "Florida."

Histories.

Histories also can build up a knowledge of language, as those of Livy, in which is a very delightful fluency, and, as Jerome says, a milky fountain of eloquence. There is Suetonius, in whom there is that marvellously close appropriateness of speech which has more nerves than body. Cornelius Tacitus would be a great help if he had come down to us whole and corrected, and, such as he is, he is emphatically of use. In Caesar's "Commentaries" is shown that chastity of style of Roman conversation which was in the pristine Roman nobility; nothing can be imagined more terse, polished, elaborate. These "Commentaries" should be known accurately. They will greatly enrich materials of speech and will make it readier for use. Sallust was the brightest writer of Roman affairs, as Tacitus says. He is often in the hands of boys, although he seems to me to be more suited to those who have made considerable progress in the language. His grace of writing is inimitable, and, however often any one goes back to Sallust, the reader never feels tedium or satiety.

Agricultural Writers.

Cato, Varro, Columella, Palladius, Pliny, and the architect Vitruvius suggest words in various subject-matter, and are, therefore, to be read diligently, and the words used to be referred to the things described, so that we do not translate it wrongly. Pliny is as varied in expression as the nature of the subjects on which he treats. There is, therefore, in him a great wealth of both subject-matter and of expression. Vitruvius will provide by no means a small store of language. If his subject-matter were changed to suit the present time, they would not be so obscure.

Poets.

Poets are also to be studied for the sake of the mind; for they often relieve the tedium of business, and of the reading of unfettered speech. This alternation of verse and prose keeps the mind intent on studies for a longer time. Moreover the poets abound in unusual words and figures of every kind which common speech at one time or other requires. The poets are, in invention, sublime, pleasant, keen, weighty, facile; in words, sweet, charming, gay. They raise up every emotion as the occasion demands. Virgil holds the first place, and rightly so, in my opinion, on account of his seriousness and his ideas. Horace is joined with him as being so polished in his verses, singular in his expression, and, for the most part, perceiving life wisely. Silius Italicus has shown great industry. Of the Latin tragedians Seneca alone has survived to our age. But, in my opinion, Lucan holds the victory over all, in the majesty of his words and the force of his subjects, in the value and number of his thoughts. Also the poets of our religion should be read, Prudentius, Prosper, Paulinus, Servilius, Juvencus, and Arator, who, whilst they discuss matters of the highest kind, for the salvation of the human race, are neither crude nor contemptible in speech. They have many passages in which, by their eloquence and charm of verse, they vie with the ancients. Some even think they surpass them.

Grammarians.

In all the authors you read notice how the grammatical forms are preserved and where they are neglected. For in many of them the use of them is varied and multiform, and cannot be enclosed within the norms and rules. Now that which is constituted by actual use must be followed rather than the grammatical art, and not contrariwise. Yet that art, on this account, is not to be despised. Only do not follow it so closely as to be strangled by it (*ne sit superstitiose anxie*). In our time we need rules, since we have not the Roman people to whom to talk, and all these rules have to be wrested out of the Latin authors. If we do not get help from them for the right way of speaking, we shall be forced on solecisms as being our chief help. For we have different material of thought from the ancients, and must speak therefore in other terms. Even when the same language was spoken in Latium and Greece by the learned and the people they could not do without rules. Many have written grammars; but one or other of the best should be chosen—Perothus or Aldus, Nebrissensis, Mancinellus, Sulpitius, Ninivita. For elegancies of speech Valla should be diligently perused: he is too pedantic, but most apt for rendering students more wary.

Expositors.

You will at your age, and even at a later age, need expositors in reading authors. For there are in writers many difficult places which you can hardly successfully attack, even with the most troublesome labour. Expositors explain everything, with a minimum of time and work, which leads to usefulness and advancement of knowledge. In the number of such expositors are Servius on Virgil, Donatus on Terence, Acron and Porphyrion on Horace, as well as some more recent commentators. Vocabularies are also to be had which I should wish you always to have at hand whilst studying, so as to consult them when doubtful as to any word. We have in this respect a great lack in the study of Latin literature. For the most learned are these: Varro, Festus, Marcellus; but they are too difficult for the learner and only to be understood by those who are somewhat learned already, and they do not treat of all the matters which we now need. The "Cornucopiae" of Perothus and the work of Calepinus, which we all use, are not sufficiently comprehensive, and lack in scholarship; nor are they safely to be trusted. Perothus accomplished what he could; but what he left undone is considerable. Calepinus, indeed, quaffed the horn of Perothus, but took upon himself to teach others when he himself rather needed a teacher. But in the meantime we must make use of these dictionaries until there shall be forthcoming for the world some other which shall hand down this part of scholarship more happily. Budaeus, in his "Annotationes Pandectarum" and the "De Asse," digs out many subjects hitherto hidden in the deepest darkness, and also has disclosed and brought forward what was unknown even to the learned—a great work for the revival of learning.

You must also read the authors for yourself, and not wait till your tutor has explained them all: else you will never understand anything without it being read and explained to you. So when that comprehensive treatise of words and things shall be prepared it will have to be sought from a very large number of writers on varied subjects from the intelligence of one or another author, whom the teacher explains, and there will have to be given to this study an application neither sluggish nor feeble. Many others must be known by the compiler. There are words and *formulae loquendi* the same in all, by comparison of which the meaning is gathered; so that there is no book which, rightly understood, may not be a teacher of the understanding of many others, if only the judgment is applied and what is already known is sown amongst those topics under consideration. It is not for nothing that it is said that one book is opened by another.

Greek Letters.—Production of Sounds.

Quintilian thinks that the Greek letters could be learned equally well at the same time as the Latin letters. First, the sounds of the letters should receive diligent attention, and, as far as possible, be purely and perfectly pronounced: for it is no greater labour from the first to learn them well than ill, though the fruit is so greatly richer. You will observe how the learned pronounce, and imitate them; for it is necessary that you become equal to them, or at least that you pronounce not unlike the way they pronounce theirs, by comparing yourself with them as your example. On the practice of the right pronunciation Hieronymus Aleander has written his learned "Tabellae." Only take care that you do not so accustom yourself to Greek pronunciation that you pronounce the Latin in the same manner. And do not confound the methods of accents, which are diverse in the two languages. The Greek generally puts the accent on the last syllable; the Latin on the penultimate.

Inflexions.

Then we shall come to the inflexions of nouns and verbs, which you fix thoroughly in the memory, so that ignorance of them shall not compel you to hesitate and blunder later on in your reading. There are the first two books of Theodore Gaza, which teach this subject in very short compass and with skill. Then you can have in collected form the rules of accents and orthography—for the most part in the third book of Theodore Gaza. Lest you should have to read the whole of that volume—a

Digitized by Google

troublesome task, and of slight value in many places—the parts selected by Caporlinus from Gaza will suffice at this stage.

First Exercise in Reading of Authors.

It will be useful, for the sake of getting a vocabulary, to hear some authors read by your teacher, and especially some which are easy and clear. Of this kind are some of the Dialogues (especially those which do not make white black), the short orations of Isocrates, Plato, and the epistles of some others, and the fables of Aesop, in which you will understand before all which words are used to signify a particular thing and in what manner they are inflected.

Syntax.

Single words are joined together in speaking. Concerning construction more works are written by the Romans than the Greeks. Gaza, in his fourth book, has taught in a difficult manner. He followed Apollonius, who was himself somewhat misty. Lascaris at great length tried to reduce all Greek words to those five kinds and rules of Latin words—with ill success, as I think. It will be best to notice the forms of Greek speech in the reading of authors, and especially how the idioms of Greek and Latin should differ from each other.

Reading.

To begin with, I think the orators should be read—Isocrates, Demosthenes, Lysias, Aeschines, Aristotle, and part of Lucian. Then the philosophers — Plato, Aristotle, Xenophon, Theophrastus. Next those ironlike writers—Thucydides and Plutarch. If you have learned to know any works of these in a Latin translation, read those works first, so that the understanding of the meaning of the words may be the readier. Before you attack the poets read Apollonius and Johannes Grammaticus on the Greek dialects: then chiefly translate, to begin with, the Attic writers such as Aristophanes, and, afterwards, Homer, the fountain of the rest. Then, Euripides and Sophocles. Have a lexicon by you—say Suidas or Hesychius. It will be helpful to possess a Greek-Latin dictionary, from which a word will sometimes become clearer in Latin, whilst, if it were explained in Greek in the lexicon, you would not sufficiently understand it.

Expositions.

Compare the Greek with its version in Latin if there are verbal translations as the "Fables" of Aesop, the "Tabula Cebetis," and part of the "Dialogues" of Lucian which Erasmus and More translated. Then turn to those who altogether, according to their own fancy, chose their words so as to render freely the sense of the author whom they were interpreting—*e.g.*, Thucydides and Herodotus, a translation of which authors was made by Laurentius Valla. But before all others rank the translations by Budaeus of Herodianus, Politianus, and some small works of Plutarch. Hermolaus, in translating Themistius, has been carried too far away from the original by the heat of youth and by the desire of being ostentatious. The prince of translators, by the consent of every one, is Theodore Gaza (who translated the "De Animalibus" and "De Problematis" of Aristotle and the "De Stirpibus" of Theophrastus). Gaza is the best translator, whether it be for the dignity and elegance of his version or the copiousness of his Latin, in which he vies with Greek, or the happy boldness with which he invents words or takes refuge in analogies so that he may render the Greek more neatly.

The Fruit of Greek Learning (Graecitates).

To the one who has acquired the knowledge of the Greek tongue, the fountains of all branches of learning stand open, for these have issued from the Greeks. He is admitted to the knowledge of the greatest minds in which Greece was always so prolific. Moreover, his copiousness of Latin speech is deeper founded, both because the Latin people sought from Greece the schemes and figures of speech and colours of subject-matter, and also because, when the Latin vocabulary is not at hand for signifying a thing, a term can be borrowed from the Greek, which is so full of words. Nay, also the Latin authors after the time of Cicero were so studious of Greek, or such displayers of their knowledge, that a great part of their idioms were poured across into Latin.

Herewith, my Charles Mountjoy, thou hast what suggestions I thought to be able to help thee to the rudiments of thy studies. Do thou strive hard that thou mayst be, in a short time, thy own great teacher in these matters, and of that highest kind of good people who of themselves, by their own efforts, have acquired a knowledge of all things.

THE DEVELOPMENT OF INITIATION.

AN EXPERIMENT IN THE CULTIVATION OF INDIVIDUAL RESEARCH AND PRIVATE STUDY IN SCHOOLS.

By J. Duckworth, B.A., Organizing Superintendent, Carlisle.

For some time there has been a growing conviction that the product of our schools is not what we should like it to be. Parents make sacrifices to keep a child at school a little longer than usual; yet the child often does not appreciate the effort made on his behalf, and, so far from being interested in his school work, cheerfully leaves on the very day he becomes legally exempt from attendance, and for the next few years avoids any institution that looks like a school.

Yet we see children in the infant schools lively, eager, inquisitive, ready to talk to their teachers, to ask questions, and to "do" things, and we often note with regret that, as they pass through the senior school, their brightness of demeanour fades away, and the boy gradually degenerates into the "professional schoolboy," who takes no particular interest in his school work. What is the cause of this? Briefly, it is that the interests of the child have not been fostered, but by improper usage have been stifled during his progress through the school. Instead of learning how to *do* things, he has had things done for him, and consequently, at the age of fourteen, he is often helpless to help himself. On all hands we hear papers read and lectures given on the method of teaching this or that; what we need far more is some healthy criticism of our ideals and of the organization of our schools.

With the object of attempting to deal with this problem, I set before me, as an ideal, the maintenance and further development of a child's interest and the production of ability rather than the storing up of knowledge. And here it is that one feels the uselessness of indulging in vague generalities about the training of character and so forth, which are so often only an excuse for slackness in detail; we must have clearly before us certain habits or kinds of ability which we wish our pupils to show, and then devise exercises calculated to develop these habits, being always, however, on the watch to let the child take its own initiative, whenever any is shown. The scheme detailed below has already been in use for nearly three years in one of our schools and for shorter periods in others, and the results have been highly satisfactory.

One of the exercises that tend to produce this ability is the practice of intelligent note-taking. How few children who leave school can or do take notes of a lecture which they may happen to attend! They have seldom learnt how to do so. At school the teacher has usually written the summary of the lesson on the blackboard and the children have meekly copied and learnt it; or the teacher has dictated it, with the same result. Memory work has been the ideal, and ability apart from memory has received little consideration. I would therefore suggest that every child in the upper school should practise the art of note-taking. Lessons should be so given as to provide facilities for this; the notes could afterwards be "written up" into an abstract or essay upon the subject of the lesson. This would serve as a starting-point for the exercise of the child's own initiative; the essay would be embellished with illustrations, maps, plans, diagrams, &c., either as supplied by the teacher, or, better still, by the pupil, from his own reading and research or inventiveness, and everything possible done to make his essay complete and exhaustive. A boy needs time for this, and he should have as much time as is needful, provision for which can be made in the time-table. A child who can take notes has acquired some valuable habits—close observation, mental alertness, power to seize the salient points of a discourse, and self-expression in writing and drawing.

Another object to be sought is to enable a pupil to leave school with the ability to use books as a means of obtaining knowledge, and to this end he should learn how to read selectively and to pursue a topic through many pages of printed matter or through many books by means of the index or other indication.

Applying the method to history and geography, say, and with a class of forty or fifty children, the procedure is somewhat as follows: — A supply of suitable books of reference, &c., is provided. One, two, or more of each may be provided, according to probable requirements. A number of questions or topics upon history or geography are framed, typed or duplicated, and

Digitized by Google

distributed to the children. The child selects any topic he fancies, finds the necessary books, and makes sufficient notes for his purpose. Having obtained all the information he can from one book, he searches others in quest of further information on the same subject, until he has exhausted all the sources of information at his disposal. In pursuit of this object, he uses information gained from the teacher or from sources outside the school—the more the better. Using the notes he has made, he next writes them into a draft essay, using a lead pencil rather than a pen, as there is less danger of his handwriting suffering, while a higher degree of speed can be attained. Next he goes carefully through the essay, correcting the spelling, improving the composition, and attending to stops, paragraphs, and other matters. This he must do himself, for self-correction is a vital element in the training. He may also obtain further criticism from a fellow-pupil or from the teacher. When he is satisfied with his effort, the essay is written out in a fair hand and, in its final form, with such wealth of illustration, maps, plans, &c., as the nature of the topic and the fancy of the pupil may suggest. It is then filed for the head teacher's inspection, and another topic is begun and treated in the same way. As only two or three pupils can work on the same topic simultaneously in proportion to the number of books supplied, it is necessary that a large variety of topics should be before the children at any one time, and the more topics there are the less probability there will be of the work in any case being delayed for want of books. It is essential that, while there is hard and close work, there shall be no mere hurry. The pupil must not be harassed to "get on" faster nor the teacher censured for not getting more topics worked through; so long as it is clear that there is no dawdling, and that any apparent slowness is due to the nature of the subject or to a desire to exhaust it. Anxiety to show a large number of topics will eventually lead to shallow, superficial work, and, considering its object, the process will become a waste of time. A topic thoroughly worked out and properly illustrated and written up with due care, will do more to interest a boy and give him a habit of doing a thing well than a score of hurried, superficial essays such as form the usual output of the schools. We are feeling more and more the need of something into which the child can put himself and his own best effort, as distinguished from the contrary attitude of following the lead of the teacher in everything.

In such work the teacher's first effort must be to eliminate himself to some extent. He must frankly recognize that the child must be taught to look upon him as only one (albeit a most useful and sympathetic one) of the many means of obtaining information upon any subject in which he is interested. The teacher is the child's guide, helping him at difficult places, showing him the best books and apparatus for dealing with a given subject, and keeping constantly before himself the purpose of the whole exercise—namely, the development of the pupil's interests.

The teacher will also be able to do an important work in showing the pupil how to express ideas and statements in different ways. I recollect seeing a pictorial representation of Tennyson's "Brook" done by a boy of twelve, giving a bird's-eye view of the windings of the river, Philip's farm, and other details of the poem. The incident suggests a method of treatment which might be applied to an extensive variety of subjects—indeed, an important part of the teacher's work will be to suggest different ways in which ideas and facts may be expressed. Drawing and colouring will naturally take a prominent place in any mode of expression; but there are others, and the teacher who shows the most versatility in developing these will be the most successful. Thus with pupils studying history, the construction of a time chart, showing graphically the length of each reign or dynasty, and the position in it of important events, will naturally lead to the acquisition of a good deal of knowledge; maps, plans, diagrams, pictures transferred from cuttings, or drawn and coloured by the child, and other modes of expression will be used to illustrate historical facts and details taken from the text of the book: mere copying, apart from the essay, is of no use for the larger purpose indicated.

In geography, the heights of mountains, the lengths of rivers, areas, populations, and statistics of various kinds all lend themselves to expression by diagrams and graphical methods; a book of travels may be followed out step by step, and a map of the route made. All these exercises will usually be worked in connexion with the investigation and writing up of notes made upon topics given to the children or suggested by them.

It is not intended, however, that pupils should be exclusively kept to this mode of obtaining knowledge. The freshness will wear off, and without change the whole process will become tedious. The teacher will occasionally give a lesson upon some topic arising out of the subject studied, which will vary the monotony of the work and prove refreshing to teacher and pupil.

Further, care must be taken not to make writing the only mode of expression. Verbal expression must have its place in the system, and a weekly debate among the members of the class is a useful way of promoting this. It gives point and purpose to the research and subsequent essay writing, if the pupil reads his effort as a "paper" to the class at one of the debates. It is found to be a real stimulus to good work, and, after the first shyness has worn off, many pupils will show considerable talent for verbal expression and debate. Sometimes subjects of debate may be proposed, pupils opening with papers on the positive and negative side respectively, and a vote taken at the conclusion. Some of our well known topics are well suited for this purpose, and such a subject as "Was the execution of Charles I. justifiable?" will involve the absorption, with added interest, of a considerable amount of knowledge. In all these matters, however, it is the habit developed which is of more importance than the information gained.

Some such method of education as is here proposed seems to form a fitting course for the last years of a child's school life in connexion with literary work. It brings into play all the intellectual forces that he is supposed to have acquired during his school career, and applies them to the practical purpose of enabling him to obtain knowledge for himself. In this way he can make use of all the information he has obtained—of his power of reading, composition, drawing, sketching, and measuring; all these are put to practical use as means of obtaining or illustrating knowledge. It is also a valuable means of forming the habit of self-help and of ability to use books in a student-like manner. It cultivates all the modes of self-expression—by speech, by written composition, and by diagrams and other manual methods. What is required to keep it efficient is that the teacher should be sufficiently well informed to suggest lines of work, to help pupils over difficult places, and keen and enthusiastic enough to fire his pupils with a love of "doing."

There is a possible danger in outlining too clearly for the pupil the line of investigation to be followed, but it is helpful, and indeed necessary, to do so in many cases, and especially at first. If the spirit of debate is fostered, and the listeners to the paper are encouraged to ask questions, and to "heckle" the reader, it will have a good effect in stimulating the latter to be thorough in his reading and preparation.

It may be helpful if I mention a few of the topics that have been worked in the case of a class studying the history of the nineteenth century and its connexions:—

1. What is coal? How has it been formed? What varieties of coal are there? What are the characteristics of each? In what parts of the British Isles do we find beds of coal? When did coal begin to be used in England? How is coal mining carried on? Sketch a section of the workings. What are the dangers to which coal miners are exposed? Explain the principle and construction of the Davy lamp. Write a sketch of the life of Sir Humphry Davy.

2. Trace the causes and events of the revolt of the Greeks against the Turks in 1821. What notable Englishmen joined in it? How did our Government help? and what was the result? Draw a map of the eastern part of the Mediterranean Sea, showing all the necessary names.

3. What were the political disabilities of the Catholics at the beginning of the nineteenth century? How did the Catholics come to be so harshly treated? What connexion had Lord George Gordon with the movement? What caused people to think that these disabilities might now be removed? Why did the Irish take a principal part in getting these disabilities removed? Sketch the life of Daniel O'Connell; show how political leaders in England gradually came round to his views. When and by what Acts were these disabilities largely removed? Do any still remain?

4. Why did women and little children go out to work early in the century? What did they work at? What were the effects of their doing this (*a*) on their health, (*b*) on their moral character, (*c*) on their success in life? When factories and mines began to increase, what part did women and little children take in the work in such places? Find out all you can about this. What wages did they get? What did they lose? Find out what you can about Lord Shaftesbury. What were the Factory Acts? What other laws have been passed respecting working by children? Why do people not want children to work too early? What do children under fourteen work at in your own district?

5. How were poor people cared for in early English times? What

Digitized by Google

were trade guilds, and how did they help poor people? When and why did the trade guilds disappear? Who helped the poor then? How did the monasteries help the poor? When these were destroyed, what became of the poor? How were the poor treated in Tudor times? How did Queen Elizabeth's Parliament deal with them (1601)? What changes were made in 1834?

6. Draw several maps of India. Show upon them severally, in colour, the extent of our Empire at each of the following years:—1810, 1820, 1834, 1840, 1850, 1860. What were the characteristics of, and the countries inhabited by the Sikhs, Mahrattas, respectively? Give an account of the massacre at Cabul and of the subsequent campaign of 1839–42. Draw plans of the pass and country, or, better, make a model of clay or cardboard, showing the mountains, passes, &c., and colour. Find out what you can about the causes, events, incidents, and results of the Indian Mutiny. Make maps and plans to illustrate. Describe any evils such as Suttee, Thugs, Child Marriage, Juggernaut, &c., which are disappearing. How is education being promoted in India?

7. Trace the course of African exploration under Dr. Livingstone. Make maps showing what he discovered. Do the same with the discoveries of Stanley and other explorers. How did the Boers come into South Africa? What native people lived there then? Describe their appearance and habits. Make sketches. What were the relations between Boers and natives? How did the British come into South Africa? Describe and illustrate the successive "treks" of the Boers. Give some account of the two Boer Wars, with frequent maps. How did Mr. Cecil Rhodes help the development of South Africa?

8. Give an account of improvements in: (*a*) Modes of iron smelting. (*b*) Mining. (*c*) Making and maintaining roads and canals. (*d*) Pottery. (*e*) Cotton weaving. (*f*) The steam engine, locomotives, steamships. (*g*) Improvements of agriculture. (*h*) Improvements of waste lands.

Among questions of general history are:

1. A study of architecture in England, domestic and ecclesiastical.
2. A study of dress, armour, modes of conveyance, &c., of different periods.
3. Modes of trial, and the gradual development of the present system.
4. A study of the progress of industry, agriculture, development of mining, manufactures, &c.
5. A study of the social condition of the people from serfdom onwards.
6. The rise and decline of religious orders in England.
7. Studies of struggles for great principles—*e.g.*, the equality of all before the law, the right of the Commons only to levy taxes, &c.
8. The development of local self-government.
9. The extension of our Empire.
10. Scientific discoveries and their application to industry.

Practical geographical studies may take the form of maps, contoured or tinted by pupils, to show height of land, vegetation, density of population, rainfall, minerals, &c. Some excellent suggestions are given in Snape's "Geographical Diagrams" (A. & C. Black).

The apparatus required will be an atlas, a reference atlas for occasional use, "Whitaker's Almanack," exercise books, blank or ruled faint or cross faint for maps, diagrams, and other purposes (many teachers prefer "blocks" or loose sheets), ruler, pen, pencil, rubber, box of colours and brushes, with as many as possible of good text-books, works of reference, and readers upon different subjects of study.

I have dealt only with literary subjects, for it is in connexion with these that the danger of stifling individuality seems greatest, for they naturally lend themselves to lecturing and methods of teaching which often produce quick, showy results along with little, if any, real interest in the subject.

In conclusion, and at the risk of being tedious, I must repeat that the success of the scheme will depend upon the teacher. He must be able to efface himself to a certain extent, to avoid fuss and bustle, and to act rather as the servant of the pupil than as his master. Give the child a suitable environment of books and other apparatus, let the teacher create an atmosphere of quiet, strenuous endeavour, and leave the natural ability of the child to develop itself.

And, further, so long as our streets are filled every evening with an aimless crowd of youths and girls who have only recently left school, and can find nothing better to do than loaf about, we shall need to be constantly asking ourselves whether our educational machinery and methods and ideas of training cannot be improved so as to bear more effectively upon this evil. Many causes, of course, are at work in producing this state of things, but educational agencies are a very important factor in making an impression upon it, and the greater the number of young people who can be turned out of our schools self-reliant and with the intellectual habit developed, the greater will that impression be. Any scheme, therefore, that appears likely to develop interest and power of using books deserves encouragement as an attempt to deal with a serious social as well as educational problem.

THE TEACHING OF MATHEMATICS.

INTERNATIONAL MOVEMENT FOR REFORM.

By Louis C. Karpinski, University of Michigan.

[From the *School Review*.]

The international character of the movement toward reform in elementary teaching is attested by a Commission to investigate the teaching of mathematics which is being formed at the direction of the International Congress of Mathematicians which met at Rome in April, 1908. The formation of such a Commission was proposed in the Section of the Philosophy, History, and Pedagogy of Mathematics by Prof. David Eugene Smith, of Columbia University; the Section recommended the appointment of such a body to the Congress, which empowered a Committee—consisting of Prof. Felix Klein, Göttingen, President; Sir George Greenhill, London, Vice-President; and Prof. H. Fehr, Geneva, Secretary—to appoint the Commission. This Committee reported in September to the Cologne meeting of the Deutsche Mathematiker Vereinigung the plan of organization of the Commission. Representatives of Italy, Germany, France, England, the United States, Greece, Russia, Austria, Belgium, Denmark, Spain, Holland, Sweden, Hungary, Norway, Portugal, Rumania, and Switzerland are to form the executive body, while representatives of practically all other civilized nations are invited to participate in the meetings of the organization. General direction is lodged in the original Committee. It is proposed that the investigations begin immediately and that reports be made to the mathematical and educational societies of the various countries in order to permit of full discussion. Final reports are to be made to the next International Congress of Mathematics at Cambridge, England, 1912.

The scope of the work includes all schools in which mathematics is a subject of instruction, from primary schools to the University. The plan of studies, the systems of examinations, the methods of teaching, the preparation of teachers, laboratory methods in mathematics, the correlation among the different branches of mathematics, and the correlation between the purely mathematical and the applied branches are all to be examined not only with regard to the actually existing conditions, but also with a view to ascertaining the tendencies shown by the changes effected in the last two decades. Explicit statement is made in the preliminary report of the Committee that it is not the aim of the Commission to propose programmes which should be adapted to all countries, but rather to suggest those general principles which should inspire the teacher. The American delegation in charge of the investigations in the United States consists of Prof. William F. Osgood, of Harvard University; Prof. David Eugene Smith, of Columbia University; and Prof. J. W. A. Young, of the University of Chicago.

In the United States the National Educational Association attacked these questions as early as 1892 and 1893 through the well known Committee of Ten and the Committee of Fifteen. More recently reports have been made on proposed changes to the Mathematics Section of the Central Association and the numerous State organizations of teachers of mathematics. In England the widespread Perry movement has had as its aim to make the work in mathematics more useful and practical. The French school curriculum has lately been revised, while in Austria and Germany recent reform committees of national and sectional learned societies are too numerous to mention.

Humanization of School Work.

For fifty years, movements to humanize the work of the schools have been in progress. As a partial result of this effort Nature study, sewing, cooking, and like subjects have been introduced in the curriculum. Many educators believe that this method of humanizing the work, at least in the extent to which it is often carried, is too expensive of time and energy. The pupils scatter effort among so many studies that they obtain little real training. It need hardly be stated that training comes from consecutive application along one line of activity, be it carpentry or be it Latin. Tinkering is more destructive of ability in children than it is even in adults. Probably in the course of a few years a readjustment will eliminate or curtail in time subjects like cooking, sewing, and iron-work. As elective in high schools or even in elementary schools these subjects could be made effective agents for training, but reading, writing, arithmetic, and geography must again occupy some-

Digitized by Google

thing like their old place in instruction. These older subjects, too, have been humanized—made vital and immediate. No re-adjustment can eliminate the beneficial effect on the general studies of the influences which brought the so-called practical studies into the curriculum.

Vitalization of Elementary Work.

It may not be amiss to recount some of the ways in which this humanizing effort has made itself felt in the various branches of elementary instruction.

In the study of English grammar can one imagine anything farther removed from literature and life than the work in parsing and diagramming? To-day that work is abolished. The children write compositions on very prosaic and real subjects: actual trips to the woods, visits to factories, occurrences of vital interest to the children, and things of which they have some real knowledge are described by them in their own words.

The work in geography begins not with the strange maps of some stranger lands, but begins with talks about the rivers and hills and valleys of the child's own neighbourhood. As that pioneer in Nature study, Dr. E. A. Sheldon, has said in regard to the study of geography:—"The first duty by the way of laying a foundation is to lead the child to properly observe everything in Nature about him—the air, the water, the sky, the clouds, the temperature, the animals, the plants, the rocks, the soil, the hills, the valleys, the streams, the habitations, the occupations—in short, all that pertains to that part of the earth which he knows and its environments." From this the child goes out to county, State, country, and by natural steps to foreign lands.

The day of the spelling book is passed; the child spells when he needs to spell, and learns a given word when the need for that word arises in actual life.

The change from the alphabet system to the word and sentence method in reading is in entire accord with the new programme, even as the change from the old style of first, second, third, fourth, and fifth readers to the beautifully illustrated—and, to the child, intensely interesting—readers of the present day is a step from formalism to life.

The movement has not been simply to humanize the work in the sense of making it correspond to the work of adults, but rather to vitalize the instruction by using material real to the child at his stage of development. Widespread and deep is the recognition of the fact that education is life, not preparation for life. Training is involved; life in the largest sense is the aim of the school and the development of high ideals of living is recognized as the teacher's function. Keeping this in mind there is no distinction between cultural and utilitarian aims. Capability of enjoying the best things in literature and art, ability to understand the great questions of the day and the small ones are powers which our schools must aim to cultivate.

The Task of Mathematical Reform.

The proposed reforms in mathematics are in harmony with the changes outlined in the other branches of study. The developments can be understood only in the light of the general movement.

A rational child study leads in all the work to arithmetical problems which effect a correlation between Nature study, geography, history, and mathematics. The difficulties of the correlation are not yet cleared away, but the newer texts show an admirable beginning. The slightest attempt to adapt the work to the child precludes the possibility of rules without reason. Nor does this programme eliminate drill work in abstract problems. The child in play naturally turns to rhythmic counting in many games as one outlet for his activity. Abstract work satisfies this natural instinct.

The Committee of Ten and the Committee of Fifteen both urged to abridge the course in arithmetic with an earlier introduction of algebra. This curtailment is in process in the discarding of compound proportion, arithmetical cube root and square root, and a great part of the so-called commercial arithmetic. All along the line complicated exercises (which, in fact, serve only to obscure fundamental principles) are cut out, and simple exercises which emphasize the reasoning are substituted. Again and again it is being noted that mathematical thinking as required by life is to be cultivated in the study of mathematics.

Hard-and-fast programmes of number work for the primary grades are disappearing. Complete suppression of number work

OPPOSITE THE BRITISH MUSEUM.

THACKERAY HOTEL

GREAT RUSSELL STREET, LONDON.

NEAR THE BRITISH MUSEUM.

KINGSLEY HOTEL

HART STREET, BLOOMSBURY SQUARE, LONDON.

These well-appointed and commodious **TEMPERANCE HOTELS** will, it is believed, meet the requirements, at moderate charges, of those who desire all the conveniences and advantages of the larger modern Licensed Hotels. These Hotels have

PASSENGER LIFTS, BATHROOMS ON EVERY FLOOR, LOUNGES AND SPACIOUS DINING, DRAWING, WRITING, READING, BILLIARD, AND SMOKING ROOMS.

Fireproof Floors. Perfect Sanitation. Telephones. Night Porters.

Bedrooms, including attendance, from 3s. 6d. to 6s. *Full Tariff and Testimonials on application.*

Inclusive Charge for Bedroom, Attendance, Table d'Hôte Breakfast and Dinner, from 8s. 6d. to 10s. 6d. per day.

ALSO UNDER THE SAME MANAGEMENT.

ESMOND HOTEL

1 MONTAGUE STREET, RUSSELL SQUARE, LONDON.

This **Temperance Hotel** adjoins the British Museum, and is exceptionally quiet and economical.

Bedrooms, including attendance, from 3s. to 4s. 6d. per night. *Full Tariff and Testimonials on application.* **Night Porter.**

Telegraphic Addresses:

is neither desired nor possible. The child is constantly confronted with the numerical side of life, and the school can easily avail itself of these outside stimulations.

Connected series of problems on milk supply, on the school garden, on city distance in blocks—to cite only a few—offer abundant live material for number work in the primary grades. Family-expense accounts, statistics from census tables, transportation problems including electric railroads, steam railroads, and water routes, banking business, local industries, city, State, and national finances present problems that can be adapted to arithmetic work in the upper grades.

The artificial barriers between arithmetic and algebra are broken or breaking; happily no more will examiners request a solution "by arithmetic and not by algebra." The elementary algebra work, while not so difficult as the arithmetic it is replacing, offers fully as much content.

The movement to teach geometry and algebra side by side is an attempt to emphasize mathematical reasoning; a similar effort to teach trigonometry in connexion with the related theorems in geometry brings out the intimate connexion between these two studies. The machinery of our school system is too complicated to permit such radical changes to be rapidly made; but a wider knowledge of these movements is needed among teachers of elementary mathematics.

The Commission on the Teaching of Mathematics has a tremendous task before it. The ground has been well prepared and an authoritative statement of the fundamental principles which should inspire the teacher of mathematics may expect a fruitful reception from enthusiastic teachers the world over.

HEAD MISTRESSES AND THE FRANCHISE.

The Head Mistresses of Girls' Public Secondary Schools have forwarded to the Prime Minister the following Memorial in favour of the extension of the Parliamentary Franchise to duly qualified Women. Many hundreds of signatures, including the foremost names in the profession, are appended.

We, the undersigned, being head mistresses of public secondary schools in the United Kingdom, with a total attendance of forty thousand pupils, desire to put before you the reasons that compel us to join in the demand that the Parliamentary franchise should be extended to duly qualified women. We share with all women of the country the hardships that fall on every unrepresented class from mistakes in legislation both of commission and of omission, arising from lack of knowledge, lack of interest, lack of sympathy on the part of the legislators. We suffer, too, with all the tax-paying women of the country the injustice that compels payment of taxes and refuses the return due to that payment; but our position as professional women drives home to us the special anomaly of our position, and it is on this we desire to address you.

We are members of a great profession which undertakes duties towards the State that are second to none; we have been chosen from the ranks of that profession by governing bodies who have judged us to be especially fit for the exercise of great responsibilities. We are placed side by side with men who have been similarly elected for similar duties. Like them, we labour for the moral, intellectual, and physical welfare of the children placed in our charge; like them, we have to guide and control a large body of subordinates—in some cases men as well as women; like them, we give much of our scanty leisure to the public work of the districts in which we live; like them, most of us are graduates of some University; like them, too, we make compulsory contribution from our yearly earnings to the national exchequer. Unlike the head master, however, who has the Parliamentary franchise twice over—as a tax-payer and as a graduate—the head mistress is relegated by the State to the same class as the male convict and lunatic. She may—nay, must—do the work of a citizen, but she may not have a citizen's privileges.

Education in this country has been for many years under partial Government control, but it is only within the last decade that this control has reached girls' secondary schools. Recent years have seen statutes and Orders in Council that affect directly our schools, our pupils, ourselves. An inspectorate of secondary schools has been established. Our schools had been developing for thirty years on lines very different from boys' schools, but their tradition has been ignored and no woman representative of girls' secondary schools has yet been appointed to the permanent staff of Inspectors. We attribute this to the fact that we have not been able to bring Parliamentary pressure to bear in the right quarters, and our schools are suffering in consequence.

In another matter, that of Teachers' Registration, women teachers have the same grievance as men, but, at a time when it is of the greatest importance that the profession should unite in bringing pressure to bear in Parliament, only those who possess the vote can act effectively. Our want of political power here directly affects us in a professional question.

Other subjects on which we desire to be able to influence legislation, since we hold opinions on them with the strength which comes from practical knowledge (though these opinions are not necessarily unanimous), are: the religious training of children, the medical inspection of children, the care of the feeble-minded, child labour, compulsory school attendance, the feeding of school children at public cost, school age, the facilities for the transfer of pupils from elementary to secondary schools, continuation schools, reform of the Universities. But on all we are driven back to the academic attitude only, and our views command just the amount of attention usually accorded to academic views.

We desire enfranchisement, then, for the protection of our sex, of girls' schools, of our profession, but, above all, because we believe that with our votes we could help the country which at present declines us as citizens. Knowing that men's work is imperfect without the co-operation of women, we would desire to see not only the work which particularly affects ourselves, but the whole work of the country perfected, as it can only be when the gifts of women as well as those of men can be freely given for its services. This high responsibility for the country will be fully realized by women as a whole, and instilled into the boys and girls of the nation when, by enfranchisement, women are given the same stake in the country as all other citizens.

REVIEWS.

Science and the Soul.

The Genesis and Evolution of the Individual Soul scientifically treated; including also Problems relating to Science and Immortality. By the Rev. J. O. Bevan, M.A., F.G.S., Assoc.Inst.C.E., F.S.A., sometime Prizeman, Exhibitioner, and Foundation Scholar of Emmanuel College, Cantab., Rector of Chillenden, Dover. (2s. 6d. net. Williams & Norgate.)

Mr. Bevan boldly attacks a problem of extreme difficulty—the origin and the development of the soul of man. This problem has mostly been treated within the sphere of religion and theology, but Mr. Bevan lays aside his religious and theological armament, and girds himself to the enterprise with the weapons and methods of science, biological and physical. This course, it must be conceded, he is perfectly entitled to adopt, without theological or other censure. Yet, he tells us, "he is conscious that the subject transcends science; and, for complete solution, he turns to philosophy."

When a correspondent asks Mr. Bevan "whether the Australian aborigine has a mind—a soul," he replies that everything depends upon the definition. In the present volume Mr. Bevan postulates "that man possesses *one* soul, and only one, whatever the term may designate." What, then, does Mr. Bevan designate by the term? His statement is vague—perhaps inevitably so. "A strict definition of terms—body, mind, soul, spirit—is unnecessary for our present purpose," he says, "especially as it is contended in this dissertation that successive and concurrent bodily, mental, moral, and spiritual manifestations alike are but different aspects of the undivided and indivisible Personality—one manifestation being in excess at one time, another at another." He is content, therefore, "to take those definitions which are simplest, and on which all thinkers would agree, as a basis from which to start." However, one cannot go far without discriminations; and accordingly Mr. Bevan by and by opposes the soul to the body—"that part of us which is 'not body.'" Still he refrains from a more positive statement: "What is certain," he remarks, "is that in this soul is resident the supreme Ego, the individual personality, the *primum mobile* of thought, feeling, and will." "The Body, through its senses, brings the outer world into contact with the Soul"; but what is the nature of the formal union between Body and Soul Mr. Bevan does not determine. Nor, indeed, does it appear that union is necessary or is always maintained. "In the most general terms, perhaps, we may be allowed to suggest," he writes, "that the Soul is a derivative essence, which exists near or in remote space, separately or pantheistically, of such a nature and power that (although it may be at an infinite distance, or of a higher dimension than the body) it is capable of using the brain and nervous system generally, after the manner of an instrument—itself constituting part of the self-same instrument!—to work its will and register its decrees." When Mr. Bevan comes to speak of the soul and immortality, it is not easy to distinguish his notion of the soul from that of the theologians. The difficulty of definition may well be admitted: the embarrassment caused by the lack of definition is not to be ignored.

Ralph, Holland & Co.'s Latest List.

Complete Catalogue post free on application.

OLD BALLADS OF ENGLAND AND SCOTLAND.

Selected and Edited, with Introduction, Historical Notes, and Full Glossary, by ROBERT ARMSTRONG, Secondary School, Gateshead. Crown 8vo, cloth, **1s. 6d.**

This work is based upon the literature requirements of the Board of Education for Secondary Schools, but it will be found equally suitable as a Reading Book for the Upper Standards.

The Inspectors of the Board of Education have for years past been urging the necessity for a more careful study of English Literature, and, in view of the latest Syllabus issued by the Board of Education in this subject, it is hoped that the work will supply a want.

CONCURRENT PRACTICAL AND THEORETICAL GEOMETRY.

By W. J. POTTER, M.A. (Cantab.), Second Master, The Roan School for Boys, Greenwich. Containing the substance of Euclid, Books I. to XI., treated both practically and theoretically: in three parts; strongly bound in cloth.

Part I., Crown 8vo, 188 pages... ... **Price 1s. 6d. net.**
Part II., Crown 8vo, 249 pages ... **Price 1s. 9d. net.**
Parts I. and II., Crown 8vo, 437 pages **Price 3s. net.**

The object of this book is to provide a complete and carefully planned School Course in which the two branches of Geometry shall proceed concurrently from the simplest to the highest parts of the subject. The treatment of each Theorem in three stages—(i.) Preliminary Practical Exercises, (ii.) Formal proof, (iii.) Practical and Theoretical Exercises—is designed so as to be of the greatest possible use to Teachers and Pupils. The proofs are set out on a concise and original plan.

Part I. contains the subtance of Euclid, Book I. 1-34, with additions on Symmetry, Division of a Line, and Scale Drawing.

Part II. contains the substance of Euclid, Books III. 1-34, IV. 1-9, 13-15, I. 35-48, II. 1-14, with additions.

Part III. (*ready shortly*) contains the substance of Euclid, Books VI., III. 35-37, IV. 10-16, XI. with additions.

Parts I., II., and III. complete in one volume (*ready shortly*).

A SCIENTIFIC GEOGRAPHY.

By ELLIS W. HEATON, B.Sc., F.G.S., Principal of North Shields Secondary School and Pupil-Teachers' Centre. A text-book of Geography, showing on entirely new and original lines the relation between Geographical Conditions and Industry and Commerce. Illustrated by numerous maps and diagrams. Issued in seven separate books as under:—

Book I.—**The World** (broadly treated) .. **Price 2s. 6d. net.**
This volume deals with the "Principles of Geography" (Oxford Locals), and contains all the "Physical Geography" required for the Cambridge Local Examination.
,, II.—**The British Isles** ... ... **Price 1s. 6d. net.**
,, III.—**Europe** ... ... **Price 1s. 6d. net.**
,, IV.—**North America** ... ... **Price 1s. 6d. net.**
,, V.—**Africa** ... ... **Price 1s. 3d. net.**
,, VI.—**Asia** ... ... **Price 1s. 6d. net.**
,, VII.—**The British Empire** ... ... **Price 2s. net.**

HARRAP'S SHORTER FRENCH TEXTS.

General Editor—J. E. MANSION, B.-ès-L.

With Exercises, Notes, Vocabularies, &c. Most of the Volumes will contain 64 pages. Price ***6d.,*** limp cloth.

Series A. *Very Easy. With Vocabulary.*

Choix de Contes Populaires de la Haute-Bretagne, par PAUL SÉBILLOT. Edited by KATE SHELDON, B.A.
Contes des Provinces de France, par PAUL SÉBILLOT. Edited by MARY ROBERTSON, L.L.A.
La Belle au Bois dormant (Féerie en quatre tableaux), par EMMA FISHER. Edited by F. G. HARRIMAN, M.A.
Deux Comédies enfantines, par MATHILDE REICHENBACH. Edited by J. E. MANSION, B.-ès-L.

Series B. *Easy. With Vocabulary.*

Le Château de la Vie, par E. LABOULAYE. Edited by R. T. CURRALL.
Michel Perrin, par Mme DE BAWR. Edited by F. G. HARRIMAN, M.A.
Mon Étoile, par SCRIBE. Edited by NEIL S. SNODGRASS, M.A. 96 pages. 8d.
Le Médecin malgré lui, par MOLIÈRE. Edited by MARC CEPPI.
Le Bourgeois Gentilhomme, par MOLIÈRE. Abridged and Edited by MARC CEPPI.
Les Petites Ignorances de la Conversation, par CH. ROZAN. Edited by R. DE BLANCHAUD, L.-ès-L.
Anecdotes sur Napoléon, par MARCO DE ST. HILAIRE. Edited by A. AUZAS.
Quatre Contes des Mille et une Nuits. Edited by R. DE BLANCHAUD, L.-ès-L.
Choix de Poésies faciles. Edited by W. M. DANIELS, D.Litt.
Contes du Petit-Château ("Le Petit Ravageot" et "Mademoiselle Sans-Soin"), par JEAN MACÉ. Edited by J. E. MANSION, B.-ès-L. 96 pages. 8d.
Contes de ma Jeunesse. By L. LAILAVOIX, L.-ès-L.
La Farce de Paquin fils. By L. LAILAVOIX, L.-ès-L.

Series C. *Intermediate. With Vocabulary.*

Le Trésor du Vieux Seigneur, par ERCKMANN-CHATRIAN. Edited by W. M. DANIELS, D.Litt.
Récits tirés des Impressions de Voyage d'Alexandre Dumas (Le Midi de la France). Edited by J. E. MANSION, B.-ès-L.
Croisilles, par ALFRED DE MUSSET. Edited by S. TINDALL, M.A.
Contes à ma Sœur ("La Souris blanche" et "Les Petits Souliers"), par H. MOREAU. Edited by L. LAILAVOIX, L.-ès-L.
Poèmes Napoléoniens. Edited by A. AUZAS.

Series D. *Intermediate and Advanced. No Vocabularies.*

L'Avocat Patelin, par BRUEYS. Abridged and Edited by MARC CEPPI.
L'Avare, par MOLIÈRE. Abridged and Edited by MARC CEPPI. 96 pages. 8d.
Les Jumeaux de l'Hôtel Corneille, par ED. ABOUT. Edited by S. TINDALL, M.A.
L'Évasion (Extrait de "Vingt Ans après"), par ALEX. DUMAS. Edited by R. T. CURRALL, M.A.
Waterloo (Extrait de "Misérables"), par VICTOR HUGO. Edited by R. P. JAGO.

Special Prospectus of the above now ready, also our complete Modern Language List.

A NEW SERIES. 12 VOLUMES NOW READY.

ALL TIME TALES

Each with at least 8 Full-page Illustrations. Printed in clear type and bound in limp cloth.

128 pages each, 6d.

1. **Northland Heroes.** FLORENCE HOLBROOK.
2. **Old Celtic Tales.** E. M. WILMOT-BUXTON, F.R.Hist.S
3. **The Story of Siegfried.** J. WALKER MCSPADDEN.

160 pages. 9d. each.

4. **A Book of Nature Myths.** FLORENCE HOLBROOK.
5. **The Wonderful Voyages of Gulliver.** Retold by EDITH L. ELIAS, M.A.
6. **The Adventures of the Caliph Haroun-al-Raschid.** Edited by the Rev. CLAUD FIELD, M.A.
7. **The Adventures of Deerslayer.** Edited by MARGARET HAIGHT.
8. **Tales from the Eddas.** E. M. WILMOT-BUXTON, F.R.Hist.S.
9. **Tales from Chaucer.** J. WALKER MCSPADDEN.
10. **Tales of Early England.** E. M. WILMOT-BUXTON, F.R.Hist.S.
11. **Fables and Nursery Tales.** CHARLES ELIOT NORTON.
12. **Gisli, the Outlaw.** Retold by ALBERT T. SIMS.

TOLD THROUGH THE AGES

Large crown 8vo. 256 pages. 16 plates. Cloth boards, ***1s. 6d.***

NEW VOLUMES.

16. **Stories from the Odyssey.**
17. **Stories from the Iliad.**
18. **Told by the Northmen.**
19. **Stories from Don Quixote.**
20. **The Story of Roland.**
21. **Stories from Thucydides.**

Digitized by Google

Assuming Mr. Bevan's position, then, we inquire into the origin of the soul. The investigation is, in the first place, biological. Each contribution of the parents "has a special characteristic as a soul-element: the union of these two soul-elements constituting the soul of the child that is to be." Hence "a distinct characteristic personality, linked on to a long chain of ancestors, until we reach the first pair of humans." But what of the souls of the first pair? For the adumbration of these we must go back to the original cell. But, "where the *original* cell came from, whence its powers arose," says Mr. Bevan, "we cannot tell, and it is at present useless to speculate." Still, how does Mr. Bevan know about the alleged soul-elements and their union? The analogy of the mixture of oxygen and hydrogen to form water is confessedly "imperfect." Then, to avoid materialism, Mr. Bevan considers it "thinkable that each soul is an emanation from the One Universal Soul, since—apart from a Universal Soul—we cannot conceive of anything in this Universe of Unities, whether soul or body, material or immaterial, that could have an independent, self-creative origin."

For the purpose of his argument, Mr. Bevan strongly insists on the physical basis of all sentient life—*i.e.*, on the existence of a "world-stuff"—as the protoplasmic material which enters as "warp and woof" into the texture and constitution of every living thing in the universe, whether vegetable or animal. (See Appendixes C and D.) Moreover, he asserts that the germ-cells of each male and female organism are (in a measure) distinct from all other cells in the bodily system, and that it is a product of those germ-cells alone, from both sides of the parentage, which unite at a certain physiological moment in order to constitute the body-soul of the new personality thus brought into being.

Mr. Bevan postulates "that Matter and Motion alike belong to this embryo soul—but that its ultimate structure and function are largely determined by its environment and by the accidents and incidents of the sphere and condition of life into which it is born." The attribution of matter to the soul raises difficulties. If there is matter in it, how is it discriminated from body? Is it a scientific fact that there is matter in it? And, supposing there is, then the question of the determination of its ultimate structure and function plunges us into the most abstruse and most debated problems of the several virtues of stock and environment. Yet, we have to remember that new views of matter and force have been recently enunciated. Mr. Bevan regards the discussion of the soul—or what is more or less analogous to the soul—in animals as foreign to his present purpose: "the conclusions reached would not materially affect those relating to the lot of man." We will not follow Mr. Bevan into his speculations on death, resurrection, and immortality. It is hardly necessary to say that the discussion is ingenious, independent, and courageous. Every step is, of course, beset with difficulties, and, after all, pure science does not take us far, even by analogy. The argument overflows into a number of interesting appendixes. In a case where definite results do not appear to be at present obtainable, it matters little whether one accepts or rejects Mr. Bevan's conclusions: the essential thing seems to be the argumentative effort. And certainly Mr. Bevan presents views and suggestions that are not only interesting, but worthy of examination by experts in the fields he has chosen for his appeal. He has evidently devoted long and serious study to the subtle and abstruse questions he discusses, and he treats them with a mental detachment and strenuousness that command respect. Our brief indication of the heart of his position (even if we have quite grasped it) is necessarily insufficient: the cumulative analogical detail must be sought in the volume itself.

Infinite Series.

An Introduction to the Theory of Infinite Series. By T. J. I'A. Bromwich, M.A., F.R.S. (15s. net. Macmillan.)

Prof. Bromwich writes not only for the mathematical scholar, but also in the interests of the student of mathematics. In fact, the present volume has for its foundation the substance of college lectures delivered by the author, and by its publication the student's library acquires another very important accession to its mathematical section. Even whilst passing through the press, ostensibly in its original form, the work has been enlarged, so that the scope of its contents has, as far as possible, been extended in proportion to the advance made by the latest researches in the subject. Moreover, as a natural consequence of the critical investigation to which he has been submitting his materials, the writer has himself arrived at fresh results, and is thus a contributor to the growth of the theory as already known when he commenced his undertaking.

The volume opens with the consideration of what is the essential characteristic of a succession of quantities forming a sequence, and the writer next distinguishes carefully between convergent and non-convergent sequences, the latter being further subdivided into divergent and oscillatory. By this classification the author notifies his sympathy with the views of those who are opposed to the inclusion in one category as *divergent* of all sequences (and as a consequence of all series) whose terms (and the sum of whose terms) do not tend to a definite limit. In the first chapter, also, monotonic sequences are defined; the general principle of convergence claims attention, with the necessary condition for its existence; whilst various fundamental truths respecting limits, upper and lower limits, and maximum and minimum limits, are brought before the reader's notice. The writer makes frequent use of maximum and minimum limits, as they enable him in many cases to shorten his demonstrations. From the second chapter onward Prof. Bromwich presupposes, on the part of a student of his work, a knowledge of the principles and methods of the differential and integral calculus. Such knowledge he believes to be a requirement for profitable study of the theory of infinite series. Further, the assumption that he is at liberty to use freely the powerful instrument afforded by the calculus offers facilities to the author for the condensation of proofs.

The scheme of the work involves next the discussion of series of positive terms and of the leading tests for their convergence. Series in general then occupy the reader's attention, and the author necessarily differentiates between convergence and absolute convergence. He proceeds to discuss further tests and to note the effect on a series of any derangement of the terms of which it is composed. Chapters v.–ix. treat successively of "Double Series," "Infinite Products," and of series of several fundamental types, *e.g.*, series with variable terms, power series, &c. It is in chapter x. that the writer takes up the subject of complex series and products, ably giving a connected discussion of the theory and interweaving with it theorems and tests of convergence associated with the well known names of De Moivre, Abel, Dirichlet, Weierstrass, and others. The contents of chapter xi. and, for the most part, of the Appendixes are outside the original plan of the work and help to bring the volume up to date, thereby greatly enhancing its value as one of the standard text-books of Pure Mathematics.

Further, there will be found in the Appendixes rigid proofs of much whose truth is assumed, at least to a great extent, at the commencement of the work. The rigorous discussion has been postponed to the later pages in order that the beginner may not be unnecessarily burdened at the outset, and that the discussion may thus be rendered more attractive to him. It may, in conclusion, be observed that many theorems excluded through want of space from the body of the text have been placed amongst the numerous exercises. There is every reason to believe that Prof. Bromwich's treatise will be invaluable to those for whom it is intended.

English Political History.

"The Political History of England."—Vol. IX., *The History of England from the Accession of Anne to the Death of George II.* (1702–1760). By I. S. Leadam, M.A., formerly Fellow of Brasenose College, Oxford. (7s. 6d. net. Longmans.)

The volume covers less than two generations, and one half of it is devoted to the dozen years of the reign of Anne. Considerable space is necessarily occupied with the description of the multifarious fighting on land and sea against France and Spain: the campaigns of Marlborough are narrated succinctly, clearly, and soberly, the specific difficulties and the decisive movements being pointedly indicated. The general settlement accomplished by a series of treaties at Utrecht is not reached till near the end of Anne's reign. The political intrigue that ran through all the national business of the period forms a large part of the framework of the picture. It is curious to observe how much of the political action and of the commercial policy carries instruction for us to-day—if our politicians and voters had any practical regard for the maxim that history teaches by examples, and did not slackly acquiesce in the other maxim that history repeats itself, however expensively. At home the important movement of union with Scotland was at last effected, not very creditably indeed, but still effected; and Mr. Leadam's description is well informed and scrupulously fair, though he gives little idea of the extreme difficulty of

Digitized by Google

maintaining it under the unconstitutional legislation and international friction of 1709–14, or of the causes that turned the tide of repugnance under the next sovereign, notwithstanding the outbreak of 1715. The rebellions of 1715 and 1745 are fully and carefully narrated, but the political moral is not adequately pointed out by an exposition of causes and underlying supports. The same deduction falls to be made on other occasions: with an excellent marshalling of the events, there is a paucity of indication of essential causes and of definite consequences. Nor do we always find estimates of the more prominent characters, except by silent inference from what we are told of their public action. The beginnings of our Indian Empire arise within Mr. Leadam's period. They are outlined strongly, but the compression detracts from the effectiveness of the presentation, and sometimes leaves ambiguity in the mind of the reader. For instance, the account of the "atrocity" of the Black Hole of Calcutta leaves it open to the reader to believe that the Nawab deliberately perpetrated it; indeed, rather suggests that view. The final chapter sketches briefly, but suggestively, the movements in literature and in manners. On the whole, the facts of the history of the period are assiduously sifted and deftly presented in due relative proportions. The style is plain, simple, and interesting. A very useful account of the authorities is given in an appendix; a second appendix contains a most convenient list of the administrations; and there is a very full index.

GENERAL NOTICES.

CLASSICS.

The Acharnians of Aristophanes. By W. Rennie, M.A., Fellow of Trinity College, Cambridge, Lecturer in Greek at the University of Glasgow. (6s. net. Edward Arnold.)

This is an unpretentious but very thorough and capable piece of work, which will make room for itself among the many editions of the great farce of Aristophanes. The introduction deals pointedly with the various aspects of the play, and particularly with the "strange relationship" between Aristophanes and Callistratus in the production of this and other plays. The commentary is very full, explaining and illustrating all difficulties, whether of matter or of expression. Mr. Rennie has availed himself of the whole range of learning on the subject, and treated it all with constant independence and generally with very sound judgment. The textual criticism is judiciously conservative; and the philological handling is markedly competent throughout. This is not only the best edition of the play that we have seen, but also one of the most able and luminous classical expositions of recent years. There are separate Greek and English indexes.

(1) *Limen: a First Latin Book.* By W. C. Flamstead Walters, M.A., Professor of Classical Literature in King's College, London, formerly Master in Christ's College, N.Z., and R. S. Conway, Litt.D., Professor of Latin in the University of Manchester, formerly Fellow of Gonville and Caius College, Cambridge. (2s. 6d.) (2) *Limen Appendix: Suggestions for Teachers on the Oral Method.* By the same Authors and R. H. Rees, B.A., Assistant Mistress at Ladybarn House School. (6d.) (Murray.)

The authors combine three main objects: "(1) to bring the pupil as soon as possible to the stage of reading Latin authors; (2) to teach him as much as possible of the use of the forms of the language in and during the time in which he is learning them; (3) to use as far as possible the fruits of recent inquiry in historical and comparative grammar, so as to simplify and enliven the harder rules of accidence and syntax by indicating briefly and clearly how the rules themselves grew up." These objects, which of course are by no means new, are closely bound together, and each is furthered as far as seems reasonably possible within the limits. For beginners of eleven, the work constitutes a three years' course; for beginners of twelve to fourteen, a two years' course: in either case, it should enable "the average boy or girl in the average school" to matriculate in Latin, and fit the more than average pupil to begin a more specialized course. The simpler parts of the active form of the verb are tackled at once, and the other parts of speech are gradually worked in, abundance of exercises and reading lessons being carefully provided. The passive voice and more difficult constructions are reserved to a later stage (Part II.). A summary of the accidence is given in an appendix; and vocabularies, &c., complete the volume. The oral method is recognized from the beginning, but it is not unduly pressed; and the "Limen Appendix" furnishes full suggestions for teachers that wish to use it. The care and labour of the authors are manifest; their effort to render the newer ideas of teaching Latin as effective as possible within the scope of an elementary volume is entirely laudable; and it is to be hoped that their method will produce the desired results in a shorter time and with less drudgery than the older system. Their strongest ally, we apprehend, will be the more

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W. [FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.
Secretary—W. N. NEALE, ESQ. Actuary and Manager—FRANK B. WYATT, ESQ., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE without personal liability on highly favourable terms to

THE CLERGY AND THEIR RELATIVES.

ALL PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,351,137. Annual Income, £471,097.

Bonuses Distributed, £4,256,464.

LOW PREMIUMS. LARGE BONUSES. Notwithstanding the lowness of the Premiums charged, the BONUSES are on an EXCEPTIONALLY HIGH SCALE.

NEW AND SPECIAL POLICIES. Application is invited for the PROSPECTUS, and Leaflets explaining two new Policies, with valuable Options.

1. **WHOLE-LIFE CONVERTIBLE ASSURANCES.** Very Low Premium—about one half the usual rate—during first ten years.

2. **PENSION POLICIES.** Premiums returnable with compound interest in case of death or surrender before pension age. Option to commute for cash.

Assurances without profits, at low rates of premium, may be effected, and Life Annuities on favourable terms may be purchased, by any person irrespective of any special qualification by relationship to the Clergy.

ANNUAL PREMIUMS FOR £1,000, WITH PROFITS.

Age next Birthday.	£1,000 Payable at Death.			£1,000 Payable at Age 60 or earlier Death.		
	£.	s.	d.	£.	s.	d.
25	20	1	8	27	3	4
30	23	3	4	32	10	10
35	26	10	0	40	1	8
40	31	1	8	51	5	0

NOTE.—Under the Reduced Premium System (explained in Prospectus) four-fifths only of these Premiums need be paid, the other one-fifth remaining a charge to be repaid out of Bonus.

No Agents employed and no Commission paid for the introduction of business, whereby £10,000 a year is saved to the Members.

Assurances can be effected by direct communication with the Office, 2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

advanced age of commencement. In the "Limen Appendix" Miss Rees consistently speaks of "the children": we should hope they are well on to fourteen, and have got a good grip of English.

MATHEMATICS.

Modern Geometry. By C. Godfrey, M.A., and A. W. Siddons, M.A. (4s. 6d. Cambridge University Press.)

An attractive volume, both in respect of the contents and the mode of issue. It serves as a sequel to the work on "Elementary Geometry" written some few years since by the same authors, and includes many of those portions of modern geometry which are most generally useful to the student, whether he is working for a Pass or for an Honours University degree. It forms, moreover, a valuable introductory treatise on the subject for the intending specialist in mathematics. As a matter of course, the significance of *sense* in connexion with geometry, the elements of the modern geometry of the triangle, the theories of harmonic section, of pole and polar, of inversion, &c., are discussed. The necessity for the concept of infinity forms the theme of an early chapter: but, interesting as the pages devoted to the subject are, they seem scarcely sufficient to do more than upset the young student's preconceived ideas, and we confess that we do not like the term "mathematical fiction" as applied to the concept. It is quite otherwise with the excellent note on solid geometry and the principle of duality, in which the reciprocal character of points and planes and the intermediate position occupied by lines stand out very forcibly. The large collection of exercises included in the text-book to some extent owes its varied character in point of difficulty to the wide experience in teaching possessed by the writers. This has suggested to them the benefit of leading up from very simple questions to problems of standard type. A notice of the work would be incomplete without comment on the care evidently bestowed on the details of production. It will suffice to mention two points of excellence—namely, the choice of type and the sympathetic execution of some of the more complex diagrams.

Elementary Geometry. By W. A. Knight, M.A., B.Sc. (2s. 6d. Cassell.)

The author treats, in a generally useful manner, the substance of Euclid's first four Books, together with the elements of ratio, proportion, and the theory of similar figures. A number of the more important "riders" to Euclid's propositions find place in the text as additional pieces of bookwork. The subject is viewed in its theoretical and practical aspects, and, although the work is not absolutely free from the faults noticeable in so many of the recent elementary text-books, still it is evident that matters of detail have received close attention. The volume is intended to meet the requirements of students reading for the various Local Examinations.

School Algebra. Parts I. and II. By W. E. Paterson, M.A. Cantab., B.Sc. Lond., Mathematical Master, Mercers' School, London. (2s. 6d. each; with Answers, 3s. each. Clarendon Press.)

These volumes have been arranged with much care. They comprise a course suitable for upper as well as lower forms. The treatment is based on the ideas with regard to teaching which have been growing more and more popular during the last few years. The text is simple, clear, and explanatory, and the writer makes a practice of preparing the way for the discussion of a new principle—possibly, even, for its rediscovery by the pupils. This he effects by the introduction, in preceding examples and exercises, of those difficulties which necessitate the recognition of the truth of the principle in question.

SCIENCE.

Outlines of Chemistry, with Practical Work. By Henry John Horstman Fenton, M.A., Sc.D., F.R.S. First Part. (9s. net. Cambridge University Press.)

Dr. Fenton here outlines the method that long experience has suggested to him for making the best of the time of his students in General and Physical Chemistry for the Natural Science Tripos at Cambridge. "A special feature of the course is the interdependence of the practical and theoretical teaching, the students, after each lecture, performing a series of experiments which illustrate as far as possible the general principles, laws, or facts which have been discussed." Dr. Fenton accordingly sets out the fundamental principles in concise but lucid form, sending his students to the standard text-books to fill out his exposition; and he places well devised experiments in conjunction with the statement of principles, so as to drive them home—only in outline, however, for he aims at cultivating self-reliance, and at "inducing the students, as far as possible, to devise their own method, to plan and fit up suitable apparatus, and to regard the work rather in the light of a research than as an exercise." The volume certainly supplies work enough for two extremely busy terms: the work of two more terms will form the subject of another volume which will, of course, be in immediate demand. The handling of the matter, theoretical and practical, is of the highest order. There are twenty-five figures.

We give a very cordial welcome to a fourth edition of *The Recent Development of Physical Science*, by William Cecil Dampier Whetham, M.A., F.R.S., Fellow of Trinity College, Cambridge (5s. net, Murray). Some additions have been made here and there, but no striking new branches of knowledge have appeared so as to necessitate any fundamental change of plan. It is most gratifying to observe the awakened interest in the problems with which the volume deals; and no inconsiderable part of the credit is due to the ability and lucidity of the author.

We gladly seize the opportunity of the reissue of Mr. Whetham's work to repair the accidental, but none the less regrettable, omission to notice a similar volume that was suggested by it: *Recent Progress in the Study of Variation, Heredity, and Evolution*, by Robert Heath Lock, M.A., Fellow of Gonville and Caius College, Cambridge, published by Mr. Murray in 1906. The developments recorded and explained by Mr. Lock are no less important and interesting than the remarkable story of Mr. Whetham: the theories of evolution associated with the names of Lamarck and Darwin (with the criticisms of Herbert Spencer and others), the work of the Biometricians (Galton and Pearson), the theory of mutation (de Vries), the study of hybridization (Kölreuter), Mendelism, &c. The results of such inquiries promise to be of incalculable value in their commercial and social bearings; and in some cases the promise has already reached fruition. Mr. Lock writes with ample knowledge, with conspicuous fairness, and in a plain and lucid style. He is most careful to distinguish between what is proved and what is not adequately supported by evidence. His work ought, on the merits both of matter and of handling, to be quite as popular as Mr. Whetham's. When a new edition appears, we hope Mr. Lock will add short biographies of all the investigators whose theories he discusses: Mendel is, we think, the only one whose biography he outlines in the present edition.

ENGLISH TEXTS.

"Arnold's English Texts."—Edited by H. B. Browne, M.A. Lond., Senior English Master at Hymers College, Hull. (6d. each.)

We have a dozen volumes of this excellent and attractive series: (1) *The Song of Hiawatha* (Longfellow); (2) *Marmion* (Scott); (3) *Idylls of the King* (Tennyson); (4) *Hereward the Wake* (Kingsley); (5) *The Cloister and the Hearth* (Reade); (6) *The Life of Nelson* (Southey); (7) *Tanglewood Tales* (Hawthorne); (8) *Gulliver's Voyage to Lilliput* (Swift); (9) *The Pilgrim's Progress* (Bunyan); (10) *The Bible in Spain* (Borrow); (11) *The Natural History of Selborne* (White); (12) *A Naturalist on the Amazons* (Bates). The little volumes are very handy in form, well printed on good paper, and strongly fixed in an agreeable and serviceable limp cover. Of course, most of the works have had to be cut down to ninety-six pages, including introduction and questions (usually about thirty) on the text—a delicate task, which the editor has performed with discretion. This will prove a very favourite series.

Cambridge University Press.—*English Literature for Schools.* (1s. 4d. each volume.)

This is a new series offering a liberal supply of excellent literary matter suitable for schools, and for general readers as well. We have four volumes: (1) *The True Travels, Adventures, and Observations of Captain John Smith in Europe, Asia, Africa, and America, and the General History of Virginia, New England, and the Summer Isles, Books I.-III.*, edited by E. A. Benians, M.A., Fellow of St. John's College, Cambridge; (2) *Memoirs of a Cavalier* (1632-1648), by Defoe, edited by Elizabeth O'Neil; (3) *Rural Rides* (Cobbett), selected and edited by J. H. Lobban, M.A., Lecturer in English Literature, Birkbeck College, London; and (4) *Characters of Shakespeare's Plays* (Hazlitt), edited by J. H. Lobban, M.A. The introductions are concise, but sufficient, and the notes are judiciously restricted to reasonably necessary explanations, which are uniformly brief and pointed. The type is clear and the get-up is plain and chaste. The series is sure to be very widely popular outside as well as inside the schools.

"The University Tutorial Series of English Classics."—*The Utopia of Sir Thomas More* (Robinson's translation). Edited by R. R. Rusk, M.A., Ph.D. (2s. Clive.)

Dr. Rusk's introduction is a piquant essay on the "Utopia," outlining the substance of it (with special reference to contemporary life), and criticizing frankly various points in the philosophy of it. The notes, if brief and not very numerous, appear to be reasonably adequate. A glossary is appended; also a series of fifty questions bearing on the main points. An excellent school edition.

ATLASES—MAPS—CHARTS—MODELS.

Messrs. Adam & Charles Black publish an extremely interesting atlas of *Maps of Old London*, edited by G. E. Mitton (5s.). Except one—Faithorne's map showing London before the Great Fire—they have already appeared in Sir Walter Besant's exhaustive "Survey of London." Ogilby's map is given as showing London rebuilt after the Great Fire. These maps have hitherto been obtainable only separately and at considerable prices; and the publishers do a great service by making them so accessible. They exhibit the spread of the city from the reign of Elizabeth downwards, and they are beautifully reproduced.

Messrs. George Philip & Son issue two excellent sheets showing physical features: (1) *The World*, exhibiting the two hemispheres side by side, coloured variously according to stages of elevation of land and depth of water, and with sections along various latitudes; also, in separate compartments, (*a*) winds and barometric pressure, (*b*) annual rainfall, and (*c*) regional vegetation. (2) *The Polar Regions*, exhibiting the Arctic and Antarctic regions side by side, with limits of open sea, of drift ice, &c.; also, in separate compartments, (*a*) annual mean ocean temperature, (*b*) January and (*c*) July isothermal lines; and other useful

(*Continued on page* 388.)

DENT'S LIST FOR SECONDARY SCHOOLS.

MODERN LANGUAGES.

TWENTIETH EDITION (*completing* 150,000 *copies*). Extra fcap. 8vo. Price 2s.

DENT'S FIRST FRENCH BOOK. By S. ALGE and W. RIPPMANN.

SPECIAL NOTE.—The Publishers propose to issue at an early date a new printing of this book, which has been completely reset. It should be distinctly understood, however, that the text has in no way been altered. Improvement has been effected by the production of the small Season Pictures and the French Coinage in Colour, while the incorporation of Mr. NORMAN'S Supplementary Exercises will doubtless be much appreciated. The Exercises were hitherto issued separately at 6d.

SEVENTH EDITION (*completing* 39,000 *copies*). Extra fcap. 8vo. Price 2s.

DENT'S SECOND FRENCH BOOK. By S. ALGE and W. RIPPMANN.

The above books are used in the principal Public Schools, Municipal Secondary Schools, and County Secondary Schools throughout the country. The scheme of study for junior students of Melbourne University is based upon "Dent's First French Book."

L'ENTENTE CORDIALE À LA CAMPAGNE. Scenes of French Life. By CLÉMENCE SAUNOIS. 1s. 4d.

EPISODES EN ACTION. With a Phonetic Transcript. By J. STUART WALTERS. 1s. 4d.
A series of scenes from French daily life, at first very brief and simple, then gradually increasing in length and difficulty.

FABLES EN ACTION. By VIOLET PARTINGTON. 1s.
The author has had the happy thought of dramatizing some of the famous fables of La Fontaine.

NEW SHORT FRENCH READERS. Each 48 pp. With Exercises and Notes. Price 4d. each.

Yvon et Finette.	**Poucinet.**
Un Episode sous la Terreur.	
Le Monde où l'on se bat.	
Un Merle Blanc.	**Télémaque.**

DER GOLDENE VOGEL AND OTHER TALES. A Second Year German Reader. Edited by W. RIPPMANN, M.A. Extra fcap. 8vo, 1s. 4d.

EISENHANS AND OTHER TALES. A Second Year German Reader, with Exercises. By WALTER RIPPMANN, M.A. Extra fcap. 8vo, 1s. 4d.

The Exercises in "Der Goldene Vogel" and "Eisenhans" are typical of the latest advance in reform teaching. They consist of questions based on the text, and exercises in word-formation and applied grammar.

A FIRST BOOK OF GERMAN POETRY. By WALTER RIPPMANN, M.A. 1s. 4d.

FIRST EXERCISES IN GERMAN GRAMMAR AND WORD-FORMATION. By WALTER RIPPMANN, M.A. 1s. 8d.

LATIN.

DENT'S LATIN PRIMER. By E. S. FORSTER, M.A. 1s.
"The graduation of the matter is very carefully worked out . . . the little book is excellently done."—*Educational Times.*

DENT'S FIRST LATIN BOOK. By HAROLD W. ATKINSON, M.A., Sometime Head Master of the Boys' High School, Pretoria, and J. W. E. PEARCE, M.A., Head Master, Merton Court School, Sidcup. With 12 Illustrations by M. E. DURHAM. Small crown 8vo, cloth, 3s.

FORUM LATINUM. A First Latin Book. By Dr. E. VERNON ARNOLD, Professor of Latin at the University College of North Wales. Small crown 8vo, 3s. 6d.

AENEAE FACTA ET FATA. A Stepping-stone to VIRGIL. With Notes and Exercises on the Text by Dr. E. VERNON ARNOLD. With numerous Illustrations. Small crown 8vo, cloth, 2s.

CAESAR IMPERATOR. An Elementary Latin Reader. With Vocabulary and Exercises on the Text. By J. W. E. PEARCE, M.A. [*In the press.*

ENGLISH LITERATURE.

SOUTHEY'S LIFE OF NELSON. With Introduction and Notes by HENRY WILLIAMS, M.A. 1s.

SIR ROGER DE COVERLEY PAPERS. Edited by R. G. WATKIN, M.A., Ph.D. 1s.

SCOTT'S TALISMAN. With Introduction and Notes by HENRY WILLIAMS, M.A. 1s.

PRESCOTT'S CONQUEST OF MEXICO AND PERU. Edited by OLIPHANT SMEATON, M.A. 1s.

TALES FROM BROWNING. By the Rev. G. LACEY MAY, M.A. 1s.

STORIES FROM CARLYLE. By D. M. FORD. 1s.

VOYAGES OF FAMOUS BRITISH SEAMEN. Selected from DAMPIER, HAKLUYT, and COOK. By R. BRIMLEY JOHNSON. 1s.

MATHEMATICS AND MECHANICS.

A FIRST STATICS. By C. S. JACKSON, M.A., Instructor in Mathematics, R.M. Academy, Woolwich; and R. M. MILNE, M.A., Assistant Master, Royal Naval College, Dartmouth. With over 200 Diagrams and numerous Examples. Crown 8vo, with or without Answers, 4s. 6d.

A FIRST DYNAMICS. By C. S. JACKSON, M.A., and W. M. ROBERTS, M.A., Instructors in Mathematics at the Royal Military Academy, Woolwich. 5s.

ELEMENTARY TRIGONOMETRY. By CECIL HAWKINS, M.A., Senior Mathematical Master at Haileybury College, Hertford. Small crown 8vo, without Answers, 3s. 6d.; with Answers, 4s.

GEOMETRICAL CONICS. By Professor G. H. BRYAN, F.R.S., and Professor R. H. PINKERTON, M.A. 3s. 6d.
"The book is excellent, refreshing in its treatment of an interesting branch of mathematics."—*Practical Teacher.*

ANALYTICAL CONICS. By Professor CHARLOTTE ANGUS SCOTT, D.Sc., Bryn Mawr College, U.S.A. 5s.
"We heartily recommend the book to geometrical students."—*Civil Service Gazette.*

EXERCISE PAPERS IN ELEMENTARY ALGEBRA. By Rev. E. M. RADFORD, M.A., Mathematical Lecturer at St. John's College, Battersea. 2s. Answers separately, 6d.

The above is a Selected List of Books from Messrs. Dent's Educational Catalogue. Many other Books are included in this Catalogue, covering nearly all branches of the usual Secondary School Curriculum.

London: J. M. DENT & CO., Aldine House, Bedford Street, W.C.

Digitized by Google

sketches filling out the corners. The maps are carefully drawn and delicately coloured.

Messrs. Philips also present a new series of *Comparative Outline Maps*—a companion series to their "Elementary Atlas of Comparative Geography," and designed to supply a set of outlines corresponding to the coloured originals, for map-drawing, test questions, exercises, &c. (½d. each). They are admirably suited for their purpose.—*Philips' County Council School Atlas* (1s. net), which has been specially prepared for the L.C.C. schools, and will find a much wider sphere of usefulness, offers forty-four coloured plates, containing about a hundred maps and diagrams, with some good introductory letterpress. It is edited by George Philip, F.R.G.S. The present, if we mistake not, is a new edition.—We have also a new edition of *Philips' "Diagram" Hand Atlas* (3s. net), designed by B. B. Dickinson, M.A., F.R.G.S., Assistant Master, Rugby School, and A. W. Andrews, M.A., F.R.G.S., Extension Lecturer, Oxford and London. It contains thirty orographical maps, carefully coloured to indicate different stages of elevation. An admirable work.

The *New British Empire Globe*, just produced by Messrs Philips (7s. 6d. net), shows the British Empire and the All-British Cables in bright red. Being 8 in. in diameter, it depicts the surface of the globe in great fullness, and marks the important lines of intercommunication. There is no overcrowding, and yet the clearness of the lettering allows an ample provision of names. The Globe is strongly and artistically mounted. It should very instructive as well as interesting in the junior schoolroom.

The Scholars' Atlas, issued by Ruddiman, Johnston, & Co., contains twenty political and ten physical maps (9½ by 7¾ in.), the physical maps being in each case placed to face the corresponding political maps. The names are clear and not overcrowded; heights and depths are indicated by colours on the physical maps. Moreover, each map of a foreign country has a small inset map of the British Isles on the same scale for ready comparison. The price is only 6d., so that no little scholar need lack a very helpful atlas.

Messrs. A. J. Arnold & Son publish *The "A.L." Food-Values Diagrams*, by Miss Alice Ravenhill, F.R.San.I., Lecturer on Child Hygiene to Teachers under the L.C.C. Education Committee, and Miss E. M. Morris, Lecturer on Hygiene under the West Riding County Council Education Committee—six large charts (each 42 by 33 inches) showing diagrammatically the proximate principles contained in some typical articles of food (Set, 18s. or 12s. according to mounting, &c.; single sheet, mounted on calico, with rollers and varnished, 3s. 6d.) The charts are boldly drawn and coloured. No. 1 exhibits in tabular form the comparative food values of some typical animal and vegetable foods; No. 2, the average amount of food constituents required for daily consumption by a healthy person from birth to the age of eighty-nine years; No. 3, the average percentage of body-building and flesh-forming material and of the heat and energy-giving material contained in a chop and a loaf of bread; No. 4, the average percentage similarly contained in a glass of milk and an egg; No. 5, similarly, for a piece of cheese and a herring; No. 6, similarly, for a banana and a potato, with a diagram showing the proportion of nutriment often lost in a potato by wrong methods of cooking (that is to say, when the skin is removed before boiling). The names of the authors guarantee the scientific quality of the information, and the charts are most carefully drawn and effectively produced. The importance of the subjects will ensure a cordial welcome to this most graphic presentation of the facts.

The "A.L." Smoking Chart, 35 by 45 inches (5s. mounted on cloth, with rollers, varnished; E. J. Arnold), sets forth in simple, terse, and forcible language the injurious effects of nicotine on the blood, nerves, heart, digestive organs, &c., and its retarding influence on the healthy mental and physical development of growing boys. There is nothing merely sensational in the statements; every one of them, we believe, will be accepted by every competent medical observer. They may very conveniently be made the basis of lessons, and in any case the boys will readily appreciate the bearings of them. The chart is substantially and beautifully produced.

The Geographical Model Works (Emerson Chambers, Blackett Street, Newcastle-on-Tyne) have produced a hypsometrical or relief map of the district of Ingleborough—a district that Prof. Hughes, of Cambridge, has singled out as most instructive for the concrete method of teaching the principles of geology. The map has been constructed with minute accuracy to scale by J. Foster Stackhouse, F.R.G.S. It "covers an area of 42 square miles to a horizontal scale of 6-inch ordnance map. Vertically the measurements are $\frac{1}{16}$-inch to every 25 feet, which is nearly double the horizontal scale, in order to throw the indentations of the ground into the strongest possible relief. The map has no painted features, being finished uniformly in grey, and even the river beds are represented by actual indentations. The whole effect is as if one were looking down upon the district from a balloon on a clear moonlight night." Accurate full size copies of this model, in unglazed grey adamantine, are now available. Prof. Lebour, of Armstrong College, describes the work as "an extremely fine and useful example of first-rate topographical sculpture," and says "it would form a most valuable addition to any institution in which scientific earth-features are studied scientifically."

RELIGIOUS AND MORAL.

The Century Bible Handbook. General Editor, Principal Walter F. Adeney, M.A., D.D. (6d. net each; cloth, 1s. net each. Jack.)

This new series may be regarded as completing or supplementing the excellent series of "The Century Bible"; the volumes marshal the results of research and scholarship on such matters of archæology, literature, and criticism as help to throw light on the Bible and its contents. The series, when complete, "will present a survey of the latest information on the whole round of subjects that are directly concerned with an adequate understanding of the Old and New Testaments in relation to two matters: first, their local and historical setting and historical development; second, their contents and teaching." Apocryphal and Apocalyptic writings also receive separate attention. The volumes are written by scholars of high rank. While the series is "conceived on the understanding of Christian faith," the treatment is "entirely unfettered in regard to critical conclusions." It is intended not only for theological students, but also for ordinary educated readers, and especially for Sunday school teachers. We have (1) *The Books of the New Testament*, by the Rev. G. Currie Martin, M.A., B.D., Professor of New Testament Exegesis and Criticism in the United College, Bradford, and Lancashire Independent College, Manchester; (2) *Old Testament History*, by the Rev. W. H. Bennett, M.A. Lond., Litt.D. Camb., Professor in New College and Hackney College, London, sometime Fellow of St. John's College, Cambridge; (3) *The Religion of Israel*, by A. S. Peake, M.A., D.D., Professor of Biblical Exegesis in the University of Manchester, Tutor in the Primitive Methodist College, Manchester, and Lecturer in Lancashire Independent College, sometime Fellow of Merton College, Lecturer in Mansfield College, Oxford; (4) *The Life and Teaching of Jesus Christ*, by the Rev. W. B. Selbie, M.A., D.D., Principal of Mansfield College, Oxford; (5) *The Early Church*, by the Rev. Robert F. Horton, M.A., D.D., formerly Fellow of New College, Oxford; (6) *The New Testament Doctrines of Man, Sin, and Salvation*, by R. S. Franks, M.A., B.Litt., Theological Lecturer at the Friends' Settlement for Religious and Social Study, Woodbrooke, Birmingham, sometime Scholar of St. John's College, Cambridge; (7) *Christian Ethics*, by Robert Macintosh, M.A., D.D., Professor of Ethics, Christian Sociology, and Apologetics in Lancashire Independent College, Lecturer in the University of Manchester; and (8) *The Apocryphal Books of the Old and New Testaments*, by the Rev. H. T. Andrews, B.A., Professor of New Testament Exegesis and Criticism, New College, London. The names of the writers guarantee the quality of the work. These little volumes cannot be too widely circulated and studied.

EDUCATION.

The English Grammar Schools to 1660: their Curriculum and Practice. By Foster Watson, M.A., Professor of Education in the University College of Wales, Aberystwyth. (6s. net. Cambridge University Press.)

Prof. Foster Watson essays in this fresh and elaborate volume to present an account of the development of the teaching in the English Grammar Schools from the time of the invention of printing down to 1660. He presents "a history of the practice of the schools, of their curricula, and of the differentiated subjects of instruction, in distinction from the history of the theories of educational reformers as to what ought to be taught and how existing methods could be improved." The basis of the work is therefore bibliographical: and, though the full details supporting the author's generalizations are curtailed by narrow space, he gives an effective description of really representative documents and school text-books. "In 1660, Charles Hoole notes down over three hundred books which ought to be within the reach of the grammar school pupils"; so that, with full allowance for repetition of matter, the necessity for selection is obvious. The limitation of the survey to the Restoration year is justified on the ground that "from that time onwards there was the marked competition of modern subjects with the old undivided sway of classical material in the teaching of the grammar school." Prof. Foster Watson starts with the ecclesiastical organization of schools, and describes the teaching of religion—the use of the Bible and the Catechism—and the teaching of manners and morals (so that direct moral instruction appears to be no new-fangled notion). Then he reviews the secular subjects, from the Horn-book ABC to the "holy" languages: the teaching of reading, writing, music, grammar, logic, Latin, Greek, and Hebrew, with practical applications in disputation, theme-writing, oratorical exercises, Latin speaking, verse-making, and so forth. The numerous extracts from school statutes, with reference to masters as well as to scholars and subjects, are curiously interesting and instructive.

A chance opening of the volume will probably give an impression of oddity, much as the speech or the dress of the people of the time might produce; but a continuous perusal soon reveals a deep earnestness of search for the best ways of securing the educational results desired, a persistent trial on whatever lines seemed most likely to lead to success. Prof. Foster Watson points out to what a surprising degree the intellectual, literary, social, political, and religious environment is reflected in the school text-books. He also shows that, while the schools were "classical in aim," yet "the main stimulus, the outstanding motive of the whole English grammar school system, seen in the Statutes of Foundation, both in the curriculum and in the text-books employed, is distinctly religious": it is doubtful, indeed, "whether any statutes

Professor MEIKLEJOHN'S SERIES.

MEIKLEJOHN'S OROSCOPIC MAPS.

These Maps have been prepared **ON NEW LINES,** and they present the physical features of a country in a simple manner, **WHICH APPEALS STRONGLY TO THE EYE.**

The following are now ready:—
SOUTH AMERICA.
AUSTRALIA. (Size 28 in. by 28 in.)
ASIA. (Size 30 in. by 30 in.)

AFRICA. (Size 30 in. by 30 in.) [*In the press.*
NORTH AMERICA. (Size 30 in. by 30 in.) „ „
EUROPE. (Size 33 in. by 25 in.) „ „
And others to be announced later.

Well mounted on linen and with rollers. Size 33 by 25 inches. Price 6/- net.

GEOGRAPHY.

A NEW GEOGRAPHY ON THE COMPARATIVE METHOD. With Coloured Maps and Diagrams, and an Outline of Commercial Geography and full Index. By J. M. D. MEIKLEJOHN, M.A. **Thirty-eighth Edition (Revised).** Crown 8vo, 630 pp. ... ... **4s. 6d.**

A SCHOOL GEOGRAPHY. With special reference to Commerce and History. With Maps and Diagrams. By J. M. D. MEIKLEJOHN, M.A., and M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 410 pp. **Sixth Edition (Revised)** ... ... **2s. 6d.**

A SHORT GEOGRAPHY. With the Commercial Highways of the World. **Thirtieth Edition (Revised).** By Professor MEIKLEJOHN. Crown 8vo, 196 pp. ... ... **1s.**

THE COMPARATIVE ATLAS. By J. G. BARTHOLOMEW, F.R.G.S., and Edited by Professor MEIKLEJOHN. **Seventh Improved Edition.** Containing 64 Plates and a General Index ... ... **2s. 6d.**

THE BRITISH COLONIES AND DEPENDENCIES: Their Resources and Commerce. By M. J. C. MEIKLEJOHN, B.A. **Seventh Edition (Revised).** Crown 8vo, 96 pp. ... ... **6d.**

EUROPE: Its Physical and Political Geography. Page Map in Colour. By M. J. C. MEIKLEJOHN, B.A. 96 pp. **Fourth Edition (Revised)** ... ... **6d.**

AUSTRALASIA: Its Geography, Resources, Commerce, and Chronicle of Discovery. Third Edition (Revised). By M. J. C. MEIKLEJOHN, B.A. Crown 8vo, 86 pp. ... ... **6d.**

ASIA: Its Geography, Commerce, and Resources. With Tables of Salient Distances and a Double-page Map in Colour. By M. J. C. MEIKLEJOHN, B.A., F.R.G.S. **Second Edition (Revised).** Crown 8vo, 96 pp. ... ... **6d.**

ENGLISH.

ENGLISH LITERATURE. A New History and Survey from Saxon Times to the Death of Tennyson. By J. M. D. MEIKLEJOHN, M.A. **Second Edition.** Demy 8vo, 650+viii pp. ... ... **6s.**

Digitized by Google

of a school could be produced in the period 1518–1559 which do not explicitly name some aspect of religion as the cause which led the founder to establish his school," and the religious motive is still more emphatic in the period from 1559 to 1660, under the Puritan influence. A most laborious, curious, and valuable work.

A Century of Education. Being the Centenary History of the British and Foreign School Society, 1808–1908. By Henry Bryan Binns. (Dent.)

Mr. Binns narrates, not the general history of education, but the part played in the education of the people both at home and abroad by the British and Foreign School Society, during the past century. That past has been a very important and a very honourable one; and, if it is not adequately recognized or even fully known, everybody will be grateful to Mr. Binns for bringing it to the attention of the public. His book is based primarily upon the records preserved in the Society's offices. He is able to present some new materials for the history of education during this period; he definitely connects Lancaster with the Quakers, who have always been a strong element in the Society, and indicates the share taken by important Quakers in its work. The essential interest, however, lies in the general narrative of the operations of the Society, showing its influence upon educational affairs in different periods during the century. The relations between the Society and the Government are of special interest: they began in 1814 with an application for a Government grant; they led to a formidable secession in 1848; but then they also led to the Education Act of 1870. Mr. Binns does well to tell the story of a great movement, and he tells it in plain and lucid language. In appendixes are given four instructive papers: on Elementary Education, by Dr. T. J. Macnamara, M.P.; on Secondary Education, by Mr. Sidney Webb, LL.B.; on the Training of Teachers, by Prof. Foster Watson; and on the Future of English Education in the Light of the Past, by Mr. Graham Wallas. There are five illustrations—portraits of Joseph Lancaster, William Allen, the Duke of Kent, the Sixth Duke of Bedford, and Lord John Russell. The volume is an able and welcome contribution to the history of education during the past hundred years.

Messrs. J. & J. Paton issue the twelfth annual edition of their very useful *List of Schools and Tutors*—"an aid to parents in the selection of schools" (2s.). The volume remains on the well known lines. It does not profess to include all schools, but it presents in a concise and practical form the more important particulars of many of the best English schools for boys and girls, with separate lists of schools in Scotland and in Ireland; and in the new edition the selection has been carefully extended. The lists of scholarships and exhibitions obtainable at the Public Schools are extremely useful; and much information is given regarding preparation for the Services and for the Professions. The illustrations, as usual, form a very attractive and interesting feature of the volume

MISCELLANEOUS.

Messrs. Ralph, Holland, & Co. issue a new edition of *Citizenship: Its Rights and Duties*, by Frederick Peaker (1s. 6d.). The reduced price should bring the work within the reach of all the schools, and give it a wider general circulation. We have much pleasure in repeating our original commendation of this excellent manual on a most important subject.

Messrs. Methuen & Co. issue for the Budget League *The Budget, the Land, and the People*, a handy little volume explaining and illustrating the new land value taxes, and claiming to be "a complete guide to the great question of the day" (6d. net). A preface is furnished by the Chancellor of the Exchequer. Both friends and foes will find in the booklet at least a clear explanation of the Government point of view. Mr. Lloyd George indeed disclaims responsibility for the statements and figures, but he says that the work appears to him "to present a concise and well-founded account of the subject." Certainly, as he says, "every citizen should know as much as is here set forth."

The *Preliminary Certificate Guide*, 1909 (6d. net, Normal Correspondence College), gives the official information on the subject, with much additional explanation and hints that will be very helpful to candidates.

Pitman's Evening School Record-Syllabus Book, "adapted to the Codal requirements of both Rural and Urban Evening Schools" (1s.), will be very convenient for teachers.

The "Knowledge" Circular Slide Rule Calculator (*Knowledge* Office, 27 Chancery Lane, W.C.) is an ingenious device by Major B. Baden-Powell. The calculations—multiplication and division, proportion, conversion of measures, squares and cubes and square roots, decimal equivalents of fractions, &c.—are promptly done by simple manipulation of two similarly figured dials—an outer (fixed) and an inner (rotatable). Very clever and curious.

Messrs. Libraco, Ltd. (60 Wilson Street, E.C.), publish various little books relating to the management of libraries. (1) There is a *Guide to Librarianship*, edited by James Duff Brown, Borough Librarian, Islington—"a series of reading lists, methods of study, and tables of factors and percentages required in connexion with library economy," designed for the use of students entering for the professional examinations of the Library Association (2s. 6d. net). It is a very much revised and enlarged edition of the "Annotated Syllabus for the Systematic Study of Librarianship" issued by the same author in 1904. (2) *The Sheaf Catalogue*, by James Douglas Stewart, Islington Public Libraries, Secretary of the Bibliographical Committee of the L.A. and Editor of "The English Catalogue"—"a practical handbook on the compilation of manuscript catalogues for public and private libraries" (2s. 6d. net). (3) *Guides to Book Selection*, by J. D. Stewart and Olive E. Clarke, Islington Public Libraries—"a description of the principal aids and guides, with an index of subjects, and statistical and financial factors." These books are all intelligently compiled, and contain a great deal of sound practical information and suggestion for librarians.

FIRST GLANCES.

Classics.

Hellenica Oxyrhynchia, cum Theopompi et Cratippi Fragmentis. Recognoverunt brevique adnotatione critica instruxerunt Bernardus P. Grenfell, Patrologiae apud Oxonienses Professor, Collegii Reginae Socius, et Arturus S. Hunt, Papyrologiae apud Oxonienses Praelector, Collegii Reginae Socius. (4s. 6d. cloth; 4s. paper. Clarendon Press—Oxford Classical Texts.)

[Smaller and convenient edition, rendering the materials more widely accessible. Most carefully and ably edited.]

Latin Book, First. By C. A. Williams, M.A., sometime Scholar of Queens' College, Cambridge, and Classical Master at Hulme Grammar School, Oldham. (2s. Rivingtons.)

["The first year of a two years' course preparatory to Caesar." "Vocabulary mainly and intentionally Caesarian." Confined to the simple sentence: oral work introduced from the first lesson; slowly progressive; exercises abundant. Grammar in summary at end. Full vocabularies. Elaborate and effective.]

Livy IX. Edited by W. B. Anderson, M.A., sometime Major Scholar of Trinity College, Cambridge, Professor of Latin in Queen's University, Kingston, Canada, formerly Senior Classical Lecturer in the University of Manchester. (Cambridge University Press—Pitt Press Series.)

[Text slightly changed from Stephenson's edition. Notes independent and often presenting fresh results. Special discussions in appendix. Indexes unusually full. Exceptionally able work.]

Thucydides, Book III. Edited by E. C. Marchant, M.A., Sub-Rector of Lincoln College, Oxford. (3s. 6d. Macmillan—Classical Series.)

[Introduction outlines and explains "the four great episodes" of the book, and deals with style and diction, the speeches, &c. Notes ample and well considered. Indexes. Very instructive edition.]

Mathematics.

Arithmetic, Advanced. Parts I. and II. By J. Lightfoot, M.A., D.Sc. Revised and enlarged by P. G. Asbury, B.A. Lond. 3s. 6d. net. Normal Press.

[Revised edition. Theory fully shown; applications to business and science constantly kept in view; abundance of exercises; answers.]

Arithmetic, Practical, for Schools. By W. G. Borchardt, M.A., B.Sc., Assistant Master at Cheltenham College, formerly Scholar of St. John's College, Cambridge. 4s. 6d., with answers; 3s. 6d., without answers.

[Abundant exercises, problems, and (125) test papers.]

Calculus, The, and its Applications. By Robert Gordon Blaine, M.E., Assoc.M.Inst.C.E., &c., Lecturer at the City Guilds Technical College, Finsbury. 4s. 6d. net. Constable.

[Based on long experience of teaching (under Prof. Perry). Numerous problems fully worked out; 79 figures.]

Formen- und Invariantentheorie, Allgemeine. Erster Band: Binäre Formen. Von W. Franz Meyer, in Königsburg i. Pr. M. 9.60 geb. Leipzig: Göschen (Sammlung Schubert XXXIII).

Geometry, Modern (Godfrey and Siddons), Solutions of the Exercises in. By C. Godfrey and A. W. Siddons. 4s. net. Cambridge University Press.

[Very helpful to teachers.]

Geometry, The Elements of, in Theory and Practice. By A. E. Pierpoint, B.Sc., sometime Examiner in Mathematics to the Allahabad and Punjab Universities. 3s. Longmans.

[Parts I., II., and III. together, comprising the subject-matter of Euclid I., II., III, IV., 1–9 and 15, with experimental sections and additional theorems and problems. 1,259 exercises; hints to solutions of the more difficult; sets of questions for examination; 346 figures. Elaborate.]

Mathematics, American Journal of. July, 1909. (Kegan Paul.)

Mathematics, Annals of. July, 1909. (Longmans.)

Practical Manuals.

Cookery, Instruction in. By A. P. Thompson, Instructress to the London County Council. 2s. 6d. Methuen (Text-Books of Technology).

["Does not pretend to be a recipe book"—though some few recipes are given—"but to give practical hints on the conduct of classes." Most useful. Ten illustrations.]

Digitized by Google

Cookery Recipes, Plain. Nelson.

[Published under the auspices of the Edinburgh School of Cookery and Domestic Economy, Limited. A varied, comprehensive, and excellent collection for home use in families of moderate incomes.]

Dress Cutting and Drafting, "Up-to-Date." By M. Prince Browne, Examiner in Dressmaking of the Teachers in Training at the University College of South Wales and Monmouthshire, &c. In four Parts. 1s. each. Horace Cox.

[Part I., Bodices and Sleeves. Part II., Skirts and Adaptations. Part III., Tailoring and French Pattern Modelling. Part IV., Adaptation of Patterns to the Cutting-out of Under Garments. Full and clear. Numerous diagrams.]

Woodwork for Schools on Scientific Lines: a Course for Classwork or Private Study. By James Thomas Baily, Head Master, St. Albans Technical School, and Manual Training Staff Instructor, Hertfordshire County Council, and S. Pollitt, B.Sc., Head Master, Southall County School, Middlesex. 2s. Also in three Parts, each separately, 9d. Murray.

[Links the classroom with the laboratory and workshop, and gives due prominence to the practical usefulness of the subject learned. Construction of science models forms an important portion of the course. Excellently devised series of 60 lessons; 122 figures.]

EDUCATION.

Board of Education. Regulations applicable to Schools for Blind, Deaf, Defective, and Epileptic Children (from September 1).

[Bright and attractive.]

Novello's School Songs (edited by W. G. McNaught).—Book 200, The Children's Winter Day (song-cycle for young children). Words and Music by Myles B. Foster. 9d. Book 210, Garlands of Songs for Children (Set IV.). Arranged to be sung in unison consecutively by W. G. McNaught. 6d.—Grade II., Book 205, Eight Two-Part Songs, by various composers. Book 207, Eleven Old English Songs. 6d. each book.—Grade III., Book 174, Five Accompanied Trios, by various composers. 8d. Book 203, Six Two-Part Songs, by various composers. 8d. Book 206, Thirteen Unaccompanied Trios, by various composers. 6d.

Separate Pieces: Grade I. (very easy), The Lullaby of Little Koos. Words by Mary Adamson; composed by Ernest Newton. 3d. Land of the Veld. Words by Mary Adamson; composed by H. Elliot Button. 3d. The Shadow of Life. Words by Alfred C. Calmour; composed by W. G. Alcock. 2d. Stay, Stay at Home. Words by Longfellow; composed by Arthur Richards. 2d.—Grade II. (easy): The Flag of the Empire. Words by the Rev. G. H. Moore; composed by Thomas Facer. 1½d. Song of the Fairies (Over Hill, Over Dale). Words from Shakespeare's "Midsummer Night's Dream"; composed by J. P. Attwater. 2d. Under the Greenwood Tree. Words by Shakespeare; composed by Arthur Richards. 2d. Combien j'ai douce Souvenance (Breton Folk-Song). Arranged by H. J. Taylor. 1½d.—Grade III. (suitable for Higher Divisions): The Little Quaker. Words by Mary Adamson; composed by H. Elliot Button. 3d.—Not Graded: The Story of the Bok-Makieri. Words by Mary Adamson; composed by Ernest Newton. 3d. The Fall of the Leaf (Herbstlied)—Two-Part Song. Words by Mahlmann; composed by Robert Schumann. 2d.

[Generally very interesting and suitable.]

MATHEMATICS.

Note on Kirkman's Schoolgirl Problem, vide *Question* 15956.

(Vide "*Educational Times*," *August*, 1909, *and earlier issues of this Journal.*)

By O. ECKENSTEIN.

I see that Mr. Henry E. Dudeney has discovered how I solved the cases of 69 and 93 girls; as in his last contribution he repeats, as new, some matter which has already appeared in the *Educational Times Reprint*, and, as his information is also incomplete in some respects, I send you a further contribution on the subject. In order to simplify matters, I will replace Mr. Dudeney's letters $a_1, b_1, c_1, a_2, b_2, c_2, \ldots$, by the numbers 1, 2, 3, 4, 5, 6, ...

A considerable part of the first paragraph of Mr. Dudeney's paper is expressed, less eloquently, by my statement that this method applies to *all* cases, with the solitary exception of 15. I may add that the "new pose exhibited" is not a new pose at all, as it has been used before.

The second paragraph at once follows from the solutions I gave. In each of them the solution is in two parts, and the cyclical arrangement described by Mr. Dudeney is evident on inspection.

In the next paragraph he then adopts the $18n$ classification, having previously used the $24n$ classification only (my statement was "all cases of the form $18n+3$"). He then gives his arrangement of the triplets, all differences of the form $3p$ being used in the first part, as in the solutions I gave. Here, however, an important point arises, which he does not mention and which is not apparent from either of my solutions: in cases of the forms $18n+3$ and $18n+15$ these differences *must* be used in the first part of the solution; in cases of the form $18n+9$ they *may* be used in that part, but they may also be used in the second part; and if we use one of them, namely $6n+3$, in the second part, and introduce the slight modifications necessary, we obtain a simple and regular method for the $18n+9$ series, in which the arrangement of the triplets is as regular as in my 93 ($18n+3$) solution. As an instance, I will take the case of 45 girls.

45 *girls.*—Call the girls 1, 2, 3, ..., 45. The first day's arrangement is:—

1 4 10	16 19 25	31 34 40
11 12 30	26 27 45	41 42 15
8 13 29	23 28 44	38 43 14
6 18 20	21 33 35	36 3 5
2 37 24	17 7 39	32 22 9

The 2nd, 3rd, ..., 15th day's arrangement is obtained by adding 1, 2, ..., 14 to the first day's numbers. When the sum obtained exceeds 45, subtract 45 from that sum.

The first triplets on the 16th, 17th, ..., 21st day are:

1 5 12	2 6 13	3 7 14
1 9 26	2 10 27	3 11 28

The 2nd, 3rd, ..., 15th triplet on each day is obtained by adding 3, 6, ..., 42 to the first triplet of that day. When the sum obtained exceeds 45, subtract 45 from that sum.

The last day's arrangement is:

1 16 31, 2 17 32, ..., 15 30 45.

The method used is comparatively simple; all cases of the form $18n+9$, except 9, can be solved in this way.

This solution, like my 93 solution, is a regular one; as few different sets of differences as possible are used.

My 69 solution was an irregular one, and so is Mr. Dudeney's. I gave an irregular one intentionally; firstly for the sake of variety, and secondly because the method is the only one generally applicable, without modification (15 always excepted). But it is also possible, but also not simple, to obtain regular solutions in the case of the $18n+15$ series. As an instance, I will take the case of 33 girls.

33 *girls.*—Call the girls 1, 2, ..., 33. The first day's arrangement is:—

1 13 19	23 11 5	3 15 21
2 4 7	12 14 17	28 30 33
6 16 25	10 20 29	8 18 27
24 31 32		
9 22 26		

The 2nd, 3rd, ..., 11th day's arrangement is obtained by adding 3, 6, ..., 30 to the first day's numbers; subtracting 33 if that sum is exceeded.

The first triplets on the other 5 days are:—

1 8 9	2 9 10
1 14 18	2 15 19
1 12 23	

The subsequent triplets are obtained by adding 3, 6, ..., 30; subtracting 33 if that sum is exceeded. Here the sets of differences used are 6 12 15, 2 3 5, 9 10 14, 1 7 8, 4 13 16, 11 11 11, *i.e.*, 6 sets, the minimum number possible.

Digitized by Google

All cases of the form $18n+15$, except 15, can be solved in this way.

In a former contribution, Mr. Dudeney states that a general method for solving cases of the form $24n+15$ has yet to be discovered. There are a number of methods, some simple and others complicated, for attacking cases of the form $12n+3$. I select some typical instances. Such methods can be divided into two classes: in one the sets of differences containing odd numbers (excluding $6n+1$) are of the form 1 3 2 or 1 3 4; in the other they are of the form 1 1 2. I will call the former scalene, and the latter isosceles solutions. In the solutions which follow, I give the first day's arrangement; the 2nd, 3rd, ... day's are obtained by adding 2, 4, ... to the first day's. If the sum obtained exceeds $12n+2$, subtract $12n+2$ from that sum. The girls are called k, 1, 2, ..., $12n+2$.

SCALENE SOLUTIONS.

123 GIRLS.

k 1 62	15 109 34	29 95 118
61 63 64	47 77 92	33 91 120
3 121 58	17 107 94	31 93 2
59 65 56	45 79 96	70 44 72
5 119 54	19 105 26	46 98 42
57 67 52	43 81 24	30 12 22
7 117 74	21 103 102	4 40 20
55 69 48	41 83 104	68 18 100
9 115 78	23 101 106	50 28 108
53 71 80	39 85 16	38 116 32
11 113 82	25 99 14	110 76 122
51 73 84	37 87 112	36 90 60
13 111 86	27 97 10	114 6 66
49 75 88	35 89 8	

39 GIRLS.

k 1 20	15 25 30	11 29 38
19 21 22	7 33 32	26 10 24
3 37 16	13 27 34	8 2 12
17 23 14	9 31 4	6 18 36
5 35 28		

All cases of the form $12n+3$ can be solved in this way. The method is very simple in most cases; it applies, without any modification whatever, to all except 27, 51, 111, ... If suitably modified, it applies to these cases also, but then becomes much more complicated. An instance is given below.

ISOSCELES SOLUTIONS.

31 91 12	93 81 38	18 70 62
61 83 72	87 63 26	84 90 74
23 67 94	75 27 2	20 32 98
45 35 40	51 53 52	36 22 92

All cases of the form $12n+3$ can be solved in this way. The method is simple in most cases. It has this peculiarity, that in nearly every case some modification is necessary; as shown in the above two cases. The modification varies with the number and magnitude of the odd-number series obtained. Thus, with 135 girls we have one series only; but with 99 we have four series: two of 21 numbers each and two of 3 numbers each. In certain cases, especially those of the form $60n-9$, the modifications required are so many and so complicated as to give the appearance of a new method. An instance is given below.

SCALENE SOLUTION.—27 GIRLS.

k 1 14	17 23 8	5 19 26
9 11 12	13 21 18	2 4 10
3 7 22	15 25 24	6 16 20

ISOSCELES SOLUTION.—51 GIRLS.

k 1 26	23 45 34	31 35 8
41 43 42	9 33 46	32 48 50
13 19 16	27 47 12	14 18 24

3 17 10	25 37 6	4 28 40
11 29 20	7 15 36	

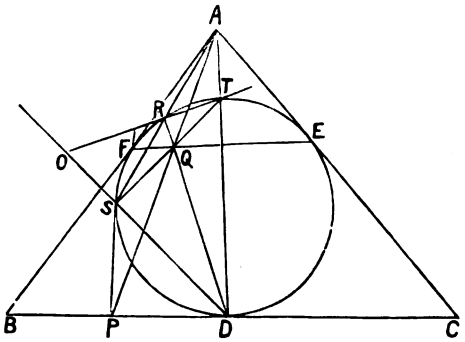
In conclusion, I would like to state that we (Mr. L. A. Legros and myself) do not claim that all, or any, of the methods used in the solutions I have given are wholly original; but in each case there is at least one feature of interest not noted in those hitherto published. And for most of them only a very elementary knowledge of mathematics is required.

[Mr. Dudeney sends us the following note as we are going to press:—"At the time of writing my article for the August number of the *Educational Times* I had, unfortunately, not seen any of the matter previously communicated by Mr. Eckenstein, nor have I had the pleasure of reading it even now. This I regret; but it should have been obvious that I could not have seen his solutions. Towards the end of the article (for *Reprint*) I wrote: 'The only cases under 100 for which arrangements have *now not been published* . . . are 57, 75, and 93.' He has apparently seen the complete article or he would not know that I had solved 93, as he states. Of course, the entirely original matter that I gave in my first two articles, with its indication of types and methods of solution, would make the discovery of mere arrangements, for the cases I mentioned, comparatively easy, and my pose for the case of 21 girls would naturally lead other investigators, as it led me, to substitute the $18q$ for the $24p$ classification that I had previously discovered. Mr. Eckenstein does not state where the 'new pose' has been published before; but the important point was not its novelty, but the discovery that it is general for all values of $6m+3$. Consideration of space has prevented my discussing the all-important but difficult point of the method of grouping the differences and applying them to the numbers or suffixes, and Mr. Eckenstein is also silent on the point. But I will just remark that, by his method for 111 girls (a case of the form $60n-9$), he finds that 'the modifications required are so many and so complicated,' whereas by my general method it is so simple, direct, and free from all modifications, that it can be written out in two minutes without any previous calculation or preparation, and without any trials or empirical steps."]

16675. (W. J. DOBBS, M.A.)—A circle is inscribed to a triangle ABC, touching its sides at D, E, F. P is any point in the side BC, and AP meets FE at Q. DQ meets the circle at R, and AR meets the circle at S. Prove that PS is the tangent at S.

Solution by W. RIGBY, M.A., *and* Rev. WILLIAM ANDERSON, M.A.

It is a well known theorem (*a*) that the harmonic triangle of a quadrangle inscribed in a circle is self-conjugate for the circle.



Join AD and let it cut the circle in T; then EF, the polar of A, passes through Q, which must be the intersection of DR and ST ... (*a*).

Let RT, SD meet in O, then from (*a*) PQ is the polar of O. Therefore the polar of P passes through O.

The polar of P also passes through D, since PD is a tangent to the circle. Therefore OD is the polar of P. Therefore PS is the tangent from P to the circle.

11509. (J. H. GRACE, M.A.)—Having given three circles A, B, and C, (1) draw a circle which shall touch A, cut B orthogonally, and bisect the circumference of C, and (2) find how many circles can be so drawn.

Solutions (I.) *by* F. E. RELTON; (II.) *by* W. L. MARR, M.A., B.Sc.; (III.) *by* R. J. DALLAS.

(I.) Let P be the centre of any circle which cuts B orthogonally and bisects the circumference of C. Then, if r_2, r_3 be the radii of B, C, respectively, $PB^2-r_2^2=PC^2+r_3^2$ or $PB^2-PC^2=r_2^2+r_3^2$, so that the locus of P is a straight line (PD say) perpendicular to BC. Take a

Digitized by Google

system of circles co-axal with B, the axis being PD. Let E, F be the limiting points. The required circle passes through E, F and touches A. As two such circles can be drawn there are two solutions.

(II.) The locus of the centres of circles which cut B orthogonally and bisect the circumference of C is a straight line (L). With the centre of B as origin of inversion, describe a circle the inverse of A, the radius of B being the radius of inversion. Call this last circle D. The problem then resolves itself into finding a circle whose centre is in L and which touches A and D.

(III.) If c is radius of C, r that of sought circle, d distance between centres, we have $r^2-c^2=d^2$. That is $r^2+(ci)^2=d^2$, hence sought circle cuts B and a circle concentric with C, and radius ci orthogonally; thus it belongs to a coaxal system. Let X, Y be the real common points of intersection of the system; let C_1 be centre of C, and let B cut line of centres in B_1B_2. Then, drawing CO at right angles to line of centres at C_1 and $= c_1$, we must have XOY a right angle, that $C_1X.C_1Y$ may $= -c^2$. Also X, Y divide B_1B_2 harmonically. The problem is thus reduced into finding the common pair of two superposed involutions. In fact the solution is: join OB_1, OB_2 and bisect B_1OB_2 internally and externally by OX_1, OY_1. Having found X and Y, we describe circles through them to touch A. There are two of them.

11352. (G. S. Carr, M.A.)—If a watch spring, normally straight, be made circular by soldering together the ends, and then compressed at the extremities of a diameter AA′ by forces P, P′, the length of the transverse diameter BB′ thus becoming $2b$, show that the curvatures at A and B respectively (putting E for the elasticity) will be

$$(Pb/2E)\mp 1/b.$$

Solution by W. L. Marr, M.A., B.Sc.

For equilibrium the forces P and P′ must be equal.

Let C be the radius of curvature at S, C_1 at A, C_2 at B.

The couples keeping the arc AS in equilibrium are Px due to the impressed force P and those due to the curvatures at A and S.

$$E/C_1+Px=E/C \ldots (1).$$

When $x=b$,

$$E/C_1+Pb=E/C_2 \ldots (2).$$

$$1/C=d/dx\,(dy/ds),$$

$$E/C_1+Px=E\,d/dx\,(dy/ds) \ldots (1).$$

Integrating $E/C_1\,x+\frac{1}{2}Px^2=E\,dy/ds$,

when $x=b$, $dy/ds=1$;

therefore $E/C_1\,b+\frac{1}{2}Pb^2=E$ ..... (3);

therefore $E/C_1+\frac{1}{2}Pb=E/b$; therefore $E/C_2=E/b+\frac{1}{2}Pb$.

The curvature at A and B is thus given by $1/b\pm Pb/2E$, which agrees numerically with the formula given.

Note by the Proposer.—Mr. Marr's is the better way of presenting the formula; only that I should write $\mp$ since the minus sign belongs to A and the plus to B. If P increases until it becomes $= 2E/b^2$, the curvature at A vanishes and after that changes sign, the curve becoming re-entrant.

16658. (W. F. Beard, M.A.)—A conic circumscribed about a triangle passes through its centroid. Show that the triangle formed by joining the mid-points of the sides is self-conjugate to the conic.

Solution by A. H. S. Gillson.

Take the given triangle as triangle of reference.

Then the equation of the conic circumscribing the triangle of reference is, in trilinear coordinates,

$$f.\beta\gamma+g.\gamma\alpha+h.\alpha\beta=0 \ldots (1).$$

Also, since the centroid $(2\Delta/3a,\ 2\Delta/3b,\ 2\Delta/3c)$ is on the conic,

$$af+bg+ch=0 \ldots (2).$$

The coordinates of the middle point D of the side BC are $(0,\ \frac{1}{2}a\sin C,\ \frac{1}{2}a\sin B)$. Hence the polar of D with respect to (1) is

$$\alpha(hc+gb)+\beta fb+\gamma fc=0,$$

which, by the condition (2), reduces to

$$a\alpha=b\beta+c\gamma \ldots (3).$$

This line clearly passes through the middle points E and F of the sides CA, AB. Hence the triangle DEF is self-polar for the conic (1), (2).

The following solution is due to the Proposer:—

Let ABC be the triangle, A′, B′, C′ the mid-points of its sides, G the centroid.

Let AGA′ meet B′C′ at D.

Then A′G/GD = A′A/DA.

Therefore (A′D, GA) is harmonic. Therefore the polar of A′ to a conic through ABCG passes through D.

Also (A′ ∞ BC) is harmonic. Therefore the polar of A′ is parallel to BC.

Therefore B′C′ is the polar of A′. Similarly for B′, C′.

Thus A′B′C′ is a self-conjugate triangle.

16679. (R. Chartres.)—Evaluate

$$\sum_1^\infty \frac{[1.3.5\ldots(2n-1)]^2}{(2n+2)!}.$$

Solution by T. W. Chaundy.

$$(1-x^2)^{\frac{1}{2}}=1-\tfrac{1}{2}x^2-\frac{1.1}{2.4}x^4-\frac{1.1.3}{2.4.6}x^6-\ldots;$$

i.e.,
$$1-(1-x^2)^{\frac{1}{2}}=\tfrac{1}{2}x^2+\frac{1^2.3}{4!}x^4+\frac{1^2.3^2.5}{6!}x^6+\ldots;$$

i.e.,
$$\int_0^1\frac{1-(1-x^2)^{\frac{1}{2}}}{x^2}\,dx=\tfrac{1}{2}+\frac{1^2}{4!}+\frac{1^2.3^2}{6!}+\ldots$$
$$=\tfrac{1}{2}+\sum_1^\infty\frac{[1.3\ldots(2n-1)]^2}{(2n+2)!};$$

i.e.,
$$\sum_1^\infty\frac{[1.3\ldots(2n-1)]^2}{(2n+2)!}=-\tfrac{1}{2}+\int_0^1\frac{1-\sqrt{(1-x^2)}}{x^2}\,dx \qquad [x=\sin\theta]$$
$$=-\tfrac{1}{2}+\int_0^{\frac{1}{2}\pi}\frac{1-\cos\theta}{\sin^2\theta}\cos\theta.d\theta$$
$$=-\tfrac{1}{2}+\int_0^{\frac{1}{2}\pi}\frac{2\cos^2\theta-1}{\cos^2\theta}\,d\theta$$
$$=-\tfrac{1}{2}+\int_0^{\frac{1}{2}\pi}(2-\sec^2\theta)\,d\theta$$
$$=-\tfrac{1}{2}+\tfrac{1}{2}\pi-1=\tfrac{1}{2}(\pi-3).$$

The Proposer's solution is as follows:—

Integrating $\int_0^1\sin^{-1}x\,dx$, by parts, and also by expanding,

$$\tfrac{1}{2}\pi-1=\int_0^1\left(x+\tfrac{1}{2}.\frac{x^3}{3}+\frac{1.3}{2.4}.\frac{x^5}{5}+\ldots\right)dx.$$

Therefore
$$\sum_1^\infty\frac{[1.3.5\ldots(2n-1)]^2}{(2n+2)!}=\tfrac{1}{4}(\pi-3).$$

16684. (R. F. Davis, M.A.)—Solve the equations

$$abc\,(y^2+z^2-x^2)+(b^2+c^2-a^2)(ayz+bzx+cxy)=2bcP,$$
$$abc\,(z^2+x^2-y^2)+(c^2+a^2-b^2)(\ldots\ldots\ldots\ldots)=2caQ,$$
$$abc\,(x^2+y^2-z^2)+(a^2+b^2-c^2)(\ldots\ldots\ldots\ldots)=2abR.$$

Solution by H. J. Woodall, A.R.C.S.

Adding the first two equations, dividing by zc, and factorizing, we get

$$(az+cx)(bz+cy)=bP+aQ.$$

Similarly, from (1) and (3),

$$(bx+ay)(bz+cy)=cP+aR;$$

and, from (2) and (3), $(bx+ay)(cx+az)=cQ+bR$,

whence
$$cx+az=\frac{\sqrt{[(bP+aQ)(cP+aR)(cQ+bR)]}}{(cP+aR)},$$
$$cy+bz=\frac{\sqrt{[(bP+aQ)(cP+aR)(cQ+bR)]}}{(cQ+bR)},$$
and
$$bx+ay=\frac{\sqrt{[(bP+aQ)(cP+aR)(cQ+bR)]}}{(bP+aQ)};$$
$$x=\frac{\sqrt{[(bP+aQ)(cP+aR)(cQ+bR)]}}{2bc}\left(\frac{b}{cP+aR}+\frac{c}{bP+aQ}-\frac{a}{cQ+bR}\right),$$
$$y=\&c.,$$
$$z=\&c.$$

8064. (J. P. Johnston, B.A.)—If a cone of the second degree whose vertex lies on a fixed plane (M) intersects a quadric (U) in a pair of planes, one of which (L) is fixed, the envelope of the other is a cubic of the form $L(U+kM^2)=0$.

Digitized by Google

Solution by A. M. NESBITT, M.A.

Refer the quadric to a self conjugate tetrahedron having one of its faces in the plane M; there will be no loss of generality if we take for its equation $x^2+y^2+z^2=w^2$, $w=0$ being the equation to M. Now in the particular case where $w\equiv c$ and the other three faces of the tetrahedron are at right angles, U becomes a sphere, and the cone becomes a cylinder whose common sections with U are *equal* circles. Hence, the section with L being a fixed circle, the other section envelopes a concentric sphere touching L (I am, however, far from clear that the plane L can be said to belong to the envelope), and this sphere has an equation of the form $U+kc^2=0$. Consequently, when M is no longer the plane at ∞ and the other faces are not mutually at right angles, the envelope will be of the same form $U+kM^2=0$.

Note.—The envelope of a variable chord of a circle which is equal to a fixed chord L is a concentric circle touching L; but L is itself no part of the envelope; and the case that is treated of in my solution above seems to me analogous.

QUESTIONS FOR SOLUTION.

16686. (Professor H. LANGHORNE ORCHARD, M.A., B.Sc. Revised; *vide Educational Times*, July 1909.)—Find the envelope of a sphere of unit radius which moves so that its centre is always in a fixed plane. In Questions 16700, line 3, and 16704, line 1 (*vide Educational Times*, August 1909), read ${}_{n+1}C_4.B_2.3^{n-3}$ and s respectively.

16714. (Professor SANJÂNA, M.A.)—Two knights are placed at random on a square chess-board of n^2 squares; prove that the chance that either can take the other is $8(n-2)/n^2(n+1)$; and solve the question when the move of each piece consists of r squares parallel to one side of the board, and s squares parallel to the other.

16715. (PULINBIHARI DAS, M.A.)—Prove that

$$\int_0^a \frac{\operatorname{cosech}(\frac{1}{2}\pi\sqrt{x})}{1+x}\,dx=\pi.$$

16716. (Professor NEUBERG.)—Trouver l'équation différentielle des cissoïdes de Dioclès qui ont même point de rebroussement.

16717. (S. NARAYANA AIYAR.)—$a, b, c, d, \ldots$, being n quantities, establish the following identities where ρ_{ab} denotes $\sqrt{(a^2+b^2-2ab\cos\theta)}$, and ϕ_{ab} denotes $\tan^{-1}(a\sin\theta)/(a\cos\theta-b)$, and where the summation extends to all the n quantities,

(1) $$\Sigma\frac{\sin(x+a-b)\sin(x+a-c)\sin(x+a-d)\ldots\text{ to }n\text{ factors}}{\sin(a-b)\sin(a-c)\sin(a-d)\ldots\text{ to }n\text{ factors}}\equiv\frac{\sin nx}{\sin x},$$

(2) $$\Sigma\frac{\rho_{ab}\rho_{ac}\rho_{ad}\ldots\text{ to }n\text{ factors}}{(a-b)(a-c)(a-d)\ldots\text{ to }n\text{ factors}}\cos(\phi_{ab}+\phi_{ac}+\phi_{ad}+\ldots\text{to }n\text{ terms})\equiv\Sigma_{r=0}^{r=n-1}\frac{\cos}{\sin}r\theta.$$

16718. (*Communicated by* Professor K. C. SIH.)—Sum the series

$$\frac{1+2+3+4}{1.2.3.4}+\frac{5+6+7+8}{5.6.7.8}+\frac{9+10+11+12}{9.10.11.12}+\ldots\text{ ad inf.}$$

16719. (Professor SANJÂNA, M.A.)—Show that numbers of the form $x^4-x^2y^2+y^4$ can be resolved into two algebraic factors for a multiply infinite number of corresponding values of x and y. Hence factorise

$$120^6+119^6,\quad 193^6+141^6,\quad 243^6+242^6,\quad 447^6+445^6.$$

16720. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Solve (in integers) $N_1N_2N_3=\square$, where $N_r=x_r^4+y_r^4>1$. Give the lowest solution, and also one with $N_1N_2N_3>10^{40}$, both completely resolved into prime factors.

16721. (Professor E. B. ESCOTT.)—Find two equations of the fourth degree with all their roots rational, each equation having a double root (no roots common to the two equations) and having the first four terms alike in the two equations.

16722. (R. J. DALLAS.)—A sheaf of planes through a fixed point O cut two pairs of non-intersecting lines (aa'), (bb') in AA', BB', and AA', BB' meet in P. To show that the locus of P is a cubic surface, and to examine the break-up of the surface when the lines lie on a quadric.

16723. (R. CHARTRES.)—Show how *naturally* a sphere and the corresponding cone make up the circumscribing cylinder, and then deduce their volumes.

16724. (C. E. YOUNGMAN, M.A.)—From any point P on a cardioid, let chords PSQ, PRQ' be drawn, one through the cusp S, the other to be tangent at R; then QQ' is the chord of curvature at Q.

16725. (S. NARAYANAN, B.A., L.T.)—Show that the focus of an inscribed parabola having the orthocentre for the foot of the directrix lies at an intersection of the circum-circle with the cubic

$$\Sigma\beta\gamma\tan A\,[\beta\sin B-\gamma\sin C+\alpha\sin(B-C)]=0.$$

16726. (M. T. NARANIENGAR, M.A.)—Given a chord PQ of a conic, and a point R on it, find, geometrically, a point O on the conic such that OR shall be equally inclined to OP and OQ. Discuss the number of solutions.

16727. (H. L. TRACHTENBERG, B.A.)—Prove that the centres of a four-point system of conics lie on a line, provided that two of the four points are at infinity.

16728. (Professor NANSON.)—The director circles of all conics harmonically inscribed in three given conics have a common orthogonal circle.

16729. (R. F. DAVIS, M.A.)—Along the perpendiculars AX, BY, CZ are set off distances AL, BM, CN respectively equal to the trilinear coordinates of any point P on the circum-circle of a given triangle ABC, attention being paid to sign. Prove that L, M, N are collinear. What is the geometrical significance of the line LMN?

16730. (W. F. BEARD, M.A.)—Z is a fixed point in a fixed straight line XY, and D is any other point not in XY. Two circles are drawn to touch XY and to touch ZD at D. The tangents to these circles from any point A on ZD produced meet XY at B, C. Prove that the locus of the in-centre of the triangle ABC is a straight line.

16731. (W. J. GREENSTREET, M.A.)—The sides and diagonals of a quadrilateral being a, b, c, d, e, f, show that

$$ac\cos(a,b)+bd\cos(c,d)+ef\cos(e,f)=0,$$

where (a, b) is the angle between a and b.

16732. (W. GALLATLY, M.A.)—Resolve

$$bc(b+c)(a^2+ac+c^2-b^2)(a^2+ab+b^2-c^2)+\ldots+\ldots$$

into seven factors.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

11568. (J. J. WALKER, F.R.S.)—A Boyle and Marriotte tube might obviously be employed to find the barometric reading (approximately). Discuss the possible error in the result, and determine whether a considerable or moderate condensation of air is preferable.

11757. (Professor CROFTON, F.R.S.)—A heavy circular hoop (radius = 1) is jointed at three points A, B, C. The line AB is horizontal, and the joints A, B are fixed points, on which the hoop rests in a vertical plane. Find the direction of the strain at C. If ψ be the inclination of this strain to the horizon, θ the arc of the hoop from C to the highest point, show that if the points A, B are taken continually nearer and nearer to the lowest point, the inclination ψ tends to the limiting value $\tan\psi=\theta/(1+\theta\tan\frac{1}{2}\theta)$; but that when they ultimately coincide at the lowest point, the direction of the strain is indeterminate.

11768. (The late H. R. GREER, B.A.)—Prove that any algebraical equation connecting x and Δ (the symbol of finite difference) becomes an algebraic identity when we substitute -1 for Δ. Of what general transformation, allowable with regard to these symbols, is this a particular case?

11887. (Professor SYLVESTER.)—Find the least circle which will contain a given system of points in a plane; also the least sphere which will contain a given system of points in space.

11971. (Professor BESSO.)—Éliminer x, y, z entre les équations

$$yz(1-2x)=\alpha^2(1-x)^2,\quad zx(1-2y)=\beta^2(1-y)^2,$$
$$xy(1-2z)=\gamma^2(1-z)^2,\quad x+y+z=1.$$

12074. (E. WHITE, B.A.)—If a number N be expressed in any scale of notation, radix r (say), and a new number be formed from it by adding to it the sum of its digits, and this number be treated in the same way, and so on, then no number of the series will be a multiple of $r-1$, unless N itself be a multiple, or unless $r-1$ equal some power of 2.

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Road, West Kensington, W.

Vol. XV. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, *89 Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.*

Cambridge University Press

Elements of the Differential and Integral Calculus.

By A. E. H. Love, M.A., D.Sc., F.R.S., Sedleian Professor of Natural Philosophy in the University of Oxford.

Crown 8vo 5s

This book is written with the view of making the subject more easily and generally accessible than it has been hitherto, and is intended to help the reader to make a beginning. In order to render his progress as easy as possible, results with which he is supposed to be more or less familiar are recapitulated in the places where they are wanted, and formal proofs of some propositions are omitted from the text and placed in appendices, along with certain rather abstract discussions.

Outlines of Chemistry. With Practical Work.

By H. J. H. Fenton, M.A., Sc.D., F.R.S. First Part.

Demy 8vo 9s net

For many years it has been the writer's custom to give a course of instruction in General and Physical Chemistry to students who are candidates for the Natural Sciences Tripos at Cambridge, many of whom are unable, at this stage, to devote more than one complete year to the study of Chemistry. As the result of very long experience a method has been adopted, the nature of which is outlined in the present volume. The intention has been to introduce the fundamental principles in a concise and somewhat condensed form and afterwards to convey just so much information as, it is hoped, may create an interest in each of the subjects and stimulate further individual inquiry.

Inorganic Chemistry. By E. I. Lewis, B.A., B.Sc., Assistant Master at Oundle School.

Demy 8vo 5s

"This book deserves the widest recommendation as a sound and interesting introduction to the subject. . . . It deserves a high place, not only in the school, but generally as an introductory first course, understanding by this term not a mere smattering of the kind deemed sufficient only a few years ago, but a course in keeping with the true position of the science as a serious and profitable part of a good modern education."—*Nature*

"A decidedly original work, based on the author's experience as a teacher; in many respects it is very superior to the average text-book used in schools, especially in throwing light on general principles."—*School World*

Elementary Geometry (Practical and Theoretical).

By C. Godfrey, M.A., Head Master of the Royal Naval College, Osborne, and A. W. Siddons, M.A., Assistant Master at Harrow School.

Crown 8vo 3s 6d
Or in Two Volumes 2s each
Or in Five Parts 1s each

"After a careful examination of the various books on the new geometry that have recently been published, we have no hesitation in commending this book as the best for preparatory schools."—*Preparatory Schools Review*

"This book deserves to be placed on the list of text-books to be used in all secondary schools."—*Local Government Chronicle*

Modern Geometry. By C. Godfrey, M.A., and A. W. Siddons, M.A.

Crown 8vo 4s 6d

"This treatise covers the schedule of modern plane geometry required for the special examination in mathematics at Cambridge, and is intended also to serve as an introduction for those who will afterwards specialize for scholarship work. . . . The general tenor of the book is excellent, and we believe that it will be found to meet successfully a real need."—*Guardian*

Plane Geometry for Secondary Schools.

By Charles Davison, Sc.D., and C. H. Richards, M.A., Mathematical Masters at King Edward's High School, Birmingham.

Crown 8vo 4s
Or in Four Parts 1s each

"The authors adopt a conservative point of view, and give a very strong Euclidean flavour to their treatise, but they show themselves capable of appreciating the chief lessons to be learnt from recent experiments in geometrical teaching. . . . The book covers the substance of Euclid I to VI; those of Euclid's theorems which are not included in the text are set as riders together with a large number of well-chosen examples. The treatise is very complete within the limits chosen, and contains sections on loci, geometrical dissections, the nine-point circle, inscribed and escribed circles, Ceva's theorems, &c. A teacher who has conservative views could, on the whole, hardly wish for a better text-book."—*Nature*

Milton. Comus.

Edited, with Introduction, Notes, Glossary, &c., by A. W. Verity, M.A.

Small 8vo 1s.

The present edition is reprinted from the volume containing 'Comus and Lycidas' in the Cambridge Series for Schools and Training Colleges.

Of 'Comus and Lycidas' *The Educational Times* says:—"We can heartily recommend the book. . . . It contains a succinct life of Milton, a good introduction to the poems, and a capital chapter on the metrical features. There are abundant and excellent notes, with many references to classical and other writers and explanations and etymologies of phrases and words which are likely to be difficult to the student."

Livy. Book IX.

Edited, with Introduction, Notes, &c., by W. B. Anderson, M.A., Professor of Latin in Queen's University, Kingston, Canada.

Fcap 8vo 2s 6d

"Professor Anderson has followed for the most part the text of Mr. Stephenson's edition in the same series, and reprints his running analysis. The commentary is, however, original, and in several places time-honoured explanations are rejected. In an appendix it is argued that cc. 17-19 (in which Livy maintains that Alexander could not have conquered the Romans) is an unrevised youthful exercise written when he was a pupil in the school of a *rhetor* at Patavium."—*Times*

Horace. Satires, Book II.

Edited, with Introduction and Notes, by James Gow, Litt.D., formerly Fellow of Trinity College, Cambridge, Head Master of Westminster.

Fcap 8vo 2s

Uniform with Dr. Gow's edition of 'Horace Satires,' Book I., in the Pitt Press Series, described by the *Guardian* as "decidedly the best for school purposes," and by the *Classical Review* as "not only an excellent school book but a very considerable contribution to our knowledge of the Satires."

Cambridge County Geographies.

A series published under the General Editorship of Dr. F. H. H. Guillemard, and suitable for general use as handbooks to the various counties, and for use in Secondary Schools and the Upper Classes of Elementary Schools.

Fcap 8vo 1s 6d each

Volumes on Somerset, Wiltshire, and Hertfordshire have just been added to this series, and Westmorland will be ready this month. Volumes have already been published on Norfolk, Suffolk, Essex, Kent, Surrey, and Sussex. Each volume gives an account of the history, antiquities, architecture, natural history, industries, and physical, geographical, and general characteristics of the county, and each has two coloured maps, one physical and the other geological, and a large number of illustrations.

English Literature for Schools.

A New Series of Reading Books for the Upper and Middle Forms of Secondary Schools.

Fcap 8vo 1s 4d each

The following volumes are ready:—Scott's Tales of a Grandfather, Defoe's Memoirs of a Cavalier, Captain John Smith's Travels, Cobbett's Rural Rides, Hazlitt's Characters of Shakespeare's Plays, and other volumes are in active preparation. A detailed list with specimen pages will be sent on application.

"Whether we wish to place before our pupils the Elizabethan English of Captain Smith, Defoe's Memoirs of the early eighteenth century, or Hazlitt's criticism of the early nineteenth century, we have them here well printed, briefly annotated, and most serviceably bound."—*Schoolmaster*

"The volumes are very neatly and serviceably produced, and the work of selecting and editing has been judiciously and carefully performed."—*Guardian*

Applications from Teachers for specimen copies should be addressed to E. T., Cambridge University Press, Fetter Lane, London, with a statement as to the number of copies likely to be required if the books are adopted for school use.

COLLEGE OF PRECEPTORS.

(INCORPORATED BY ROYAL CHARTER.)

MEMBERS' MEETING.

The next Monthly Meeting of the Members will take place on Wednesday, the 20th of October, at 7 p.m., when there will a Discussion on "The Relations between Heads of Schools and Parents." The Discussion will be opened by W. CAMPBELL BROWN, M.A., F.C.P.

Members have the privilege of introducing their friends.

LECTURES FOR TEACHERS.

On Thursday, 30th of September, JOHN ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London, commenced a Course of Twelve Lectures on

"PRACTICAL PROBLEMS OF THE CLASSROOM."

The matters to be dealt with are such as interest all classes of teachers, and will be treated with that frankness that is possible in an unreported discourse, but is out of the question in a printed book. While the Lecturer will lose no opportunity of indicating how present educational conditions may be improved, he will take the present conditions as the basis and show how to make the best of things as they are. The Lectures will be copiously illustrated by references to actual experience in all kinds of Schools.

For Syllabus, see page 426.

The Fee for the Course is Half-a-Guinea.

Members of the College have free admission to this Course.

EXAMINATIONS.

Diplomas.—The next Examination of Teachers for the Diplomas of the College will commence on the 27th of December, 1909.

Practical Examination for Certificates of Ability to Teach.—The next Practical Examination will be held in October, 1909.

Certificate Examinations.—The Christmas Examination for Certificates will commence on the 7th of December, 1909.

Lower Forms Examinations.—The Christmas Examination will commence on the 7th of December, 1909.

Professional Preliminary Examinations.—These Examinations are held in March and September. The Spring Examination in 1910 will commence on the 1st of March.

Inspection and Examination of Schools.—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

The Regulations for the above Examinations can be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary.*

Bloomsbury Square, W.C.

EXAMINATIONS, 1909.

The NEXT EXAMINATION in PIANOFORTE PLAYING, SINGING, THEORY, and all branches of Music will be held in London and 400 Provincial Centres in DECEMBER, when Certificates will be granted to all successful candidates.

The last day of entry is Monday, November 15.

The Higher Examinations for the Diplomas of Associate (A.L.C.M.), Licentiate (L.L.C.M.), the Teachers' Diploma (L.C.M.), and Fellowship (F.L.C.M.) also take place in DECEMBER.

Gold and Silver Medals and Book Prizes are offered for competition according to the Regulations.

LOCAL SCHOOL CENTRES.—Full particulars with reference to the formation of these Centres will be forwarded to Principals of Schools upon application.

SYLLABUS for 1909, together with Annual Report, may be had of the SECRETARY.

In the Educational Department students are received and thoroughly trained under the best Professors at moderate fees. The College is open 10 a.m. to 9.30 p.m.

A COURSE of TRAINING in Pianoforte and Singing for Teachers is held at the College.

VACATION LESSONS for Teachers and others are given at Easter, August, and Christmas.

T. WEEKES HOLMES, *Secretary.*

UNIVERSITY OF ST. ANDREWS.

L.L.A. DIPLOMA FOR WOMEN.

The attention of Candidates is drawn to the Ordinary and Honours Diplomas for Teachers, which are strongly recommended as suitable for those who are or intend to be teachers.

Examinations are held at Aberdeen, Birmingham, Blackburn, Brighton, Bristol, Cardiff, Croydon, Devonport, Edinburgh, Glasgow, Hull, Inverness, Leeds, Liverpool, London, Manchester, Newcastle-on-Tyne, Norwich, Nottingham, Oxford, St. Andrews, Sheffield, Swansea, and several other towns.

Information regarding the Examinations may be obtained from the SECRETARY, L.L.A. Scheme, The University, St. Andrews.

PORTLAND ROAD GYMNASIUM,

LONDON, W.—Students thoroughly trained for Public Examination. Duration of Course, 2 to 3 years. Mistresses supplied to Schools for all branches of Physical Work. Gymnastics, Hygienic Exercises, Dancing, and Remedial Work.—Miss TOLLEMACHE, M.B.C.P.E., 113 Mount Street, Grosvenor Square, W.

UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)

Principal—Sir H. R. REICHEL, M.A., LL.D.

Next Session begins October 5th, 1909. The College Courses are arranged with reference to the Degrees of the University of Wales; they include most of the subjects for the B.Sc. Degree of the London University. Students may pursue their first year of Medical study at the College. There are special Departments for Agriculture (including Forestry) and Electrical Engineering, a Day Training Department for Men and Women, and a Department for the Training of Secondary and Kindergarten Teachers.

Sessional fee for ordinary Arts Course, £11. 1s.; for Intermediate Science or Medical Course, £15. 15s. The cost of living in lodgings in Bangor averages from £20 to £30 for the Session. There is a Hall of Residence for Women Students: fee, from Thirty Guineas for the Session.

At the Entrance Scholarship Examination (held in September) more than 20 Scholarships and Exhibitions, ranging in value from £40 to £10, will be open for competition.

For further information and copies of the various Prospectuses apply to

JOHN EDWARD LLOYD, M.A.,
Secretary and Registrar.

UNIVERSITY COLLEGE OF NORTH WALES, BANGOR.

(A Constituent College of the University of Wales.)

The post of Lady Superintendent of Women Students and Warden of the University Hall of Residence will shortly be filled. Particulars may be obtained on application to the REGISTRAR.

September 15th, 1909.

THE INCORPORATED

FROEBEL EDUCATIONAL INSTITUTE,

TALGARTH ROAD, WEST KENSINGTON, LONDON, W.

Chairman of the Committee—Sir W. MATHER, LL.D.
Treasurer—Mr. C. G. MONTEFIORE, M.A.
Secretary—Mr. ARTHUR G. SYMONDS, M.A.

TRAINING COLLEGE FOR TEACHERS.
Principal—Miss E. LAWRENCE.

KINDERGARTEN AND SCHOOL.
Head Mistress—Miss A. YELLAND.

Students are trained for the Examinations of the National Froebel Union and other Examinations.

TWO SCHOLARSHIPS of £20 each, and two of £15 each, tenable for two years at the Institute, are offered annually to Women Students who have passed certain recognized Examinations.

Prospectuses can be obtained from the PRINCIPAL.

CHERWELL HALL, OXFORD.

TRAINING COLLEGE FOR WOMEN SECONDARY TEACHERS.

Recognized by the Board of Education, by the Oxford University Delegacy for Secondary Training, and by the Cambridge Syndicate.

Principal—Miss CATHERINE I. DODD, M.A. (late Lecturer in Education, Manchester University).

Students are prepared for the Oxford and London Teacher's Diploma and the Cambridge Teacher's Certificate.

FEES ... ... for the Course from £65.

Scholarships of from £40 to £20 open to Students with a degree on entry. There is a Loan Fund.

BIRKBECK COLLEGE.

BREAMS BUILDINGS, CHANCERY LANE, E.C.

DAY AND EVENING CLASSES.

University of London.—The College provides courses of Instruction for the Examinations of the University in Arts, Science, Economics, and Laws, under Recognized Teachers of the University. The Laboratories are well appointed, and there are facilities for Research.

Full particulars on application to the Secretary.

DENMARK HILL PHYSICAL TRAINING COLLEGE, LONDON, S.E.

(*a*) EDUCATIONAL DEPARTMENT for fully Certificated Gymnastic and Sports Mistresses.

(*b*) REMEDIAL DEPARTMENT for Massage and Remedial Swedish Movements.

Principal: Miss E. SPELMAN STANGER, M.B.C.P.E. and S.T.M., Sunray Avenue, Denmark Hill, S.E.

Preparation for the Examinations of (*a*) British College of Physical Education (Swedish and English Syllabus), (*b*) Incorporated Society of Trained Masseuses.

BEDFORD COLLEGE FOR WOMEN (UNIVERSITY OF LONDON),

YORK PLACE, BAKER STREET, LONDON, W.

Principal—Miss M. J. TUKE, M.A.

Lectures are given in preparation for all Examinations of the University of London in Arts, Science, and Preliminary Medicine; for the Teachers' Diploma, London; the Teachers' Certificate, Cambridge; and for the Cambridge Higher Local Examination.

Six Laboratories are open to Students for Practical work.

There is a special course of SCIENTIFIC INSTRUCTION IN HYGIENE, designed to furnish training for Women Factory and Sanitary Inspectors, and Teachers of Hygiene.

The ART SCHOOL may be attended by Students who are not taking other subjects at the College.

A single Course in any subject may be attended.

Regular Physical Instruction is given free of cost to Students who desire it, by a fully qualified teacher.

RESIDENCE.

Accommodation for about 40 Resident Students is provided in the College. The College has opened, as an additional residence, South Villa, Regent's Park, where further accommodation for 15 Students is provided. South Villa is about five minutes' walk from York Place, and has large gardens available for Students of the College.

Full particulars on application to the PRINCIPAL at the College.

DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.

Head of the Department—Miss MARY MORTON, M.A.

The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge.

Students are admitted to the Training Course in October and in January.

One Free Place (value £26 5s.), one Scholarship of the value of £20, and a limited number of Grants of £10, are offered for the Course beginning in January, 1910.

They will be awarded to the best candidates holding a degree or its equivalent in Arts or Science.

Applications should be sent to the HEAD OF THE DEPARTMENT, not later than December 1st.

THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN.

Principal—Miss M. H. WOOD, M.A., Lit.D., Girton College, Cambridge Classical Tripos.

A residential College providing a year's professional training for Secondary Teachers.

Preparation for the London and the Cambridge Teachers' Diploma. Ample opportunity for practice in teaching science, languages, mathematics, and other subjects. Fees £65 to £75. Admissions in January and September.

For particulars apply—The PRINCIPAL, Training College, Cambridge.

KING'S COLLEGE, LONDON. (UNIVERSITY OF LONDON.)

DEPARTMENT FOR TRAINING TEACHERS FOR SECONDARY SCHOOLS.

Theory, Practice, and History of Education:
J. W. ADAMSON, B.A., Professor of Education (Head of the Department).

Ethics:
Rev. A. CALDECOTT, D.Lit., D.D., Professor of Mental and Moral Philosophy.

Psychology:
W. BROWN, M.A., Lecturer.

The Course, which includes practical work in Secondary Schools, extends over one academical year, beginning in October or January. It is suitable for those who are preparing to take the Teacher's Diploma of the University of London.

The fee is £20 for the year, if paid in advance, or 8 guineas per term (three terms in the year).

Two Scholarships of £20 each for one year, tenable from October 1, 1909, are offered to suitable candidates (men) who are graduates of a British University.

Application should be made to Prof. ADAMSON, King's College, Strand, W.C.

KING'S COLLEGE. (UNIVERSITY OF LONDON.)

DEPARTMENT OF PSYCHOLOGY.

Seaside, North East Coast. Splendid opening for Kindergarten. Very easy terms. Apply—PRINCIPAL, c.o. "The Educational Times" Office.

JOINT AGENCY FOR WOMEN TEACHERS,

74 GOWER STREET, LONDON, W.C.

(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Welsh County Schools Association.)

THIS Agency has been established for the purpose of enabling Teachers to find work **without unnecessary cost.** All fees have therefore been calculated on the **lowest basis** to cover the working expenses.

No Registration Fees are charged to members of the above Associations, and their Commissions are reduced.

Hours for Interviews:
11 a.m. to 1 p.m., and 3 to 5 p.m.;
Saturdays, 11 a.m. to 1 p.m., and 2 to 3 p.m.

When possible, special appointments should be arranged.

Registrar, Miss ALICE M. FOUNTAIN.

THE JOINT SCHOLASTIC AGENCY.

23 Southampton Street, Bloomsbury Square, W.C.

Managed by a Committee of Representatives of the following Bodies:—

HEAD MASTERS' CONFERENCE.
INCORPORATED ASSOCIATION OF HEAD MASTERS.
COLLEGE OF PRECEPTORS. TEACHERS' GUILD.
INCORPORATED ASSOCIATION of ASSISTANT MASTERS.
ASSOCIATION OF TECHNICAL INSTITUTIONS.
ASSOCIATION OF PREPARATORY SCHOOLS.
WELSH COUNTY SCHOOLS.

Registrar: Mr. E. A. VIRGO.

The object of this Agency is to render assistance at a minimum cost to Masters seeking appointments. The lowest possible fees are therefore charged.

A PROSPECTUS will be sent ON APPLICATION.

Interviews (preferably by appointment) 12 p.m.–1.30 p.m. and 3 p.m.–5.30 p.m. Saturdays, 12 p.m.–1 p.m.
Telephone—City 2257.

New Edition. 18mo, price 9d.

THE ELEMENTS OF BOOK-KEEPING,

by SINGLE and DOUBLE ENTRY, with Practical Explanations and Exercises on the most useful Forms for Business. By A. K. ISBISTER, M.A., LL.B., late Dean of the College of Preceptors.

LONDON: LONGMANS & Co., PATERNOSTER ROW, E.C.

For Terms, Testimonials, &c., address—
THE PRINCIPAL,
Burlington Correspondence College,
BIRKBECK BANK CHAMBERS,
LONDON, W.C.

Messrs. TRUMAN & KNIGHTLEY, LTD.,
Educational Agents,
158 to 162 OXFORD STREET, LONDON, W.

Directors:
S. A. TRUMAN. F. E. KNIGHTLEY.
JAMES HEARD, B.A.
(Trinity College, Cambridge).

Telegrams—"TUTORESS, LONDON."
Telephone—No. 1136 City.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

A.—EMPLOYMENT DEPARTMENT.

(i.) ASSISTANT MASTERS & TUTORS.
MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

(ii.) ASSISTANT MISTRESSES.
MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

(iii.) LADY MATRONS AND HOUSE-KEEPERS.
MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

B.—SCHOOL TRANSFER DEPARTMENT.

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

***No charge is made to Purchasers,* and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.**

All communications and enquiries are treated in the strictest confidence.

C.—PUPILS' DEPARTMENT.

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. *No charge is made for registration.*

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

The Educational Times.

Education in Russia.

In the sober garb of the "Special Reports on Educational Subjects" there has just been issued, after long delays, by the Board of Education a most elaborate monograph on Education in Russia by the late Mr. Thomas Darlington—a volume of nearly six hundred solid pages (Cd. 4812, 2s. 5d., Wyman). The work has been manifestly a labour of love, pursued tenaciously through interruptions and difficulties, and marked from beginning to end by genuine sympathy and clear insight. Mr. Darlington steadily regarded Russian education as an aspect of Russian culture; otherwise he could not have hoped to render his statement complete or even intelligible. While the principle holds generally, it applies in an especial degree to a treatise on Russian education for Western students, for the historical background in Russia forbids the assumptions that would be admissible in the case of any other great European country: Russia's past is very different from the past of Western Europe, and "no civilized nation is more widely sundered from Russia by history and national temperament, as well as by social and political ideals, than our own." Accordingly, Mr. Darlington occupies a quarter of his space in sketching the history of Russian education. He then presents a general survey of the present position and organization of education in Russia; discusses in detail successively Primary, Secondary, University, Technical, and Commercial instruction; and concludes with an historical summary and general considerations. At all points one is impressed with the industry, care, and level judgment of the writer.

The historical sketch is an extraordinary miscellany of ups and downs, with eventual advance and expansion. The necessity for it, with applications, is thus shown by Mr. Darlington:

> The actual position of Russian education cannot be understood without some knowledge of its origins and of the conditions which have determined its development up to the present time; because only in proportion as these are realized does it become possible to apply a correct standard of judgment to the existing state of things. For example, the backward condition of Russian primary education, with its consequence, a low average level of culture, is explicable only as the result of social and economic conditions which, though corresponding to the medieval stage of Western civilization, lasted in Russia until the abolition of serfdom forty years ago. On the other hand, the recent advances made in professional and technical instruction stand in direct relation with the industrial developments of the last generation, which in their turn were made possible only by the liberation of labour from the restraints imposed upon it by the existence of serfdom. The present-day problems of higher education in Russia are unintelligible unless studied with reference to the vicissitudes through which the principle of University autonomy has passed in the course of the last century; whilst the secondary schools of general education have been affected during the same period by a variety of causes intimately connected with the social and political history of the time.

It is an absorbing story of pitiful interest, yet eminently instructive and inspiring great hopes for the future.

Though all education is under State control, the Ministry of Public Instruction is but one of many Government Departments concerned in educational administration. The Ministry of Public Instruction controls institutions of general education; schools and colleges with specialized curricula are under the supervision of other Departments of State specially interested in their efficiency. "Thus, the Universities, gymnasia, progymnasia, real-schools, and an important part of the primary schools are administered by the Ministry of Public Instruction; but the theological academies and seminaries are under the control of the Holy Synod, commercial schools under that of the Ministry of Finance, agricultural schools under that of the Ministry of Agriculture and Imperial Domains, certain engineering institutes are maintained by the Ministry of Ways of Communication, and so on." And even to this general rule there are important exceptions: for example, while the great majority of intermediate and primary technical and trade schools are also under the Ministry of Public Instruction, the primary schools under the Holy Synod outnumber those belonging to the Ministry of Public Instruction. Moreover, the various institutions are not necessarily supported, in whole or in part, by the State:

> Certain kinds of schools and colleges—as, for example, the Universities and most of the classical gymnasia—are, in fact, so supported; others, for example, some of the higher technical colleges, real-schools, and primary schools are maintained partly by State subventions and partly by funds locally contributed; others again, including nearly half of the primary schools and some of the more important places of technical and commercial instruction, depend almost wholly on local funds, with little or no aid from the Imperial Treasury; and, finally, many are private-venture schools pure and simple. These distinctions, however, make practically no difference to the kind and degree of control exercised by the State.

Even private schools "are officially recognized as existing in order to co-operate with the views of the Government, and

Digitized by Google

the English idea of a school as having rights in the shape of freedom from Government inspection and the like, which it can barter away to the State in exchange for Treasury grants or other privileges, is one which is entirely foreign to Russian habits of thought."

This State control, unlimited, arbitrary, and indisputable, accounts for curious contrasts. When national education became necessary—not because the people wanted education, but because the bureaucracy had to supply itself with administrative officers throughout the official grades—the State took matters into its own hands, and summarily set aside the educational control of the Church, at any rate in the higher education; whereas in Western countries the approach to a national system has been slow and toilsome and imperfect. More recently, while the Church has been fighting a desperate and losing battle for the control of education in Western countries, the Church in Russia, without any desire on its own part, has been drawn steadily into a subordinate control of education, especially of primary education, by the pressure of the State, which finds the Church more in sympathy with its policy than the secular local bodies, zemstvos, and municipalities. Again, while classical studies have been fighting for dear life, and real studies have been pushing to the front, in the West, the classical curriculum in Russia has invaded, though not without much criticism and opposition, the ground traditionally held by the real curriculum. Such changes as take place are essentially governed by the bureaucratic conceptions of the safety and welfare of the State; and the different history of political and social conditions is the key to the contrast with the other countries of Europe.

It is impossible to enter upon details of any of the divisions of the educational hierarchy, and it is the less necessary because presumably all educationists will study the "Report" for themselves. We will refer, however, to the great institution of "Chin" (*chēn*, order, grade, regulation, &c.). "Chin" denotes the hierarchy of the upper classes, not according to birth or hereditary position, but according to position in the public service. It was invented by Peter the Great, who had the notion that the Civil Service should be organized on the same basis of personal rank as the Military Service. Now personal nobility belongs to all the fourteen classes of "Chin," hereditary nobility being confined to the four highest classes; and every teacher has his place in the system.

The Rector of a University or the Director of a higher technical college is placed in Class IV; a University Inspector or an ordinary Professor in Class V; an extraordinary Professor in Class VI; a Lector in Class VII. To the staff of a secondary school are assigned ranks in each case a grade lower than those of the corresponding positions in a University, the Director being placed in the fifth class, the inspector in the sixth, the teachers in the seventh. Persons belonging to a particular class in virtue of their official position may, nevertheless, within certain limits defined by statute, obtain promotion to a higher class while still retaining the same office. Thus it happens that one finds a Director of a secondary school or a District Inspector with the title of Actual State Councillor and the rank of a major-general (Class IV), or a University Professor with the title of Privy Councillor and the rank of a general of division (Class III), in each of these cases the official in question being addressed as "Your Excellency."

There is another point of contact with this hierarchy of ranks which is of even greater importance. In Russia education is the one means of access to the public service in all its branches.

The class in which a public servant commences his official career depends entirely upon the kind and degree of previous education which he has received. The certificate of maturity of the gymnasium gives the right to the fourteenth class; the ordinary diploma of the University gives admission to the tenth, the degree of Magister to the eighth, the Doctorate to the seventh. Those who complete the course of the Alexander Lyceum leave with *chin* of the twelfth, tenth, or ninth class according to the way in which they have acquitted themselves; and similar privileges belong to other institutions of the same kind. It is the fact that *chin* is thus made dependent upon education which makes it true to assert that in Russia education is the one indispensable condition of admission to the ranks of the nobility, whether personal or hereditary.

Those of us that hope for the inclusion of teachers in the Civil Service will be interested in the chances of ranking as a Major-General and being addressed as "Your Excellency."

NOTES.

THE meeting of the British Association at Winnipeg, the capital of the great wheat province of Manitoba, half way between Montreal and Vancouver and over 1,400 miles distant from both, again invested the proceedings with a certain Imperial air. Canada was to the front: the President spoke in flattering terms of Canadian science, Canadian Universities, and Canadian students; the Presidents of sections vied with the President in chief; and the President of the Education Section actually annexed a considerable slice of the Dominion, planting a new wing of Bradfield in a new land. Sir Joseph Thomson has had special opportunities of appreciating colonial and foreign students, who have flocked to his laboratory from the ends of the earth, and his approval sets a great seal to the educational institutions and the countries of their training. We are not so sure of his ground when he recommended an interchange of University students, but we note that he indicated a certain limitation. "He was quite sure that many English students—especially those destined for public life—could have no more valuable experience than to spend a year in one or other of the Canadian Universities: he could think of nothing more likely to lead to a better understanding of the feelings, the sympathies, and, what was not less important, the prejudices of one country by another, than by the youths of those countries spending a part of their student life together." There can be no doubt of that; only these things do not yet figure in the Tripos examinations, and the mutual recognition of examinations, residence, and so forth, is still in the future of University developments. Meantime, the great lesson from the other side of the Atlantic is the splendid (and paying) generosity of the people in the maintenance and extension of their educational institutions. As for the technical element of the President's address, no representative of British science could have been more competent to handle the astonishing developments of physics in recent years.

IN the Education Section Dr. Gray represented, with ability and dignity, the more progressive educationists of the old country. His note was Imperial throughout. It rang out loud and clear, reverberating "on the banks of the Isis and the Cam," and challenging the warders on the moss-grown walls of the "pre-Reformation" citadels. If it is not the whole duty of the secondary schools to equip youths to

Digitized by Google

take a leading part in the life of the Empire beyond the seas, it is at any rate part of their duty. It is the ancient Universities that block the way: their entrance demands have prevented the secondary schools from widening their curriculum with the development of new spheres of knowledge and enterprise. There is something in the indictment; but is there not something on the other side? Is it not in the scholarships that the gravamen lies? And, even on the score of scholarships, have not the Universities advanced a good few steps to meet the claims of modern subjects? Moreover, if "the results on the lower rungs of the educational ladder have been lamentable," is it quite fair to lay the blame at the door of the Universities? What have the lower rungs to do with the Universities? Can the schools not dispose the studies of the lower rungs just as they think fit? However, there is a grievance, and no inconsiderable one. And how does Dr. Gray propose to remedy it? Geography—especially historical geography—with special reference, of course, to the origin, growth, and progress of the British Empire; an elementary knowledge of science; a co-ordinated study of English language and English literature; only one ancient language (except for scholastic specialists); modern languages, mathematics, manual training: such is the proposed programme of the Imperial age. And a very good programme it is. We should not be surprised, however, if the ancient Universities entirely approved of it, and asked the secondary schools what difficulty they have in carrying it out. There is something to be said on the teaching of English language and literature and of geography in the schools; but that can wait.

Prof. Armstrong, presiding in the Chemical Section, based another querulous diatribe against the adventurousness of woman and the utter failure of the educational system upon chemical action of an extremely obscure nature. "The most disquieting feature of the times," he is reported to have said, "is the revolt of women against their womanhood, and their claims to be on an equality with man and to compete with men in every way." He seems to have argued himself pretty much into the views of another eminent connoisseur, who thought the proper business of women was "to suckle fools and chronicle small beer." Generally speaking, it is undeniable that "the evolution of the sexes has been on different lines, and different qualities have been developed in them"—probably enough by reason of profound germinal differences. But it is a long step from this admission to argue that women ought not to put their hand to any of the forms of daily work that are traditionally man's work. Given a swarming population, half of them women, and many of them dependent on their own exertions for a livelihood, many of them also having relatives dependent upon them, are the women not to stretch out their hands to whatever work they are physically and mentally competent to do? And, among other things, are they not to devote themselves to study, in whatever branch, if they find themselves able to satisfy thereby their mental and social needs? "It has been stated that in the United States of America the higher education of girls has been proved to sterilize them." Well, suppose this is the fact. Prof. Armstrong gives no facts to prove that the ladies have any regrets or that the welfare of the community has appreciably suffered. Choose whatever line you may, some faculty or other will fall more or less into disuse. The only sound element of Prof. Armstrong's reasoning is in the danger of overstrain; and that is common to man and woman and to all kinds of physical and mental exertion. He is crying in the wilderness. As for the "terrible failure" of popular elementary education, and other education to boot, there is nothing new in that. A less extravagant criticism would, we imagine, be more effective. We are reminded of George Macdonald's rural pessimist with the dismal and sweeping refrain:

Ye're a' wrang, and a' wrang,
An' a'thegither a' wrang;
There's nae a man aboot the toon
But's a'thegither a' wrang.

Not any of the questions discussed at Winnipeg has a more far-reaching importance than the problems of anthropology mooted by Prof. Myres. Unfortunately, we have as yet no adequate report of his address. The gist of it, however, is obvious. He wants a record of Nature's dealings with the European immigrants to Canada, just as he wants a record of the personal conditions of people at home. The Eugenist and the Mendelian are apt to fall out and to say hard things of each other; but it is plain that their different methods, if successfully followed, must issue in confirmation of the very same facts. Partly from lack of funds, partly from lack of investigators, both groups of inquirers are doomed to slow progress; but the results already achieved point indubitably to immense developments, which will make an unusual stir at the Local Government Board and in the field of education. Generalities of more or less accuracy will be brought within scientific definition, and new vistas of social development will be opened out. Allied with these inquiries is the anthropometric movement, which is already extending its scope from skull measurements and the colour of eyes and hair to the more delicate estimations of mental faculty. Prof. Myres justly acknowledged the pre-eminence of the United States Bureau of Ethnology as "the most systematic, the most copious, and the most scientific of the public agencies for the study of men as men." It is not creditable to our Government that this praise should necessarily be awarded by an Englishman to the Government of a foreign country. True, the ethnographical section of the last Indian census makes a very decent second; but then the cost of that does not come out of the Whitehall exchequer. It is high time that the Government should see their way to grant the modest assistance that English anthropologists recently requested; it is traditional, no doubt, but it is neither graceful nor economical, to leave the burden of a most valuable national inquiry upon the shoulders of private students.

Sir Philip Magnus, M.P., wrenched himself away from the absorbing interest of the Finance Bill to deliver the annual address to the Conference of the Union of Lancashire and Cheshire Institutes at Lancaster (September 23). He chose for his text—not for the first time—"the problem of

Digitized by Google

all others that rivets one's attention on account of its intimate bearings on the future of this Empire—the kind of education that should be given in the schools in which more than nine-tenths of the population receive their training." Sir Philip sees, and admits that he sees, "certain plain ostensible advantages" that have resulted from the series of Education Acts since 1870—extremely important advantages too; but, without sacrificing such advantages, he wants to secure more. "Employers of labour, heads of commercial firms, and others complain that the lads who come into their works have been insufficiently and inadequately trained—are backward in the art of learning, irresponsive to suggestions, inert in habit, and lacking in resourcefulness and initiative" With full allowance for unreasonableness, this should not be a general complaint. The remedy, as heretofore, is—practical work.

I am glad (said Sir Philip) that the Board of Education are moving in this direction. But progress is necessarily slow, and even the Board of Education cannot act too far in advance of, and certainly not in direct opposition to, what they believe to be public opinion, and public opinion just now is largely influenced by social ideas and social conditions that do not make for self-reliance and self-dependence and the display of individual energy and thought. Our hope is in the teachers, and we may look for some improvement if only the Board of Education can be induced to make it a condition of State aid that the Training Colleges shall provide a more systematic scheme of practical instruction.

We cannot but think that Sir Philip is very much too distrustful of public opinion and of the force of individual energy. Anyhow, he has ample confidence in the teachers. "As a class," he said, "I do not know of any profession the members of which show a more genuine interest in their work, or discharge more conscientiously their arduous duties, than the men and women who spend their days in the task, than which none is more necessary or useful, of developing the intelligence and of helping to form the character of the future citizens of the Empire."

THE *Morning Post* says the Englishman "will spend money on anything rather than pay the best men he can get to teach his son." After quoting examples of salaries up and down the country, our contemporary proceeds:

What efficiency can Englishmen expect in secondary education run on lines like these? What man of ability will go through years of training—training is a neglected necessity to-day—in order that, after a life of self-devotion, he may be turned adrift to wait for an old-age pension—unless, indeed, he can make a living as a professional tenor or a grower of tomatoes? In Germany assistant masters in secondary schools begin their work with a minimum salary of £135, which in twenty-one years increases to £360. Besides this there is a house allowance of £70 a year. In Prussia a master may in addition receive a *Zulage*, or additional salary of £45, as a recognition of special ability. Compare this with the English average of £120, and the reason why English secondary education is so inefficient stands revealed. England needs good men, and they must be trained, and good men are not to be had, nor can they be trained, unless the English parent is prepared to pay. It is not only the inadequacy of the salary, however, which in England deters men of ability from becoming schoolmasters. Except in the case of a few well endowed public schools, there are no prospects. Once a schoolmaster, a man may say farewell to ambition. In Germany every schoolmaster has the possibility of a career. From the assistant masters are selected the Government Inspectors and the members of the Central Executive. This has another and most important result. The men who rise to control the national system of education are men who have spent most of their lives in teaching and have a practical understanding of the questions they administer. The result is one which compares well with the efforts of the experts who sit in the building in Whitehall. English education suffers most because those who direct it have no means of knowing whether their reforms are possible or not. They reason in the air and construct national systems of education in prefatory memoranda.

SUMMARY OF THE MONTH.

THE memorandum attached to the text of the Education (Physical Training) Bill introduced into the House of Lords (September 17) says: "The object of this Bill is to secure continuous physical training for the youth of both sexes up to the age of sixteen years, in order, as far as possible, to ensure for each young person the possession of sound and healthy vital organs, a deep, mobile chest, and the development of an evenly balanced muscular and nervous system, and thus to arrest the deplorable physical degeneration disclosed by the Report of the Inter-Departmental Committee on Physical Deterioration."

THE total number of candidates entered for the Cambridge Local Examinations held in July was 7,723, exclusive of 303 candidates examined at colonial centres. In the Senior Examination 965 boys and 1,307 girls passed, 87 boys and 23 girls being placed in the first class. Sufficient merit was shown by 487 boys and 313 girls to entitle them to exemption from one or both parts of the Previous Examination. Of the junior candidates, 1,451 boys and 1,184 girls passed, the numbers placed in the first class being 128 and 17 respectively. In the Preliminary Examination, 263 boys and 256 girls satisfied the Examiners.

SCHOLARSHIP awards to girl students are announced as results of the Cambridge Higher Local Examinations held in June, each scholarship being of the value of £50, and tenable for three years. The Clothworkers' Scholarship was won by G. E. Powers (City of London School) for Science and Mathematics, and the Winkworth Scholarship by K. Grant (St. Paul's Girls' School for Mathematics and Science). The scholarships offered for Classics last March were awarded to A. Yoxall (St. Paul's Girls' School), and the Mathilde Blind Scholarship to E. L. Perry (Elson House School, Leytonstone) for Modern Languages. The Gilchrist Fellowship for Professional Training was awarded to Miss D. H. G. Reeve, who obtained a First Class in the Medieval and Modern Languages Tripos in 1907, with distinction in German..

THE results of the examinations for Higher and Lower Certificates held by the Oxford and Cambridge Schools Examination Board in July are published. For Higher Certificates there were 2,358 candidates. Of these 527 girls were candidates for letters only. The number of Higher Certificates awarded was 963, and 446 letters were given to girls. In Latin there were 1,097 candidates, and 562 passed, 43 with distinction. In Greek there were 885 candidates, and 645 passed, 50 obtaining distinction. Of 1,502 candidates offering French, 774 passed, 71 with distinction. Of 240 examined in German, 167 passed, 26 with distinction. Five candidates offered Italian, and 2 were successful. Nine submitted Arabic, and 5 passed, 2 with distinction. Ten offered Spanish, and 9 passed, 3 with distinction. In Elementary Mathematics there were 1,854 candidates, and 1,188 passed; and in Additional Mathematics 614 sent up papers, and 414 passed, 54 with distinction. Of 1,166 offering Scripture Knowledge, 805 were successful, and 57 gained distinction. Of 1,140 offering English, 805 passed, 48 with distinction. Of 1,142 offering English Essay only, 656 passed (some candidates offering the whole subject of English passed in Essay only). In History there were 1,408 candidates, of whom 1,046 passed, 59 with distinction. Of 20 offering Geography, 15 passed, 1 with distinction. Four offered the composite subject, and 1 satisfied the examiners. In the Mechanical Division of Natural Philosophy, 126 out of 179 candidates were successful, 21 gaining distinction; in the Physical Division, 120 out of 196 passed, 13 with distinction; and in the Chemical Division, 128 out of 242 passed, 13 with distinction. Sixteen candidates offered Experimental Science, and 13 satisfied the examiners. Of 41 offering Physical Geography and Elementary Geology, 22 passed, 1 gaining the extra mark. Of 334 offering Biology, 265 passed, 28 with distinction. Of 139 offering Drawing, 100 were successful, and 10 gained distinction. Of 37 offering Music, 29 passed, 7 with distinction. For Lower Certificates there was an entry of 1,087, and 593 certificates were awarded. Of 117 candidates for school certificates, 40 were successful.

WITH regard to the Senior candidates at the Oxford Local Examinations, the Board of Revising Examiners call special

Digitized by Google

attention to a defect which seems due to an abuse of oral teaching. With the principles of oral teaching they are in entire sympathy, but they remark there can be little doubt that candidates are taking advantage of it as a means of dispensing with the labour of accurate study. This has been most noticeable during the present year in the case of languages, and especially of the French language. Many papers which showed a general acquaintance with linguistic structure were remarkably inaccurate in point of detail; they confused terminations of similar sound, they made elementary blunders in accidence, they gave the impression of superficial and unscholarly work. A few years ago the chief danger in the teaching of secondary schools was a pedantic insistence on minutiæ; there is now no less danger of a reaction to the opposite extreme.

At the Trade Union Congress, held at Ipswich, Mr. W. Thorne, M.P., proposed a lengthy resolution dealing with education policy from the standpoint of the trade unions. The resolution urged organized workers to continue their efforts to secure Parliamentary and municipal recognition of the trade union education policy, which demanded (1) the State maintenance of school children; (2) scientific physical education, with individual medical inspection and records of the physical development of all children attending State schools, and skilled medical attendance and treatment for any requiring it; and in order to secure this (*a*) the development of the Medical Department at the Board of Education, the head of which should be directly responsible to the Board of Education, to whom he shall report annually; (*b*) the payment of an adequate grant from the Imperial Exchequer for purposes of medical inspection and for the establishment under every Education Authority of properly equipped centres for medical treatment; (*c*) the establishment under every Education Authority of scientifically organized open-air recovery schools, the cost to be borne by the community as a whole, and not in any part by charitable contributions; (3) the complete dissociation of these reforms from Poor Law administration; (4) that secondary and technical education be an integral part of every child's education and be secured by such a reform and extension of the scholarship system as would place a maintenance scholarship within the reach of every child, and thus make it possible for all children to be full-time day pupils up to the age of sixteen; (5) that the best intellectual and technical training be provided for the teachers of the children, that each educational district be required to train the number of pupil-teachers demanded by local needs and to establish training colleges, preferably in connexion with Universities or University colleges; (6) that the provision of educational buildings and facilities be obligatory upon the Local Authority, who should always maintain administrative control of the buildings and the facilities so provided; (7) that the cost of education be met by grants from the Imperial Exchequer and by the restoration of misappropriated educational endowments; and, further, having regard to the increasing cost of popular education, and also to the increasing value and notoriously undemocratic administration of the University and public school endowments, the Congress called upon the Parliamentary Committee to press the Government to appoint a Royal Commission to inquire into and report upon the educational endowments of the country. Remarkable progress, said Mr. Thorne, had been made with the policy outlined in the resolution. Medical inspection was very desirable within the last twelve months of school life, so that the doctor could certify whether or not the children were fitted to go into the workshops at a tender age. No doubt a number of people would ask where all the money was coming from to carry out the policy outlined. He recommended them to read Sir Robert Giffen's statement in the *Nineteenth Century* to the effect that there was enormous wealth to draw upon, with a gross income liable to income-tax of about a thousand millions and a further amount of two thousand millions which did not come under the income-tax. Surely, in a rich and wealthy country, the Government should grant a few more million pounds to give the children a decent education. The resolution was carried.

The Federation of University Women, which took shape at a meeting of twenty-six delegates at Manchester in June, is practically on a graduate basis: only women that possess a University degree or its equivalent, or are registered doctors or dentists, are qualified for membership; but associates and honorary members may be admitted under conditions. The objects of the Federation are: (1) to express the opinion of the whole body of University women, and to take concerted action on matters specially affecting them; (2) to stimulate their interest in municipal and public affairs; (3) to act as a means of intercommunication and co-operation between the members of different Universities; and (4) to encourage independent research by women. In connexion with this last aim, the Federation will direct its energies to founding fellowships, of the annual value of £150, which will be tenable at some University or other place suited to the special study undertaken. Another branch of the work will be the collection and publication of statistics affecting University women.

The Home Secretary has signified to the Council of the Royal College of Surgeons his decision to approve the by-laws regarding the admission of women to the examinations for the diplomas of the College. He has further expressed his willingness to sign the formal document which is to be submitted after the next meeting of the Council of the College on October 14. It is understood, however, that meanwhile it will be possible to complete the necessary formalities in time for women to enter for the examinations of the Royal College to be held in January next.

The programme of the coming term at the Working Men's College, Crowndale Road, N.W., the object of which is to bring University men and working men into closer touch and to give the latter a liberal education at a small cost, shows that classic and modern languages form strong sections, there being thirty-eight classes. Science, art, mathematics, history, literature, law, logic, economics, philosophy, and music students are all provided for. Of the ninety classes, thirty are voluntarily taught by University graduates. Many lectures admission to which will be free are included in the programme.

A meeting in connexion with the Trade Union Congress and in support of Ruskin Hall, Oxford, was held (September 8) in the Social Settlement Hall, Ipswich. The hall was crowded. The audience was not wholly favourable to the object of the meeting, and the speakers were constantly subjected to interruptions. Mr. C. W. Bowerman, M.P., who presided, gave an account of the events which led to the recent "strike" of students; it became a question at last whether every member of the Executive Committee or whether the Principal should resign. Since the resignation of the Principal, hardly a week had passed without the college's being the object of attack by those who fell foul of the Executive Committee. He had no objection to the formation of a new college, but if it was being erected to spoil and crush a college that had done excellent work for ten years on behalf of labour he was going to put his back to the wall and fight for Ruskin Hall. Prof. H. B. Lees Smith, chairman of the Executive Committee, said that the Committee had no intention whatever of making the college in any way a part of the University. It was not true that the University had insisted on the removal of sociology as a condition of union; as a matter of fact, the University had itself actively taken up the teaching of sociology in recent times. Mr. Shackleton, M.P., also denied that any proposals for union with the University had been made or would be entertained if made. It had been said that the college was not sufficiently "Labour"; if it became "Labour" in the narrow sense he would leave it. It was not a trade union or a political organization, but a college.

In the prairie districts of Canada there is a great dearth of teachers, and Mr. Obed Smith, the Assistant Superintendent of Emigration in London, has been in communication with the Dominion Education Authorities on the subject. In a letter Mr. Smith has received from Mr. D. W. Mackenzie, the Deputy Minister of Education for the Province of Alberta, the Minister says that the holders of degrees from British Universities are admitted to the Alberta Normal School in order to train for the highest class of certificates. The Canadian course, too, is very much shorter than that prescribed in England, Scotland, and Ireland. In the Dominion the authorities devote the whole time during the course strictly to pedagogical training, instead of dividing the time between academic and pedagogical work. Consequently they are able to cover a very satisfactory course in seven or eight months. Up to the present, however, the course has been limited to four months, as the authorities are anxious to prepare as many teachers as possible for the work; but for next year it is expected that the course for first-class certificates will be extended to seven or eight months. All British University

Digitized by Google

graduates are invited to forward official evidence of the courses they have covered, and they will be given *pro tanto* standing in Alberta. Thus undergraduates who have completed two or three years in some of the British Universities occasionally go to Alberta and obtain first-class standing. Candidates who have matriculated at London University, or who hold equivalent standing, are admitted to the Alberta Normal School to train as second-class teachers, and holders of the senior local certificates of London, Oxford, or Cambridge are also admitted for similar training.

For some years past, at Cambridge, during the Long Vacation, lectures have been given in elementary science for primary teachers. But this year, on the recommendation of the Board of Geographical Studies, it was determined to have a course on geography, and to invite secondary teachers as well as primary. The result was that the number of persons attending rose to upwards of one hundred, coming from all parts of England and Wales, and including several head masters. The lectures were given by Mr. H. Yule Oldham (King's), Mr. P. Lake (St. John's), and Mr. R. H. Adie (Trinity). In addition, some lectures on botany were given by Mr. A. M. Smith (Emmanuel), assisted by Mr. H. H. Thomas (Downing). The course was most successful.

Dr. James Bellamy has survived but a few weeks his resignation of the Presidentship of St. John's College, Oxford. He was born in 1819, educated at Merchant Taylors School (where his father was Head Master), and elected a Scholar of St. John's in 1836. Thereafter he was regularly resident at Oxford, as Tutor, and then (1871) as President of his College. He was an excellent man of business, displaying great ability in University as well as in College affairs.

UNIVERSITIES AND COLLEGES.

London. The Principal has circulated the following letter to the press:—"It may be of interest to many of your readers to know that an Appointments Board has been constituted by the University of London. The terms of reference to the Board are 'to assist graduates and students of the University in obtaining appointments, and to co-ordinate and supplement the work done by the schools and institutions of the University with this object.' I am directed by the Board to express their hope that, through the medium of the press, the objects of the Board may be brought to the notice of graduates as well as of those who are able and willing to assist in furthering the work of the Board, the aim of which is to encourage the selection of University men for all posts in the work of which the possession of a University training on scientific methods is an advantage. They wish to assist graduates to find employment, and to assist employers to find, in the University ranks, suitable men for vacancies. It would assist the Board if, whenever your readers know of any vacant appointments suitable for University men, they would communicate with the Secretary of the Board, so that he may put forward selected candidates. In this way the work of the Board as an employment exchange would be greatly helped."

Birkbeck College.—The eighty-seventh Session was opened (September 27) by an address by Dr. Miers, Principal of the University of London. The courses of study provide for degrees in the faculties of Arts, Science, Laws, and Economics. There is a very complete curriculum for chemistry, physics, mathematics, botany, zoology, and geology. The laboratories are well equipped with modern apparatus and appliances, and research work is encouraged in various science departments. The Arts courses include English, classics, French, German, Italian, history, logic, mathematics, economics, and geography, all conducted by recognized teachers of the University. The Law courses comprise mercantile and common law, equity, conveyancing, and Patent law, and classes in English and Roman law, and constitutional law and history. More than one hundred students passed some examination of the University during the last session; and several students gained scholarships at the older Universities. There is also an Art school, which provides instruction in the various branches of artistic work (painting, modelling, life, design, &c.).

East London College.—The Calendar of the East London College, Mile End Road, for the session 1909–10 has just been issued. During the session 1908–9 the College has continued its development. To the equipment of the school of engineering, civil, mechanical, and electrical, valuable additions have been made, while the botanical department has been thoroughly reorganized. A considerable sum of money was placed at the disposal of the College Committee for these purposes by the Drapers' Company, who specially assigned a portion of their benefaction for the improvement of the College library, which is now housed in comfortable rooms and possesses a very fair collection of works dealing with the various subjects in the College curriculum. The College is the only school of the University in the Faculties of Arts, Science, and Engineering in the eastern half of London.

Manchester. A course in Agriculture, leading to a degree in Science, has been established. It will extend over three years, the first of which will as a rule be taken entirely at the University, while the second and third years will be taken partly at the University and partly at the College of Agriculture of the County Council of Cheshire at Holmes Chapel. This degree course is not intended to be the regular course of the Holmes Chapel students, for the majority of them will still take the ordinary diploma and not the University degree. The University is not aiming at giving the agricultural training which the farmer requires for his son, and which both the Lancashire and the Cheshire Councils make provision for, but the object is to make educational provision for those who intend to become teachers in agricultural colleges or to take some of the higher posts in farm management or the management of large estates. From the syllabus just issued by the University it appears that the College of Agriculture is a residential one, and its management in the hands of the Principal, assisted by a resident staff of lecturers.

Liverpool. The School of Civic Design, which has been established as a department of the School of Architecture in Liverpool University, owes its inception to the very evident demand existing for a system of training in the broader aspects of architecture and engineering. It is the first organization of its kind exclusively designed to meet the need of students who wish to study this subject. Town-planning, although intimately connected with architecture and engineering, is a distinct and separate study, and the primary object of the school is to equip architects, engineers, and others with a knowledge of the supplementary subjects essential to town-planning. In the organization of the school and the training of students the course will consist of lectures and studio work, and those specially interested in the subject will find much useful information in the prospectus for the ensuing sessions, which contains some artistic diagrams supplementary to lucid descriptive matter.

Belfast—Queen's. In his report for the past year, Dr. Hamilton says: "The University will have one important advantage over its predecessor. The College was miserably endowed. The amount charged on the Consolidated Fund for its maintenance was only £7,000 per annum. The University will happily possess a more adequate income. When the 'appointed day' arrives in the approaching autumn, its endowment will be £28,000 per annum, and when to this are added the private endowments of Queen's College, which will be transferred to it, and the University and class fees of students, the improvement in its financial position as compared with its predecessor will be very great. Already it has been able, owing to its increased income, to add very substantially to the teaching staff and to set aside a very much larger amount of money than ever before for University scholarships and other prizes. As a matter of fact, it is intended to devote an additional £1,000 per annum to this purpose, and thus not only to increase the number of the present College scholarships, but to add materially to their pecuniary value. To this method of utilizing a good part of our funds every year I attach great importance. In addition to the above-mentioned annual income, the sum of £60,000 is to be supplied by the Treasury for providing such additional buildings, lands, and equipments as may be found necessary, and, when it is remembered how much the 'Better Equipment Fund' had already done in this direction, it will be seen that the position has been very materially improved. More money will also now be available for the College Library and for the various scientific departments than ever before. Altogether, the provision for higher education and research in the North of Ireland will be

Digitized by Google

far in advance of anything we ever before possessed. When to this I add that arrangements are in progress for providing the University with a new and thoroughly equipped playing field for the students, that the large and commodious house (hitherto occupied first by the Vice-President of the College and more recently by the Registrar) is being at present transformed into quarters for the use of the women students and for other purposes, and that a Committee of the University has under consideration a scheme for the erection of several ranges of new buildings, it will be seen that an altogether new era of University life has dawned upon Belfast." A very noticeable feature of the life of the past year was the exceptionally large attendance of women students.

Northampton Institute, Clerkenwell.

THE educational aim of the Northampton Institute is to provide classes in technological and trade subjects, attention being first paid to the immediate requirements of Clerkenwell, the district of London in which the Institute stands. The day courses are for students willing to give the whole of their time for one, two, or more years to a systematic training in technology. Day courses are provided in mechanical engineering, electrical engineering, watchmaking, and horological engineering. In horology, a very large amount of time is given to workshop practice. There are also day courses in technical optics, electrochemistry, and other subjects. Evening classes are held in a very great variety of subjects. At the Aldgate institution graded courses of study extending over several years are provided in the various departments, and also special lectures, with accompanying laboratory practice, are given to meet the needs of persons holding responsible positions in the manufacturing establishments in the neighbourhood who desire to keep in touch with modern developments in applied science. Among the announcements of such special work may be mentioned the course on liquid, gaseous, and solid fuel arranged for the benefit of workers in chemical and engineering establishments and others concerned with the use of fuel as a motive power; that on the fermentation industries, with particular attention to microbiology; and that concerned with metallurgical problems. The evening classes at East Ham are under the general supervision of a responsible principal, and it is consequently possible for a student to obtain advice in the direction of securing a properly co-ordinated course of study continuing from year to year. The numerous classes are adapted particularly to meet the requirements of young men and women engaged in the manual and other industrial trades of the locality.

THE BRITISH ASSOCIATION.

MEETING AT WINNIPEG.

THE seventy-ninth meeting of the British Association for the Advancement of Science was held at Winnipeg, opening on August 28, under the presidency of Sir J. J. Thomson.

THE PRESIDENTIAL ADDRESS.

The President said that, from the foundation of the Society until 1884, its meetings had always been held in the British Isles; in that year, however, the Association met in Montreal, and a step was taken which changed them from an insular into an Imperial Association. He claimed to have had some experience of at any rate one branch of Canadian science, for it had been his privilege to receive at the Cavendish Laboratory many students from Canadian Universities. Some of these had been holders of what were known as the 1851 (Great Exhibition) Scholarships. He had had many opportunities of seeing the work of these scholars, and his opinion was that there was no educational endowment in the country which had done or was doing better work. He had also had students from New Zealand, Australia, and the United States, and had thus had opportunities of comparing the effect on the best men of the educational system in force at such Universities with that which prevailed in the older English Universities. He had come to the conclusion that there was a good deal in the latter system which they had been wise not to imitate. The chief evil from which Cambridge suffered and which they had avoided was, he was convinced, the excessive competition for scholarships which confronted students at almost every stage of their education. The colleges in the University of Cambridge alone gave more than £35,000 a year in scholarships to undergraduates, and the case was much the same at Oxford. The result of this was that preparation for these scholarships dominated the education of the great majority of the cleverer boys who went to those Universities.

It was the practice in many Universities to make special provision for the reception of students from other Universities who wished to do original research or to study the more advanced parts of their subject, and considerable numbers of such students migrated from one University to another. It would be a good thing if this practice were to extend to students at an earlier stage in their career; especially should he like to see a considerable interchange of students between the Universities in the mother country and those in the colonies. He was quite sure that many English students, especially those destined for public life, could have no more valuable experience than to spend a year in one or other of the Canadian Universities, and he hoped some of the Canadian students might profit by a visit to English Universities. He could think of nothing more likely to lead to a better understanding of the feelings, the sympathies, and, what was not less important, the prejudices of one country by another, than by the youths of those countries spending a part of their student life together. Undergraduates, as a rule, did not wear a mask either of politeness or any other material, and had probably a better knowledge of each other's opinions and points of view—in fact, knew each other better—than did people of riper age. To bring about this communion of students there must be co-operation between the Universities throughout the Empire; there must be recognition of each other's examinations, residence, and degrees. Before this could be accomplished there must, as Mr. E. B. Sargant pointed out in a lecture given at the McGill University, be co-operation and recognition between the Universities in each part of the Empire.

Sir Joseph went on to give an account of recent developments in physics, dealing particularly with uranium and the untapped energy of the sun; and he then passed to a consideration of one of the most important and interesting advances ever made in physics, in which Canada, as the place of the labours of Profs. Rutherford and Soddy, had taken a conspicuous part—the discovery and investigation of radio-activity. In conclusion, he said that the new discoveries made in physics in the last few years, and the ideas and potentialities suggested by them, had had an effect upon the workers in that subject akin to that produced in literature by the Renaissance. Enthusiasm had been quickened, and there was a hopeful, youthful, perhaps exuberant spirit abroad which led men to make with confidence experiments which would have been thought fantastic twenty years ago. It had quite dispelled the pessimistic feeling, not uncommon at that time, that all the interesting things had been discovered, and all that was left was to alter a decimal or two in some physical constant. There never was any justification for that feeling, there never were any signs of an approach to finality in science. The sum of knowledge was—at present, at any rate—a diverging, not a converging, series. As they conquered peak after peak, they saw in front of them regions full of interest and beauty, but they did not see their goal, they did not see the horizon; in the distance towered still higher peaks, which would yield to those who ascended them still wider prospects, and deepen the feeling, whose truth was emphasized by every advance in science, that "Great are the works of the Lord."

EDUCATION.

The Rev. Dr. H. B. Gray, Warden of Bradfield College, President of the Educational Science Section, examined the educational factors of Imperialism, dwelling upon the medieval methods of English secondary education and the unsuitability of the equipment provided for those who should take a leading part in the life of the Empire beyond the seas. Asserting that there was no width of educational outlook in England until the last thirty years of the nineteenth century, he said the only strongholds of learning which presumed to give the lead to English secondary education were to be found on the banks of the Isis and the Cam. "In these antique, I hesitate to say antiquated, fastnesses, the 'grand old fortifying classical curriculum' was, till lately, regarded as the main, if not the only, high road to educational salvation." They preserved, indeed, to this day, almost the same entrance bars against admission to their thresholds as existed in pre-Reformation days, and the emoluments were still appropriated to the ancient models of education.

Digitized by Google

The results on the lower rungs of the educational ladder had been lamentable. The curricula of the public secondary schools had been narrowed, or rather had never been widened coincidently with the development of new spheres of knowledge and enterprise. Three-quarters of the time-tables in the historic schools of England were given to the exclusive study of the grammar, literature, and composition in the languages of ancient Greece and Rome, and those who could not find any stomach for this medieval learning were actually driven away from those moss-grown seats of learning. How many unsung Hampdens or mute inglorious Miltons of mechanical genius had been lost to the world by the non-elastic systems even yet prevailing!

The President went on to propose the remedy. He would give a prominent place, he said, to the scientific teaching of geography, and particularly to historical geography, with special reference, of course, to the origin, growth, and progress of the British Empire. Again, he would enforce an elementary knowledge of science on every boy who passed through the stage of secondary education. But, above and beyond all, there should be brought into the foreground a co-ordinated study of English language and English literature. In this connexion he alluded to the recent Imperial Press Conference in England. The loyalty and devotion of the colonies, he said, admitted of no dispute. The doubt was of the loyalty of the centre of the Empire towards its extremities, through the crass ignorance which existed as to the geographical and political meaning of that Empire. In criticizing the old medieval system of education, however, which had prevailed in England till comparatively recent years, and which still had far too great a hold on the more venerable and important institutions of our island home, he would not have it supposed that he was an advocate of a complete, or even an approximately complete, basis of utilitarian education. He had no hesitation in expressing his belief that the time had come when not only the study of the two ancient languages should be reduced to one for all except scholastic specialists, but both should yield pride of place in our educational system to the claims of English, modern languages, mathematics, natural science, and, not least, manual training, so that our young men should be fully equipped to put their hand to any work which might confront them amid all the complex problems and critical situations to be found within the world-wide boundaries of the British Empire. Whether Oxford or Cambridge—particularly Oxford—would ever so reform themselves as to contribute largely to such solution remained to be seen. Personally, he looked with far greater confidence to the more recently organized Universities—those of London, Leeds, Sheffield, Manchester, and the like—to equip men educationally with those moral, physical, and intellectual qualities which are most in requisition in our great Dependencies and Commonwealths.

In conclusion, the President read from the *Times* an extract giving details of the new movement for the international interchange of University students. This scheme, which had been worked out independently whilst he had been preparing his address, embraced much of what he had advocated. To-day we were confronted with the problems of a vast and complicated Empire—great Commonwealths, great Dominions, sundered from each other by long seas and half a world—and, however closely science had geographically brought them together, we could not remain attached unless we grappled to each other and understood each other in the greatest of all interests, the educational training of our children in the one part of our Empire, to make them suitable citizens in another.

The Future of the Race.

Prof. H. E. Armstrong, President of the Chemical Section, said no problem could compare in importance with that of the future of our race. To consider it was the one plain duty before us, and the need became daily a more urgent one. Not only did we encourage deterioration at the lower end of the scale of intelligence: we were now, through our system of higher education, courting failure also at the upper end. Herbert Spencer forcibly drew attention many years ago to the tendency which the development of individuality must have to depress fertility, and to the evil effects of severe mental labour on women especially. It had been stated that, in the United States of America, the higher education of girls had been proved to sterilize them. Many of us probably had experience within our own circle of observation which would justify such a conclusion: there were so many ways in which education operated to retard marriage, even if it had no direct effect on the organism. Even if man-stuff and woman-stuff be in no fundamental way different materials, there were essential differences between the sexes which must be taken into consideration. During the active period of her life the woman was subject at intervals to influences which do not affect the man; various excitants came into operation and produced effects which were altogether remarkable; her mental condition was consequently in a state of continued flux. Cause and effect in these cases were undoubtedly chemical in their nature. The most disquieting feature of the times was the revolt of women against their womanhood, and their claim to be on an equality with man and to compete with men in every way. There should be no question of equality raised; when comparison was made between complementary factors the question of equality did not and could not come into consideration. It was clear that should the struggle arise—and it was to be feared that it was coming upon us—there could be but one issue: woman must fail, and in failing must carry man with her to destruction, for she would inevitably cease to exercise her specific womanly functions with effect, so delicate was the adjustment of her mechanism. The evolution of the two sexes had been on different lines, and different qualities had been developed in them. It was probable that the germinal differences were profound. And education could not remove the difference; although education might condition functional disturbances, it must be powerless to modify the structure and mechanism.

Man was in no way what he was to-day in virtue of the education he had received during a few generations past; the education of the race throughout time had been something entirely different from what was thought of now as education. "Nature, the dear old nurse," not man, had done the work by a severe and drastic process of selection—by picking out men capable of doing men's work, and by picking out women capable of doing women's work. She had constituted them helpmates, and had no thought of their being so silly as to wish to get in one another's way; this was a state brought on by an artificial, unsuitable system of education. The subject had been brought before the chemical world in England recently by the application of a number of women to be made Fellows of the Chemical Society. Many of the members had resisted the application because they were unwilling to give any encouragement to the movement which was inevitably leading women to neglect their womanhood, which was in itself proof that they did not understand the relative capacities of the two sexes and the need there was of sharing the duties of life. If there was any truth in the doctrine of hereditary genius, the very women who had shown ability as chemists should be withdrawn from the temptation to become absorbed in the work for fear of sacrificing their womanhood; they were those who should be regarded as chosen people, as destined to be the mothers of future chemists of ability. The argument was applicable generally; it was surely desirable in all cases of declared ability that the education of girls should be directed so as to produce not merely minimum disturbance of the woman's attributes and charms, but full understanding of the unique position of responsibility she occupied in the scheme of life.

Questions such as he had raised were of the utmost importance as bearing on educational policy. Their ideas of education were in almost as inchoate a state as they were in 1885. They had been led, it was true, to recognize that their scheme of popular elementary education was a terrible failure, that its whole tendency had been to emasculate their population; yet at the very time that they were making this discovery they were beginning to force their higher education along lines which experience showed must be ineffective—along literary lines. He would be the last to deny that there was an under-current of improvement perceptible, but this was directed only by sporadic influences, and was in no way favoured by most of those in authority. They were still suffering at the hands of those who had been their persecutors in the past—the clerics, who controlled most of the schools and whose outlook was almost as narrow as it ever was. The saving grace of science had in no way entered into their souls. How could it? The Universities made no attempt to secure their redemption. London of late years had even reversed the enlightened policy the University so long pursued and had allowed Latin to figure as alternative to science, not as the complement of science. The British Association seemed to have little or no effect on the public conscience. And the explanation was not far to seek. Their interests were too special; they were all too much wrapped up in their own affairs; too inconsiderate to co-operate effectively. They forgot or did not realize that "Something is wanting in science until it has

Digitized by Google

been humanized"; they made no attempt to organize their forces and make good the claim they put forward to be the possessors of superior knowledge. A complete change of attitude on their part was required; they needed to play the part of propagandists. They were almost unknown as popular writers, and the days of popular lectures were past. Practically nothing was done to train the public mind, and school science was in no way effective.

ANTHROPOLOGY.

"The Influence of Anthropology, or the Science of Man, on the Course of Political Science," was the subject dealt with by Prof. John L. Myres before the Anthropological Section. The Bureau of Ethnology of the United States, said Prof. Myres, was the most systematic, the most copious, and the most scientific of the public agencies for the study of men as men. The only other which could be compared with it was the ethnographical section of the last census of India. In Canada the need was for the systematic study of the European immigrants, a record of Nature's dealing with them, and as long as that was unobserved the questions must remain unanswered: What kinds of men do best in Canada? What kind of men is Canada making out of the raw material which Europe is feeding into God's mills on this side? In England there had been created in vast towns great vats of fermenting humanity, under conditions of life which at the best were unprecedented and at their worst almost unimaginable. That was the great experiment in modern English anthropology—what happened to Englishmen in city slums? and they would hear before that meeting ended something of the methods by which scientists were attempting now to watch and record the outcome of that experiment in the making of the English of to-morrow.

THE COLLEGE OF PRECEPTORS.

MEETING OF THE COUNCIL.

A MEETING of the Council was held at the College, Bloomsbury Square, on September 25. Present: Prof. Adams (Vice-President) in the chair, Prof. Adamson, Dr. Armitage Smith, Mr. Bain, Mr. Baumann, Rev. A. W. Boulden, Mr. Brown, Mr. E. A. Butler, Mr. J. L. Butler, Miss Crookshank, Miss Dawes, Prof. Dixon, Mr. Eve, Mr. Hawe, Mr. Holland, Rev. R. Lee, Dr. Maples, Mr. Pendlebury, Mr. Pinches, Mr. Rule, and Rev. Dr. Scott.

The minutes of the last meeting were read and confirmed.

The Secretary reported that the Summer Examination for Diplomas had been held on August 30 to September 4, and had been attended by 323 candidates. The Professional Preliminary Examination had been held on September 7 to 9, and had been attended by 213 candidates.

He reported that the examinations conducted by the College on behalf of the Newfoundland Council of Higher Education had been held at 108 centres in June last, and the class lists of the successful candidates, with the examiners' reports on the work sent up, had been forwarded to the Newfoundland Council in August. The total number of candidates examined in the four grades was 2,711.

Saturday, January 22, 1910, was fixed as the date of the next ordinary General Meeting of the members of the College.

The Report of the Finance Committee was adopted.

The free use of rooms at the College was granted to the English Committee of the International Home Education Congress (Brussels, 1910), for holding the meetings of the Committee.

Mr. W. J. Bates, Priory College, Priory Road, Hornsey, was elected a member of the College.

The following books had been presented to the Library since the last meeting of the Council:—

By MR. J. P. A. MARTIN.—Navarre's Histoire Générale de la Sténographie.

By the AGENT-GENERAL FOR NEW SOUTH WALES.—Annual Report of the Department of Mines, New South Wales, 1908.

By the BOARD OF EDUCATION.—Modern Sides of Public Schools (Merchant Taylors, Clifton, and Bedford Grammar School); Syllabus of Physical Exercises for Public Elementary Schools, 1909.

By the UNIVERSITY OF MANITOBA.—Examination Papers, 1909.

By G. BELL & SONS.—Charles and Hewitt's Experimental Mechanics for Schools.

By A. & C. BLACK.—Black's Geographical Pictures, Series VIII (Mountains); Reynolds's Africa and Australasia (Regional Geography).

By MACMILLAN & CO.—Davies's Geography of the British Isles; Wallis's Practical Exercises in Geography; Gregory and Hadley's A Class Book of Physics; Siepmann's Primary French Course (Part III); Pellissier's Marivaux' Le Jeu de l'Amour et du Hasard (with word-and phrase-book).

By METHUEN & CO.—Methuen's Simplified French Texts (Ceppi's Edmond Dantès, and Ingham's M. de Beaufort à Vincennes); Chambers's Constitutional History of England; Davies's Junior History Examination Papers; Webb's Systematic Geography of the British Isles; Wilmot-Buxton's Stories from the Old Testament.

By the OXFORD UNIVERSITY PRESS.—Plunket's The Fall of the Old Order; Spenser's Faerie Queene, Book I; Milton's Paradise Lost (Books I and II); Shelley's Adonais, Alastor, and other Poems; Byron's Prisoner of Chillon, Mazeppa, and Lament of Tasso.

By RIVINGTONS.—Dix's First Latin Lessons; Edwards's Junior British History Notes (Parts I, II, and III).

Calendar of the University of Glasgow.
Calendar of the London School of Economics.
Calendar of the University College, Cork.
Calendar of the University of St. Andrews.
Calendar of the University College, Exeter.

COLLEGE OF PRECEPTORS.

PROFESSIONAL PRELIMINARY EXAMINATION.—PASS LIST.

SEPTEMBER, 1909.

THE Supplementary Examination by the College of Preceptors for Certificates was held on the 7th, 8th, and 9th of September in London, and at five other local centres—viz., Birmingham, Bristol, Leeds, Liverpool, and Manchester. The following candidates obtained Certificates:—

First Class [or Senior].

Pass Division.

Hutchinson, A. M. — Maude, A. H. *ch.*
Lunnon, L. G. *a.* — Templer, H. E.

Second Class [or Junior].

Honours Division.

Bachelor, S. *e.g.f.* — Toulmin, S. N.

Pass Division.

Adams, A. H.	Gripper, G. D.	Payne, T. M.
Ambler, R.	Hamilton, M. St. C.	Rhys, R. I.
Barnden, P. W.	Harris, R. A.	Richards, G. V.
Bastable, O.	Hollely, W. F. *ch.*	Roberts, W. S.
Beauchamp, W. S.	Holmes, G. C.	Rook, A. F.
Beaumont, E. V.	Hughes, J. L.	Rowland, J. *g.*
Berryman, G. F.	Hyde, H. B.	Sadler, N.
Booth, G. A.	Jenkins, F. A. M. B.	Simpson, B. C. W.
Bradfield, G. R. D.	Jewell, W. *ch.*	Smith, L. B.
Buckley, H. H.	Klosz, R. L.	Solomon, S. *ch.*
Bull, W. M.	Kolligs, F. F.	Stafford, Miss I.
Carr, S. *f.*	Laborda, F. E. R.	Thornton, P. *a.*
Carroll, L. J.	Lambie, W.	Tippet, J. A.
Clark, L. M.	Lennon-Brown, A. G.	Trevers, C. T.
Coe, W. E.	McEwan, G. F.	Tyrrell, E. J.
Dixon, C. C.	Meggs, A. H. *f.*	Wallace, F. H.
Garry, E. W.	Nealon, G. R.	Wallis, M. J. T.
Gibson, C. C. G.	Ord, G.	Warde, A. H.
Green, A. S.	Payne, A. V.	White, G. A. O.

N.B.—The small italic letters denote that the candidate to whose name they are attached was distinguished in the following subjects respectively:—

a. = Arithmetic. *e.* = English.
ch. = Chemistry. *f.* = French.
g. = Geography.

IT is officially announced that Lord Londonderry and thirty-five other subscribers to the fund for the better equipment of Queen's College, Belfast, have forwarded a petition to the Lord Lieutenant praying his Excellency to disallow the statutes which have been made for the Queen's University of Belfast in so far as they provide for the teaching of scholastic philosophy at the public expense. The petitioners urge that the teaching of this subject would be contrary to the representations which were made and upon the strength of which the equipment fund was subscribed, and, if persisted in, will end in ligitation on the part of the subscribers to the equipment fund who are opposed to any religious or denominational teaching being introduced into the College at the public expense. They are all friends of the College, and are anxious to see it succeed under the recent Act. They are aware that, apart from the subscribers to the equipment fund, there is a strong and growing feeling among the majority of the people in Ulster hostile to the introduction of scholastic philosophy into the arts faculty as a subject to be taught at the public expense, and they feel satisfied that, if that portion of the statutes is not disallowed, it will have a most injurious effect on that portion of the public which has hitherto supported the College, both by means and by students, and to which the College must look in the future for similar support.

COLLEGE OF PRECEPTORS CERTIFICATE EXAMINATIONS.—JULY, 1909.

LIST OF SUCCESSFUL CANDIDATES AT COLONIAL AND FOREIGN CENTRES.

N.B.—The small italic letters denote that the Candidate to whose name they are attached was distinguished in the following subjects respectively:—

a. = Arithmetic. | *d.* = Drawing. | *f.* = French. | *s.* = Scripture.
al. = Algebra. | *e.* = English. | *h.* = History. | *sh.* = Shorthand.

The small figures [1] *and* [2] *prefixed to names in the Second and Third Class Lists denote that the Candidates were entered for the First and Second Classes respectively.*

In the addresses, Coll. = College, Coll. S. = Collegiate School, Conv. = Convent, Inter. = Intermediate, S. = School, Sec. = Secondary.

[Bracketing of names denotes equality.]

SUITABLE BOOKS
FOR
SECONDARY SCHOOLS.

A Text-Book of Geography. By G. C. Fry, M.Sc., F.I.C.

4s 6d — "The compilation is by no means one of mere geographical facts; the 'why' and the 'wherefore' are everywhere in evidence — the subject is, indeed, presented scientifically."—*Schoolmaster.*

The School Arithmetic. An Edition of the *Tutorial Arithmetic* for School use. By W. P. Workman, M.A., B.Sc., Head Master of Kingswood School, Bath.

Third Edition
3s 6d — "The best arithmetic for schools on the market."—*Mathematical Gazette.*
"The book is of a very high order of merit and provides a thorough course in arithmetic."—*School World.*

The School Geometry. By W. P. Workman, M.A., B.Sc., and A. G. Cracknell, M.A., B.Sc., F.C.P.

Part I 2s
Part II 2s
In One Vol 3s 6d — This is an edition of *Geometry, Theoretical and Practical*, by the same Authors, specially adapted for ordinary school use. In its preparation special consideration has been given to the recommendations of the Board of Education on the Teaching of Geometry as contained in Circular 711.

An Introduction to the School Geometry. By the same Authors.

1s — Specially written to meet the requirements of the First and Second Stages of Geometry outlined in the Board of Education's Circular.

Life Histories of Common Plants. By F. Cavers, D.Sc., F.L.S., Professor of Biology at the Hartley University College, Southampton.

3s — An Introductory Course of Botany based on the Experimental and Observational Study of Types.
"The author is to be congratulated on the excellent features of his book, which may be summarized as a clear diction, a logical sequence, and a recognition of the essentials."—*Nature.*

Junior Chemistry. By R. H. Adie, M.A., B.Sc., Lecturer in Chemistry, St. John's College, Cambridge.

2s 6d — "The results of fifteen years' experience of a thoughtful teacher are always valuable, and, as one might have anticipated, the book offers a thoroughly sound course of practical instruction."—*Nature.*

The Matriculation English Course. By W. H. Low, M.A., and John Briggs, M.A., F.Z.S.

Third Edition
3s 6d — "The matter is clearly arranged, concisely and intelligently put, and marked by accurate scholarship and common sense."—*Guardian.*

The Matriculation French Course. By Ernest Weekley, M.A., Professor of French at University College, Nottingham, and Examiner in French at the University of London.

Third Edition
3s 6d — This book, though written primarily to meet the requirements of London University Matriculation Examination in French, is generally suitable as a school text-book, and as such has secured a wide adoption.

The Tutorial Latin Grammar. By B. J. Hayes, M.A., and W. F. Mason, M.A.

Fourth Edition
3s 6d — "It is accurate and full without being overloaded with detail, and varieties of type are used with such effect as to minimize the work of the learner."—*Schoolmaster.*

Complete Catalogue of the University Tutorial Series, and Lists of Books for Oxford and Cambridge Locals, College of Preceptors, and London University Examinations, post free on application.

University Tutorial Press, Ld.,
Drury Lane, London, W.C.

Kennedy, F.R.S.; Sir Joseph Larmor, F.R.S., Lucasian Professor of Mathematics, Cambridge, Sec.R.S.; Right Hon. Walter Long, M.P.; Prof. Gilbert Murray, Oxford; Sir Richard Douglas Powell, M.D., President of the College of Physicians; Sir William Ramsay, F.R.S., University College, London; Lord Rayleigh, F.R.S.; Ernest Rutherford, F.R.S., Professor of Physics, Manchester; Arthur Shadwell, Economist; Mrs. Henry Sidgwick, Principal of Newnham College; Lord Strathcona and Mount Royal; Prof. Silvanus P. Thompson, F.R.S., ex-President of the Institution of Electrical Engineers; William A. Tilden, F.R.S., long Professor of Chemistry in Mason College; Sir J. J. Thomson, F.R.S., Professor of Physics, Cambridge, President of the British Association; Charles S. Tomes, F.R.S., F.R.C.S., Past President of the British Dental Association; T. Herbert Warren, President of Magdalen College, Vice-Chancellor of Oxford University; Dr. Bertram Windle, F.R.S., President of Queen's College, Cork, long Dean of the Faculty of Medicine in Birmingham; Viscount Wolverhampton.

* * *

PROF. GRIFFITH, Reader in Egyptology in the University of Oxford, has been elected a Corresponding Member of the Imperial Academy of Sciences in Vienna.

WILBERFORCE UNIVERSITY, Ohio, has conferred the honorary degree of LL.D. upon Dr. Charles Forshaw, Bradford, in recognition of his writings in the American Masonic press, and of his services to literature in general.

Endowments and Benefactions.

SIR WILLIAM O. DALGLEISH, Bart., of Errol Park, has made another gift of £5,000 (making a total of £11,000) to the Building Fund of the new Technical College, Dundee. This gift completes the necessary sum—£30,000.

* * *

THE Oxford University Endowment Fund has now reached the sum of £139,000.

* * *

THE Jews' College still lacks £10,000 for its Endowment Fund. An appeal for further subscriptions has been issued.

* * *

THE Tulane University (Louisiana) has received some £400,000 from the Newcomb estate, which will go to the Women's Department, founded by Mrs. J. L. Newcomb in memory of a daughter; £10,000 from Mrs. I. A. Richardson towards the establishment of a chair of Botany; and £1,000 from the late Miss L. Miles for the purchase of books for the Library.

* * *

HARVARD UNIVERSITY has received £3,000 from Mrs. J. A. Rumrill to establish three scholarships in memory of her late husband.

Appointments and Vacancies.

MR. CHARLES JOHN HOLMES, B.A., Slade Professor of Fine Art in the University of Oxford, has been appointed Director, Keeper, and Secretary of the National Portrait Gallery, in succession to Mr. Lionel Cust, M.V.O., who retires.

* * *

MR. GEORGE A. GIBSON, M.A., LL.D., Glasgow and West of Scotland Technical College, has been appointed Professor of Mathematics in the University of Glasgow.

* * *

DR. T. H. BRYCE, Lecturer on Anatomy, Queen Margaret College, Glasgow, has been appointed Regius Professor of Anatomy in Glasgow University.

* * *

DR. JOHN MARNOCH, Surgeon to and Lecturer on Clinical Surgery at the Royal Infirmary, Aberdeen, has been appointed Regius Professor of Surgery in Aberdeen University.

* * *

MR. T. MATHER, F.R.S., has been appointed Professor of Electrical Engineering at the City and Guilds Central Technical College, in succession to Prof. Ayrton.

* * *

MR. WILLIAM BROWN, Lecturer in Electro-Technology, has been appointed Professor of Physics in the Royal College of Science, Ireland, in succession to Prof. W. F. Barrett, who retires. Mr. Brown is succeeded by Mr. Felix Haskett.

* * *

THE REV. G. W. THATCHER, M.A., Tutor at Mansfield College, Oxford, has been offered the post of Warden of the Camden College, Sydney, N.S.W., in succession to the Rev. J. G. Fraser, D.D., resigned.

Digitized by Google

MR. W. A. J. ARCHBOLD has resigned the Principalship of the Mohammedan Anglo-Oriental College, Aligarh.

* * *

THE REV. ROBERT LAW, M.A., B.D. Edinburgh, has been appointed Professor of the New Testament and Exegesis in the Presbyterian College, Toronto.

* * *

DR. A. D. DENNING, Lecturer in Experimental Physics, Birmingham University, has been appointed Superintendent of Industries and Inspector of Technical and Industrial Institutions in the Presidency of Bengal.

* * *

MR. GRANVILLE POOLE, Lecturer in Mining, &c., in Birmingham University, has been appointed one of H.M. Assistant Inspectors of Mines for the York and Lincoln district.

* * *

DR. A. RUSSELL, D.Sc. Glas., Lecturer on Applied Mathematics and Head of the Laboratory Department, has been appointed Principal of the Electrical Standardizing, Testing, and Training Institution (Faraday House).

* * *

MR. W. BUCHANAN, Chief Engineer to the Electric Construction Company, Wolverhampton, has been appointed Lecturer on Electrotechnics and Design of Electrical Machinery at Faraday House, London.

* * *

DR. ARNOLD H. GIBSON, Senior Demonstrator and Assistant Lecturer in Engineering and Lecturer on Hydraulics, Manchester University, has been appointed Professor of Engineering in University College, Dundee.

* * *

MR. W. T. MACCOLL, M.Sc., Halifax, has been appointed Head of the Sunderland Technical College.

* * *

DR. JAMES MILLER, Lecturer in Bacteriology, Birmingham University, has been appointed Lecturer in Pathology in Edinburgh University.

* * *

AT University College, Aberystwyth, Dr. S. Adams has been appointed Lecturer in Applied Mathematics; Dr. Fleure, Lecturer in Zoology; and Mr. O. T. Jones, of the Geological Survey, Lecturer in Geology.

* * *

MR. A. Y. CAMPBELL, M.A., has been appointed Lecturer in Classics in University College, Reading.

* * *

MR. J. H. JONES has been appointed Lecturer in Social Economics in the University of Glasgow.

* * *

MRS. EDWIN NEAVE, of Gedling, Notts, has been appointed Lady Warden of University Hall, St. Andrews.

* * *

THE Head Mastership of Sutton Valence Grammar School is vacant. Graduates, under forty-five. Apply to Mr. C. Spencer Smith, 53 Palace Street, Westminster, S.W.

* * *

THE City of London School requires (1) a classical assistant master and (2) a senior chemistry master. Age should not exceed thirty-five. £300, rising to £450. Apply, by October 16, to Mr. A. J. Austin, at the school, on forms to be obtained from him.

Literary Items.

MESSRS. A. & C. BLACK announce "The Billiard Year-Book for 1910," recording the principal amateur and professional games of the past season, and giving full information about the game and its developments. It will be published with the authority of the Billiard Association, and will be the only official book relating to the game. They also intimate the issue of several interesting series of Colour Books suitable for young folk.

* * *

AMONG the numerous announcements of the Oxford University Press are the first two volumes of "Oxford Studies in Social and Legal History," edited by Prof. Vinogradoff; "Historical Essays," by the late Prof. Pelham; the fifth and final volume of Dr. Farnell's great work, "The Cults of the Greek States"; and considerable extensions of various series.

* * *

THE Cambridge University Press announces "The Story of the Roman Republic" in three volumes, by Mr. W. E. Heitland, M.A., Fellow of St. John's College, Cambridge.

* * *

MESSRS. DENT promise the early issue of a new (limited) one-volume edition of "Le Morte d'Arthur," illustrated and decorated by Aubrey Beardsley. They also announce a volume on "Homer and the Iliad," by Miss Melian Stawell, formerly of Newnham College, again reviewing the scope and character of the original poem.

* * *

MESSRS. DENT are publishing editions of "Gulliver's Travels" and "Lamb's Tales from Shakespeare" (by Mr. Arthur Rackham, in colour and in black and white, liberally illustrated).

* * *

MR. FISHER UNWIN is publishing an elaborately illustrated work on "Town Planning in Practice," by Raymond Unwin. He is also bringing out an English edition of "Studies in Logical Theory," edited by Prof. John Dewey, University of Chicago; "The Evolution of the Sciences," by Prof. L. Boullevigne, Marseilles; and a series of three volumes on the French Revolution, each centred in one of the great personalities of the period (Mirabeau, Danton, Robespierre), by Charles F. Warwick.

* * *

SIR ISAAC PITMAN & SONS have commenced to issue the "Bicentenary Edition of Pitman's extra-Illustrated Boswell's Johnson," edited by Roger Ingpen, with 568 illustrations. It will be completed in twenty weekly parts. The first part indicates that it will be a very handsome book.

* * *

MESSRS. GINN will shortly publish a "History of English Literature," by William J. Long—a sympathetic and scholarly study, with illustrations.

* * *

MESSRS. D. APPLETON & Co. will publish immediately "The Story of Oil," by Walter S. Tower, telling the romance of the oil-fields of America, with numerous illustrations.

* * *

THE *Bellman* (Minneapolis) has unearthed and published (July 10) Prof. Skeat's poem on "The Death of St. Edmund," with Mr. Laurence Housman's illustrations. The poem was sent to the *Universal Review* in 1889, and Mr. Housman prepared drawings, but the *Review* died without publishing them. "The poem was never given to the world; the drawings were lost and forgotten." The poem is in the alliterative, unrhymed metre of "Piers the Plowman," and the two illustrations are characteristic.

General. Emeritus Prof. Campbell Fraser, who succeeded Sir William Hamilton in the Chair of Logic and Metaphysics in Edinburgh University, received a congratulatory address from old pupils, colleagues, and other friends, on the occasion of his ninetieth birthday.

* * *

The *British Medical Journal* (September 4), the *Hospital* (September 4), and the *Medical Press* (September 8) give their comprehensive annual summaries of opportunities of medical education in the three kingdoms.

* * *

Sir James Crichton Browne formally opened the new Hostel in connexion with Dumfries Academy (September 8). During the first year forty-seven girl pupils will be in residence. "It is only since the passing of the Education Act of 1908," says the *Scotsman*, "that it has been legal for Local Authorities to build and equip such a hostel, and it is possible that we are on the eve of a great transformation in the school environment of Scotland." The hostel is mainly due to the generosity of the late Dr. Thomas McKie.

* * *

Dr. Gray, Warden of Bradfield College, has bought 1,928 acres some twenty miles from Calgary, in Alberta, and two days' journey from Winnipeg. He expects to take out his first batch of boys next Easter.

A NEW PUBLIC SCHOOL.

(From the *Morning Post*.)

In the course of a necessarily short article it is impossible—even if it were desirable—to enter into a detailed discussion of the many ways in which the present public schools fail to fill their true place in the national economy. These things have been again and again discussed, and among sincere educationists there is now a pretty general consensus of opinion. During the last two years, for instance, letters have been constantly appearing in the *Morning Post* from men who speak with undeniable authority—chief among them Mr. A. C. Benson and Dr. Rouse—all of whom condemn the present condition of our public schools. They do so for different reasons and have different remedies to propose. Dr. Rouse is chiefly concerned that we should view the classical languages and literatures from a new and reasonable standpoint. He is in the fortunate position of having a school in which he can, without let or hindrance, carry his plans into practice. But there are other reformers who take the standpoint of Mr. Benson, who see with general dissatisfaction the effect of the great boarding schools on those who are "educated" in them." These reformers would like to see a new spirit pervade our public schools. They would like to see schools in which the only worldly prospect set before the masters was not the chance of becoming—some time in the dim future—an hotel-keeper on a small scale. They would like to see public schools which would attract to their service none but men of the highest ability and of settled aim. And, further, they would like to see the teaching remodelled so as to exclude the obvious inference that the schools exist for the salvation of a small minority of boys and for the perpetual damnation of the great majority.

Now it may not be possible to convert the authorities to these views. On the other hand, there is always the alternative that the reformers shall become their own authority. And certain reformers, after long consideration and discussion, have decided that an effort ought to be made by those who can agree upon a broad scheme of public school reform to realize their ideals in practice. There must be many men who have sufficient faith in their ideas of what education ought to be to translate those ideas into action. Of course no one man can do it. Not only must the necessary funds be found, but the right men must be induced to leave their present work and embark upon a possibly hazardous undertaking. Everything will depend upon the amount of support and loyal co-operation which is forthcoming.

The Lessons of Previous Foundations.

Our principal public schools appear to have been founded for the most part in two widely separated periods—during the reigns of two great Queens, Elizabeth and Victoria.

The Victorian Schools are the following:

	Founded.	Present Numbers.	Annual Fees.
Cheltenham	1841	600	£108 to £144
Marlborough	1843	629	£89 to £110
Rossall	1844	230	£63 to £84
Radley	1847	250	£97
Brighton	1847	195	£81 to £93
Lancing	1848	180	£74 to £101
Wellington	1856	518	£113 to £135
Bradfield	1859	325	£118
Haileybury	1862	430	£81
Clifton	1862	595	£106
Malvern	1865	506	£99
Leys (Cambridge)	1875	174	£109

Judged by the test of numbers, Cheltenham, Marlborough, Clifton, Wellington, and Malvern appear to have been the most successful. In the last column are the fees charged for boarders, from which it would appear that the cheaper schools are less successful as a rule than those where higher fees are paid. Haileybury, though apparently an exception, is not really so; for the present school took over the buildings of the old East India Company's College on favourable terms, and is thus less highly capitalized than other modern schools. This is a point of great importance, for it is the initial outlay required to provide the superior accommodation considered necessary in modern public schools that checks their increase and keeps up the fees. In this respect Malvern was very fortunate. The buildings were erected by a syndicate, independent of the School Company, and it was not until some years after its foundation that the latter was able to buy out the syndicate and become the owner of the school buildings. The late Lady Emily Foley took great interest in Malvern College from its inception; in fact, the first land owned by the company was acquired from her under an easy option, and thus the need of ready money at the outset was so considerably relieved that the College was registered as a company with a nominal capital of only £20,000. The comparatively low fees charged at Malvern are probably due to these early advantages and consequent low capitalization. The practical lessons of the nineteenth-century foundations would seem then to be:

1. That unless land and buildings can be acquired in an exceptional manner fees must range well over £100 a year.
2. That three hundred boys must be regarded as the minimum number for a successful public school.
3. That the best schools are crowded, and that there is therefore room for more of them.
4. That the southern portion of England appears to be more popular with parents than the northern.

The last point is probably connected with the absence of dialect. A Yorkshire or Lancashire boy, after a few terms at a south country school, returns home with what is considered by his family to be a more refined manner of speaking.

The Staff Problem.

Closely connected with the financial aspect of public schools is the question of staff, and it is notorious that, with the exception of the head masters, they are very much underpaid. The result is that the schools no longer get the best men from the Universities. As a rule, there is no pension, and unless an assistant master can succeed to a boarding house by the time he is forty his prospects are gloomy indeed. For his training, fourteen or fifteen years of the best education, a high University degree, and considerable strength of character are indispensable; some athletic or games distinctions are very desirable additions, and the remuneration is inferior to that of a Civil Service clerk. It is true there are apparent compensations in long and fairly frequent holidays; but these are no more than necessary to enable a master to recover from the "fag" of a school term and to take up the burden again. The success of a modern public school is chiefly dependent upon personnel, and to get the best men the best price must be paid not only in the matter of salary, but also in the shape of substantial assistance to a pension fund which should form part of the endowment of every public school.

Digitized by Google

Requisites of the New School.

As for curriculum, what is wanted is a new public school without any "sides" at all, where the general education up to the age of fifteen should include living languages and their literature, history, mathematics, science, geography, and, of course, religious teaching. From about that age a boy might be allowed to specialize according to his tastes, abilities, and future career. The classics would be taught in sets, as modern languages are now, and a boy's place in school order would depend not, as at present, on his linguistic gifts, but on the aggregate of the results in each branch of his studies.

Starting with a clean slate, such a school would be free to remedy most of the recognized defects in the older foundations. The following suggestions are offered for criticism:—

1. Small groups or classes, not exceeding fifteen boys each, in every subject taught. No promotion until the standard of the group to be left has been fully attained.

2. A young staff, selected for teaching ability rather than for high University degrees. Compulsory retirement at the age of fifty-five on a partly contributory pension scheme.

3. House masters to be selected solely by merit, to be paid an adequate salary as house masters, and to be relieved from the cares of housekeeping by a professional caterer.

4. The school to have its own dairy farm, orchard, and market garden, its own laundry and bakery, its own electric light and water supply, and, if possible, its own drainage system.

5. It should be in a fairly high, bracing situation, somewhere on the Downs, and, if possible, near some existing centre of education.

6. The curriculum should be as simple as possible for the purpose of a sound and thorough general education. Many schools now advertise an "engineering branch," but such work is better postponed until the boy is fit to get the utmost good out of one of the numerous technical colleges, and he can only be made fit by thorough grounding in mathematics and science, not by premature specialization. If he could pass the certificate examination at seventeen or eighteen and go on as soon after as possible to the University or technical college and begin his specialization there, he would overtake and pass the boys who had been allowed to dabble in their post-school subjects whilst still at school to the prejudice of their general education.

7. Sunday lectures should be made a feature. Sunday is a dull day at school. Few boys have much religious feeling, and the constant succession of chapels bores and hardens them. A lecture, to which they are not obliged to go, by a man they do not see every day, a lecture on any subject would be a welcome relief to monotony. A lecturer with a pleasant delivery and a well known reputation can rouse dull boys to enthusiasm; and the re-start on Monday morning after such a fillip would be far fresher and more lively than after three compulsory chapels. This is no reflection on the school chaplains, for the harm is mostly done at home, where religion is too often kept only for Sunday use as a sort of official respectability, valuable as an easy means of keeping the house quiet and "saving the servants."

Cost of the New Foundation.

To establish a school of this class would entail an outlay of £100,000. The whole of this sum would not be required at the outset, as the boarding-houses and classrooms would only be built as numbers required. The chapel, gymnasium, laboratories, and workshops might well be temporary buildings, to be made permanent as funds become available. But not less than £50,000 should be in sight before the school could be opened. Annual school expenses for the full number of three hundred boys may be estimated at £19,000, which would be raised by a school fee of £70 per annum, from which twenty major scholars would be exempt, and towards which twenty minor scholars would pay a reduced fee of £45 each per annum. A boarding fee of £80 would cover expenses in houses averaging 43 boys each. The rent of these houses, at 6 per cent. of their cost, would form a sinking fund sufficient to pay off £50,000 of debentures at 4 per cent. in thirty years. Interest at 5 per cent. on £50,000 in shares is included in the estimate of school expenses.

The history of schools like Uppingham, Marlborough, Malvern, and others shows how generous parents, old boys, and other well-wishers have been to the schools they believed in, and, given the right sort of head master, there is good reason to feel confident that the twentieth-century school would meet with the same generous support, the same enlightened benevolence, and an even greater measure of appreciation. The increase of wealth has been so enormous, the rise in the general level of middle-class income so unprecedented, since the great Victorian schools were founded, and *pari passu* with this increase the interest taken in educational matters is now so much keener and more widespread, that it would be strange indeed and almost shameful if an appeal for help in founding the first Edward VII. Public School should fail to meet with prompt and liberal response.

EQUAL PAY FOR EQUAL WORK.

(From the *School Journal*).

The State Legislature of New York passed a Bill framed to make mandatory the payment of equal salaries to men and women teachers doing equal work. Mayor McClellan has vetoed it, as he did before in a similar case. He takes the position that the Board of Estimate has full power to act in matters of salary equalization without legislative interference. He suggests, further, that by equalizing the salaries of men and women teachers an injustice is done to those women who are not in competition with men, especially those in the primary grades.

The one important constructive move made by Mayor McClellan is the declaration that a Commission should be appointed to investigate the causes that led to the appeal by the teachers to the Legislature in regard to the adjustment of salaries. The Commission is to consist of persons who are not teachers and have no connexion with either the Board of Education or the Board of Estimate and Apportionment. These are the conditions to be investigated: First, the average rates of living of teachers, both male and female, in this city, and to ascertain if possible the general trend of responsibilities which they have to meet on the salary offered to them by the city. Second, to compare, as near as possible, the salary rates in other cities with those offered to teachers in this city. Third, to investigate and accurately determine what increase to the budget such recommendations as they may deem proper to submit will make.

Mayor McClellan is to be commended for insisting that these matters should be investigated. There are, however, several important considerations which do not seem to be adequately covered in the scope of the Commission's inquiry, unless the phrase "general trend of responsibilities" is permitted to be sufficiently elastic to include an examination into the comparative efficiency or sufficiency of men and women in the various positions under the Board of Education. If the Mayor's Commission is to supply a report that reasonable people may well accept as authoritatively conclusive, a sufficient appropriation must be made to allow consulting with experts. The economic phases of the inquiry are easily determined. The educational phases are not.

We lack impersonal standards for the comparative judgment of the efficiency of teachers. So there is much division of opinion and consequent injustice. It is not at all improbable that a teacher will be marked "Excellent" by one inspector and "Poor" by another. The inspectors again may be declared efficient or inefficient by others who pretend to know what such an inspector should be and do. Opinion rules. And opinion is a fickle thing. A basis of established facts supplies the only reliable assurance of ultimate justice. Dr. J. M. Rice has proved that an impersonal standard of this kind is possible. But little has been done by lawful authority to promote the recognition of the demonstration. That is why assertions of the superiority of men over women teachers, or vice versa, may pass for legal currency. Prerogatives may be governed by them, and salaries graded accordingly. No reasonable citizen would deny that the pay of teachers should be regulated by merit rather than by sex. But we must have a standard for judging merit.

If the investigation should prove that the school system is actually in need of men teachers in the elementary schools, and that the only reason for not appointing enough men at the present time is that they are not to be had with the salaries that are paid, the argument in favour of "equal pay for equal work" will be stronger than ever. Men receive considerably less as teachers than they do in other occupations making equal demands as regards preparation and responsibility. They have failed to secure more attractive salaries because there have always been plenty of women ready to take their places even for less money. It might be said that, by raising the salaries of women to the scale now prevailing for men, the competition would become more intense than ever, and the likelihood of an increase to attract men would vanish altogether. On the other hand, it is just possible that, having to pay "men salaries," the Boards of Education will put more men into the places where these prevail, and thus gradually eliminate women from the best salaried positions. The latter result rests, of course, on the assumption, never yet actually proved, that men in certain positions in elementary schools produce better results than women.

Mayor McClellan's Commission will have to face questions like

Digitized by Google

the following: "Are men needed as teachers in the elementary schools—in what grades or under what conditions?" "Are men superior to women?" "What places, if any, must always be filled by men?" Questions such as these strike clearly at the root of the contentions which impelled teachers to go to the State Legislature with demands for "equal pay for equal work." The sort of investigation that is needed to answer them necessitates an extensive examination into the comparative efficiency of men and women teachers in various positions and under varying conditions. There is no doubt that it is urgently needed. The argument so far is all on the side of the agitators of "equal pay for equal work."

REVIEWS.

English Literature.

The Cambridge History of English Literature. Edited by A. W. Ward, Litt.D., F.B.A., Master of Peterhouse, and A. R. Waller, M.A., Peterhouse. Vol. III, *Renascence and Reformation.* (9s. net. Cambridge University Press.)

The classical Renascence, which exercised such a powerful influence in enriching and moulding the literary languages of modern Europe, finds an admirable herald in Principal Lindsay, who narrates the coming of Erasmus, and portrays the more important of the English humanists, notably appreciating Colet as "a great personality, who impressed every one with whom he came in contact by his incalculable force of character," and as "perhaps the only man who exercised a commanding and abiding influence on the brilliant Dutch humanist." The effects of the Reformation upon the national literature are traced in judicious detail by Prof. Whitney, with the collateral result of demonstrating how varied were the religious impulses of the movement and how vital they were for the national welfare, upon both their positive and their negative sides. In a short but very suggestive chapter, the Rev. R. H. Benson estimates the losses to learning through the destruction of books and of other opportunities for study in connexion with the dissolution of the religious houses, and the gains to learning through the rise of enterprise on the ruins of tradition:

It is impossible, with any degree of justice (he says), to set the gains and the losses resultant from the dissolution in parallel columns. The former were subtle, far-reaching, immature; the latter were concrete, verifiable, and sentimental. Rather, until some definition of progress be agreed upon by all men, we are only safe in saying that, from the purely intellectual side, while the injury to the education of those who lived at the time, and the loss of innumerable books, antiquities, and traditions for all time, are lamentable beyond controversy, yet, by the diffusion of general knowledge, by the widening of the limits of learning and philosophy, by the impetus given to independent research, art, and literature, and by the removal of unjustifiable prejudice, we are the inheritors of a treasure that could hardly have been ours without the payment of a heavy price.

The array on both sides will not be challenged, but there seems to be some confusion of thought or of expression in making the one series the price of the other. The German influences on English literature, represented mainly by Barclay and Skelton, were neither very important nor very lasting: they are adequately summarized by Dr. Koelbing. The progress of social literature in Tudor times, sketched by Prof. H. V. Routh, brings into prominence a great variety of anecdotal, critical, and "merry" pamphlets, broadsides, "toys and trifles," that are neglected in the ordinary histories of literature, but reflect a curious light upon the English middle-class life of the sixteenth century:

The great changes of the sixteenth century—the increase of luxury, the rise of the middle classes, the growth of competition, the suppression of the monasteries, the expansion of Europe, the frequence of pestilence—inspired a vigorous literature quite distinct from the theological and æsthetic movements of the time. But, while the popular printing-presses were thus exposing fraud and enlightening ignorance, the superstitions of an earlier age were reappearing in an aggravated form. The belief in fetishes, totems, the evil eye, luck-bones, folk-remedies, love charms and nefarious magic, was rampant in England. Christianity and paganism were, among the unthinking and the untaught peasantry, inextricably mingled. Jugglery and legerdemain had still the glamour of the miraculous, and magic was used to discover lost things, bring back wayward lovers, and cure disease. Astrologers still foretold events by studying the position of the stars, and sold information as to the auspicious hour for all kinds of human enterprise, from the founding of cities to the taking of medicine. . . . It was an age of monstrous hallucinations.

Mr. T. F. Henderson deals with Sir David Lyndsay and the later Scottish "Makaris" (poets), and Prof. Hume Brown with the Reformation and Renascence in Scotland.

"The New English Poetry," of which Wyatt and Surrey were the pioneers, was an outcome of the closer touch of England with the kingdoms of the Continent. "For the first time in a more than incidental way England submitted her intellectual life to the influences of the Renascence." The inspiration of the new poetry "was almost entirely foreign; it was upon French, and especially upon Italian, models that the courtiers of Henry VIII. founded the poems which now began to be written in large numbers." Mr. Harold H. Child works out the history concisely and pointedly. A separate chapter is assigned both to "A Mirror for Magistrates"—"an important link between medieval and modern literature"—a monument of industry, extending to more than 1,400 closely printed pages, and retailing stories of misfortune and wickedness in high places, from Albanact (B.C. 1085) to Queen Elizabeth—and to George Gascoigne, the first of the Elizabethan court poets: both by Prof. J. W. Cunliffe. It is enough to note that the poetry of Spenser is treated by Dr. W. J. Courthope; the Elizabethan sonnet by Dr. Sidney Lee; Prosody, from Chaucer to Spenser, and Elizabethan Criticism, by Prof. Saintsbury; Chroniclers and Antiquaries by Mr. Charles Whibley. The review of Elizabethan Prose Fiction, by Prof. Atkins, of Aberystwyth, is careful and luminous:

When all this prose fiction has been placed in its proper perspective it presents a record of experiment rather than of achievement. . . . [The future lay with a type of work which provided entertainment independently of dramatic accessories.] It is in the prose fiction of the time that the beginnings of this type are found, and this historical interest is its first claim to recognition. As to its actual achievement, one has to confess that this is comparatively small, for it worked from no model and was inspired by no tradition. It was wanting in coherent form and definite purpose; its plots lacked logical development—the threads of a story might be hopelessly confused; its characters were stiff and formal, and its style was not always adapted to the matter in hand. Nor can it be said to treat as yet the problems of life: it was content, for the most part, with simple narrative, with rough outlines of character, and with studies of manners. But it improved its methods as it went on, it experimented in styles both simple and ornate, it made use of dialogue, and it realized some of the wit and humour, as well as the descriptive power, of which prose was capable.

A very effective handling of the Marprelate controversy is furnished by Mr. J. Dover Wilson, Lector in English in the University of Helsingfors; and an exceptionally fine chapter on "The Laws of Ecclesiastical Polity" is from the accomplished pen of Dr. Foakes-Jackson. Mr. W. H. Woodward outlines efficiently the conditions of English Universities, schools, and scholarship in the sixteenth century. In the final chapter Prof. Atkins notes the changes in language from Chaucer to Shakespeare. The volume, as has been indicated, is most comprehensive, with stress upon many things that are little noticed in less extensive summaries, but that still have their importance. But it is somewhat curious that writers full of the facts of English literature should be so generally oblivious to, or careless of, the niceties of English composition.

Mendelism.

Mendel's Principles of Heredity. By W. Bateson, M.A., F.R.S., V.M.H., Fellow St. John's College, Professor of Biology in the University of Cambridge. (12s. net. Cambridge University Press.)

The importance of heredity in the theory of the evolution of living things—with, perhaps, the exception of man—has long been recognized. In recent years, owing chiefly to the influence of the writings of Sir Francis Galton and his school, the importance of heredity in the study of the evolution of man himself has begun to be more adequately realized. The modern view is that every physical and mental character of man is the product of two factors—namely, an inherited tendency or capacity, and the influences exerted by the external conditions of the individual's life. Attempts to estimate the relative importance of these two factors have generally been futile, because both factors are essential in the final product. But, when we find social reformers and educationists ignoring altogether the inherited factor and acting on the theory that the only method of improving mankind is by improving the conditions in which he lives, then it is time that the students of the Laws of Heredity (or, as it is now called, the Science of Genetics) should come forward and direct the attention of the public to the great

Digitized by Google

advances that have been made in their science. This Prof. Bateson has done very effectually in the work before us for what is known as the Mendelian Theory of Heredity.

There are two rival theories of heredity at present in the field—namely, the Galtonian or ancestral theory and the Mendelian theory. Galton's law is founded on a statistical comparison of the occurrence of the same characters among sons, parents, grandsons, &c. This law has been stated by its author to be that "the two parents contribute between them on the average one-half of the total heritage of the offspring, the four grandparents one quarter, the eight great grandparents one eighth, and so on." This law is repudiated by Prof. Bateson as being inconsistent with the great discoveries made by Mendel and his disciples. It is, however, by no means generally agreed that the two laws are necessarily inconsistent, and, notwithstanding Prof. Bateson's confidence in his own view, we think it is advisable for the present to suspend our judgment on this question.

The Mendelians apply the experimental method to the elucidation of the laws of heredity, and by this method a great many remarkable and unexpected discoveries have been made. Mendel, an Austrian clergyman, the founder of this new theory, published in a somewhat obscure local journal the results of his experiments on the hybridization of plants about the date of the appearance of Darwin's "Origin of Species." The extraordinary interest excited by Darwin's work resulted in Mendel's experiments being completely ignored till they were unearthed a few years ago. One of the classical experiments of Mendel consisted in crossing tall and short varieties of peas. He found that the first generation of crosses were all tall. In the second generation three-fourths of the peas were tall and one-fourth were short. The tall peas in this last generation were called *dominants* and the short peas *recessives*. One-third of the dominants were found to be pure—that is, they had only dominant offspring—and all the recessives had only recessive offspring. Two-thirds of the dominants were found to be hybrid—that is to say, their offspring was partly dominant and partly recessive.

To explain these phenomena Mendel devised a beautifully simple theory, namely, the *segregation* of the unit characters in the gametes (or germ cells), so that the units combined in all possible pairs to form the zygote or fertilized cell. If to this principle we add the assumption that one of the two characters, whenever present in a zygote, formed the *soma* of the completely developed individual, this phenomenon of *dominance* explains why the apparent dominants form three-fourths of the whole offspring.

The principles of Mendel have been further developed by his successors, and especially by Prof. Bateson and his pupils at Cambridge. The subject becomes much more complicated when different pairs of alternate or allelomorphic characters are present in the gametes which join to form the zygote. But the same beautifully simple principle of the random combination of all the elements contributed by the male and the female holds. Prof. Bateson gives an interesting example of this in his explanation of the different varieties of fowls' combs produced by crossing different breeds of poultry. Without the Mendelian theory, the results would be quite inexplicable; with it, they are simply explained, and the results of new experiments in crossing can be confidently predicted. The Mendelians are the first to give any rational explanation of the phenomenon of sex. The explanation is rather startling. The female ovum contains both the male and the female characters, with femaleness dominant. The male germ contains the male characters only. In other words, the female is bisexual and the male unisexual. The Mendelian theory is also applied by Prof. Bateson to explain the extraordinary colour phenomena obtained by crossing animals and plants with different characteristic colours. The author, however, has to admit that there are still some of these phenomena for which no satisfactory explanation is forthcoming.

The book is written in a racy style, which is quite the antithesis of the ordinary dry-as-dust scientific treatise It is undoubtedly far the best exposition of this important new theory that has as yet been published, and it is evidently the work of a master in the subject.

THE THEORY OF GROUPS.

An Introduction to the Theory of Groups of Finite Order. By Harold Hilton, M.A. (14s. net. Clarendon Press.)

The author treats of a branch of mathematics of which he himself has evidently made a close study, but he places himself in the position of a teacher of students taking up the subject for the first time and standing in need of sympathetic assistance from the source of information. Notwithstanding the fact that, in order to master the Theory of Groups, little is demanded beyond a preliminary knowledge of general algebra, and more especially of Theory of Numbers, it is yet the case that earlier standard treatises on the subject may present many difficulties to the uninitiated. It is to the author's appreciation of what seemed to him a real need that mathematical students owe the production of the present volume. It will be advantageous to notice some of the means adopted by the writer in order to simplify the treatment of his subject. In the first place, wherever he can do so without detriment to the treatise as a whole, he refrains from introducing long and specially difficult discussions. On the other hand, and as a natural consequence of the gain of space, the number of exercises is exceptionally large. Amongst them readers will find many that allow of very ready solution, but these will have fully served their purpose if only they help the student to absorb principles and grasp the full force of the various propositions. Another very valuable source of assistance (provided always that it is drawn upon judiciously) is the closing chapter, in which suggestions are offered as a guide to the solution of most, if not all, of the more difficult exercises. Again, in framing his definitions, the writer has sought to benefit by the knowledge that the language—or, perhaps we should say rather, the terms—connected with the subject are by no means definitely fixed. He has aimed always at making such definitions terse and to the point. The work is supplied with bold and clearly drawn diagrams, but the arrangement of type and spacing is far from satisfactory, as the text gives in general the effect of being overcrowded and of being overpowered by the illustrations where they occur.

GENERAL NOTICES.

MATHEMATICS.

The Elementary Theory of the Symmetrical Optical Instrument. By J. G. Leathem, M.A. (2s. 6d. net. Cambridge University Press.)

This is Mr. Leathem's second contribution to the valuable series of Cambridge Tracts in Mathematics and Mathematical Physics. It is the eighth of the tracts, and may be regarded as the companion of No. 7, since both are occupied with the important study of optical instruments. Mr. Leathem takes up the subject with special reference to those symmetrical instruments through which, when in use, the light is transmitted in a direction practically parallel to the common normal of the surfaces of revolution of which their refracting surfaces consist. The subject is approached as simply as possible, for this tract, like all the others hitherto issued as members of the series, is intended to be useful to readers on their first introduction to the study of the particular branch of science considered. In the earlier chapters, in order that the desired simplicity may be secured, the discussion proceeds along the lines followed by Gauss in one of his memoirs. Again, we note that, with a view to possible simplification of treatment, the author discusses the general optical properties of the instrument before attempting to investigate the functional form of its constants. In a short tract the writer is necessarily unable to enter into a detailed examination of special instruments. He has, however, been successful in his endeavour to include the consideration of some points connected with equivalent thin lenses and field-glasses, which are not, in general, treated in our text-books. The brief sketch closes with "A Syllabus of Propositions concerning the characteristic function and the focal lines of a pencil of rays of light." The treatment is thoroughly capable and lucid.

Practical Arithmetic and Mensuration. By Frank Castle, M.I.M.E. (2s. Macmillan.)

Mr. Castle's intention is to meet the demands of evening continuation schools and technical classes. His work, entirely modern in conception, follows a plan possessing many features of practical utility. Thus, the order of instruction is made to depend on the pupils' needs, as they are likely to arise in the course of study. Also rules taught through the medium of arithmetic are without delay given a more general form, and thus serve to inculcate the ideas underlying elementary algebra. With reference to the first named characteristic, it may, however, be well to suggest the value of caution, lest the growing tendency to disregard any definite order in teaching be carried too far and it become more and more difficult to gauge with reasonable accuracy the mathematical knowledge of young students. Several passages in the text ought to be revised. The reader is told, for example, that a fraction whose denominator is not 10 or a "*multiple*" of 10 is called a vulgar fraction. Again, the right angle is first stated to be an angle in which one of the arms is *perpendicular* to the other; the help of a diagram does not constitute a sufficient justification for so loose an explanation. The rhombus is inaccurately defined, and the term "significant figures" is used without

Digitized by Google

any previous or accompanying discussion as to its meaning. The above are but isolated passages, but their presence amidst so much that is useful is to be regretted.

Elementary Algebra. By V. M. Turnbull, M.A. (2s. 6d. Cassell.)

There are arguments both for and against the issue of elementary mathematical treatises in which the answers to exercises are not given in any form whatever. The present volume will be more especially attractive to the teachers who prefer that such results should not be published. Used in accordance with the author's intention—namely, as the complement to effective oral instruction—the text-book under consideration cannot but prove a valuable one. It consists principally of exercises—many for oral, but very many more for written work. The small quantity of bookwork forms a good basis for a useful course in elementary algebra, and deals very briefly with the rudiments of the subject as far as geometrical progressions. The course also provides for a first introduction to logarithms and the theory of indices. The text furnishes the teacher with well considered notes and helpful explanations. In their bearing on the processes of addition and subtraction, the author discusses the laws governing the combination of positive and negative signs with more than ordinary clearness; and, for the beginner, Mr. Turnbull is perhaps wise in merely stating the usage that obtains in connexion with multiplications and divisions.

SCIENCE.

"First Books of Science."—*A First Book of Botany.* By Elizabeth Healey, A.R.C.Sc. Lond., Assistant Lecturer in the University College of South Wales and Monmouthshire. (1s. 6d. Macmillan.)

Miss Healey essays to follow the order of the school year and begins with fruits—a matter of no great practical moment. The exposition is very simple and clear, and appended to each chapter are judicious directions for practical work. "Observation and experiment are the dominating notes of the lessons, and from the beginning great stress is laid on the need for constant practice in accurate sketching from actual plant specimens." Questions and exercises on the several chapters are appended. There are eighty-nine figures. The little book forms a very agreeable and efficient introduction to a most interesting and important branch of study.

A Course of Inorganic Chemistry for Colleges. By Lyman C. Newell, Ph.D. (Johns Hopkins). (6s. Heath.)

This is primarily a students' book, for such as devote a year to general chemistry. It handles the usual topics in adequate fullness and with proper attention to the more recent conceptions applied to the interpretation of chemical and physical phenomena; and it gives considerable space to the application of modern principles to chemical industries. The treatment is careful, simple, and lucid; and problems and exercises are furnished at the end of each chapter. There are eighty-nine figures; and portraits of Sir James Dewar, Sir William Ramsay, Mendelejeff, Moissan (who isolated fluorine), and Mme. Curie.

Preliminary Mechanical Drawing, for Schools and Evening Classes. By Joseph T. Treleaven, Medallist in Practical Plane and Solid Geometry and Naval Architecture. (1s. 6d. Longmans.)

Mr. Treleaven presents a graduated series of eighteen plates (a dozen of them coloured), containing over fifty figures and accompanied with clear descriptions and directions. The scheme is well devised and capably worked out. It will give impetus and guidance in the practice of actual and useful measurement in schools and evening classes, and form an easy and natural transition from elementary plane and solid geometry to the first stage of technical drawing. An interesting and capable work.

ENGLISH LITERATURE.

"Laurel-Crowned Letters." (1s. 6d. net each volume. Heinemann.)

Of this series, which comes from America, we have seven volumes: (1) *The Best Letters of Horace Walpole*, edited by Anna B. McMahan; (2) *The Best Letters of Lord Chesterfield*—to his son and to his godson—edited by Edward Gilpin Johnson; (3) *The Best Letters of Madame de Sévigné*, edited by Edward Mayfair Anderson; (4) *The Best Letters of Charles Lamb*, edited by Edward Gilpin Johnson; (5) *The Best Letters of Lady Mary Wortley Montagu*, edited by Octave Thanet; (6) *The Best Letters of William Cowper*, edited by Anna B. McMahan; and (7) *The Best Letters of Percy Bysshe Shelley*, edited by Shirley Carter Higginson. The avowed purpose is to show the writers at their best. In this view the selections have been well made. The volumes are furnished with sufficient literary introductions, and afford a convenient way of becoming acquainted with these distinguished writers in very interesting literary, social, and moral aspects.

The People's Library. (8d. net a volume, cloth; leather, 1s. 6d. net. Cassell.)

This very popular series now comprises 120 volumes of excellent and most varied literature. Our latest batch consists of 10 volumes: (1) *The Crown of Wild Olive* and *The Ethics of the Dust* (Ruskin); (2) *The Four Georges* (Thackeray); (3) *Lavengro* (Borrow); (4) *The Black Tulip* (Dumas); (5) *The Master of Ballantrae* (Stevenson); (6) *The Sketch Book* and (7) *The House of the Seven Gables* (Hawthorne); (8) *Villette* (Charlotte Brontë); (9) *Mansfield Park* (Jane Austen); and (10) *Reminiscences of Scottish Life and Character* (Dean Ramsay). The type is good, and the binding is firm and agreeable, the leather binding being specially flexible and grateful.

Clarendon Press.—(1) *Browning's Strafford.* Edited by Hereford B. George, Fellow of New College, Oxford. 2s. (2) *Voyages of Drake and Gilbert* (Hakluyt). Edited by Edward John Payne. With additional Notes, Maps, &c., by C. Raymond Beazley. (2s. 6d.)

(1) It will be interesting to see whether the schools will gladly take to Browning's characteristic tragedy: there may indeed be a welcome for it in more advanced classes, especially in connexion with the period of history in which Strafford plays his part, though Browning twists the history to suit his purpose. In the introduction and notes Mr. George makes ample historical and literary provision for the needs of readers. (2) is simply a section of the larger book, "Voyages of Elizabethan Seamen," with the introduction reprinted, and two illustrative maps (North and South America). Both works are beautifully produced, and furnish excellent reading matter.

"Macmillan's English Classics."

This admirable series is now a pretty long one, and it still continues lengthening. (1) *The Utopia of Sir Thomas More* (Robinson's translation), edited by H. B. Cotterill, M.A. (2s. 6d.), has a full introduction containing a chronological summary of More's life with leading facts of contemporary history in parallel columns, and a concise account of More in personal, literary, and political aspects; and the notes are elaborate, explaining and illustrating all points of difficulty. This is an excellent edition, whether for school or for private use. (2) *Tales from Shakespeare* (Lamb), second series, edited by C. D. Punchard, M.A. (1s. 6d.), gives the text of the story of seven plays, with literary introduction, concise notes, and a suggestive series of questions. (3) *Tennyson's The Lady of Shalott, and other Poems*, and (4) *Tennyson's Idylls, and other Poems* (1s. 9d. each), are very judiciously edited by J. H. Fowler, M.A. The excellent type and substantial get-up of the series are quite familiar.

SHAKESPEARE.

"The Elizabethan Shakespeare."—*The Winter's Tale.* Edited by William Henry Hudson, Lecturer to the University Extension Board of the University of London. (1s. 6d. net. Harrap.)

As we have already seen, the note of this series is the reprinting of the text faithfully from the First Folio, "but in easily readable form, together with such a systematized apparatus of brief textual foot-notes and fuller, but not too copious, literary notes, glossaries, lists of various readings, and introductions for each play, as may combine with the Elizabethan texts the advantages of a thoroughly modern editorial equipment, embracing the fullest results of Shakespearean scholarship." The introduction discusses the play, with constant references to its sources and with comparisons on various points with other plays of the author. Following the text are a full "argument," an account of the sources, an inquiry into the date of composition, very instructive and scholarly notes, glossary, variorum readings, &c. An admirable edition.

Hamlet, Prince of Denmark. Edited by C. W. Crook, B.A., B.Sc., Head Master of the Higher Grade School, Wood Green, N. (2s. Ralph, Holland, & Co.)

Mr. Crook has already edited some half dozen of the plays with much discretion and success. His guiding principle is "to concentrate the attention of the student upon the play itself, to help him to form his own judgment upon it, and to keep him from being entangled in the mazes of philosophic discussion or textual criticism." In none of the plays is it more difficult to carry out this principle than in "Hamlet." The introduction, after giving some very practical and sensible hints to the students, presents a concise life of Shakespeare, a brief account of the theatre before and during the poet's time, and useful and suggestive matter about the particular play, including an analysis of the action and sketches of the characters. The notes, running along the foot of the text-page, are helpfully explanatory and not overdone. A good glossary is appended. As usual, the volume is interleaved. An excellent edition for school study.

"The University Tutorial Series."—(1) *Hamlet*, (2) *The Merchant of Venice*, both edited by S. E. Goggin, M.A. Lond.; (3) *The Tempest*, edited by A. R. Weekes, B.A. Lond. (2s. each. Clive.)

All the introductions follow the same plan—first a common account of the life and works of the poet, and then a special handling of the particular play—text, date, sources, editions, characters, and metre. The notes are explanatory of the action of the play as of the language; they are careful and adequate. The volumes are well got up and form very useful additions to a valuable series.

"Normal Tutorial Series."—*King Lear.* Edited by F. J. Frost, B.A., Principal of P.-T. Classes, University College, Reading. 1s. 6d. net.

A full introduction deals with the drama, general and Elizabethan; with the life, genius, times, and work of Shakespeare; and with the sources, date, treatment, and character of "King Lear." The notes, grammatical and explanatory, are reasonably adequate. An appendix contains, under a dozen heads, a great variety of pertinent matter, mainly on the language of the play and on Shakespearean English generally, together with examination questions. A careful, elaborate, and useful edition.

Longmans' School Shakespeare. Edited by A. V. Houghton, M.A. (2s. 6d.)

A thick volume of over eight hundred pages, "consisting of twelve of the most suitable plays for school reading." There are neither introductions nor notes, but a full and careful glossary is appended. The

Digitized by Google

collection will be very convenient for wide and rapid reading. The type is good and the binding substantial.

"Professor Meiklejohn's Series." (6d. each. Meiklejohn & Holden.)

This series gives the text only. It is in bold type and strong and tasteful limp binding. We have four more plays: (1) *King Henry the Fifth*; (2) *The Merchant of Venice*; (3) *Julius Caesar*; and (4) *Macbeth*.

"Chambers's Shakespeare Texts without Notes." (4d. each.)

Two more plays: (1) *King John*; (2) *Coriolanus*. The "Coriolanus" has a brief historical and literary introduction. The series is printed in close but clear type, and very strongly and tastefully bound in limp cloth.

"Oxford Elementary School Books": Plays of Shakespeare. (Henry Frowde and Hodder & Stoughton.)

One play: *The Merchant of Venice*, with glossary and coloured frontispiece, beautifully printed and strongly bound in limp cloth with artistic design.

HISTORY.

From Island to Empire: a Short History of the Expansion of England by Force of Arms. By John S. C. Bridge. (6s. net. Chatto & Windus.)

Mr. Bridge begins with the Elizabethan seamen and finishes with the Boer War—a survey of three long centuries. Admiral Sir Cyprian Bridge says in his able preface to the volume that "it is useful to know how the Empire was built up, because the knowledge will help us to perceive the way in which it can be preserved and defended." We wish we could feel equal confidence in the effects of the lessons of history upon sovereigns and statesmen, or upon the public generally; but at any rate it is something that admirals lay them to heart, and the story is always useful for such as are willing and able to profit by it. The military operations, however, which alone are here described, form but one element in the expanding or building process. Mr. Bridge writes with lucidity and animation. He does not profess to have gone beyond the "recognized authorities" for his facts. Here and there, consequently, he lays himself open to criticism. As usual, he fails to grasp the siege of Delhi: to speak of General Wilson as a man "whose iron nerve and inflexible determination pre-eminently fitted him for the arduous post" of commander-in-chief, and of Colonel Baird Smith simply as "a clever engineer," is merely to exhibit complete misapprehension of the essence of the situation. Why, it was Baird Smith that had the iron nerve and the inflexible determination, which General Wilson had lost; and it is somewhat difficult to understand why the dying Nicholson should have thanked God that he still had enough strength left to shoot a commander of iron nerve and inflexible determination. We do not care to touch on political aspects, but we are satisfied that Mr. Bridge fails to appreciate the position and attitude of President Kruger. For a variety of reasons, the contemporary popular views and the historical facts are too liable not to coincide, and the popular view is always to be distrusted till historically verified. However, with such cautions, the volume may be read along with the school history as well privately, and will be found to be generally instructive as well as extremely interesting. There are some very good and useful maps and plans.

The Papacy: The Idea and its Exponents. By Gustav Krüger, Professor of Ecclesiastical History in the University of Giessen. Translated by F. M. S. Batchelor and C. A. Miles. (5s. net. Fisher Unwin.)

As indicated in the sub-title, it is the idea of the Papacy and the characteristics of the men that have stood for it that Prof. Krüger investigates and expounds—not the story of the 260 Popes that have occupied the chair of St. Peter. The authenticity of the passage of St. Matthew, "Upon this rock I will build my church," seems to the author "more than improbable." "Like a prophet wise in the light of past events," he says, however, "the historian can only say that no better motto can be found for the history of the Papacy than this sentence of the 'Rock' which shines in golden letters in the dome of St. Peter's—a glittering symbol of the might and splendour of the Roman Church." Again, the words "Feed my lambs," "Feed my sheep," though "also a legend," contain a truth if ever legend did, and "reveal the inmost meaning of the history of the Papacy." Prof. Krüger does not spare "the numerous falsifications that accompany and support the continuous growth of the primacy" of the Roman Church; and he traces developments, through the powerful personalities that achieved them, down to the present day. He even peers into the future: "the contradiction between the idea and its realization in the world is too evident for some attempt not to be made at adjustment." But he challenges Macaulay's anticipation of the permanence of the Papacy. "Macaulay and all those who judge as he does, whether influenced by religious or merely by romantic feelings, take in their short-sighted view the strongest thing yet known to mankind for something eternal." But there was a time when neither Church nor Papacy existed; and it is in natural course that Papacy should eventually come to an end. Be that as it may, the volume is lucidly and agreeably written.

RELIGIOUS AND MORAL.

"The Century Bible."—(1) *Exodus*. Edited by W. H. Bennett, D.D. Aberd., M.A. Lond., Litt.D. Camb., Professor in Hackney and New Colleges, London, sometime Fellow of St. John's College, Cambridge. (2) *Isaiah*, Vol. II. Edited by the Rev. Owen C. Whitehouse, M.A., D.D. (2s. 6d. net each. Jack.)

Both these volumes—the last of the series, if we mistake not—are masterly compends of the information desired by an intelligent student on their different subjects. The editors are fully abreast of the new learning, and are strong enough to utilize it with critical discrimination. Dr. Bennett furnishes a most elaborate analysis of the composition of "Exodus" and comments instructively upon its historical and religious significance; "it reflects the social and religious life of Israel for many centuries." His notes are very careful and helpful. Dr. Whitehouse calls chapters xl–lv "the Deutero-Isaiah" and chapters lvi and lxvi "the Trito-Isaiah," and discusses the pertinent questions in most able introductions—the historical setting, the theological conceptions, the writing and style, &c. The annotation is very full and thoroughly well considered. The whole series forms a most valuable commentary, and cannot but greatly advance a real knowledge of the contents of the Bible among professed students as well as among general readers.

The Story of the Jewish People. By Jack M. Myers. In two volumes. Vol. I. (1s. 6d. net. Kegan Paul, Trench, Trübner, & Co.)

Mr. Myers offers "a history of the Jewish people since Bible times," adapted for use alike in school and home. He disclaims both scholarship and original research: his aim is to arouse and to confirm interest. "And so this book takes the form of sketches rather than a scientific history; it deals with the romance rather than the philosophy of Jewish history." The volume opens with a sketch of the events leading up to the Maccabean revolt, which is narrated with spirit: "A Day in Jerusalem" in the time of Herod is a piece of picturesque portraiture well calculated to make an instructive impression; and many chapters are occupied with stories of Rabbis of interesting personalities, drawn from Talmudic, Midrashic, or Biblical sources. The work is very attractive, and no doubt, as the Chief Rabbi says in a prefatory note, it "will prove a valuable help to teachers," as well as to general readers. A map of Palestine in the time of Judas Maccabeus is prefixed, and there are numerous illustrations.

Manual of Moral Instruction. By James Reid, M.A. (2s. 6d. net. Nelson.)

"A graded course of lessons on conduct worked out on the concentric plan," based on the syllabus of the Moral Instruction League. The volume assumes the desirability of definite moral teaching—that is to say, "a belief that ordinary psychological law obtains in the moral sphere, and that judiciously conducted study of the principles of right and wrong in action does not make a boy a prig or a hypocrite: that good example and generous impulse are all the more effective when the application of general principles to individual cases has been to some extent developed by teaching, and that the presentation of noble ideals in History and in Literature enlarges indefinitely the influences for good which affect the character and conduct of the pupil." The scheme is worked out with marked ability and judgment. Though moral questions are presented entirely apart from theological sanctions, there is no reason why the moral lesson should not be treated in connexion with the Bible lesson, or why the course of moral study should not be useful in the Sunday school as well as in the day school.

CAREERS FOR BOYS AND GIRLS.

Choosing a Career: a Guide to Success in Professions, Occupations, and Trades. By Duncan Cross. (2s. 6d. net. Cassell.)

Mr. Cross deals with the more common careers in alphabetical order—from Accountant and Actor on to Stockbroker and Veterinary Surgeon. Through exigencies of space he has to limit himself to outlining the main qualities that make for success in the numerous occupations he describes, and to a brief statement of the regulations of entry and an estimate of the prospects ahead. He places most value upon the opinions he records; the facts can be got by sending for a prospectus, though it is convenient to have them at hand in his book. These opinions, he tells us, "have been painfully gathered from the leaders of the professions and occupations dealt with—from bishops, from King's Counsel, from admirals, from soldiers, from leaders of commerce, from any one, in short, who had climbed the difficult tree of success, and would reach down a friendly hand of advice to the beginner." So far good; but probably no less valuable information might be obtained from some that had tried and for one reason or another had ceased to try. However, the book will be very suggestive and helpful.

Professions for Girls. By T. W. Berry, Director of Education, Rhondda, Glamorganshire, late Assistant Director of Education, City of Manchester. (2s. 6d. net. Fisher Unwin.)

Mr. Berry treats briefly but pointedly of the qualifications necessary for the principal spheres of usefulness open to girls, the modes of acquiring them, the prospects of reward, and so forth. He does not profess to be exhaustive, but he provides quite enough information "to enable a parent to form an idea as to which profession would probably suit his girl, and which profession his daughter would probably be fitted to follow with reasonable chance of success." Lady Grove, in a strenuous preface, contends vigorously that women teachers should be remunerated on the same scale as men teachers.

Trades for London Girls, and How to enter them (9d. net. Longmans) is a companion book to "Trades for London Boys," compiled by the Apprenticeship and Skilled Employment Association (36 and 37 Denison House, Vauxhall Bridge Road, S.W.). The accounts of the various trades and occupations "are based on the investigations made by members of this Association and of the Women's Industrial Council,"

Digitized by Google

and articles on trades of any importance "have been submitted to experts in each trade." The information, then, may be taken as trustworthy, and many practical hints of value are furnished.

The Central Bureau for the Employment of Women (9 Southampton Street, Holborn, W.C.) has brought out a third edition of *The Fingerpost* —"a guide to the Professions and Occupations of Educated Women" (1s.; post free, 1s. 3d.). Each profession or occupation is described by a writer familiar with the subject. Teaching is treated in eight sections. The work is comprehensive and trustworthy, and it cannot fail to be extremely useful. The present edition has been revised and, in many points, improved.

Our Sons and their Start in Life (with two articles on "Professions and Occupations for Women")—a reprint from the *Guardian* (5 Burleigh Street, Strand, W.C.; 1s.)—has for some time been in a second edition (revised). The brochure contains a great deal of detailed information, with well considered suggestions.

MISCELLANEOUS.

Eliza Brightwen: the Life and Thoughts of a Naturalist. Edited by W. H. Chesson. With Introduction and Epilogue by Edmund Gosse. (5s. net. Fisher Unwin.)

Mrs. Brightwen's autobiography and diaries, of which this volume mainly consists, will be of special interest to those that are familiar with the half-dozen volumes of her published writings on multifarious aspects of Nature. There is nothing of the interest of adventure in her life, and in the latter part of it illness kept her pretty closely to the house. But her observation and thoughtfulness are marked amidst the record of the commonest doings; and her devotion to the investigation of birds, insects, plants, &c., is always attractive. She was sixty before she ventured on authorship; and the success of "Wild Nature won by Kindness" gave her an impulse to further efforts of authorship; but authorship was only an incidental result of her studies. The curious thing is that she worked in complete independence of other students of her science: "she used her own piercing eyes, her own agile fingers; she trusted almost exclusively to her personal observation and manipulation, and she was little affected by books." In fact, she went on placidly discovering things that had been "known for a century." Mr. Gosse speaks affectionately of her charm of manner, her sense of humour, and her courage in affliction. Her portrait is given as frontispiece.

Prof. Osler's Linacre Lecture, delivered at St. John's College, Cambridge, has been published at the Cambridge University Press (2s. 6d. net). The title is simply *Thomas Linacre*—the treatment dealing with the life, the medical work, the literary efforts, and the foundations of the eminent physician and scholar. It is a very interesting tractate. There are eleven plates, including the Windsor and British Museum portraits of Linacre.

FIRST GLANCES.

History.

England, History of, A Junior. By E. Nixon, late Head Master of Junior School, Specialist in History, Ladies' College, Cheltenham. 1s. 6d. George Bell.
[Simple, judicious, and well informed; liberally illustrated.]

England, History of, A Young Folks'. Relfe.
[Simple outlines for junior forms. Illustrated.]

England, History of, The Normal. By A. F. Dodd, First Class Cambridge Historical Tripos. 3s. 6d. net. Normal Press.
[Full and fluent (with some common blunders). Summaries and questions to each chapter.]

English History, Revision Notes to. By F. Wallace-Hadrill, Second Master at Herne Bay College. 1s. Methuen.
[Condenses leading events; concise notes on main points; numerous questions from Local Examination Papers.]

European History, The Main Landmarks of. By M. K. A. Beisiegel, late of Newnham College, Lecturer in History at a P.-T. Centre. 1s. 6d. net. Normal Press.
[For the Preliminary Certificate Examination primarily. Rapid outline; numerous maps; questions.]

World's History, A Brief Survey of the. By Rev. H. G. Rogers. 1s. net. Blackie.
[Historical notes and chronological tables. Very thin.]

Geography.

British Empire, A Modern Geography of the. By C. A. Wood, M.A., F.R.G.S., F.G.S., Principal of the Hounslow P.-T. Centre. 2s. 6d. net. Normal Press.
[Matter selected with judgment and presented with effect. Foreign trade very plainly shown. Numerous good maps. Full index.]

Empire, Round the. By George R. Parkin, C.M.G., LL.D. 1s. 6d. Cassell.
[New and revised edition; 153rd thousand. Fifty-three figures.]

First Geography, A. By C. A. E. Rodgers, M.A., F.R.G.S., Assistant Master, Bradford Grammar School, and an Examiner in Geography to the College of Preceptors. 1s. Blackie.
[Very simple and clear explanation; fifty-nine pertinent and excellent figures, coloured.]

Mathematical, Astronomical, and Physical Geography. By C. A. Wood, M.A., F.R.G.S., F.G.S., Principal of Hounslow P.-T. Centre. 1s. 6d. net. Normal Press.
[Sensible selection of points and effective description. Maps and diagrams numerous and good.]

Oxford Geographies, The (Edited by A. J. Herbertson).—The Practical Geography. By J. F. Unstead, M.A., Lecturer in Geography at the Goldsmiths' College, University of London. Parts I and II. 1s. 6d. each. Clarendon Press.
[Main facts carefully and clearly stated. Numerous exercises skilfully devised to make pupils reproduce their information in a practical form. Distinctively able and valuable.]

Physical Geography, A Junior. By E. Ogwen Williams, F.G.S., The County School, Aberdare. 1s. Philip.
["For Intermediate and Secondary Schools." Points judiciously selected and lucidly explained; forty-four illustrations and diagrams. Excellent within its range.]

Preliminary Geography of the British Isles and India. By A. G. Haynes, B.A., Head Master of Highbury High School. 1s. Relfe.
["Covering all the requirements of the Oxford Local Preliminary Examination." Clear statement; helpful tabulations and groupings; 7 maps and diagrams. Very useful.]

Natural Science and Nature Study.

Bird Life: containing over a hundred illustrations of birds and their nests from photographs by Charles Reid, Wishaw. 1s. net. Foulis (Edinburgh; and 21 Paternoster Square, E.C.).
[Admirable photographs; descriptions brief and simple.]

(1) Mother Nature, A Year's work with. (2) A Second Year's work with Mother Nature. (3) Nature Notes and Notions; being a Third Year's work with Mother Nature. By Alyce L. Sandford, Head Mistress of Christ Church School, Southwark, late Mistress of Method at S. Marylebone P.-T. Centre. 3s 6d. each. Pitman (Notes of Lessons Series).
[Very simple and clear; carefully progressive; liberally illustrated. Attractive and helpful.]

Nature Study, a Cycle of. By M. M. Penstone, late Head Mistress, Home and Colonial School Society's High School for Girls and Training College for Kindergarten Teachers, Highbury, London. 3s. 6d. National Society's Depository.
[For children under twelve; suggestions for teachers in town and country schools. Observational method; very readable style: sixty-seven figures. Very interesting and instructive.]

Plants, Common, Life Histories of. By F. Cavers, D.Sc. Lond., A.R.C.Sc., F.L.S., Professor of Botany, Hartley University College, Southampton. 3s. Clive.
[Very able and interesting; questions on each chapter; 123 figures.]

Scaly-Winged, The: a Book on Butterflies and Moths for Beginners. By R. B. Henderson, M.A., Rugby School. 1s. net. Christophers (Lancaster Place, Strand, W.C.).
[Simple, clear, and charming; twenty-two illustrations.]

Seaside, The Little Naturalist at the. By the Rev. Theodore Wood, F.E.S. Illustrated by G. E. Collins, R.B.A., and J. Halliday. 1s. Nister.
[Delightful and instructive; numerous illustrations, some of them coloured.]

Religious and Moral.

Acts of the Apostles, Lessons on the. By I. F. Young, L.L.A. 1s. net. Normal Press.
[Plain, suggestive; with questions.]

Bernard of Morlaix, The Rhythm of, on The Celestial Country, and the Hymn on The Glory of Paradise by Peter Damiani, Cardinal. With Translations by J. M. Neale. 1s. net. Allenson.
[Daintily produced.]

Christian Denominations, The Relations of, to Colleges. Address before the Conference on Education of the Methodist Episcopal Church, South, at Atalanta, Ga., by Henry S. Pritchett, President of the Carnegie Foundation for the Advancement of Teaching.

Handbooks on the Gospels for Young People. I, St. Mark. Edited by C. M. E. Hicks, M.A., Brompton Parish Church. 1s. S.P.C.K.
[Simple commentary, "based on the general principles and results of modern research." Useful.]

(1) Heroes of Israel. (2) Heroes of the Hebrew Monarchy. By Mrs. F. S. Boas. 1s. 4d. each. Horace Marshall.
[Simple and effective narratives, the object being, not direct religious instruction, but a portrayal of leading figures, with a certain amount of historical and geographical detail. Six heroes in each volume. Illustrations.]

The idea of this series was suggested by the difficulty of setting homework to a class of boys working entirely with wall-pictures, as it is a common experience that when working at home they do not remember the details required. Besides meeting this need, it is hoped that they will be found useful in examinations carried out under "reform methods," and for ordinary class-work, either instead of wall-pictures or as adjuncts to them.

Now Ready. Crown 8vo, **3s. 6d.**

EXPERIMENTAL MECHANICS FOR SCHOOLS.

By **FRED CHARLES, B.A.,** and **W. H. HEWITT, B.A., B.Sc., A.R.C.S.**

This book has been designed not to replace but to help the teacher by providing in a convenient form directions for experiments and examples for practice. The deductions to be drawn from experiments are not stated, but questions are put that should elicit the principles involved. The Authors' endeavour has been to work out the theme of each of the early chapters from first principles, so that teachers may follow the order which they themselves prefer.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

PRACTICAL PROBLEMS OF THE CLASSROOM.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London.

The Second Course of Lectures (Thirty-seventh Annual Series) commenced on Thursday, September 30th, at 7 p.m.

The matters to be dealt with are such as interest all classes of teachers, and will be treated with that frankness that is possible in an unreported discourse, but is out of the question in a printed book. While the Lecturer will lose no opportunity of indicating how present educational conditions may be improved, he will take the present conditions as the basis and show how to make the best of things as they are. The Lectures will be copiously illustrated by references to actual experience in all kinds of Schools.

SYLLABUS.

I. (*Sept.* 30.) *The Practical in Teaching:* nature of theory: its inevitableness: rule of thumb itself based on a theory: relation of theory to experience: practical dangers of lack of theory and of excess of theory: the doctrinaire and the empiric: the pedagogic type of mind: illustrations from actual school experience.

II. (*Oct.* 7.) *Organization:* relation between curricula and organization: organization by "sides": the "form" system and its modifications: "sets": the specialist system: the synchronous system: combination of systems: co-education: relations between head and assistants: visiting teachers: prefects and delegated authority.

III. (*Oct.* 14.) *Time-Tables:* length of whole school day: relation between class work and preparation work: arrangements of the major divisions of the day: theory of fatigue and its application to (*a*) rest-intervals, (*b*) sequence of studies, (*c*) length of study periods at different stage, and for different subjects, (*d*) relation between physical exercise and mental effort. Form in which time-tables should be drawn up—rigidity and elasticity.

IV. (*Oct.* 21.) *Nature of the Class:* various bases of classification in schools: psychological nature of class: difference from group of individuals: minimum number of pupils to form a psychological class unit: the fallacy underlying the phrase "average pupil": sympathy of numbers: disintegration and redintegration of class: coaching versus class teaching: advantages of the class teacher: schematic preparation.

V. (*Oct.* 28.) *Discipline:* various meanings of term: special sense of *control:* basis of discipline: authority: place of consciousness in the maintaining of discipline: personality: fabled power of the eye: George Nidiver: different ideals of class discipline: "talking": relation between discipline and class work: possibility of teaching on the discipline of another: the "discipline master."

VI. (*Nov.* 4.) *Teaching as Presentation:* presentation swallows up all the other steps in the mind of the specially practical teacher: basis on which presentation must be built: relation of teacher's mental content to pupil's mental content: mental focus: the inference point, the inference zone, and the gaping point: turning fact into faculty: the growing point.

VII. (*Nov.* 11.) *The Socratic and the Heuristic Method:* fundamental resemblances and differences in the two: the three stages in the Socratic process: law of internal harmony: confrontation: relation of both methods to the *Zielangabe:* subjects suitable for each of the methods: dangers of each method: relation to the ordinary work of the class: illustrations from actual class work.

VIII. (*Nov.* 18.) *The Concentric Method and Correlation:* the method in relation to "rapid impressionism": illustration from Geography teaching: the test of a good "concentric" text-book: in ultimate analysis all teaching is concentric: correlation the complement of the concentric method, but not limited to this application: selection of "core" subjects: extravagances of correlation: illustrations from American school syllabuses: results of actual experiments in the application of correlation.

IX. (*Nov.* 25.) *Teaching Devices:* anticipatory illustration: the vacuum: mistake-traps: rule and exception: the awful example: the use of the standard: fixing the alternative: mnemonics, legitimate and illegitimate: definition of cram: benevolent and malignant cram: the arithmetical challenge.

X. (*Dec.* 2.) *The Use of the Blackboard:* special appeal to the visual pupils: kind of writing suited for blackboard: rough work not necessarily slovenly work: different uses of pictures and diagrams on board: mechanical aids to blackboard drawing: coloured chalks: the optics of the blackboard: eyestrain, and how to prevent it: excessive use of blackboard.

XI. (*Dec.* 9.) *Note-making and Note-taking:* note-making by teacher: new demands: old form and new: legitimate and illegitimate notes by teacher: the lecture versus the text-book: notes by pupils (*a*) from lecture, (*b*) from other sources in the way of rudimentary research: dangers of ordinary system of note-taking in school: relation of age of pupils to amount of note-taking: revision of note-books.

XII. (*Dec.* 16.) *Under the King and over Us:* a study in superiors: teacher's relation to the various powers that be: how to serve many masters without being disloyal to any: how to interpret official documents: lesson of the shepherd's dog: the art of compromise: the fundamental agreement: the authorities as allies.

FEES FOR ADMISSION.

Half-a-guinea for the whole Course. Two shillings for a single Lecture.

*** The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

Digitized by Google

MATHEMATICS.

16667. (Professor COCHEZ.)—On donne deux droites fixes Ox et Δ. On prend un point variable M sur Δ et sur la bissectrice de l'angle xOM on porte une longueur OP = $\sqrt{(OM)}$. Lieu de P.

Solution by C. M. ROSS.

Take Ox as axis of x and a line perpendicular to Ox through O as axis of y.

Let the co-ordinates of M be (h, k), and of P be (x', y').

If the angle XOM be 2θ, then

$$k/h = \tan 2\theta, \quad y'/x' = \tan\theta \quad \ldots\ldots (1).$$

Again, if the equation of Δ be $ax + by = 1$,

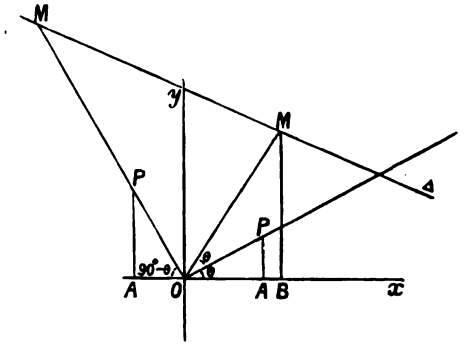
since M is any point on Δ, $\quad ah + bk = 1 \quad \ldots\ldots (2).$

Now $\quad OM^2 = h^2 + k^2$ and $OP^2 = x'^2 + y'^2$;

therefore $\quad x'^2 + y'^2 = (h^2 + k^2)^{\frac{1}{2}}$, by hypothesis $\ldots\ldots (3).$

From the equation (1) $k = 2x'y'/(x'^2 - y'^2)\,h$,

and from (2), by substitution,



$$h = (x'^2 - y'^2)/[a\,(x'^2 - y'^2) + 2bx'y'], \quad k = 2x'y'/[a\,(x'^2 - y'^2) + 2bx'y'].$$

Finally, from (3), $\quad a\,(x'^2 - y'^2) + 2bx'y' = \pm 1.$

But this is the condition that (x', y') should lie on the curves

$$a\,(x^2 - y^2) + 2bxy = \pm 1,$$

which are equilateral hyperbolas.

N.B.—There must be two curves as there are two bisectors, one of the acute and the other of the obtuse angle.

16644. (T. STUART, D.Sc.)—Is there any criterion by which we can determine whether the equations $\pm N = x_1^4 - 2y_1^2 = x_2^2 - 2y_2^4$ are soluble or insoluble in integers, N being a number of the form ± 1, mod 8? Exhibit your method by applying it to the numbers 281 and 241.

Partial Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.

This question is Question 16135 repeated, and was partly settled under that number. In order to make use of the results published under that "solution," it will be convenient to use the notation

$$N_1 = t_1^4 - 2u_1^2, \quad N_2 = t_2^2 - 2u_2^4, \quad N_3 = 2u_3^4 - t_3^2, \quad N_4 = 2u_4^2 - t_4^4.$$

The first criteria are that N_1 being odd must be of one of the linear forms $(8n \mp 1)$, and also of one of the 2-ic forms $(e^2 - 2f^2)$, $(2f'^2 - e'^2)$; and, if the successive solutions of $N = (e_r^2 - 2f_r^2) = (2f_r'^2 - e_r'^2)$ be formed, some one or more of the 2-ic parts (e_r, f_r, f_r', e_r') must equal square at some one or more of the steps. This last criterion is both necessary and sufficient; but, as the values of e_r, f_r, f_r', e_r' rise rapidly with r, it is very often too laborious for practical use.

Under Question 16135 several cases were given with t, u algebraically solvable. To these may now be added

$$N = \tfrac{1}{2}(x^4 + y^4) = 2\,[\tfrac{1}{2}(x^2 + y^2)]^2 - (xy)^2 = 2u_3^4 - t_3^4, \quad \text{if } x^2 + y^2 = 2u_3^2;$$

$$N = 2\,(u^2 \pm a^2)^2 - a^4 = (2u^2 \pm a^2)^2 - 2u^4.$$

All such forms furnish sufficient (but not necessary) criteria of solvability.

Here follow criteria* of insolubility of some generality, also sufficient (but not necessary).

Since N is odd, t is always odd; so that $t^2 = 8i + 1$, $t^4 = 16i' + 1$. If possible, let $N_1 = 16n + 7$, $N_4 = 16n + 9$; and take residues to mod 16. Then

$$N_1 = 1 - 2u_1^2 \equiv 7 \quad \text{and} \quad N_4 = 2u_4^2 - 1 \equiv 9 \pmod{16}.$$

Hence $\quad 2u_1^2 \equiv -6 \equiv +10$ and $2u_4^2 \equiv +10 \pmod{16}$.

And $\quad u_1^2 \equiv +5$ and $u_4^2 \equiv +5 \pmod 8$, both *impossible*.

Thus $\quad N = 16n + 7 \not\equiv N_1 \quad \ldots\ldots (A)$

and $\quad N = 16n + 9 \not\equiv N_4 \quad \ldots\ldots (B).$

Next, let $\quad N = a^2 + (4b)^2 = t_1^4 - 2u_1^2$, with b *odd* (if possible).

Here N (being odd) requires a, t_1 odd, and b is given odd.

Then $\quad t_1^4 - 16b^2 = a^2 + 2u_1^2$ and $(t_1^2 + 4b)\,(t_1^2 - 4b) = a^2 + 2u_1^2$.

Hence $\quad t_1^2 - 4b = a'^2 + 2u'^2$, where $t_1^2 = 8\tau + 1$, $b = 2\beta + 1$.

Hence $\quad a'^2 + 2u'^2 = (8\tau + 1) - 4\,(2\beta + 1) \equiv -3 \pmod 8$ [*impossible*].

Hence $\quad N = a^2 + (4b)^2 \not\equiv N_1$, with b odd $\ldots\ldots (C).$

Again, let $\quad N = c^2 + 2\,(2d)^2 = 2u_3^4 - t_3^2$, with d *odd* (if possible).

Here N (being odd) requires c, t_3 odd, and d is given odd.

Then $\quad 2\,(u_3^4 - 4d^2) = c^2 + t_3^2 = (8\gamma + 1) + (8\tau + 1).$

Here $\quad (u_3^2 + 2d)\,(u_3^2 - 2d) = \tfrac{1}{2}\,(c^2 + t_3^2) = c'^2 + t'^2$, an *odd* number.

Hence $\quad u_3$ is *odd*, and $u_3^2 + 2d = c'^2 + t'^2$ should $= 4m + 1$ }
But $\quad u_3^2 + 2d = (8v + 1) + 2\,(2\delta + 1) = 4m' + 3$ }.

Hence $\quad N_3 = c^2 + 2\,(2d)^2 \not\equiv N_3$, with d odd $\ldots\ldots (D).$

Other criteria may be obtained by taking residues to moduli 10^2, 10^3, 10^4. In two cases 10^4 may be used usefully with N_2, N_3. Thus—

Let $\quad N_2 = t_2^2 - 2u_2^4 \equiv 01, 21, 41, 61, 81 \pmod{100}.$

This is easily shown to involve $u_2 = 10v$, $u_2^4 \equiv 10^4 v^4$.

Hence $\quad t_2^2 \equiv N \pmod{2.10^4}$ and $f_r = u_2^2 \quad \ldots\ldots (E).$

Again, let $\quad N_3 = 2u_3^4 - t_3^2 \equiv 19, 39, 59, 79, 99 \pmod{100}.$

This is easily shown to involve $u_3 = 10v$, $u_3^4 \equiv 10^4 v^4$.

Hence $\quad t_3^2 \equiv -N \pmod{2.10^4}$ and $f_r' = u_3^2 \quad \ldots\ldots (F).$

The two results (E), (F) greatly limit the possible forms of t, u. To apply these tests the successive solutions of $N = (e_r^2 - 2f_r^2).(1)^r$ should be calculated, or rather the residues of the successive e_r, f_r to mod 10^2, 10^3, &c.

After a certain number of steps the residues will recur, and it may thus appear that (E), (F) cannot be satisfied. This process is laborious, as the period of recurrence may be very long.

The four criteria (A, B, C, D) above show that most of the gaps left in the table of (t, u) in the author's solution of Question 16135 were really *impossible* cases. Thus—

By (A), $N_1 \not\equiv 7, 23, 71, 103, 151, 167, 199, 263, 311, 359, 439, 487$;

By (B), $N_4 \not\equiv 41, 73, 89, 137, 233, 281, 313, 409, 457$;

By (C), $N_1 \not\equiv 17, 41, 97, 137, 193, 241, 313, 401, 409, 433, 449, 457$;

By (D), $N_3 \not\equiv 17, 73, 89, 97, 193, 233, 241, 281, 401, 433, 449.$

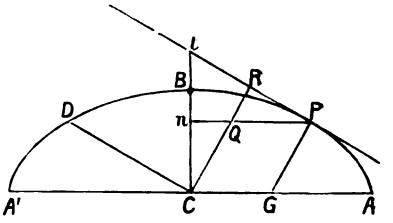
The writer has extended the table of Question 16135 to $p > 1000$ without finding any case of N in all four forms (N, ... N_4).

In the Proposer's two examples N = 241, 281 two cases of each are excluded above. The application of criterion (E) will be found extremely laborious.

** Partly suggested by some investigations of the Proposer.*

The Pedal of an Ellipse with respect to its Centre.

By R. F. DAVIS, M.A.



Let Pt, PG be the tangent and normal at any point P of an ellipse whose axes are ACA', BCB'. Draw CR perpendicular to Pt; and let a parallel to the major axis through P meet CR, Ct in Q, n respectively. Since

$$CQ = PG = (b/a).CD,$$

the locus of Q is the locus of D turned through a right angle and its linear dimensions diminished in ratio $b : a$; that is to say, a definite ellipse.

Since $CQ.CR = Cn.Ct = CB^2$, therefore the locus of R is the inverse of this ellipse.

16700. (G. N. WATSON, B.A.)—Prove that

$$\tfrac{1}{2}(n+1)\,[2^{n+1} + 2 + 3^n] = 3^{n+1} + {}_{n+1}C_2.B_1.3^{n-1} - {}_{n+1}C_4.B_2.3^{n-3} + {}_{n+1}C_6.B_3.3^{n-5} - \ldots,$$

where $B_1, B_2, \ldots$ denote Bernoulli's numbers.

Solution by W. E. H. BERWICK.

By definition, when $|x| < 2\pi$,

$$\frac{x}{1 - \exp(-x)} = 1 + \tfrac{1}{2}x + \frac{B_1}{2!}x^2 - \frac{B_2}{4!}x^4 + \frac{B_3}{6!}x^6 - \ldots;$$

further, $\quad \dfrac{\exp(3x) - 1}{1 - \exp(-x)} = \exp(x) + \exp(2x) + \exp(3x).$

Digitized by Google

Hence $x[\exp(x)+\exp(2x)+\exp(3x)]$

$$= [\exp(3x)-1]\left(1+\tfrac{1}{2}x+\frac{B_1}{2!}x^2-\frac{B_2}{4!}x^4+\frac{B_3}{6!}x^6-\dots\right),$$

i.e., $x\left(3+x(1+2+3)+\dots+\frac{x^n}{n!}(1^n+2^n+3^n)+\dots\right)$

$$=\left(3x+\frac{3^2x^2}{2!}+\frac{3^3x^3}{3!}+\frac{3^4x^4}{4!}+\dots\right)\left(1+\tfrac{1}{2}x+\frac{B_1}{2!}x^2-\frac{B_2}{4!}x^4+\dots\right).$$

Since each series on the right converges absolutely when $|x|<2\pi$, we can expand the product in a power series, valid when $|x|<2\pi$, and since this series and the series on the left are then each absolutely convergent, it is legitimate to equate coefficients of various powers of x.

Comparing coefficients of x^{n+1},

$$\frac{1}{n!}(1^n+2^n+3^n)=\frac{3^{n+1}}{(n+1)!}+\tfrac{1}{2}\frac{3^n}{n!}+\frac{B_1}{2!}\frac{3^{n-1}}{(n-1)!}-\frac{B_2}{4!}\frac{3^{n-3}}{(n-3)!}+\dots.$$

Hence

$$(n+1)(1+2^n+3^n)$$
$$=3^{n+1}+\tfrac{1}{2}(n+1)3^n+B_1\,{}_{.n+1}C_2.3^{n-1}-B_2\,{}_{.n+1}C_4.3^{n-3}+\dots.$$

Rearranging, we see that

$$\tfrac{1}{2}(n+1)(2+2^{n+1}+3^n)=3^{n+1}+B_1\,{}_{.n+1}C_2.3^{n-1}-B_2\,{}_{.n+1}C_4.3^{n-3}+\dots.$$

16435. (Professor Sanjána, M.A.)—The Brocard points of a triangle are known, and the value of the Brocard angle (which is fixed) is known to be half of that of one angle of the triangle (say B). Prove that the angular points of the triangle move on fixed straight lines, and show how to construct it.

Solution by C. E. Youngman, M.A.

Given Ω, Ω' the Brocard points; both lie on the bisector of B, since the Brocard angle $\omega=\frac{1}{2}B$; thus B lies on $\Omega\Omega'$.

Find the circum-centre O, equidistant from Ω and Ω', with $\Omega O\Omega'=2\omega$; and draw ΩT touching the circle $O\Omega\Omega'$ to meet $O\Omega'$ at T. Then the vertex A must lie on ΩT, because angle

$$A\Omega B=\pi-B=\pi-2\omega;$$

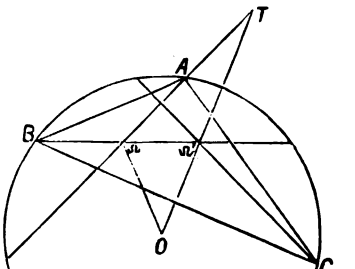
and C on the corresponding tangent at Ω'. Also angle

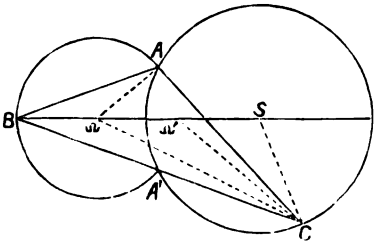
$$OA\Omega'=90^\circ-B-\omega$$
$$=90^\circ-3\omega=\Omega T\Omega';$$

therefore OA touches the circle $AT\Omega'$, and

$$OA^2=O\Omega'.OT.$$

Thus the circum-circle can now be drawn, determining ABC.





Suppose the Brocard angle not given, but varying; then there will be a locus for A and C. A simple construction is: assume B anywhere in $\Omega\Omega'$, and S such that $\Omega S=B\Omega'$; with centre S draw a circle coaxal with the points Ω and Ω', and with centre Ω, radius ΩB, cut this circle at A, A'; and draw BA' to cut the circle again at C. Then the angle $ASC=2AA'B=\pi-ABC$; therefore ABCS are concyclic, and $SCA=SBA=SBC$; but since $SC^2=S\Omega.S\Omega'$ the circle $C\Omega\Omega'$ touches SC, and $SC\Omega=S\Omega'C=2SBC$; therefore $\Omega CA=SBC$. Thus $\Omega AB=\Omega BC=\Omega CA$; and similarly $\Omega'AC=\Omega'CB=\Omega'BA$; so that Ω and Ω' are the Brocard points of ABC.

If we put $\Omega A=r$, $S\Omega A=\theta$, and $\Omega\Omega'=d$, the triangle $S\Omega A$ gives

$$r(r+d)=r^2+(r+d)^2-2r(r+d)\cos\theta;$$

i.e.,

$$r(r+d)(2\cos\theta-1)=d^2;$$

which indicates a quartic curve as the locus of A and C. When A lies in ΩS, we have $r(r+d)=d^2$, *i.e.*, $r^2=d(d-r)$; therefore A divides $\Omega\Omega'$ in medial section.

16690. (S. G. Soal.)—Show that the three vertices of a triangle, its circum-centre, orthocentre, symmedian point, and the isogonal conjugate of its nine-point centre are seven points on a conic.

Solution by Professor Sanjána, M.A.

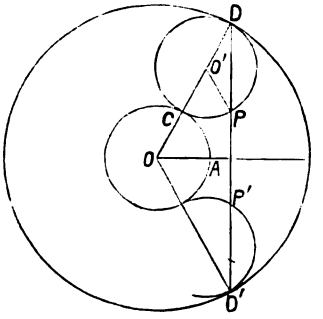
The equation of the circum-conic which goes through the circum-centre and orthocentre is $\Sigma\sin A\cos A\sin(B-C)/\alpha=0$. The points whose trilinear co-ordinates are $\sin A$, $\sin B$, $\sin C$ and $1/\cos(B-C)$, $1/\cos(C-A)$, $1/\cos(A-B)$ evidently satisfy this equation.

10230 & 16648. (10230.)—(Professor Morley.)—In the cardioide let parallel tangents touch at P, Q, R; then we know (Chasles' theorem) that the mean centre of PQR is fixed, being in fact the triple focus. Show that (1) QR, RP, PQ subtend equal angles at the cusp (this point in a triangle might be called isoptic centre); (2) PQR is of constant area; (3) the concentric ellipse through PQR is of given axes; (4) the tangents meet the concentric circle through the vertex in two equilateral triangles; (5) from the corners of one of these triangles draw the other six tangents—these meet the circle again at a regular hexagon, the twelve new tangents from these points meet at a regular 12-gon, and so on; (6) the sum of the common tangents drawn to two equal concentric cardioides is zero; (7) the sum of the radii of curvature at P, Q, R is zero; (8) the loci of orthocentre, circum-centre, nine-point centre of PQR are circles; (9) the locus of intersection of perpendicular tangents or normals to a cardioide is a circle and a limaçon. [Much of this holds good also for any epicycloid.]

(16648.)—(M. T. Naraniengar, M.A.)—If the tangents at P, Q, R of a cardioide are parallel, show that (i.) $\Sigma(SP^2)$ = constant, (ii.) the centre of gravity of PQR lies on the axis of the cardioide and is fixed, (iii.) $(PQ^2+QR^2+RP^2)$ is constant.

Solutions by G. N. Bates.

(10230.) Let O and O' be centres of fixed and rolling circles radius a, A the cusp of the cardioide.



Using circular co-ordinates with OA as axis of reals, the co-ordinates of P a point on cardioide are

$$x=2at-at^2;\quad y=2a/t-a/t^2.$$

In the figure PD is the tangent at P; let E and F be points on the rolling circle such that QE and RF, the tangents at Q and R to the cardioide, are parallel to PD.

The equation of the tangent at P is

$$x-t^3y=3at(1-t);$$

therefore the x co-ordinates of Q and R are $2a\omega t-a\omega^2t^2$ and $2a\omega^2t-a\omega t^2$ respectively; $\omega^3=1$ and OD, OE, OF make equal angles with one another and therefore sides of PQR subtend equal angles at A ..... (i.)

PQR is a maximum inscribed triangle of the ellipse centre O axes $3a$ and a parallel to DP and CP; its area is therefore constant and equal to $9a^2\sqrt{3}/4$ ..... (ii.) and (iii.)

The tangent $x-t^3y=3at(1-t)$ meets the circle $x=3at$ in the points $x=3at$ and $3at^2$.

The set of six points have their x co-ordinates $3at$, $3a\omega t$, $3a\omega^2t$, $3at^2$, $3a\omega t^2$, $3a\omega^2t^2$, and form two equilateral triangles ..... (iv.)

The tangent $x-T^3y=3aT(1-T)$ passes through the point $x=3at$ if $t-T^3/t=T(1-T)$ a cubic for T whose roots are t; $\iota\sqrt{t}$ and $-\iota\sqrt{t}$. $\iota^2=-1$.

The six tangents obtained in this way from one of the equilateral triangles meet the circle $x=3at$ in a regular hexagon, and so on ... (v.)

If the tangent DP meet the circle $x=3at$ in D' and cut in P' the rolling circle whose point of contact with $x=3at$ is D', P'D' will touch an equal concentric cardioide in P', and

$$PP'=2a\cos\tfrac{1}{2}\theta \text{ where } \cos\theta+\iota\sin\theta=t;$$

therefore

$$\Sigma PP'=0 \quad \text{..... (vi.)}$$

The centre of curvature at P is

$$x=\tfrac{2}{3}at+\tfrac{1}{3}at^2,\quad y=2a/3t+a/3t^2;$$

therefore

$$\rho^2=-16a^2/9t(t-1)^2;$$

therefore

$$\Sigma\rho=0 \quad \text{..... (vi.)}$$

The centre of the circum-circle of triangle PQR is

$$x=-4a/3-2at^3/3,\quad y=-4a/3-2a/3t^3,$$

and its locus is therefore the circle

$$(x+4a/3)(y+4a/3)=4a^2/9.$$

The loci of orthocentre and nine-point circle are also circles ... (viii.)

The equation $t^3y-3at^2+3at-x=0$ gives the t's of the three tangents through (x, y).

For two tangents to be at right angles two roots of this equation must be connected by the relation $t_1^3+t_2^3=0$.

Forming the equation whose roots are the cubes of the roots of the above equation we have

$$t^3-3t^2(xy^2-9a^2y+9a^3)+3t(x^2y-9a^2x+9a^3)+x^3=0;$$

therefore orthoptic locus is

$$9(xy^2-9a^2y+9a^3)(x^2y-9a^2x+9a^3)=x^3y^3$$

which reduces to

$$(xy-9a^2)\{9xy+81a^3(x+y)+81a^3(x+y-a)\}=0,$$

a circle and a quartic curve which has a double point on the real axis

Digitized by Google

at $x = 3a/2$ transfer the origin to this point, and, changing to polars, the curve is found to be the limaçon

$$r = 3\sqrt{3}/2a - 3a\cos\theta.$$

Dealing in the same way with the normal, the locus of point of intersection of two normals at right angles is the circle $xy = a^2$ and the limaçon $4r = 4a\cos\theta + 2a\sqrt{3}$ (the origin being $x = -\frac{1}{2}a$).

(16648.) With the above notation

$$AP^2 = (a - 2at + at^2)(a - 2a/t + a/t^2) = a^2\{t^{-2} - 4t^{-1} + 6 - 4t + t^2\};$$

therefore $$\Sigma AP^2 = 18a^2 \quad \text{..... (i.)}$$

The centre of gravity of PQR is at O, *i.e.* O is the centre of the cardioide ... . (ii.)

$$QR^2 = (2a\omega t - a\omega^2 t^2 - 2a\omega^2 t + a\omega t^2)(2a\omega^2/t - a\omega/t^2 - 2a\omega/t + a\omega^2/t^2)$$
$$= -a^2\omega^2(1-\omega)^2/t\{2 + 5t + 2t^2\} = 3a^2/t\{2 + 5t - 2t^2\};$$

therefore $$\Sigma QR^2 = 45a^2 \quad \text{.....(iii.).}$$

Factorization an Aid to the Solution of Biquadratic Equations.

By D. Biddle.

The equation being reduced to the form

$$x^4 + qx^2 + rx + s = 0 \quad \text{.....(1),}$$

the usual method, that of Descartes, assumes

$$(1) = (x^2 + kx + l)(x^2 - kx + m) = 0 \quad \text{..... .....(2),}$$

whence a cubic in k^2 can be found, and a solution of (1) be effected.

The present method consists in assuming

$$(1) = (x^2 + l)^2 - (kx + m)^2 = 0 \quad \text{.....(3),}$$

whence $$x^2 + l = \pm(kx + m) \quad \text{.....(4),}$$

a simple quadratic, or, rather, two simple quadratics, yielding the four roots required. Comparing (3) with (1), we have

$$l^2 - m^2 = s, \quad -2km = r, \quad 2l - k^2 = q \quad \text{.....(5, 6, 7),}$$

and, by addition, $$(l+1)^2 - (k+m)^2 = s + r + q + 1 \quad \text{.....(8).}$$

It is best to begin by inspecting (6), which often at once indicates the alternative values of k, m. Inspection of (5) and (7) in succession, by aid of the results of (6), will enable us in many cases to fill in (4) without further labour. Thus, taking all the instances of biquadratics reduced to the form of (1), in Hall and Knight's *Higher Algebra*, pp. 485, 488, solutions can be effected with the greatest readiness.

They are as follows:—

(i.) $$x^4 - 2x^2 + 8x - 3 = 0.$$

This is the example given on p. 485, to show the working of Descartes' method. By the present method, seeing $r = +8$, we find k, $m = 2$, -2 respectively, and seeing $s = -3$, we find $l^2 = 1$; also, since

$$q = -2 = 2l - k^2 = 2l - 4;$$

therefore $l = +1$. Consequently $x^2 + 1 = \pm(2x - 2)$, whence we obtain

$$x = -1 \pm \sqrt{2}, \quad 1 \pm \sqrt{(-2)}.$$

(ii.) Ex. 9, p. 488, $x^4 - 3x^2 - 42x - 40 = 0.$

Here $r = -42$; therefore $k, m = 3, 7$; $s = -40 = l^2 - m^2 = l^2 - 49$, and $l^2 = 9$; also, by (7), $(q = -3)$, $l = +3$. Hence $x^2 + 3 = \pm(3x + 7)$, whence $x = 4, \ -1, \ -\frac{1}{2}[3 \pm \sqrt{(-31)}]$.

(iii.) Ex. 10, p. 488, $x^4 - 10x^2 - 20x - 16 = 0.$

Here $r = -20$; therefore k, $m = 2$, 5; $s = -16 = l^2 - m^2 = l^2 - 25$, and $l^2 = 9$; also, by (7), $(q = -10)$, $l = -3$, and we have

$$x^2 - 3 = \pm(2x + 5),$$

whence $$x = 4, \ -2, \ -1 \pm \sqrt{(-1)}.$$

(iv.) Ex. 13, p. 488, $x^4 - 3x^2 - 6x - 2 = 0.$

This is slightly more difficult, owing to $s = -2$. But let $s = (\frac{1}{2})^2 - (\frac{3}{2})^2$. Then $r = -6$ yields $k = 2$, $m = +\frac{3}{2}$, and $q = -3$, $= 2l - 4$, yields $l = +\frac{1}{2}$, and we have $x^2 + \frac{1}{2} = \pm(2x + \frac{3}{2})$, whence

$$x = 1 \pm \sqrt{2}, \quad -1 \pm \sqrt{(-1)}.$$

[Rest in *Reprint*.]

QUESTIONS FOR SOLUTION.

16733. (Professor Morley. Suggested by Question 11352.)—A watch spring is in the form of a closed circle of diameter $2r$. It is compressed at the ends of a diameter until the curvature at these points is zero. If the greatest diameter be now $2a$, and the least be $2b$, prove that $2br = a^2$.

16734. (H. MacColl, B.A.)—If the chance that the hypothesis A true, assuming the hypothesis B, be equal to the chance that the hypothesis B is false, assuming that A is false; show that either B implies A, or else the chance that A is true (assuming no hypothesis beyond our admitted data) is equal to the chance that B is false.

16735. (C. M. Ross, B.A.)—Having given that

$$y_1 = \frac{x_2 x_3 \ldots x_n}{x_1}, \quad y_2 = \frac{x_3 x_4 \ldots x_1}{x_2}, \quad \ldots, \quad y_n = \frac{x_1 x_2 \ldots x_{n-1}}{x_n},$$

prove that the value of the Jacobian of $y_1, y_2, \ldots, y_n$ is

$$(-1)^{n-1}(n-2)\,2^{n-1}(x_1 x_2 \ldots x_n)^{n-3}.$$

16736. (Lt.-Col. Allan Cunningham, R.E. Suggested by Question 16664.)—Find a number of sets of three numbers L, M, N, such that N = L.M, wherein L, M, N contain l, m, n digits respectively, and N contains all the digits of L and M, and no more, so that $n = l + m$. (Sets produced by the mere addition of ciphers to a given set L, M, N should be *excluded*.)

16737. (Professor Sanjána, M.A.)—Prove that numbers of the form $X^6 + Y^6$ can be resolved into three factors when

X = 5, 121, 3597, 107761, ..., and Y = 3, 119, 3595, 107759, ...

Resolve completely

$N_2 = 121^6 + 119^6$, $N_3 = 3597^6 + 3595^6$, and $N_4 = 107761^6 + 107759^6$.

16738. (M. Kannan, B.A., L.T.)—If N is an integer such that $\frac{1}{5}(N^2 + 1)$ is a perfect square, then

$$N = {}_{2n+1}C_1 . 5^n . 2 + {}_{2n+1}C_3 . 5^{n-1} . 2^3 + {}_{2n+1}C_5 . 5^{n-2} . 2^5 + \ldots,$$

where n is zero or any positive integer.

16739. (F. G. W. Brown, B.Sc., L.C.P.)—Solve simultaneously for x, y, z, w the equations $x + z = a$, $w + xz + y = b$, $xw + yz = c$, $yw = d$. Test the solution when $a = 3$, $b = 9$, $c = 11$, $d = 12$.

16740. (C. E. Youngman, M.A.)—A circle (Z), used for tracing out a cardioid of cusp S and vertex V, rolls on an equal circle (O), touching it at A, B, C successively, to which correspond P, Q, R on the cardioid —these being such that the circle PQR is itself a fourth position of (Z), touching (O) at D and having diameter DZD'. Then (1)

$$SP + SQ + SR = 2SO;$$

(2) triangles ABC, PQR are congruent; (3) O is the orthocentre of PQR; (4) the projections of O on the six tangents at PQR lie on VD'; (5) QR cuts the curve again at points p, p', where the tangents are parallel to AP; (6) the six such points p, p', q, q', r, r' lie on a conic ($e^2 = \frac{4}{3}$), having S for vertex and SD for axis; (7) this conic envelopes a bicircular quartic, inverse to a parabola.

16741. (Professor H. Langhorne Orchard, M.A., B.Sc.)—Find the volume of the maximum *parallelepipedon* inscribable in the sphere $x^2 + y^2 + z^2 = 3$.

16742. (Professor Neuberg.)—On considère les hyperboles équilatères qui passent par les extrémités du grand axe d'une ellipse et touchent cette courbe. Trouver le lieu des centres.

16743. (Professor Nanson.)—Given three points on a conic and the locus of the focus, find the envelope of the directrix.

16744. (M. T. Naraniengar, M.A.)—Construct an ellipse being given the auxiliary circle and two points on the ellipse.

16745. (Professor V. Ramaswami Aiyar, M.A.)—ABC is a triangle inscribed in a conic X of focus S and directrix LL'. AA', BB' are the major and minor axes, and PP' a chord parallel to either axis, of X. Let Y be a conic self-conjugate with respect to the triangle ABC. (1) If Y touch LL', prove that its director circle will pass through S. (2) If it touch AA' or BB', then the director circle of Y cuts the corresponding auxiliary circle of X orthogonally. (3) If it touch PP', then its director circle cuts orthogonally the circle having double contact with X, such that PP' is the chord of contact. (4) Consider the case when X is a circle.

16746. (Major C. H. Chepmell, late R.A.)—Given two sides of unequal length, construct (by ruler and compasses) a triangle which shall have the angle included between the two given sides four times the angle opposite the greater.

16747. (I. Arnold.)—Through a given point P draw a line bisecting a triangle: (1) when the point P is inside the triangle, and (2) when the point P is outside the triangle, and by the first book of Euclid.

16748. (Professor E. Hernández.)—Dans tout triangle ABC, on a

(1) $r(1/r_a r_b + 1/r_b r_c + 1/r_c r_a) = 4(r_a + r_b + r_c)/(a + b + c)^2$,

(2) $p^2 r = r_a r_b r_c$,

(3) $(ab + bc + ca)/r r_a r_b r_c = 1/r^2 + 1/r_a r_b + 1/r_b r_c + 1/r_c r_a$,

r étant le rayon du cercle inscrit et r_a le rayon du cercle ex-inscrit qui touche directement le côté a, et de même pour r_b et r_c.

16749. (A. M. Nesbitt, M.A.)—S is a point on a circle of which POP', QOQ' are any two diameters; and α, β are the images of S in these diameters. If α, β cut PQ in Y, and Z be the image of O in P'Q', then the angle YSZ is a right angle. (By pure geometry if possible.)

THE INVICTA NUMBER SCHEME.

By J. W. LADNER, L.C.P.

A method of teaching the fundamental principles of arithmetic by a constant reference to our decimal system of notation, through the media of eye and hand as well as ear.

It is the outcome of much careful experiment and long experience, having been repeatedly tested and revised in actual class teaching. It removes many of the difficulties always encountered in teaching the elements of Arithmetic to young children.

The principles and methods of the scheme are fully explained in the

INVICTA NUMBER SCHEME HANDBOOK

with the aid of numerous illustrative diagrams; this Handbook affords a complete guide to the system, yet its contents may be mastered in an hour's study. For the Teacher. **Price 8d. net; by Post, 9d.**

AN INDISPENSABLE ACCESSORY IS

THE INVICTA NUMBER BOARD.

By its use children may learn appreciation of number concretely, through handling and seeing, as well as saying and hearing.
Size, 14½ inches by 11 inches, with slate surface, printed in silver and red. **Price 6s. 6d. net per dozen.**

Detailed Prospectus on application.

FOR SECONDARY SCHOOLS.

PHILIPS' NEW SCHOOL ATLAS OF COMPARATIVE GEOGRAPHY.

A series of 72 Physical and Political Plates, containing over 100 coloured Maps and Diagrams, with Index. **Size,** 11 by 9 inches.
Price 2s. 6d.

NEW EDITION. Revised and Enlarged. With Complete Series of Maps.

A JUNIOR COURSE OF COMPARATIVE GEOGRAPHY.

By P. H. L'ESTRANGE, B.A. With Maps, Pictures, and Diagrams. Demy 8vo, **3s. 6d.** net.

Also Published in separate Parts as under, price **10d.** net each.

Part I.—THE PRINCIPLES OF GEOGRAPHY.
Part II.—THE BRITISH ISLES.
Part III.—EUROPE.
Part IV.—NORTH AMERICA AND ASIA.
Part V.—CENTRAL and SOUTH AMERICA and AFRICA.
Part VI.—THE BRITISH EMPIRE.

All Teachers of Geography should write for a full prospectus with specimen pages of this book, and also of Mr. L'Estrange's complete "Progressive Course of Comparative Geography."

"We can heartily recommend it as an excellent class-book. . . . The most attractive we have seen."—*The Geographical Teacher.*

Elementary Projective Geometry.

By A. G. Pickford, M.A., M.Sc., Head Master of the Hulme Grammar School, Oldham.

Crown 8vo
4s

The development of the methods of Projective Geometry forms an important part of Modern Geometry, and the valuable results obtained justify the increasing attention which is being paid to this subject. In this book the author has arranged in orderly sequence the elementary propositions of Plane Projective Geometry, assuming a knowledge of the first six books of Euclid, or their equivalent, and he hopes that the book will be of use to the upper forms of schools and to junior students at the Universities. In an elementary treatment of the subject the author has avoided dependence on the use of points at infinity and imaginary points and lines; these will find place in a more advanced treatise, and also the properties of curves of degree higher than the second, and of surfaces and curves in space of three dimensions.

Elements of the Differential and Integral Calculus.

By A. E. H. Love, M.A., D.Sc., F.R.S., Sedleian Professor of Natural Philosophy in the University of Oxford.

Crown 8vo
5s

This book is written with the view of making the subject more easily and generally accessible than it has been hitherto, and is intended to help the reader to make a beginning. In order to render his progress as easy as possible, results with which he is supposed to be more or less familiar are recapitulated in the places where they are wanted, and formal proofs of some propositions are omitted from the text and placed in appendices, along with certain rather abstract discussions.

Algebra for Secondary Schools.

By Chas. Davison, Sc.D., Mathematical Master at King Edward's High School, Birmingham.

Crown 8vo
One volume
6s
Two volumes
3s each

This work, which was published in September, 1908, in one volume, price 6s., may now also be had in two volumes: Volume I to Quadratic Equations, and Volume II from Quadratic Equations.

"This Course of Algebra carries the reader up to the theory of infinite series, as illustrated by the binomial theorem, the exponential theorem, and by the logarithmic series. A refreshingly scholarly treatment characterizes the whole volume. Although many text-books on these lines have been issued in the last few years, we have seen nothing which can compare with Dr. Davison's treatise."—*Guardian*

Elementary Algebra.

By C. H. French, M.A., and G. Osborn, M.A., Mathematical Masters at the Leys School, Cambridge.

Crown 8vo
4s 6d
Or without answers
4s

This book includes Common Logarithms and the Binomial Theorem for a positive integral index, so that it covers the ground of all school examinations not requiring a special knowledge of the subject. It is amply sufficient for such examinations as the London Matriculation, the Cambridge Previous, the ordinary pass-work of the Higher Certificate Examination of the Oxford and Cambridge Board, the Oxford and Cambridge Locals, and others of similar standard.

A School Algebra Course.

By F. Gorse, Head Master of the Intermediate School, Bootle. Complete in one volume, with or without answers. Or in three parts, without answers, divided as follows:—

Crown 8vo
3s
Parts 1s each

Part I—To Simple Simultaneous Equations (including Factors), with Appendix.
Part II—Factors to Quadratic Equations, with Appendix.
Part III—Surds to the Binomial Theorem, with Appendix.

"Altogether the Algebra is one which we have no hesitation in commending to teachers of Mathematics on the outlook for a course of exercises on modern lines."—*Educational News*

Inorganic Chemistry.

By E. I. Lewis, B.A., B.Sc., Assistant Master at Oundle School.

Demy 8vo
5s

"Ought to be extremely useful to science masters. It is clear, concise, and sensibly arranged, and the boy who conscientiously works through it should really understand Chemistry."—*Spectator*

"A decidedly original work, based on the author's experience as a teacher; in many respects it is very superior to the average text-book used in schools, especially in throwing light on general principles."—*School World*

The Winchester Arithmetic.

By C. Godfrey, M.A., Head Master of the Royal Naval College, Osborne, and G. M. Bell, B.A., Senior Mathematical Master at Winchester College.

Crown 8vo
3s
Teachers' edition, with interleaved answers
6s net

"This admirable text-book will rank high amongst its fellows, and it would be difficult to find a school arithmetic more worthy of general use."—*Nature*

"The first real attempt made in a text-book to give a sound grounding to the boy of average wants and average capabilities. . . . The substance and arrangement of the chapters fulfil in a highly satisfactory manner the requirements which modern tendencies have demanded in a general grounding of the subject."—*Guardian*

Addison. Selections from the Spectator.

Edited, with Introduction and Notes, by J. H. Lobban, M.A., Lecturer in English Literature, Birkbeck College, London.

Fcap 8vo
1s 4d

This is a volume of "English Literature for Schools," a new series of reading books for the upper and middle forms of secondary schools. The following volumes are also ready:—

Scott's Tales of a Grandfather
Defoe's Memoirs of a Cavalier
Captain John Smith's Travels
Cobbett's Rural Rides
Hazlitt's Characters of Shakespeare's Plays

and other volumes are in active preparation. A detailed list, with specimen pages, will be sent on application.

"The introductions are concise, but sufficient, and the notes are judiciously restricted to reasonably necessary explanations, which are uniformly brief and pointed."—*Educational Times*

History of Scotland. Volume III. From the Revolution of 1689 to the Disruption, 1843.

By P. Hume Brown, M.A., LL.D., Historiographer-Royal for Scotland, and Fraser Professor of Ancient (Scottish) History and Palæography in the University of Edinburgh. Cambridge Historical Series.

Crown 8vo
4s 6d net

The publication of the present volume completes this work. The earlier volumes are:—Vol. I, to the accession of Mary Stewart, with seven maps, price 4s. 6d. net; Vol. II, From the accession of Mary Stewart to the Revolution of 1689, with a plan and four maps, price 4s. 6d. net.

"Scotsmen . . . owe a heavy debt of gratitude to Professor Hume Brown for the patient toil, erudition, and scholarly insight that have been lavished upon the patriotic task brought to a conclusion in the present volume . . . the newly published volume is characterized by all the excellent qualities of its predecessors."—*Glasgow Herald*

The Student's Handbook to the University and Colleges of Cambridge.

Eighth edition. Revised to June 30, 1909.

Crown 8vo
3s net

"This is an extremely business-like little book, well printed and comely in appearance, and a marvel of cheapness. For the modest sum of three shillings, the intending or actual student and his friends can purchase all the information compressible into about 600 pages about present means and methods of education practised on the banks of the Cam."—*Guardian*

"The book should be on the shelves of every head master and head mistress."—*School World*

Applications from teachers for specimen copies should be addressed to E. T., Cambridge University Press, Fetter Lane, London, with a statement as to the number of copies likely to be required if the books are adopted for class use.

London: Printed by C. F. Hodgson & Son, 2 Newton Street, Kingsway, W.C.; and Published by Francis Hodgson, 89 Farringdon Street, E.C.

COLLEGE OF PRECEPTORS.

(INCORPORATED BY ROYAL CHARTER.)

MEMBERS' MEETING.

The next Monthly Meeting of the Members will take place on Wednesday, the 17th of November, at 7 p.m., when Professor J. W. ADAMSON will read a Paper on the question: "Of what use to the Practical Teacher is the Historical Study of Education?"

A discussion will follow the reading of the Paper.

Members have the privilege of introducing their friends.

LECTURES FOR TEACHERS.

On Thursday, 30th of September, JOHN ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London, commenced a Course of Twelve Lectures on

"PRACTICAL PROBLEMS OF THE CLASSROOM."

The matters to be dealt with are such as interest all classes of teachers, and will be treated with that frankness that is possible in an unreported discourse, but is out of the question in a printed book. While the Lecturer will lose no opportunity of indicating how present educational conditions may be improved, he will take the present conditions as the basis and show how to make the best of things as they are. The Lectures will be copiously illustrated by references to actual experience in all kinds of Schools.

For Syllabus, see page 436.

The Fee for the Course is Half-a-Guinea.

Members of the College have free admission to this Course.

EXAMINATIONS.

Diplomas.—The next Examination of Teachers for the Diplomas of the College will commence on the 27th of December, 1909.

Practical Examination for Certificates of Ability to Teach.—The next Practical Examination will be held in February, 1910.

Certificate Examinations.—The Christmas Examination for Certificates will commence on the 7th of December, 1909.

Lower Forms Examinations.—The Christmas Examination will commence on the 7th of December, 1909.

Professional Preliminary Examinations.—These Examinations are held in March and September. The Spring Examination in 1910 will commence on the 1st of March.

Inspection and Examination of Schools.—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

The Regulations for the above Examinations can be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary.*

Bloomsbury Square, W.C.

For Terms, Testimonials, &c., address—
THE PRINCIPAL,
Burlington Correspondence College,
BIRKBECK BANK CHAMBERS,
LONDON, W.C.

Messrs. TRUMAN & KNIGHTLEY, LTD.,
Educational Agents,
158 to 162 OXFORD STREET, LONDON, W.

Directors:
S. A. TRUMAN. F. E. KNIGHTLEY.
JAMES HEARD, B.A.
(Trinity College, Cambridge).

Telegrams—"TUTORESS, LONDON."
Telephone—No. 1136 City.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

A.—EMPLOYMENT DEPARTMENT.

(i.) ASSISTANT MASTERS & TUTORS.

MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

(ii.) ASSISTANT MISTRESSES.

MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

(iii.) LADY MATRONS AND HOUSE-KEEPERS.

MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

B.—SCHOOL TRANSFER DEPARTMENT.

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

C.—PUPILS' DEPARTMENT.

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. *No charge is made for registration.*

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

PRACTICAL PROBLEMS OF THE CLASSROOM.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London.

The Second Course of Lectures (Thirty-seventh Annual Series) commenced on Thursday, September 30th, at 7 p.m.

The matters to be dealt with are such as interest all classes of teachers, and will be treated with that frankness that is possible in an unreported discourse, but is out of the question in a printed book. While the Lecturer will lose no opportunity of indicating how present educational conditions may be improved, he will take the present conditions as the basis and show how to make the best of things as they are. The Lectures will be copiously illustrated by references to actual experience in all kinds of Schools.

SYLLABUS.

I. (*Sept.* 30.) *The Practical in Teaching:* nature of theory: its inevitableness: rule of thumb itself based on a theory: relation of theory to experience: practical dangers of lack of theory and of excess of theory: the doctrinaire and the empiric: the pedagogic type of mind: illustrations from actual school experience.

II. (*Oct.* 7.) *Organization:* relation between curricula and organization: organization by "sides": the "form" system and its modifications: "sets": the specialist system: the synchronous system: combination of systems: co-education: relations between head and assistants: visiting teachers: prefects and delegated authority.

III. (*Oct.* 14.) *Time-Tables:* length of whole school day: relation between class work and preparation work: arrangements of the major divisions of the day: theory of fatigue and its application to (*a*) rest-intervals, (*b*) sequence of studies, (*c*) length of study periods at different stage, and for different subjects, (*d*) relation between physical exercise and mental effort. Form in which time-tables should be drawn up—rigidity and elasticity.

IV. (*Oct.* 21.) *Nature of the Class:* various bases of classification in schools: psychological nature of class: difference from group of individuals: minimum number of pupils to form a psychological class unit: the fallacy underlying the phrase "average pupil": sympathy of numbers: disintegration and redintegration of class: coaching versus class teaching: advantages of the class teacher: schematic preparation.

V. (*Oct.* 28.) *Discipline:* various meanings of term: special sense of *control*: basis of discipline: authority: place of consciousness in the maintaining of discipline: personality: fabled power of the eye: George Nidiver: different ideals of class discipline: "talking": relation between discipline and class work: possibility of teaching on the discipline of another: the "discipline master."

VI. (*Nov.* 4.) *Teaching as Presentation:* presentation swallows up all the other steps in the mind of the specially practical teacher: basis on which presentation must be built: relation of teacher's mental content to pupil's mental content: mental focus: the inference point, the inference zone, and the gaping point: turning fact into faculty: the growing point.

VII. (*Nov.* 11.) *The Socratic and the Heuristic Method:* fundamental resemblances and differences in the two: the three stages in the Socratic process: law of internal harmony: confrontation: relation of both methods to the *Zielangabe*: subjects suitable for each of the methods: dangers of each method: relation to the ordinary work of the class: illustrations from actual class work.

VIII. (*Nov.* 18.) *The Concentric Method and Correlation:* the method in relation to "rapid impressionism": illustration from Geography teaching: the test of a good "concentric" text-book: in ultimate analysis all teaching is concentric: correlation the complement of the concentric method, but not limited to this application: selection of "core" subjects: extravagances of correlation: illustrations from American school syllabuses: results of actual experiments in the application of correlation.

IX. (*Nov.* 25.) *Teaching Devices:* anticipatory illustration: the vacuum: mistake-traps: rule and exception: the awful example: the use of the standard: fixing the alternative: mnemonics, legitimate and illegitimate: definition of cram: benevolent and malignant cram: the arithmetical challenge.

X. (*Dec.* 2.) *The Use of the Blackboard:* special appeal to the visual pupils: kind of writing suited for blackboard: rough work not necessarily slovenly work: different uses of pictures and diagrams on board: mechanical aids to blackboard drawing: coloured chalks: the optics of the blackboard: eyestrain, and how to prevent it: excessive use of blackboard.

XI. (*Dec.* 9.) *Note-making and Note-taking:* note-making by teacher: new demands: old form and new: legitimate and illegitimate notes by teacher: the lecture versus the text-book: notes by pupils (*a*) from lecture, (*b*) from other sources in the way of rudimentary research: dangers of ordinary system of note-taking in school: relation of age of pupils to amount of note-taking: revision of note-books.

XII. (*Dec.* 16.) *Under the King and over Us:* a study in superiors: teacher's relation to the various powers that be: how to serve many masters without being disloyal to any: how to interpret official documents: lesson of the shepherd's dog: the art of compromise: the fundamental agreement: the authorities as allies.

FEES FOR ADMISSION.

Half-a-guinea for the whole Course. Two shillings for a single Lecture.

*** The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

THE NEW OUTLOOK GEOGRAPHY

A New Series of Geographies on the most modern principles. Profusely Illustrated in Line and Half-tone.

By W. C. BROWN, M.A., and P. H. JOHNSON, B.A.

Book I.—HOW PEOPLE LIVE.

Part I.—The British Isles. Part II.—Outside the British Isles. Crown 8vo, 288 pages, profusely Illustrated, complete, 1s. 6d. Also in Two Parts, limp cloth, 9d. each.

This introductory two years' course commences with the home surroundings, and shows exactly how the study of these should be carried out. Excursions are made to the different districts of the home country, according to their industrial or physical importance. The Young Traveller is then taken on a voyage to the chief countries of Europe and the other continents, and is finally led to a conception of the world as a Globe.

Complete List and Prospectuses on application.

GEORGE G. HARRAP & CO., 15 York Street, Covent Garden, London, W.C.

Messrs. Bell's Latest Books

Crown 8vo, with very numerous Illustrations. 2s. 6d.

PRACTICAL GEOGRAPHY

FOR SECONDARY & SUPPLEMENTARY SCHOOLS.

By **J. MILLER, M.A.**, Science and Mathematical Master, Kilsyth Academy, and **WM. MILLER, M.A., D.Sc., Ph.D.**, Senior Science Master, Dollar Institution.

This book is an attempt to present to the pupil in as elementary form as possible the principles of Map construction and Map reading. The scope of the work is such as may be suitable for a three years' course, and has been co-ordinated as far as possible with the instruction generally given in a concurrent Science and Mathematical course.

MASON'S NEW ENGLISH GRAMMARS.

Revised in accordance with Modern Requirements by **A. J. ASHTON, M.A.**, Senior English Master, Kelvinside Academy, Glasgow; and Examiner in English to the College of Preceptors.

MASON'S JUNIOR GRAMMAR. 125 pp. **1s.**
MASON'S INTERMEDIATE GRAMMAR. 218 pp. **2s.**
MASON'S SENIOR GRAMMAR. 376 pp. **3s. 6d.**

THE DIRECT METHOD OF TEACHING FRENCH.

By **D. MACKAY, M.A.**, of Ayr Academy, N.B., and **F. J. CURTIS, Ph.D.**, Professor at the Akademie, Frankfurt-am-Main.

FIRST FRENCH BOOK. With Coloured Frontispiece and 21 Illustrations in the Text. Second Edition. 1s. net.

SECOND FRENCH BOOK. With 38 Illustrations. Third Edition. 1s. 6d. net.

TEACHERS' HANDBOOK TO THE FIRST AND SECOND FRENCH BOOKS. 1s. net.

SUBJECT WALL PICTURE (Coloured). For use with the above, 60 in. by 40 in., mounted on rollers, 7s. 6d. net.

"A capital exposition of the principles of the reformers in modern language teaching."—*Journal of Education.*

BELL'S FRENCH PICTURE CARDS.

Edited by **H. N. ADAIR, M.A.** Drawn by **MARY WILLIAMS.**

Sixteen Cards. Size 5 by 4 inches. Printed in Colours, with Questionnaire on back of each. Price per packet, 1s. 3d. net.

The idea of this series was suggested by the difficulty of setting homework to a class of boys working entirely with wall pictures, as it is a common experience that when working at home they do not remember the details required. Besides meeting this need, it is hoped that they will be found useful in examinations carried out under "reform methods," and for ordinary class-work, either instead of wall pictures or as adjuncts to them.

BELL'S ILLUSTRATED FRENCH READERS.

Pott 8vo. Illustrated. 1s. each.

NEW VOLUMES.

TALES BY ERCKMANN-CHATRIAN. Third Series (Le Combat d'Ours, L'Œil Invisible, La Comète). Edited, with Notes and Vocabulary, by OLIVER H. PRIOR, Assistant Master at Rugby.

TALES BY SOUVESTRE. "L'Ile de Saint-Nicolas," "Keris," "Peronnik l'idiot." Edited, with Notes, Questionnaire, and Exercises, by H. N. ADAIR, M.A. [*Ready immediately.*

NEW MATHEMATICAL BOOKS

Detailed Prospectuses sent on application.

PRACTICAL SOLID GEOMETRY.

By the **Rev. P. W. UNWIN, M.A.**, Assistant Master at Cheltenham College.

4s. 6d. (*Supplementary Volume in the press.*)

ELEMENTARY MECHANICS.

By **C. M. JESSOP, M.A.**, and **T. H. HAVELOCK, M.A., D.Sc.**

Messrs. LONGMANS & CO.'S LIST.

By the Rev. the Hon. EDWARD LYTTELTON, B.D.,

Head Master of Eton.

SCHOOLBOYS AND SCHOOLWORK.

Crown 8vo, **3s. 6d.** *(Inland postage, 4d.)*

This book is an inquiry into the principles of a rational curriculum for boys in Public Schools, due regard being had to differences in capacity and quickness. The conclusions arrived at are of a practical nature, and have been drawn out by the Head Master of Eton in collaboration with the Head Master of Winchester.

By BENJAMIN HALL KENNEDY, D.D.,

Late Regius Professor of Greek in the University of Cambridge.

Cambridge University Press

Geometry for Beginners. By C. GODFREY, M.A., Head Master of the Royal Naval College, Osborne, formerly Senior Mathematical Master at Winchester College, and A. W. SIDDONS, M.A., late Fellow of Jesus College, Cambridge, Assistant Master at Harrow School.

Crown 8vo
1s

This book adopts the suggestions on the teaching of Geometry to beginners contained in the Board of Education Circular of 1909. It consists of:—

First Stage. A short course of experimental and inductive work, designed to give the pupil familiarity with geometrical concepts. It is not intended that accuracy of drawing should be taught at this stage.

Second Stage. A series of exercises leading up to the Fundamental Facts about (1) Angles at a point, (2) Parallels (3) Angles of triangle and polygon, (4) Congruence. These Facts are not set out as formal propositions, but explained and illustrated in such a way that the pupil may be convinced of their truth and may regard them as the foundations of a subsequent course of strict deductive Geometry. Each Fact, or group of Facts, when established, is followed by numerical examples and easy riders intended to illustrate and drive home the ideas discovered and to teach pupils to argue logically.

The Second Stage is the right time for learning accuracy of drawing, in connexion with the constructions of triangles and problems of heights and distances.

The experimental introduction to the same authors' 'Elementary Geometry' will not be needed by teachers who use 'Geometry for Beginners'; the theoretical portion, viz. Part II, of 'Elementary Geometry' is, therefore, now published separately, price 3s., *as well as in the old form.*

Notes and Answers to Exercises in 'Geometry for Beginners.'

Crown 8vo
4d

The authors of 'Geometry for Beginners' think it possible that there may be some teachers who would wish to know, in more detail than is suitable for inclusion in a text-book, the methods recommended for presenting the earlier parts of Geometry. With this end in view, detailed suggestions to the teacher are given in the present pamphlet.

Elementary Geometry. By the same authors.

Crown 8vo
3s 6d

Written especially with a view to the new schedule of Geometry recently adopted by the University of Cambridge, this book will be found suitable in preparing for the following examinations:—Cambridge Previous Examination, Oxford Responsions, Cambridge Local Examinations, Oxford Local Examinations, London Matriculation Examination, the Examinations of the College of Preceptors and of the Civil Service Commission, &c., &c.

It is also published in two volumes as well as in five parts, divided as follows:—

2 vols, 2s each

Vol. I—Experimental Course and Theoretical Geometry, Books I and II.

Vol. II—Theoretical Geometry, Books III and IV.

5 parts, 1s each

Part I—Experimental Geometry. Part II—Theoretical Geometry, in four books, Book I, Book II—Area, Book III—The Circle, Book IV—Similarity.

4d **Answers to the Examples.**

5s net **Solutions of the Exercises.** By E. A. PRICE, B.A.

Modern Geometry. By the same authors. A sequel to 'Elementary Geometry.'

Crown 8vo
4s 6d

"This treatise covers the schedule of modern plane geometry required for the special examination in mathematics at Cambridge, and is intended also to serve as an introduction for those who will afterwards specialize for scholarship work. . . . The general tenor of the book is excellent, and we believe that it will be found to meet successfully a real need."—*Guardian*

4s net **Solutions of the Exercises.**

Elementary Projective Geometry. By A. G. PICKFORD, M.A., M.Sc., Head Master of the Hulme Grammar School, Oldham.

Crown 8vo
4s

The development of the methods of Projective Geometry forms an important part of Modern Geometry, and the valuable results obtained justify the increasing attention which is being paid to this subject. In this book the author has arranged in orderly sequence the elementary propositions of plane projective geometry, assuming a knowledge of the first six books of Euclid, or their equivalent, and he hopes that the book will be of use to the upper forms of schools and to junior students at the Universities. In an elementary treatment of the subject the author has avoided dependence on the use of points at infinity and imaginary points and lines; these will find place in a more advanced treatise, and also the properties of curves of degree higher than the second, and of surfaces and curves in space of three dimensions.

Elements of the Differential and Integral Calculus. By A. E. H. LOVE, M.A., D.Sc., F.R.S., Sedleian Professor of Natural Philosophy in the University of Oxford.

Crown 8vo
5s

In the last six years the author has given annually some twenty lectures on the elements of the Differential and Integral Calculus to classes consisting chiefly of students of Chemistry and Engineering, in the course of which he has gained considerable experience in regard to the nature of the difficulties they encounter. This book is written with the view of making the subject more easily and generally accessible than it has been hitherto. It is intended to help the reader to make a beginning and to render his progress as easy as possible.

Applications from teachers for specimen copies should be addressed to E. T., Cambridge University Press, Fetter Lane, London, with a statement as to the number of copies likely to be required if the books are adopted for class use.

The Educational Times.

Religion in Schools of the Future.

PROF. MICHAEL SADLER is a bold man who has the courage of his opinions. Our educational pundits, as a rule, fight shy of the subject of religious teaching, and either ignore it altogether or dismiss it in a few non-committal platitudes at the end of their orations or treatises. Thus, in what is still the most popular work on the art of teaching, Sir Joshua Fitch apologizes for saying nothing of religious and moral instruction on the plea that it is impossible to co-ordinate it with the secular subject on which he has been discoursing. He proceeds to state very fairly the contending views as to the functions of a school in this matter—the view that right moral guidance can only be had by direct didactic teaching of theological truths, and the view that religious principles are better learned indirectly and should permeate the whole corporate life of a school—and he refuses to pronounce an opinion on "a question that divides some of our most religious and high-minded teachers."

We turn from "Lectures on Teaching" to the most recent work on pedagogics, Mr. Lyttelton's "Schoolboys and School Work"; and we read, in the preface by Dr. Burge, "It goes without saying that we take for granted a systematic course of Bible study." To those who know our public schools this will seem a somewhat bold assumption, but this is not our point.

Prof. Sadler not only grasps his nettle, but (if we may be allowed the phrase) flings himself into the nettle-bed. As President of the Teachers' Guild, he chose as the subject of the address that he delivered last week "Teachers and the Religious Lesson." And he plunges into the thick of the fray. There is no beating about the bush; there are no platitudes about the high vocation and calling of the teacher, the religious atmosphere of a school, conduct which is three-fourths of life. He faces squarely the problem: what is, what ought to be, and what probably will be, the the position of religion in our national system of education.

No summary could do justice to the address, and we must refer our readers to the text, which is given in full in the current number of the *Teachers' Guild Quarterly*. We must be content, like impatient novel readers, to turn to the last chapter and see what is the upshot of it all. Prof. Sadler is "a prophet new-inspired," and he ventures on a bold forecast of English schools twenty years hence. No one has had such opportunities of studying the problem on all its sides, and, as far as present knowledge is concerned, the old saw which warns us not to prophesy unless we know does not apply to Prof. Sadler.

We may look, then, both for instruction and guidance in the prognostics of one who has the confidence both of Churchmen and of teachers and who, in recent legislation, has been consulted by both. With the caveat that these anticipations are avowedly in part aspirations, we will proceed to summarize Prof. Sadler's conclusions.

1. Secular education, in the full and accurate sense of the word, is a chimera and may be dismissed at starting.

2. Privileged secularism, as in France, is a remote possibility, but one greatly to be deprecated—not as fatal to religion, but as opposed to the national genius.

3. *Lehrfreiheit* will be universal—that is to say, the State will allow no religious tests of any sort or kind to be imposed on teachers in schools that it aids or supports.

4. In "single-school areas" the school will be wholly under the control of the Local Authority, but in "plural-school areas" schools under denominational control will be allowed. In both classes there must be identical educational tests and there must be no "contracting out."

5. In County Council schools pupils whose parents desire it will be allowed to receive denominational instruction in some place outside the school buildings. For other pupils, either the Local Authority may provide "Cowper-Temple" instruction, or, if it declines to do so, it must admit ministers of religion to give it.

6. Opportunity for such instruction must be given during the hours of obligatory school attendance, and teachers on the regular school staff should be free to give it. The latter point is distinguished as rather a hope than a prophecy.

7. In boarding schools the State, which stands *in loco parentis*, will be bound to make provision for religious instruction, and the Act of 1902 shows how this may be done, Sec. 4 (1).

What, it will be asked, will be the state of our great public schools, which are now a law unto themselves and go each its own way? Such schools, in Prof. Sadler's horo-

Digitized by Google

scope, will virtually have ceased to exist. If for no other reason, a State system of contributory pensions will have compelled them to come in. This, indeed, is a blessed consummation, but we fear it is farther off than in Prof. Sadler's vision.

Lest we should lay ourselves open to the same charge of cautious neutrality that we brought against Sir Joshua Fitch, we may say in conclusion that, without committing ourselves to particulars, we can endorse generally Prof. Sadler's conclusions, and we may quote the opinion of Dr. Péron, a distinguished French publicist, who has just published a learned work on educational legislation in England:—

> For us Frenchmen, accustomed to the public school from which all references to religion are deliberately excluded, it is less easy to understand the repugnance of certain of our neighbours to admit Cowper-Templeism. Since it is recognized that the majority of the English nation is opposed to the idea of the "Godless school," it seems to us that a form of moral instruction on a religious and Christian basis ought to be of a nature to satisfy the requirements of even extreme sectarians. This is not a negative, but a positive and benevolent, neutrality with nothing destructive about it. Non-dogmatic Christian instruction is a preparation for specialized religious instruction, which the family, if it desires it, can impart or provide outside the school.

NOTES.

Sir Philip Magnus's Amendment to Clause 25 of the First Part of the Finance Bill was defeated by 122 votes—176 to 54. Sir Philip's strenuous argument was vigorously supported by Sir William Anson, Mr. Bonar Law, Sir Henry Craik, Mr. Butcher, Mr. Rawlinson, and Mr. Balfour, who represented forcibly the disastrous effects of the clause upon the Universities and the public schools. The contentions of the Chancellor of the Exchequer were singularly thin and crude. The institutions are not to pay so long as they "occupy and use" their land; but the moment they "sell or cease to occupy or use" it he is down upon them—just as if the proceeds would not any longer be applied to their purposes. "If we are going to except the Universities, how can we refuse to except the Ecclesiastical Commissioners and the great religious corporations?" And "if we begin to exempt the whole of these great ecclesiastical, religious, and charitable institutions from the whole of these taxes the land of England will more and more get into their hands." Yet, as Mr. Rawlinson pointed out, "in all the Mortmain Acts exemption is granted to the Universities and to certain public schools: a distinction has been drawn from time immemorial between them and religious bodies, and there is no reason why the same distinction should not hold good in this Bill." It is nothing less than preposterous that the gravely insufficient funds of these institutions should be taxed, even were the tax as light as Mr. Lloyd George asserts that it is, at a time when the Government is looked to for supplementary contributions. Mr. Butcher justly said:

> If all the surplus funds of the colleges derived from the increasing value in the developing lands went to the University, the University's needs would still be unsatisfied. The Government were taking away money from the Universities at a time when they were making great appeals to the public for £250,000 in order to enlarge the scope of their studies and equip the Universities with the very costly scientific plant necessary for research and to enable the Universities to keep pace with the enlarging science of the day. Both Universities had schemes for giving a cheaper education to the poor man, and, in proportion as the Chancellor of the Exchequer put on these taxes, so he would make it impossible to carry out these schemes. The Universities asked to be allowed to keep their own endowments at a moment when they were straining every nerve to keep their equipment up to the ideal desired. From the point of view of material prosperity of the country, the work done in our Universities was worth hundreds of thousands a year more than all these taxes put together, and did it not seem a cruel, short-sighted, and Philistine thing to cripple the Universities at the very moment they were doing their utmost to extend the teaching of science?

It is, indeed, "a cruel, short-sighted, and Philistine thing."

Prof. Osler seems always to make a stir among the dry bones when he gets on a public platform, and it is an excellent characteristic. In opening the new laboratories for chemistry, physics, and physiology at the London Hospital the other day, he not only prodded the students with vigour, but boldly bearded both the Vice-Chancellor and the Principal of the University of London. "You young men," he said, "cannot spend too long in the laboratories"; "each man must take his laboratory methods with him into practice"; "I should like every student to undertake a small piece of research work." This is sound advice, and it is advice that should be laid to heart in many other departments besides medicine, the term "laboratory" being capable of a far wider application in our studies than is technically attached to it. "But you say that research work will not help you in your examinations: I tell you to take no thought for your examinations." Here is a very hard saying, especially to candidates for London University medical degrees. But on this point the challenge was really addressed to the University, which can make the examinations (especially the matriculation examination) more reasonable, and to take due account of research work. It is much too sweeping, as the Vice-Chancellor sturdily maintained, to allege that "the University, the hospitals, and the colleges have all failed the student"; but Dr. Osler's denunciation of "the scandalous injustice that the London student cannot, after a good honest examination, get a good honest degree" was urgently needed. "The Conjoint Examination," he justly pointed out, "is as good a test as those of Oxford, Cambridge, and the Scottish and Irish Universities—some say a better." For the vast majority of practitioners, undoubtedly a better. Dr. Osler's recommendation of a constitutional agitation for "a good M.D. degree" from the University was most opportune. The *Medical Times* calls attention to "the serious plight of the London medical schools"; and the Dean of the Charing Cross Medical School, who devoted his opening address to the subject, said "this was a matter of grave, even vital, interest to the existence of the London medical schools, and he was quite sure, if the public could only appreciate what it meant, a lively and profitable interest in this most important matter would be taken." The weight of Dr. Osler's authority may be expected to forward materially a rational reform.

Sir Isambard Owen, in a luminous inaugural address, as Vice-Chancellor of the University of Bristol, differentiated sharply living and dead knowledge. In this country, he said, we are "somewhat apt to estimate Universities according to their lists of classes and honours, or according to the number of graduates they annually put forth." Elsewhere—in America, for example—"they have another way of esti-

Digitized by Google

mating the importance of a University: Americans estimate it according to the proportion of its students who desire to pursue their studies further after they have taken their interim degree." This, he thinks, is the wiser view—wiser, because based on living knowledge, inspiring interest and a desire to understand the matter thoroughly, and to extend existing boundaries. "If a University insists too much on the importance of its examinations, if it teaches its students to look forward too much to the examinations and too little to the necessities of their after-life, then a great deal of the knowledge gained in the University is likely to become of the dead kind." Undoubtedly; and the thing is, not to run down examinations, but to adjust them to the best conditions of study. Dr. Osler's demand for a piece of research is thoroughly right; but, of course, it should be under the supervision of higher knowledge, and in due co-ordination with the general studies. As for research in the deeper sense, Sir Isambard said:

> No man can be relied upon to keep himself fully familiar with the confines of a progressive subject unless he is actually engaged in work upon these confines Nor can a man be regarded as fully capable of teaching the methods of a science unless he is actually engaged in the practical use of those methods. The work of research, the seeking for knowledge, is arduous, uphill, and often thankless work. To carry on that work demands some enthusiasm and zeal; it demands some self-denial.

It is very well to encourage post-graduate work in research, but it is becoming more and more clear that professors that have shown themselves capable of, and devoted to, research should be relieved considerably from the engrossments of actual teaching, and have at least a living wage.

The new "John Morley Chemical Laboratories" of Manchester University were appropriately opened by the Chancellor—the American Ambassador for the nonce called him Lord Chancellor—Viscount Morley. Yet, "whatever else I may be," said Lord Morley, "I should certainly not be at home in the work of a chemical laboratory." He was more at home in his opening speech, where he proposed "a paper for examination," consisting of the question "What is an educated man?"—a question that he essayed to answer in part. "I think I should put it at the very top of all qualifications of educated men and women that he or she should know what is evidence—when a thing is proved, and when it is not." The list of passes in such an examination would be singularly select and not a little interesting; and Lord Morley's suggestion that in an early "appeal to the people" we shall have an opportunity "of testing both the strength and the power on the one hand and the infirmities on the other of the human intellect" is probably the grimmest stroke of humour he has ever perpetrated. What does he think of the uniform results of the voting in the University constituencies, where every voter is presumably "an educated man"? He did indeed say that his test "is one neglected aspect of education." There was a time, however, when it was by no means neglected: Sir Isambard Owen recalled at Bristol that "the main object of medieval education was to teach a man to argue." It may be doubted whether the results satisfy Lord Morley's expectations. Probably there are—and ever will be—in the human mind influences that powerfully deflect the operations of pure logic.

Though "Manchester has not yet taken the place in the world's sphere of Athens, of Florence, of Geneva, or of great Rome," still she "has proved herself from a very early period of her growth a fit capital of a great community in an industrial and scientific age"; and "there is nothing," said Lord Morley, "of which Manchester is more proud than of the efficiency and prosperity of her University." Fortunately, Sir Henry Roscoe, whose appointment to the Professorship of Chemistry dates back fifty-two years, was there to signalize simply and impressively the remarkable change in the Manchester attitude. He said this:

> I am the last of the old guard who, in the year of grace 1857, served on the staff of the College and set themselves doggedly to overcome the prejudice and want of appreciation which was shown not only by the people of Manchester, but also by the whole of the Press. It was indeed then a poor affair; we had thirty-five students in all, of whom fifteen worked in my laboratory. The thing was, in fact, going spark out. Manchester did not want a University college; it would be much better to limit our hopes to being a superior school. I was standing one night at the back door of the old building in Quay Street smoking a cigar before my evening lecture when a tramp came up to ask if this was the night asylum. I told him it was not so at present, but that if he called again in six months it might be.
>
> Think of the progress which we have made in the last fifty years. It reads almost like a fairy tale in the pages of its history written by my dear friend Joseph Thompson, who has just passed away from among us. It is the greatest example of rapid progress of higher education which this country has ever seen. It is not only in one branch of intellectual activity that our University is conspicuous, but in all branches, and this is its most remarkable characteristic. It is not a mere school of science, though each of its science departments may well challenge comparison with similar institutes in other Universities, both old and new; but it is a real University, with all its faculties, Arts, Science, Law, Medicine, Theology, Music, Commerce, and Technology, fully and adequately represented. This is the marvel and this is our glory. To found a technical school in Manchester fifty years ago would have been a comparatively easy task, but we—meaning Greenwood, Ward, and myself—had higher views. We were determined to conquer or to die, to have a University or nothing. And these small beginnings have ended, through the enthusiasm and devoted work of our successors, in what you now see.

Here is material for meditation: "Greenwood, Ward, and myself"—the dauntless Three—against popular and journalistic prejudice and want of appreciation. And how are they, and their likes elsewhere, even yet appreciated?

Mr. John Macleod, I.S.O., whose name is well known in our mathematical columns, took leave of the Elginshire Secondary Education Committee, of which he has for many years been Chairman, at its final meeting the other week before reconstitution. Mr. Harvey, who replied, paid a tribute to Mr. Macleod's ability in the chair, and to the value of his knowledge and experience in guiding the work of the Committee. He said:

> Those of them who, like himself, had been associated with Mr. Macleod for many years, knew the extraordinary amount of labour he had put into the business of the Committee, and the zeal with which he worked. The schemes that he elaborated in the early days of the Committee were worthy of all praise: they were entirely the fruits of his own brain, and they had worked out exceedingly well. There was one thing that struck him more than anything else in his association with Mr. Macleod, and that was his invariable desire that struggling merit should have an opportunity of advancement in life: many pupils that had benefited by his interest in them would long remember his name with gratitude. The Committee were very sorry to part with him as their Chairman, but their memory would go back with great pleasure and profit to what they had learned from him, and they wished him and his family long life and prosperity.

It is a pleasure to record the grateful appreciation of such disinterested and fruitful labour, and to reflect that there must be many another inspector up and down the country similarly placing his technical knowledge and experience unselfishly and unostentatiously at the disposal of Local Authorities in advancing the work of education.

SUMMARY OF THE MONTH.

SPEAKING at University College, London, on "Phonetics," Mr. D. Jones said that phonetics was not, as was often suggested, a newly discovered science. It was a science which was brought to a very high degree of perfection four thousand years ago by Indian priests and scientists whose object in studying pronunciation was to preserve unaltered the pronunciation of their ancient hymns, which were supposed to lose their efficacy if not pronounced according to ancient usage. It was only within the last thirty years that the science of phonetics had become known to the general public. The pronunciation of children in London schools was universally admitted to be deplorable, and complaint was made that teachers did not improve it; but the reason was that those teachers did not possess the necessary knowledge of phonetics to correct the bad pronunciation. Before long, however, there would probably be a marked improvement in this respect, because the Board of Education had recognized the importance of phonetics, and had introduced the subject in the regular course of training for elementary-school teachers. The English language had very much changed since Shakespeare's time, and, to show how it was pronounced three hundred years ago, Mr. Jones recited "It was a lover and his lass" in sixteenth-century pronunciation. He added that, to a person who had accustomed himself to the old pronunciation, Shakespeare lost some of his expressiveness—often to a marked extent when read in the ordinary modern southern English pronunciation: it sounded better in Scotch. Pronunciation continued to develop until, in the present day, the system of spelling was such that the spelling was absolutely no guide to the pronunciation.

CANON BARNETT, who understands the matter intimately, is very hopeful of the association of working men with University teaching, and gives his strong approval to the co-operation of London University and the Workers' Education Association. Writing in the *Westminster Gazette*, he says:

The University has, by its action, shown itself in sympathy with democracy. It has put itself and its treasures of knowledge at the service of workers. Representatives of workers' associations will have an equal voice in the choice of subjects and of teachers. Culture has offered Industry alliance on equal terms. The University no longer stands apart in academic calm, content to be used by those willing to pay their fees; the University has itself come to seek those it can help, and that it may disarm suspicion trusts its treasures to their care.

The one difficulty is to make workers aware of the offer, to make them appreciate the new departure, to open their eyes to see that in these tutorial classes they may find what they have not found at lectures, a stimulus to their intellectual force, a means of enabling them to grasp abstractions, a secret which will help them both to enjoy their own being and to take a more useful part in citizenship. Will the Press which workers read help to make the classes known?

The other difficulty is to make workers trust the University as the University has trusted them. Their suspicion may have its excuses, and they may think it politic to beware of gifts offered by classes who have not hitherto considered their interests. But the gifts at the disposal of the Universities are the means by which other classes have been enabled to get the lead, and no workman's college without the help of the Universities can supply them with the means of meeting all classes as equals. Workers will surely be well advised to seize the offer now made. There is promise of success. Already three hundred workers in London have given in their names as willing to become students in tutorial classes, submitting themselves to a course of three years' study in industrial history. But what are three hundred among the millions of London? Those who believe must not be in a hurry, but they must make haste.

MR. T. WHITEHEAD, Principal of the Bradford Pupil-Teacher Centre, read a paper before the National Federation of Teachers in Pupil-Teacher Centres on October 2. Following is his summary of conclusions:

The Centre is not a secondary school, nor is it in competition with secondary schools, for while the function of one is purely academic, that of the other is largely professional. Nor is it a training college, for its professional training is of a purely practical nature suited only to a concurrent course of theory and practice, and it is introductory to, rather than a substitute for, such an institution. I have pointed out that economic considerations demand that this period of training should take place before recognition, and that, psychologically, it should begin in the early teens. The ideal Centre, fulfilling its true function, should allow opportunity for specialization in the science and art of teaching. It should be an institution where child nature may be studied in all its varied aspects, where the subjects taught in the schools may be thoroughly analysed, and where every phase of school life may be brought under review. During this period the teacher should pass through the whole gamut of school experience, from the infant to the senior scholar, and the relation between the Centre and the school should be closely intimate. The principal of the Centre should be in vital touch with the head teacher in the school, and the two conjointly, and not apart, should seek the welfare of the embryo teacher. The teacher on leaving the Centre will have been taught how to observe, and, whether he is fortunate in securing further training in college or less fortunate in having to join the list of acting teachers, he will have secured a knowledge of the fundamental principles of his profession and a grip of the work. I am afraid that my suggestions will not be applicable to rural areas; but in concentrated areas, as in our towns and cities, it is imperative that the Federation and all who are interested in the teaching profession should see to it that the opportunities which Pupil-Teacher Centres offer are not filched away.

IN his opening address for the current session, Principal Sir James Donaldson, of St. Andrews, drew attention to the imminent probability that all elementary school masters will be schoolmistresses. He said:

From the report of the Committee of the Privy Council on Education in Scotland for the year 1908-9, we learn that the number of male teachers of every grade above that of pupil-teacher was in that year 5,114, and the number of female teachers 13,961, and that the additions to the body of teachers during that year were 240 males and 1,318 females—more than five females for one male. The number of students in training for that year shows a similar disproportion, for there were 658 men and 2,562 women. The outlook for the coming session is that the numbers will be still more disproportionate, for at the examinations for admission to the training colleges there were 74 males who were candidates and 591 females—*i.e.*, about eight women to one man, and of the 74 men 56 passed, and of the 591 women 548 passed, so that the women were nearly 10 to 1 in the passes. From this and other circumstances it is easy to foresee that the men will entirely, or almost entirely, disappear from the profession of primary teacher. Some think that the men may continue to remain in the hope of becoming head masters. School Boards have in the past time preferred for this post those who had taken the degree of M.A., and may do so in future; but now numerous women take the degree, and in all probability will continue to take it with the four years' course. So it is likely that the women will have the whole of the profession of primary teacher to themselves.

SOMETHING more will be required (says the *Standard*) than the cautious and calculating sympathy expressed by Lord Morley with the recommendations of Lord Reay's Committee on Oriental Studies if the proposed scheme is to be carried out successfully. The Committee in their Report have clearly proved the necessity of establishing an institution in England for the systematic study of Eastern languages; and the advantages to be gained by placing such a school under the control of the University of London are obvious. The Indian Secretary of State does not deny that the interests of the Empire would be served by this means; but he is inclined to think that the Committee has been rather ambitious, while he fears that the Treasury will hesitate to provide as much as £12,000 a year for the purpose. At least a quarter of that sum, and perhaps more, might be found; but Lord Morley doubted whether the Government would accept all the Committee's proposals. It will be a thousand pities if a scheme which promises to remove what has long been a reproach to a nation so deeply interested in the East as England is should be circumscribed in its usefulness by an inopportune parsimony.

MR. W. HOWARD WINTERBOTHAM, official Solicitor of the High Courts of Justice, in his presidential address at the thirty-fourth autumnal meeting of the Incorporated Law Society, at Newcastle, spoke out strongly for a central School of Law. He said:

Legal education has not been on the right lines. Articled clerks, with few exceptions, start their practical work on entering their articles without any knowledge of the law or legal principles. In my judgment the time is ripe for making attendance at a recognized law school compulsory before entering upon articles, and I suggest that after passing a preliminary examination in general education every student should be required to attend an approved law school for two years, devoting his whole time to studying the law with recognized law teachers. I feel certain that before long a central school of law will be established which will be the centre of legal education for the whole Empire. Such a school would provide for the training not only of members of the Bar

Digitized by Google

and their own branch of the profession, but for all who are called on to administer justice in any part of our Empire as civil servants, or as magistrates, or in any other capacity.

Admirable sentiments. But what about the disposition of the moneys now in the hands of the Attorney-General from the sale of the Inns? What of the attitude of the Inns of Court? and of the Law Society itself? The University is ready and willing, and waiting for its share of those ample funds: who is it that stands in the way?

The enrolments of the Edinburgh School Board Continuation Classes have now been practically completed. In the commercial institutes there are 1,654 students as compared with 1,406 last year. The number attending the adults' classes is 1,616, an increase of 123 on the total for 1908. The schools showing decreases are situated in the south and west of the city. The large successes in the enrolments of the schools in the north, east, and centre are convincing proof that the mind of the public in those districts has been deeply stirred by the public meetings held in the various works, and by the personal canvass carried on by the head teachers of the different schools. Several of the schools are now filled, and the head teachers have been compelled to cease enrolling. The new features in this session's arrangements have generally proved extremely popular. For example, very large classes have been formed in plumbers' work, housewifery, home nursing, civics, economics and industrial history, shorthand speed, and modelling in copper and brass.

Prof. Charnock Bradley, speaking on "The Commercial Value of Scientific Investigations," at the opening of the session at the Royal (Dick) Veterinary College, Edinburgh, said that, while considerable assistance had been given to research by commercial and business men in that and other cities, yet (hopeful though the prospect of the proper recognition by the business men of the commercial value of science now was) it was unfortunately true that many non-professional men were still to be found who regarded all scientific work as useless and a waste of time unless immediate utility could be demonstrated. Some of the most important discoveries and inventions had their origin in investigations which at the time did not promise to develop into knowledge capable of being turned to useful account. He hoped that some day a volume would be written—dedicated to the practical man—setting forth the small and inconsiderable discoveries on which the foundations of modern industries had been based. When this was done it would astonish the unthinking—and they were many—to learn that without scientific research modern civilization would have been impossible.

UNIVERSITIES AND COLLEGES.

(*From our own Correspondent.*)

Cambridge. The term is young, but lusty and vigorous as an eagle. A record entry of 1,140 freshmen is a subject of congratulation to deans and bursars, more especially to the latter. Plain people ask themselves a plain question: "Is it quantity or quality that we should rejoice over?" It is sweet to think that Cambridge, the kindly Alma Mater of British and Oriental youth, welcomes to its arms the simple striplings who would not be able, in spite of their years, to qualify for admission to the best of our public schools.

The first function of term was the unveiling of a statue of Tennyson in the ante-chapel of his old College—Trinity. The dedicatory oration was delivered with due impressiveness by Mr. Arthur Sidgwick, and a reception at the hospitable lodge of Trinity concluded the celebrations.

The new regulations as to alternatives for the General Examination are now in force and are working with as fatal an effect as ever was prophesied by their most vehement critics. The freshmen have instantly found the weak spot in the fence and the soft option has been detected with unerring accuracy by the intelligent freshman. In the case of those destined for professional careers, an appropriate special has usually been selected, while for those who have no further aim in their University course than to get to the end of it, History with Law has been universally selected as the broad and easy path. Even a freshman is able to note the fact that one subject is practically possessed in common by the two examinations; hence the choice.

The Syndicate who guide the studies of Army candidates are said to be preparing a scheme for a special in military subjects. This has been advocated in these columns, and will doubtless be a *fait accompli* before very long. The candidates will probably take the combination of law and military subjects, and thus will spend the whole of their time in work which has more or less connexion with their future career. Those who have a speciality, such as modern languages or mechanics, will doubtless substitute some appropriate special for that of Law, and, on the whole, the change will be a welcome one, and will attract this class of man to Cambridge at the expense of the sister University.

This term sees a considerable development in the practice of informal lecturing by recognized experts. First and foremost, Lieutenant Shackleton will have delighted us with an account of his experiences before these notes see the light; Prof. Browne gives us a course on Persian History; Mr. McTaggart discourses on Philosophy; Mr. Wace will describe recent excavations in Thessaly, following Mr. R. M. Dawkins, who recently gave us a most lucid and interesting account of similar experiences at Sparta.

The election to the Mastership of St. Catharine's was a surprise to the public, but a source of congratulation withal. The electing body must be rejoiced that their selection of the Rev. C. W. H. Johns, the noted Assyriologist, has received no hostile criticism whatever. Patient work, a career free from all trace of self-seeking, and sterling merit have obtained their reward.

The fact that there has been a vacancy at "Cat's" reminds us that death has also deprived us of two of our youngest and most promising workers. Mr. D. J. Carnegie, one of the mainstays of the Extension Lectures, whose tragic death occurred a few weeks ago, and Mr. Bryan Cookson, a man just beginning to earn name and fame in the department of Astro-Physics, to which he had devoted his keen intellectual powers—these are real losses, unexpected and irreparable.

According to a very wise regulation, the Quick Professorship of Biology is vacant at the end of the three years for which Prof. Nuttall was elected; the result of the fresh election is, of course, a foregone conclusion, and the reappointment will only serve to show how cordially the electors recognize the good work done by the talented occupant of this particular chair.

The new Examination Rooms are proving very useful for other functions besides those for which they were originally designed, and possibly the festivities of next May Week may suggest a still wider sphere of usefulness. Magdalene has developed structurally to keep pace with its increase in personnel, and the regime of the present Master has already proved its epoch-making character.

One of our social and athletic clubs has also dabbled with bricks and mortar during the Long: the Hawks have broken out into a dining room, so that now there are three institutions where the undergraduate can obtain the conveniences, if not the luxuries, of a London club—the Union, the Pitt, and the Hawks. The last-named club also intend to make another new departure and give a small ball at the end of the October term.

The Rugby football side shows a certain amount of promise; but the three-quarter line at present looks lamentably weak and quite unlikely to cope with the wonderful combination that Oxford can bring against us. The loss of two such players as M'Leod and Wright is making itself severely felt.

The new President of the C.U.B.C., Mr. E. G. Williams, is setting to work with a will, and has much promising material from which to fill the vacant places. With a nucleus consisting of Rosher, Hornidge, Swanston, and Fairbairn, he should not have a difficult task.

On October 23 a grand field day was held, in which University and Public School Territorials met in their annual combination. The streets were enlivened also by the welcome presence of the London Scottish, and Cambridge looked like a garrison town.

London. The Provost of University College, addressing the new students, said that, during their undergraduate course, they should have no time for any public meetings outside the life of the University community; it ought to be considered an act of disloyalty to belong to any club outside the University. Political partisanship, or a close following of political movements in this time of feverish political agitation, was specially baneful. Last year there were students who became so interested in certain causes as to forget altogether they were students. Speaking to the Indian students,

Digitized by Google

he said that one sympathized with them in the crisis which their country was passing through, but they must not forget that they were welcomed in the University as students, not as politicians. The College prided itself on having few rules, but it exacted implicit obedience to those few. In conclusion, he reminded them that "a little thing is a little thing, but faithfulness in little things is a great thing."

The eighty-seventh session of the Birkbeck College, Chancery Lane, was opened with an address by Dr. H. A. Miers, Principal of London University. Among the founders of the College (said Dr. Miers) was to be found the name of Francis Place, the Radical tailor and friend of Jeremy Bentham and James Mill, who played so large a part in the social reforms of the first half of the nineteenth century. Born within a stone's-throw of the College, his boyhood was spent in miserable and sordid surroundings, and, after his marriage, the weekly joint earnings of himself and his wife did not exceed 17s. In the midst of all these difficulties he managed to educate himself and ultimately to become a man of great influence among the most intellectual and powerful politicians of the country. "It is surely appropriate that I, his great-grandson," said the Principal to the astonished students, "should congratulate the Birkbeck Institution upon the good work it has done and the enormous advances which it has made during the eighty-five years which have elapsed since its foundation." He ventured to assert that every friend of popular education was proud of what it had achieved. Calling attention to a possible danger which attended the provision of increased educational facilities Dr. Miers said that, now so much was provided for the London student, there was a danger lest both he and his teachers should forget that all the provisions were useless without effort on the part of the student. There was a danger lest the process of education should be increasingly regarded as a process of putting something into the student or of moulding and fashioning him for the work which he had to do. A very great stimulus for effort of a certain sort was supplied by examinations, the grim shadow of which hung over the student's path at every stage of his career; but it was a melancholy reflection that, if the examination stimulus were suddenly taken away, a very great number of English students would as suddenly lose the real incentive to intellectual effort. If they had any real interest and enthusiasm for their work it should persist after the examination had gone. He advised the students not so much to amass facts and acquire knowledge as to understand principles and acquire wisdom. He believed that if they discussed not the details, but the principles, of the subject which they were studying, they could do as much in the cause of their own education as any teacher or book or examination could do for them.

The session of the Women's College of the University of London, South Kensington, was opened by Sir Alfred C. Lyall with an address on "The Reading of History." Now, when education had come in like a flood (he said), no part of literature was more sedulously studied than the field of history. On the other hand, the field was being very considerably enlarged, and during the ten years ending 1907 there were published in England 5,498 books under the head of history and 1,059 biographies. Authentic history may be said to have begun in Europe, and had been practically confined to that continent. A vast collection of historical material had accumulated, and necessarily required methodical treatment by men of trained intelligence and of untiring industry, men learned and accurate. These had created what was now termed the "science of history." In earlier times it was mainly an art, and necessarily so: the primitive chronicler had very little material for his stories of bygone times; he gave a dramatic version of great events. The same style and method were to be noticed in the historical books of the Old Testament. To analyse these records closely would be to break up the picture and destroy the artistic effect; the story must be taken as a whole. But, though they now spoke of the science of history, they had modern writers who had to some extent followed the ancient manner; these were artists, and their descriptions of events were so far touched with the same characteristics as those of which he had spoken as marking the old historians. He feared that the tendency of the twentieth century was unfavourable to the artistic historian and that the close investigation of every detail must discourage picturesque compositions. But the change was unavoidable. The historian of to-day had to take up a very narrow ground: to peg out a claim and not wander outside its bounds. Groups of scholars working in unison were necessary, and we knew no more of the old-fashioned histories embracing vast subjects, of histories of the world, or a history of Europe in thirty volumes. The demand for lighter and shorter books than the great histories had led to a supply which enabled the reader to obtain a bird's-eye view of the [illegible]t, the bold outlines of the historic landscape. But this kind of reading was disconnected in style and subject; and it might be expedient to give a warning against the habit of neglecting the great English classics for short biographies or compendious sketches of periods and personages; the reading of serious students of history must be continuous and consecutive. A warning from reading history was that we must not be hasty when considering the misdeeds of past generations, whether of their rulers or their people. The times were hard, so were the men. On the whole, he did not know any recent works that might be more profitable for advice and guidance in reading history than the three volumes of Lord Acton. They contained the essence of his unceasing labours in collecting, comparing, and testing an immense quantity of historic material.

The University Extension Board's scheme of lectures for the coming session shows that between sixty and seventy courses have been arranged to be delivered in different parts of the London area. The most interesting development of the work has been the Senate's adoption last session of a scheme for diplomas in History, in Literature, and in Economics and Social Science, to be awarded after a four years' course of study. Special courses designed with a view to this diploma have been arranged for the coming session, and some of the work will be carried on in permanent institutions like University College and King's College. A special pamphlet, explaining the diploma scheme and setting out the courses and the places where they will be delivered, may be obtained of the Registrar of the University Extension Board at the University.

Cardiff. THE new buildings in Cathay's Park were opened by Lord Plymouth on October 14. They stand on a site of five acres, the gift of the city, valued at £20,000. Only the Arts Department, the Library, and the administrative block have as yet been erected. The expenditure on these has been £130,000, and the total amount to be ultimately spent will be £260,000. The buildings occupy a fine position in the park, and have a beautiful outlook on extensive ornamental gardens and King Edward's and Museum Avenues, which are lined with trees. The façade of the College is decorated with designs representing the arts and sciences, and the arms of the Presidents of the College past and present, and the arms of Wales and divisions of Wales. One enters into an extensive vestibule, at the further end of which is a finely executed statue by Mr. W. Goscombe John, R.A., of the late Principal Viriamu Jones, first Principal of the College. The grand staircase is constructed of alabaster from the Rhaetian rocks at Penarth. From the balcony in front a fine view of the park is to be had. The Library, to the erection of which the Drapers' Company made a gift of £16,000, is surmounted with a semi-circular roof, and three large windows at one end bear the arms respectively of the Prince of Wales, the Drapers' Company, and the College. It has space for a hundred thousand volumes and is lighted, in the main, from the roof. Until the Great Hall is erected the Library will serve for large meetings. A narrow gallery 100 ft. long has been specially constructed for optical experiments. All the interior woodwork is of American white wood or fumed oak. The outer walls of the building are of Portland stone. When the whole scheme is completed the buildings will be symmetrically grouped round a great court larger than Tom Quad, Christ Church, the largest quad in Oxford. In designing the buildings the architect himself says that he "had in mind the many delightful Classical and semi-Classical examples in both our ancient Universities, and has endeavoured to give a flavour to the building, which, while being distinctly modern and of its time, is intended to recall some of the feeling which is so characteristic of that typically British, and at the same time scholarly, architectural development."

Edinburgh. THE University buildings are receiving considerable extensions, especially for the better accommodation of the departments of Physiology and Chemistry. A new lecture room has been erected for some 350 students: it has no desks, but the chairs have a continuation of the right arm suitable for writing.

THE EDUCATIONAL LADDER.

Aberystwyth University College.—Entrance Scholarships and Exhibitions: W. J. Davies, County School, Carmarthen (David Davies Scholarship), £40; Hannah Davies, County School, Barmouth (Principal's Scholarship), £40; H. C. Lewis, County School, Carmarthen (Visitors' Scholarship), £30; A. G. White, County School, Llanelly (Keeling Scholarship), £25; Roger Thomas, County School, Narberth (Agricultural Scholarship), £20; E. R. Williams, County School, Gowerton (Welsh Scholarship), £20; J. E. Dixon, Grammar School Bolton (Open Exhibition), £10; Evelyn B. Daw, Technical School, Birmingham (Open Exhibition), £10; E. W. Barton, Grammar School, Swansea (Open Exhibition), £10; D. J. Williams, County School, Towyn (Open Exhibition), £10; Elvina R. Jones, County School, Towyn (Open Exhibition), £10; Elizabeth D. Jones, County School, Towyn (Welsh Exhibition), £10; W. E. Phillips, Grammar School, Haverfordwest (Welsh Exhibition), £10; John F. Powell, Grammar School, Swansea (Welsh Exhibition), £10; H. J. Evans, Grammar School, Haverfordwest, and School of Pharmaceutical Society (Welsh Exhibition), £10; E. A. Edwards, County School, Tredegar (Welsh Exhibition), £10; Clifford Jones, County School, Whitland (Welsh Exhibition), £10; Rhys Griffiths, County School, Whitland (Welsh Exhibition), £10; E. S. Roberts, University College of Wales (Cynddelw Scholarship), £20.

Agricultural Society, Royal.—National Diploma in Dairying: 37 candidates (out of 59) passed.

Cambridge University.—*Emmanuel College.*—Research Studentships open to graduates: A. B. Adams, B.A., £120; C. F. Taylor, B.A., £120; E. M. Wellisch, B.A., £150. Grants from the fund: R. D. Kleeman, B.A., S. Maugham, B.A., and T. G. Taylor, B.A., £20 each.—Exhibition to an Advanced Student, £50: H. J. Swain, University of Sydney. Additional Exhibitions, £20 each: J. Pinkerton, M.A., Edinburgh University; R. D. Vernon, B.Sc. Lond., University College, Nottingham.

Trinity.—Fellowships: Percy James Pearse, B.A.; Henry Arthur Hollond, B.A.; James Mercer, B.A.; Donald Struan Robertson, B.A.

Cambridge: Newnham College.—Scholarships of £50 a year for 3 years (on results of Cambridge Local Examination, June): Clothworkers' Scholarship, G. E. Powers (City of London School for Girls), for Science and Mathematics: Goldsmiths' Scholarship, A. M. Holden (St. Elphin's School, Darley Dale), for Languages; Winkworth Scholarship, K. Grant (St. Paul's Girls' School), for Mathematics and Science; a college scholarship, C. M. Garlick (Wyggeston School for Girls, Leicester). Scholarships of £35 a year for 3 years: D. Bott (King Edward's School, Birmingham), for Modern Languages, and F. K. Rolland (Graham Street High School), for Mathematics. Gilchrist Scholarship, £50 a year for 3 years, tenable at either Girton or Newnham: D. Dale (King Edward's School, Birmingham), for Science. Miss Dale has elected to hold it at Newnham College. Scholarship offered for Classics last March (£50 a year for 3 years): A. Yoxall (St. Paul's Girls' School). Mathilde Blind Scholarship (£50 a year for 3 years): L. Perry (Elson House School, Leytonstone), for Modern Languages. Arthur Hugh Clough Scholarship for fourth-year students: Miss A. Woodward (Classical Tripos, Part I, 1909, Class 1, Division 2) and Marion Kennedy. Studentships for Research: Miss J. F. Cameron (Mathematical Tripos, 1908, equal to tenth wrangler) and Miss Emily May Smith (Moral Sciences Tripos, Part I, 1907, Class 1; Part II, 1909, Class 1, with distinction in Psychology). Gilchrist Fellowship for professional training: Miss D. H. G. Reeve (Medieval and Modern Languages Tripos, 1907, Class 1, with distinction in German). Harkness Scholarship for Geology: Miss M. F. Macphee, of Newnham College.

Cardiff University College.—Entrance Scholarships and Exhibitions: Drapers Company's Scholarship of £35 for 1 year: John Todd Hendry, Intermediate School for Boys, Cardiff (together with a City of Cardiff Scholarship in Science). Caroline Williams Scholarship of £25 a year for 3 years: Margaret Jane Howells, County School, Narberth. Sir Alfred Thomas Scholarship of £20 a year: David Felix Davies, Intermediate School, Aberdare. 1909 Arts Scholarships of £40 a year for 3 years: Jennie Madeline Price, County School, Merthyr Tydfil. Isaac Roberts Scholarship in Science of £50 a year for 3 years: David Reginald Lloyd, Barry County School. Brecon Scholarship of £27 a year for 3 years: David Erasmus Thomas, County School, Brynmawr. Cradock Wells Exhibitions: Rhys Trevor Jones, Municipal Secondary School, Cardiff; Sidney Watkiss, Municipal Secondary School, Cardiff; and Dan Stuart Rees, Municipal Secondary School, Cardiff. City of Cardiff Scholarships in Arts: W. Gladstone M'Pherson and Charles Cuthe Cole, Municipal Secondary School, Cardiff, and Pupil-Teachers' Centre, Cardiff. City of Cardiff Scholarships in Science: John Todd Hendry, Boys' Intermediate School, Cardiff (together with the Drapers' Company's Scholarship); and William Morgan Jermain, Boys' Intermediate School, Cardiff. Exhibitions to the value of £10 each: William Rees, County School, Llandilo; Oswald J. Francis, Pontywaun County School; Lucy Stodden, County School, Penarth; Walter B. Bucquet, County School, Barry; Edith M. Davies, Howell's School, Llandaff; Gwladys G. Morgan, County School, Bridgend; Thomas Herbert Richards, County School, Neath; Phœbe M. Tucker, Intermediate School, Newport; Dora Elizabeth Brockington, Howell's School, Llandaff, and Pupil-Teachers' Centre, Cardiff; Ernest I. Davies County School, Barry; James H. Dunbar, County School, Welshpool; and Elizabeth M. H. Lewis, County School, Aberdare. "Caradog" Scholarships in Music of £50 a year for 3 years: Moriydd Owen, County School, Pontypridd. £25 a year for 2 years: Herbert M. Rowlands, School for Sons of Missionaries, Blackheath, and County School, Gowerton. £25 a year for 2 years: Joseph Reys Lewis, Ferndale.

Edinburgh Heriot-Watt College.—£500 distributed in day class bursaries, from £10 each; £200, in evening class bursaries, £2 each.

Glasgow: Ferguson Scholarships (open to all the Scottish Universities—£80 each for 2 years: Classics, Herbert J. M. Milne, M.A., Aberdeen. Mathematics, James T. Lawrence, M.A., Aberdeen. Philosophy, Richard Smith, M.A., St. Andrews.

Leeds University.—1851 Exhibition Science Scholarship (£150 a year) Miss Sybil Leslie, B.Sc. This is the first time such a scholarship has been awarded to a Leeds woman student. Miss Leslie is going to study under Madame Curie.

London University.—Inter-Collegiate Scholarships Board: *University College.*—Bucknill Scholarship (135 guineas), C. I. de Silva, University College, London; Two Exhibitions (55 guineas each), R. J. Clausen, University College, London, and D. H. D. Wooderson, William Ellis School, Gospel Oak. *King's College.*—Sambrooke Medical Exhibition (£100), C. F. Hacker, University College, London; Warneford Scholarships (£100 each), S. H. Hodges, Monkton Combe School, and G. T. Symons, Blundell's School, Tiverton. *Westminster Hospital Medical School.*—"Guthrie" Arts Scholarship (£60), M. C. Breese, Dulwich College; Natural Science Scholarship (£60), H. J. Hoyte, University College, Nottingham. *London (Royal Free Hospital) School of Medicine for Women.*—St. Dunstan's Medical Exhibition (£180), Miss North Hamill, St. Paul's Girls' School; Scholarship (£30), Miss Lyndall Rice, formerly of Girls' High School, Brisbane.

Charing Cross Hospital.—Entrance Scholarships. Epsom Scholarship, 60 guineas: D. W. Pailthorpe. Livingstone Scholarship, 75 guineas: F. J. Halliman. Huxley Scholarship, 50 guineas: David B. S. Jones. Scholarship, 30 guineas: H. W. Williamson. Universities Scholarship, 50 guineas: J. M. Davis. Universities Exhibition, 20 guineas: Abel Evans.

Guy's Hospital.—Senior Science Scholarship for University Students, £50: Trevor Braby Heaton, B.A., Christ Church, Oxford. Junior Science Scholarships: £150, Charles Hamilton Gould. Preliminary Science Class, Guy's Hospital, and B.H.S., Christchurch, New Zealand; £60, James York Moore, Preliminary Science Class, Guy's Hospital. Equal Certificates: Allan Noel Minns, Thetford Grammar School, and Cyril Henry Edwards, St. Paul's School, West Kensington. Entrance Scholarships in Arts: £100, Henry Francis Thomas Hogben, Bedford Grammar School, and William Morris Lansdale, St. Olave's and St. Saviour's Grammar School (equal); £50, James Kyle, University Tutorial College.

London Hospital.—Price Entrance Scholarship in Science, £120: J. Bostock. Entrance Science Scholarships: £60, A. G. Winter; £35, R. J. M. Love. Epsom Scholarship, £126: H. G. Winter. Price Scholarship in Anatomy and Physiology (University Scholarship), £60: J. R. Marrack, St. John's College, Cambridge.

Middlesex Hospital.—Entrance Scholarships: (1) A. M. Wheeler, (2) T. C. Kidner, (3) A. O. Gray. University: T. L. Hardy and H. J. Shields (equal). Freer Lucas (Epsom College Scholar): C. E. Procter. New Zealand: T. Harrison.

St. Bartholomew's Hospital.—Senior Entrance Scholarship in Science, £75 each: A. G. Evans, B.A., Trinity College, Cambridge; and A. C. Roxburgh, B.A., Trinity College, Cambridge, and G. Sparrow, B.A., Caius College, Cambridge (the last two equal). Junior Entrance Scholarship in Science, £50: P. O. Ellison and D. H. D. Wooderson (equal). Entrance Scholarship in Arts, £100: C. Cooke, Magdalen College School, Oxford. Jeaffreson Exhibition in Arts, £50: G. C. Linder, Brighton Grammar School.

St. George's Hospital.—The University Entrance Scholarships of 70 guineas and £50 respectively have been added together and divided equally between E. F. W. Grellier, Downing College, Cambridge, and W. E. Waller, University College, Oxford.

University College Hospital.—Bucknill Scholarship and Medical Entrance Exhibition: see above—Inter-Collegiate Scholarships Board. Epsom Free Scholarship: J. H. Stuart, Epsom College.

London School of Economics.—Mitchell Scholarship, £25: Lionel M. Swan, London School of Economics.

Manchester Grammar School.—Foundation Scholarships: H. K. Ainsworth, H. T. Benson, J. P. Bowden, W. L. Brewerton, H. C. Clough, H. W. Coombs, F. G. Crowe, A. S. Gregory, L. Holt, A. F. Hutt, J. Rivers, C. H. Schofield, S. Smith, V. H. Stott, and C. Walmsley. A bursary for one year: P. Bernstein.

Oxford University.—Geographical Scholarship for 1909-10: Harry Wallis, B.A., Scholar of Hertford College. Junior Kennicott Scholarship: W. A. Davies, B.A., non-collegiate. Pusey and Ellerton Scholarship: Digby Guy Learoyd, Exhibitioner of Wadham.

Balliol.—Fellow, and Theological and Classical Tutor: the Rev. Neville Stuart Talbot, B.A., Christ Church.

Brasenose.—Senior Hulme Scholarships: R. C. Lodge, Somerset Scholar, and Valentine W. O'C. Miley, open scholar. Indian Civil Service Scholarships: James P. Wilson, formerly Junior Hulme Scholar, and Alfred D. G. Hore, B.A., late open scholar.

Digitized by Google

Merton.—Fellowships: Walter B. Gill, B.A., formerly Scholar of Christ Church; Gerald Gould, late Exhibitioner of Magdalen.

New College.—Fellowship: A. G. Heath, B.A., Scholar of the College.

St. John's.—Senior Scholarship: E. W. Sutton, Scholar of the College.

St. Andrews University.—Entrance Bursaries of £15 each, 12 awarded. Second Year Bursaries: 3 of £20, and 5 of £15, awarded. Third Year Bursaries: 3 of £20, and 2 of £15, awarded. Fourth Year Bursaries: 1 of £20, 1 of £15, and one of £5, awarded. Fifth Year Bursaries: 1 of £20, and one of £10, awarded. Research Scholarship of £40: Janet D. Scott, B.Sc., and William Strong. Robertson Scholarship, £20 for 6 years: Robert Loudon.—Berry Scholarships, £80 each for one year: Mental Philosophy, Richard Smith, M.A.; Mathematics and Natural Philosophy, Archibald H. R. Geldie. Ramsay Scholarship, £80 for one year: Classics, William Douglas, M.A. Bruce Scholarship, £50 for two years: Classics, Frank Batcheler. Millar Prize, £30: Mental Philosophy, Richard Smith, M.A.

THE COLLEGE OF PRECEPTORS.

MEETING OF THE COUNCIL.

A meeting of the Council was held at the College, Bloomsbury Square, on October 20. Present: Sir Philip Magnus, President, in the chair; Dr. Armitage Smith, Mr. Barlet, Mr. Charles, Miss Dawes, Mr. Easterbrook, Mr. Eve, Mr. Holland, Mr. Kelland, Miss Lawford, Rev. R. Lee, Dr. Maples, Mr. Marx, Mr. Milne, Mr. Pendlebury, Mr. Rule, Mr. Rushbrooke, Mr. Starbuck, Rev. J. Twentyman, Mr. Vincent, Mr. Walmsley, and Mr. White.

The minutes of the last meeting were read and confirmed.

The Secretary reported the results of the recent Summer Examination of Teachers, and diplomas were granted to those candidates who had satisfied the prescribed conditions. (For list see page 451). The prize of £10 for Theory and Practice of Education was awarded to Mr. E. A. Read, and the prize of £5 for Natural Sciences to Mr. P. F. Adams.

The Report of the Finance Committee, showing the result of the operations of the College during the first three quarters of the current year, was adopted.

The Report of the Examination Committee was adopted. The Rev. G. E. Mackie, M.A., was appointed one of the examiners in Scripture History, and Mr. J. Blake Harrold, A.C.I.S., was appointed one of the examiners in Book-keeping

The Report of the Special Committee appointed to consider the circumstances in connexion with the refusal of the Board of Education to recognize as efficient a private school on which the Board's Inspectors had reported favourably was adopted.

Four members of the Council were appointed to act as the representatives of the College at a Conference on the Registration of Teachers to take place on November 13.

The following persons were elected members of the College:—

Mr. J. E. Brown, Maitland House, Morley, Leeds.
Rev. J. Magill, A.C.P., 12 Eyre Square, Galway.
Mr. E. D. McQueen Gray, B.A. Lond., University Hill, Albuquerque, New Mexico.

The following books had been presented to the Library since the last meeting of the Council:—

By Dr. A. F. Murison.—Maclean's Law concerning Secondary and Preparatory Schools.

By Allman & Son.—Addis's Style in Composition, and Macaulay's Lays; Bally's Preparatory German Lessons; Blouet's Elementary French, Intermediate French, Aids to French Examinations, and French-English Dual Readers, Parts I, II, and III; First Aid to the Injured; Hamer's Notes on St. Matthew, Notes on St. Mark, Notes on St. Luke, and New Testament History; Healing's Manual of Geography; Hill's Student's Systematic Aid to Chemistry; Johnson's Text-Book of Botany for Students; Jones's German-English Dual Reader; Laurie's Introduction to Elementary Botany and Field Botany; Lees's Brief Geography of the World; Nixon and Steel's Bible Reader, Part I; Punch's Wordsworth; Toyne's Sketch of the Tudor Period; Varley's Geometry, Parts I and II.

By the Cambridge University Press.—Anderson's Livy, Book IX; Gow's Horace, Satires, Book II.

By W. B. Clive.—Matriculation Directory, September, 1909.

By Methuen & Co.—Draper's D'Ajaccio à Sainte-Hélène; Firth's English Literature for Schools; Wilmot-Buxton's By Road and River.

By the Oxford University Press.—Oxford Plain Texts (Macaulay's History of England, Chapter III, and De Quincey's Spanish Military Nun, &c.); Bowley's Macaulay's History of England, Chapter III; Collins's De Quincey's Spanish Military Nun, and Revolt of the Tartars; Gordon's Shakespeare's Richard II, Julius Cæsar, and Macbeth; Innes's Scott's Waverley; Wyld's Elementary Lessons in English Grammar.

By Alston Rivers.—Cash's Selections from Anson's Voyage round the World; McNair's Guide to the Study of English History, Part III; Wainwright's Selections from Pliny's Natural History, Books VIII-X.

ANTHROPOLOGY AND POLITICAL SCIENCE.

In his presidential address to the Anthropological Section of the British Association at Winnipeg, Prof. John L. Myres reviewed in rapid outline the influence of Anthropology on the course of Political Science, and pointed the practical issues. Anthropology being the Science of Man, "its full task is nothing less than this: to observe and record, to classify and interpret, all the activities of all the varieties of this species of living being." Indeed, it is more: we should include physical characters. Prof. Myres presented successive pictures of the Pre-Social State as drawn by philosophers from Aristotle downwards, explained why these different conceptions took the particular shape they did under the several circumstances of the ages that gave them birth, and showed that one of the principal factors determining their form was the actual state of anthropological knowledge in the years immediately preceding their publication. We reproduce his "Epilogue," remarking that his conclusions are as applicable at home as in Canada, and that their bearings touch education as nearly as they touch political science.

These examples, I think, are sufficient to show how intimately the growth of political philosophy has interlocked at every stage with that of anthropological science. Each fresh start on the never ending quest of *man as he ought to be* has been the response of theory to fresh facts about *man as he is*. And, meanwhile, the dreams and speculations of one thinker after another—even dreams and speculations which have moved nations and precipitated revolutions—have ceased to command men's reason when they ceased to accord with their knowledge.

And we have seen more than this. We have seen the very questions which philosophers have asked, the very questions which perplexed them, no less than the solutions which they proposed, melt away and vanish, *as problems*, when the perspective of anthropology shifted and the standpoint of observation advanced. This is no new experience; nor is it peculiar either to anthropology among the natural sciences or to political science among the aspects of the study of man. It is the common law of the mind's growth which all science manifests, and all philosophy.

And now I would make one more attempt to put on parallel lines the course of political thinking. It is not so very long ago that a great British administrator, returning from one of the gravest trials of statesmanship which our generation has seen, to meet old colleagues and classmates at a college festival, gave it to us as the need he had most felt, in the pauses of his administration, that there did not exist at present any adequate formulation of the great outstanding features of our knowledge (as distinct from our creeds) about human societies and their mode of growth, and he commended it to the new generation of scholarship, as its highest and most necessary task, to face once more the question: What are the forces, as far as we can know them now, which, as Aristotle would have put it, "maintain or destroy States"?

But if a young student of political science were to set himself to this life work, where could he turn for his facts? What proportion of the knowable things about the human societies with which travellers' tales and the atlases acquaint him could he possibly bring into his survey, without a lifetime of personal research in every quarter of our planet?

I have in mind one such student setting out his coming session to investigate, on the lines of modern anthropology, the nature of *Authority* and the circumstances of its rise among primitive men; and the difficulty at the outset is precisely as I have described. In the case of the "black fellows" of Australia such a student depends on the works of some four or five men, representing (at a favourable estimate) one-twentieth even of the known tribes of the accessible parts of that continent. For British South Africa he would be hardly better served; for British North America, outside the ground covered in British Colombia by Boas and Hill-Tout, he would have almost the field to himself; and the prospect would seem to him the drearier and the more hopeless when he compared it with things on the other side of the forty-ninth parallel.

Now, our neighbours south of that line have the reputation of being practical men: in other departments of knowledge they are believed to know well "what pays." And I am forced to believe that it is because they know that it *pays*, to know all that can still be known about the forms of human society which are protected and supervised from Washington, that they have gone so far as they have towards rescuing that knowledge from extinction while still there is time. The Bureau of Ethnology of the United States of America is the most systematic, the most copious, and, I think, taking it all in all, the most scientific of the public agencies for the study of any group of men, *as men*. The only

Digitized by Google

other which can be compared with it is the ethnographical section of the last census of India, and that was an effort to meet, against time, an emergency long predicted, but only suddenly foreseen by the men who were responsible for giving the order. Thus, humanly speaking, it is now not improbable that in one great newly settled area of the world every tribe of natives, which now continues to inhabit it, may at least be explored, and in some cases really surveyed, before it has time to disappear. But observe, this only applies to the tribes which now continue to exist; and what a miserable fraction they are of what has already perished irrevocably! It is no use crying over spilt milk, as I said to begin with; the only sane course is to be doubly careful of whatever remains in the jug.

An Ethnological Survey for Canada.

And now I conclude with a piece of recent history, which will point its own moral. When the British Association met first outside the British Isles, it celebrated its meeting at Montreal by instituting, for the first time, a section for Anthropology; and it placed in the chair of that section one of the principal founders of modern scientific anthropology, Dr. Edward Burnett Tylor, then recently installed at Oxford, and still the revered Professor of our Science there. Through his influence mainly, but with the active goodwill of the leading names in other sciences in Canada, a research committee was formed to investigate the north-west tribes of the Dominion; and for eleven consecutive years expeditions wholly or partly maintained by this Association were sent to several districts of British Columbia. These expeditions cost the Association about £1,200 in all. I am glad to think that the chief representative of this Committee's work, Dr. Franz Boas, has long since realized, in his great contributions to knowledge, the high hopes which his early reports inspired.

When the Association met the second time on Canadian soil, at Toronto, the occasion seemed opportune for a fresh step. Dr. Boas had already undertaken work on a larger scale and under other auspices. But it was thought likely that if a fresh Committee of the Association were appointed, with wider terms of reference and further grants, it would be possible to select and to train a small staff of Canadian observers, and by their means to produce such a series of preliminary reports on typical problems of Canadian anthropology as would satisfy the Dominion Government that the need for a thorough systematic survey was a real one, and that such a survey would be practicable with the means and the men which Canada itself could supply. Among the leading members of this Ethnographic Survey Committee I need only mention three—the late Dr. George Dawson, Mr. David Boyle, and Mr. Benjamin Sulte, each eminent already in his own line of study, and all convinced of the great scientific value of what was proposed. The first year's enterprise opened well; workers were found in several districts of Canada; the Association sent out scientific instruments, and formed in London a strong Consultative Committee to keep the Canadian field-workers in touch with European students of the subject. But the premature death of George Dawson in 1901 broke the mainspring of the machine; the field-workers fell out of touch with one another and with the subject; the instruments were scattered, and in 1904 the Ethnographic Survey Committee was not recommended for renewal.

I need not say how great a disappointment this failure has been to those of us who believe that in this department of knowledge Canada has great contributions to make, and who know—as this meeting too knows perfectly well—that if this contribution to knowledge is not made within the next ten years, it can never be made at all. I am not speaking merely of the urgency of exact study of the Indian peoples. This indeed is obvious and urgent enough; and the magnificent results of organized efforts in the United States are there to show how much you too can still rescue, if you will. But at the moment I appeal rather for the systematic study of your own European immigrants, that stream of almost all known varieties of white men with which you are drenching yearly fresh regions of the earth's surface, which, if they have had experience of human settlements at all, have known man only as a predatory migratory animal, more restless than the bison, more feckless and destructive than the wolf. Of your immigrants' dealings with wild Nature you are indeed keeping rough undesigned record in the documents of your Land Surveys, and in the statistics of the spread of agriculture over what once was forest or prairie; and in time to come, *something*—though not, I fear, much—will exist to show what good (and as likely as not, also, what irremediable harm) this age of colonization has done to the region as a whole. But what you do not keep record of is Nature's dealings with your immigrants; you do not *know*—and as long as you omit to *observe*, you are condemned not to know—the answer to the simple all important question, *What kinds of men do best in Canada? What kind of men is Canada making out of the raw material which Europe is feeding into God's mills on this side?*

Over in England, we are only too well aware how poor a lead we have given you. We, too, for a century now, have been feeding into other great winnowing chambers the raw crop of our villagers. We have created (to change the metaphor), in our vast towns, great vats of fermenting humanity, under conditions of life which at the best are unprecedented, and at their worst almost unimaginable. That is *our* great experiment in modern English anthropology—*What happens to Englishmen in city slums?* and we shall hear, before this meeting ends, something of the methods by which we are attempting now to watch and record the outcome of that experiment in the making of the English of to-morrow. We are beginning to know, in the first place, what types of human animal can tolerate and survive the stern conditions of modern urban life. We are learning, still more slowly, what modes of life, what modified structure of the family, of the daily round, of society at large, can offer the adjustment to new needs of life, which human nature demands under this new, almost unbearable strain. We are seeing, more clear in the mass, even if hopelessly involved in detail, the same process of selection going on in the mental furniture of the individuals themselves; new views of life, new beliefs, new motives and modes of action; new, if only in the sense that they presuppose the destruction of the old.

That is our problem in human society at home. And yours, though it has a brighter side, is in its essentials the same. Geographers can tell you something already of the physical "control" which is the setting to all possible societies on Canadian soil. Scientific study of the vanishing remnants of the Redskin tribes may show you a little of the effects of this control, long continued, upon nations whom old Heylin held to be "doubtless the offspring of the Tartars." Sympathetic observation and friendly intercourse may still fill some blanks in our knowledge of their social state; how hunting or fishing—or, in rare cases, agriculture—forms and reforms men's manners and their institutions when it is the dominant interest in their lives. But what climate and economic habit have done in the past with the Redskins, the same climate and other economic habits are as surely doing with ourselves. In the struggle with Nature, as in the struggle with other men, it is the weakest who go to the wall; it is the fittest who survive. And it is our business to *know*, and to record for those who come after us, what manner of men we were when we came; whence we were drawn and how we are distributed in this new land. An Imperial Bureau of Ethnology, which shall take for its study all citizens of our State, as such, is a dream which has filled great minds in the past and may some day find realization. A Canadian Bureau is at the same time a nearer object and a scheme of more practicable size. In the course of this meeting, information and proposals for such a Bureau of Ethnology are to be laid before this section by more competent authorities than I. My task has only been to show, in a preliminary way, what our science has done in the past to stimulate political philosophy, and to determine its course and the order of its discoveries.

"Some men are borne," said Edward Grimstone just three centuries ago, "so farre in love with themselves as they esteeme nothing else, and think that whatsoever fortune hath set without the compasse of their power and government should also be banished from their knowledge. Some others, a little more carefull, who, finding themselves engaged by their birth, or abroad, to some one place, strive to understand how matters pass there, and remaine so tied to the consideration of their owne Commonweale as they affect nothing else, carrying themselves as parties of that imperfect bodie, whereas in their curiositie they should behave themselves as members of this world." It is as "members of this world," I hope, that we meet together to-day.

The following resolutions were adopted by the Committee of Recommendations of the British Association:—

I.—To recommend the Council to represent to the Dominion Government: (1) that it is essential to scientific knowledge of the early history of Canada that full and accurate records should be obtained of the physical character, geographical distribution and migrations, languages, social and political institutions, native arts, industries, and economic systems, of the aboriginal peoples of the country; (2) that scientific knowledge of the principles of native design and handicraft is an essential preliminary to any development of native industries such as has already been found practicable, especially in the United States, in Mexico, and in India; and that such knowledge has also proved to be of material assistance in the creation of national schools of design among the white population; (3) that, in the rapid development of the country, the native population is inevitably losing its separate existence and characteristics; (4) that it is, therefore, of urgent importance to initiate without delay systematic observations and records of native physical types, languages, beliefs, and customs, and to provide for the preservation of a complete collection of examples of native arts and industries in some central institution and for public guardianship of prehistoric monuments such as village sites, burial grounds, mounds, and rock carvings; (5) that the organization necessary to secure these objects, and to render the results of these inquiries accessible to students and to the public, is such as might easily be provided in connexion with the National Museum at Ottawa, which already includes many fine examples of aboriginal arts and manufactures, and might easily be made a centre for the scientific study of the physical types, languages, beliefs, and customs of the aboriginal peoples.

II.—To recommend the Council to urge the Dominion Government to include, in the schedules of the next Canadian census, full inquiries as to precise place of origin, native language, previous status and occupation, year of immigration, and such other information as may be deemed of scientific value for the study of the effects of the Canadian environment upon immigrants of European origin.

Clough's Correspondence College.

A.C.P. CLASSES.

Remarkable Successes of Clough's Students.

In August, **1908** A.C.P. Exam.

THE MOST DISTINGUISHED STUDENT,

Was Mr. R. A. WRIGHT, a Member of Clough's A.C.P. Class, who obtained Honours in Three Subjects.

35 *Victoria Road, Runcorn,*
November 10th, 1908.

Dear Mr. Clough,—Enclosed please find formal receipt for **your cheque of £10,** *kindly awarded as Prize re A.C.P. Examination. I was agreeably surprised to find myself so distinguished, and further surprised to find myself the recipient of your cheque, for I had not dreamt of such success. I received invaluable help from your Classes in the Scholarship Examination, and knew that I could rely on your Classes pulling me through first time, and I have not been disappointed. In fact, I don't know who would be, provided that they worked systematically through your Course. Thanking you, and wishing your Classes every success.*

Yours faithfully, ROBERT A. WRIGHT.

At the above Examination

ALL THE HONOURS IN ENGLISH

were gained by Clough's Students.

In Jan., **1909** A.C.P. Exam.

THE MOST DISTINGUISHED STUDENT,

Was Miss M. A. CURLING, a Member of Clough's A.C.P. Class, who obtained Honours in Three Subjects.

45 *Brunswick Square Herne Bay,*
February 6th, 1909.

Dear Mr. Clough,—I cannot tell you how pleased and surprised I was to find myself in possession of a **£10 cheque** *which I received from you this morning as the result of obtaining* **Three Honours** *at the recent A.C.P. Examination. I can only add, in expressing my thanks to you, that no student who works through your course conscientiously can fail to be quite satisfied with the results at the final examination. Will you please accept my sincerest thanks for all the pleasure which your unfailing attention and interest have afforded me.*

Yours gratefully, MARY A. CURLING.

At the above A.C.P. Examination (January, 1909)

THE ONLY STUDENT TO OBTAIN HONOURS IN SCIENCE.

was a Member of Clough's A.C.P. Class.

IMPORTANT FEATURE OF CLOUGH'S A.C.P. COURSES.

Complete Model Answers to all questions on Psychology, Physiology, and Hygiene, and the Practice of Teaching. These Answers are models in point of style, and in the amount and arrangement of matter.

☞ **New Classes are now commencing for the A.C.P. Examinations in August (1910) and December (1910).**

For Prospectus, Plan, Terms, Entry Form, and all particulars of any of **CLOUGH'S CLASSES** (P.T., PRELIMINARY CERTIFICATE, MATRICULATION, A.C.P., OXFORD AND CAMBRIDGE LOCALS, L.L.A., CERTIFICATE, DRAWING, SCIENCE, CIVIL SERVICE, &c.), write at once to THE SECRETARY,

CLOUGH'S CORRESPONDENCE COLLEGE, Temple Chambers, London, E.C.

COLLEGE OF PRECEPTORS.—TEACHERS' DIPLOMA EXAMINATION.

SUMMER, 1909.

THE Summer Examination commenced on the 30th of August, and was held in London and at the following Local Centres:—Birmingham, Bolton, Bristol, Kirkwall, Leeds, Liverpool, Manchester, Newcastle-on-Tyne, Plymouth; Dinapore, Jubbulpore, Lahore, Nagercoil, and Ootacamund (India); Harrismith and Umzinto (S. Africa); New Amsterdam (British Guiana); St. John's (Newfoundland); St. Lucia (British West Indies).

The total number of candidates examined was 326.

The following are the names of the candidates who passed in the various subjects: (*hon.*) attached to a name, or to a letter denoting a subject, indicates that the candidate obtained Honours in the subject:—

Theory and Practice of Education.

SUCCESSES AT A.C.P.

The results obtained by Mr. Smith's Students at the A.C.P. Exams. have never been approached by any other Classes, and certainly never excelled.

At the SUMMER EXAMINATION, 1907.

Mr. A. V. S. (a Student in these Classes) passed in all nine subjects at the first attempt with **Honours in English.** Only eight other Candidates passed in all subjects, and only one other gained Honours in English.

This Student was SECOND on the LIST.

At the WINTER EXAMINATION, 1907.

Mr. J. E. (a Student in these Classes) passed in all nine subjects at the first attempt with **Honours in English and History.** Only twelve other Candidates passed in all subjects, and only one other obtained Honours in two subjects.

This Student was FIRST on the LIST.

At the same Examination only three Candidates obtained Honours in English, and two of these were in Mr. Smith's Classes.

At the SUMMER EXAMINATION, 1908.

The only Candidate who obtained **Honours in German** was a Student in these Classes.

At the WINTER EXAMINATION, 1908.

Every Student in these Classes (with one exception) was successful.

THE LATEST IMPROVEMENT IN SELF-FILLING FOUNTAIN PENS

is a proved success, and to make this Pen known to every reader of *The Educational Times* the makers offer 100,000 at less than one-third the usual price, namely, Sample Pens at **5/-,** or three Pens for **10/6.**

The Safety Self-filling Pen is truly the simplest Pen made; a single slide fills the Pen. No inside parts to get out of order, no rubber to perish, does not leak or blot, and every Pen is guaranteed for two years. The Pen is fitted with a 14-carat solid gold nib, iridium pointed—fine, medium, broad, or J—and every Pen is guaranteed to work well or money will be returned.

CONFÉRENCES FRANÇAISES.

SOCIÉTÉ NATIONALE DES PROFESSEURS DE FRANÇAIS.

LES ANGLAIS DANS LE SUD-OUEST.

Par M. GUSTAVE RIGAUD.

LE samedi, 25 septembre, au College of Preceptors, M. L. Béchot a présenté à un auditoire nombreux et choisi M. Gustave Rigaud, avocat du barreau de Bergerac. C'est par une véritable bonne fortune, et grâce à l'amitié d'enfance qui unit le président et le conférencier, que la Société des Professeurs avait le privilège d'entendre un orateur aussi distingué. M. Béchot a rappelé que tout au début de sa carrière, alors qu'il n'était que stagiaire, M. Rigaud avait pris, devant la cour d'assise, la défense d'un assassin, et, bien que la cause fût difficile, avait réussi à emporter l'acquittement de son client. Ce succès explique la situation exceptionnelle que M. Rigaud, ancien bâtonnier de l'ordre, occupe aujourd'hui dans sa ville natale.

Le conférencier avait pris comme sujet "Les Anglais dans le Sud-Ouest," et plus particulièrement "Les Anglais à Bergerac." Ce n'est pas par un excès de patriotisme local qu'il avait choisi ce sujet, car Bergerac a vraiment joué un rôle des plus importants pendant la Guerre de Cent Ans. M. Rigaud a esquissé à grands traits l'importance, à cette époque, de sa ville natale, sa situation stratégique et commerciale, et ce fait qu'elle était la tête de ligne et la capitale de cette partie de l'Entre-Deux-Mers considérée comme la plus fertile devait en faire la convoitise et la proie fatale des partis ennemis. En même temps qu'il parlait de Bergerac, M. Rigaud a donné quelques détails des plus curieux sur les seigneurs des châteaux environnants. Ce n'étaient pour la plupart que de véritables chefs de bandes, tantôt à la solde du roi de France, tantôt à la solde du roi d'Angleterre.

Après ce préambule il a annoncé qu'il divisait sa conférence en trois parties très distinctes: le commencement, le milieu et la fin de la Guerre de Cent Ans. C'est à Bergerac, on peut le dire, que la Guerre de Cent Ans a commencé; et c'est dans l'arrondissement de Bergerac qu'elle a pris fin, car la bataille de Castillon, qui la termina, a été livrée en réalité sur le territoire d'une commune de l'arrondissement de Bergerac.

Il ne nous est malheureusement pas possible de donner une analyse aussi complète que nous le voudrions de cette remarquable étude historique; nous nous contenterons de dire que, en ce qui concerne la bataille et le siège de Bergerac, qui eurent lieu au mois d'août 1345, le conférencier nous a donné des récits de faits pour la plupart assez peu connus, et dont il a tiré de très curieuses conséquences. Ainsi, s'aidant des Mémoires de Froissart, il a montré que la bataille de Bergerac avait été perdue, comme celle de Crécy l'année suivante, par la folle bravoure et l'erreur stratégique des chevaliers français. Ceux-ci, ayant fait sortir des remparts de la ville et ayant poussé devant eux leurs gens de pied, ne trouvèrent rien de mieux pour arriver plus tôt à se mesurer avec les chevaliers anglais que de tuer leurs couteliers afin de faire place nette. La perte de la bataille de Bergerac, nous a-t-il dit, fut cause du siège de Bergerac. Les Anglais, ne pouvant prendre la place par terre, l'attaquèrent par la Dordogne à l'aide de bateaux en cuir bouilli, que, d'après Froissart, ils allèrent chercher à Bordeaux, et qui leur permirent, sinon d'enlever la ville, tout au moins de la menacer assez sérieusement pour que la population civile s'empressât de se rendre. Au sujet de cette reddition, le conférencier a fait une comparaison entre les renseignements que l'on trouve dans les Chroniques de Froissart sur la façon dont l'armée anglaise se comporta vis-à-vis de la ville et des habitants et ceux quelque peu opposés que l'on trouve dans les jurades de la ville de Libourne.*

Bergerac prise par les Anglais allait être reprise de nouveau par les Français vers le milieu de la Guerre de Cent Ans, en 1377. Depuis six ou sept ans l'armée française, commandée nominativement par le duc d'Anjou, mais effectivement par le connétable Bertrand Duguesclin, battait l'estrade autour de la ville; elle avait failli s'emparer de La Linde grâce à une trahison du sire de Badefols qui était gouverneur de la place pour le roi d'Angleterre et qui fut tué par le captal de Buch au moment où il allait ouvrir les portes de la ville au Français. On possède dans les jurades de Bergerac une lettre que Duguesclin écrivait aux consuls de cette ville pour les prier de lui envoyer des vivres à Mouleydier dont il faisait le siège. C'est au mois d'août 1377 que le duc d'Anjou, venant de Toulouse, accompagné par Duguesclin, vint mettre le siège devant Bergerac; la garnison anglaise de cette ville, commandée par Perducat d'Albret, appela à son secours la garnison de Bordeaux commandée par Thomas Felton. Ce dernier, apprenant que les Français étaient allés chercher du matériel de siège à La Réole, essaya de couper l'armée française en deux. La rencontre eut lieu près d'Eymet; Thomas Felton fut pris; et en présence de la défaite de l'armée anglaise il se passa à Bergerac ce qui s'était passé en 1345: la population civile se rendit. Perducat d'Albret, paraît-il, se retira avec ses soldats et alla s'enfermer dans la place forte de Montcuq.

Dans la période qui suivit, Bergerac retrouva un peu de tranquillité. La ville fut reprise par les Anglais en 1435; mais en 1450, Jean Bureau, grand-maître de l'artillerie française, vint de nouveau assiéger la ville, qui s'empressa d'ouvrir ses portes, après avoir égorgé la garnison anglaise. C'était le commencement de la fin de la domination anglaise dans le Sud-Ouest. Trois ans après, Talbot venait se faire tuer à la bataille dite de Castillon. Il commit l'imprudence de rester à cheval après avoir fait mettre pied à terre à ses chevaliers, et ne tarda pas à devenir le point de mire des canons français.

Le conférencier s'est demandé quelle avait été l'influence de l'occupation anglaise dans le Sud-Ouest. Il a avoué qu'à sa connaissance il n'en existait pas, à part la disposition de certaines villes bâties par les Anglais, telles que Libourne, La Linde et Eymet. Il a néanmoins ajouté qu'il avait été surpris, en arrivant à Londres la veille, de voir que les cochers conduisaient en prenant leur gauche. Or dans la campagne du Sud-Ouest, et malgré les règlements du roulage, les bouviers s'obstinent énergiquement à tenir leur gauche, et le conférencier s'est demandé s'il n'y aurait pas là, par hasard, une conservation des usages anglais. En terminant, le conférencier s'est dit que, si les Anglais n'avaient pas laissé de traces appréciables dans le Sud-Ouest, ils avaient du moins gardé un excellent souvenir des productions du pays, notamment du vin, dont au cours de son dernier voyage à Bordeaux un des Lord-Mayors de Londres avait fait un éloge aussi flatteur que mérité.

Des applaudissements ont salué cette péroraison. M. Rigaud a, cela va de soi, la parole facile et convaincante; sa conférence, nourrie de documents puisés aux meilleures sources, a vivement intéressé l'auditoire, et c'est à l'unanimité que des remerciements lui ont été votés.

* Froissart rapporte que l'armée victorieuse se conduisit généreusement, tandis qu'on voit dans les jurades de Libourne que le tiers de la garnison fut passée au fil de l'épée.

THE American Ambassador opened the new buildings of the Cambridge and County School for Girls and the School of Arts and Crafts. Sir George Fordham presided, and was supported by the Bishop of Ely, the High Sheriff (Mr. Newton), the Vice-Chancellor (Dr. Mason), Alderman Spalding, the Master of Trinity (Dr. Butler), the Mayor, and others. The Chairman explained that the buildings completed the construction scheme of the County Council for secondary education. The Hon. Whitelaw Reid, before declaring the buildings open, spoke of the necessity of technical and scientific education. He would, he said, be the last to undervalue the noble work done for the humanities by the ancient Universities of Cambridge and Oxford—might that never be weakened or abandoned!—but in new times there was an imperative call for new duties. This necessity had been felt both in America and in England. They had set about to meet it, and one kind of response was to be found in the new Universities which were inclined to scientific and practical education. It was indispensable, first of all, that the foundation should be well laid by thorough mastery of reading, writing, and arithmetic; but, if a lad was really to make his way among educated rivals, there must be a broader foundation still, and he needed just as much time as could be spared in the secondary school to strengthen and broaden his mind before specializing in the arts and crafts. In fact, he needed to learn everything about something and something about everything. Having referred to the provision for industrial education in America and the favour with which it was viewed by the trade unions there, Mr. Whitelaw Reid expressed his sincere belief that these new departures in the way of more scientific and practical education did promise to turn out in both countries a generation thoroughly trained for the particular work it had to do and able in that field to keep its country abreast of the foremost. He hoped it would also so enlarge the mental horizon of its people that they might realize how infinitely more there was in life than getting a living.

J. & J. PATON,

Educational Agents,

143 CANNON STREET, LONDON, E.C.

(Telephone 5053 Central.)

PATON'S LIST OF SCHOOLS AND TUTORS.

1176 pages. Red cloth, post free, 2s. 6d.

THIRTEENTH EDITION NOW BEING PREPARED FOR PRESS.

Specimen Copy and particulars of circulation and value will be sent to Head Masters free of charge on application.

The Queen.—"This work has now for many years occupied a foremost position amongst books of its kind."

Standard.—"A useful compilation that has fought its way to the front as an accurate finger-post to parents in their choice of schools."

Journal of Education.—"This annual is so well known that all we need say of it is that this is the twelfth year of its publication and that it increases each year in bulk till it now extends to over 1,100 pages."

Yorkshire Post.—"Contains all the features which in the past have established it as a safe guide to schools."

Scotsman.—"The work is too well known to need either description or recommendation."

Dundee Advertiser.—"Easily maintains the place it has won as an excellent guide."

Stamford Mercury.—"In its unique circulation, as in other respects, it maintains its foremost position amongst books of its kind."

South Wales Daily News.—"Maintains its foremost position among books of its kind."

Guardian.—"An important and useful publication."

Sheffield Daily Telegraph.—"An extremely useful reference book."

Western Daily Press.—"Ever since its first publication, it has been looked upon as the standard of its subject."

The Lady.—"With 'Paton's List,' increasing bulk keeps time with increasing popularity."

Bombay Gazette.—"It is a most useful publication, particularly for parents away from scholastic centres."

Liverpool Courier.—"Parents who are puzzled where to educate their children would do well to consult 'Paton's List.'"

Westminster Gazette.—"Parents who consult the book should see at a glance the kind of school they are in search of."

Western Morning News.—"The parent who cannot find a school to suit his offspring, of either sex, in these profusely illustrated pages must be hard to please."

Aberdeen Journal.—"The twelfth edition is fully up to the high standard of the work and the reputation it has acquired."

BLACKIE'S LIST.

A LATIN COURSE.

By E. H. SCOTT, B.A., and FRANK JONES, B.A. First Course, cloth, **1s. 6d.** Second Course, cloth, Illustrated, **2s. 6d.**

The HEAD MASTER of an important Grammar School writes:—
"I am more than delighted with Scott and Jones's 'Latin Course.' It is one of the most craftsmanlike books that I have ever handled. My raw youngsters now using it may be said to LIKE their Latin Lessons."

A FIRST LATIN GRAMMAR.

By E. H. SCOTT, B.A., late Head Master of Boys' Secondary School, Barberton, Transvaal, and FRANK JONES, B.A., Assistant Master, King Edward's School, Aston, Birmingham. Crown 8vo, cloth, **2s.**

Great care has been given to the arrangement and typographical display of the matter, in order to secure the utmost clearness. Thus, use is made throughout of a synoptical arrangement of parallel columns which shows the various declensions and conjugations side by side, bringing out their differences and resemblances.

A special feature is the number of examples given. These are, for the most part, taken from the first and Second Courses, so that the student will have met the examples before in a connected passage.

BLACKIE'S LONGER FRENCH TEXTS FROM MODERN AUTHORS.

Printed in large type. Cloth limp, **8d.** each. With brief Notes and Questionnaire, Memory List of Useful Phrases, and Vocabulary.

Féval—Le Docteur Bousseau. **Laboulaye—Yvon et Finette.**
Deslys—Le Zouave and **La Montre de Certrude.** **About—Le Turco.**
Moreau—Contes a ma Sœur (Jeanne d'Arc, La Souris Blanche, Les Petits Souliers). **About—Le Roi des Montagnes.**
Chateaubriand—Les Aventures du Dernier Abencérage.
Dumas—Le Bourreau de Charles 1er (from "Vingt Ans Après").
Féval—Anne des Îles. **Baudelaire—Le Scarabée d'Or.**

CURRENT EVENTS.

Fixtures.

AT the Meeting of the members of the College of Preceptors on Wednesday, November 17, Prof. J. W. Adamson will read a paper on the question: "Of what use to the Practical Teacher is the Historical Study of Education?"

* * *

PROF. ADAMS will continue his course on "Convention, Imitation, Tradition, and Suggestion in Education" at the London Day Training College, Southampton Row, on November 6, 13, 20, and 27 at 11.30 a.m. Open without fee to teachers. Admission cards from Prof. Adams. Applicants should state, in full, name and address, and name and address of their schools.

* * *

M. L'ABBÉ MARGUERÉ will address the Société Nationale des Professeurs de Français en Angleterre on "Manning et la Democratie" at the College of Preceptors on November 27, at 4 p.m.

* * *

THE Annual Meetings of the Incorporated Association of Assistant Masters in Secondary Schools will be held on January 5–7—probably at the City of London School. A special subject of discussion will be a Report on the Conditions of Service of Secondary Teachers in Foreign Countries. The annual dinner will be held at Pagani's Restaurant, Great Portland Street, W., on January 6, at 7.30 p.m.

* * *

THE Child Study Society, London (90 Buckingham Palace Road, S.W.), will be addressed by W. C. Sullivan, M.D., Medical Officer of Holloway Prison, on "The Child Criminal," November 18, 8 p.m.; and by Miss M. Frere and Miss C. Grant on "Children's Care Committees," November 25, 8 p.m.

* * *

THE commencement of the course of ten weekly lectures on "Modern Educational Psychology" arranged to be given by Mr. William Brown, M.A., at King's College, has been postponed till January 14, at 8 p.m.

* * *

MR. T. SHARPER KNOWLSON will continue his course of ten lectures on "Journalism (Free Lance)" at the Central Y.M.C.A. (346 Strand, W.C.), on November 5, 12, 19, and 26, at 7.30 p.m.

* * *

MR. JOHN WEATHERS, Middlesex County Instructor in Horticulture, will continue his course on "School, Cottage, and Allotment Gardening" for School Teachers, at the Hall, Ealing Green, on Saturdays, at 11 a.m.

* * *

PROF. W. P. KER, LL.D., University College, London, will deliver the Leslie Stephen Lecture in the Senate House at Cambridge, on November 11, at 5 p.m.

* * *

THE Creighton Memorial Lecture will be delivered by Prof. J. B. Bury, of Cambridge University, at University

Digitized by Google

College, London, on November 12, at 5 p.m. Subject: "The Constitution of the later Roman Empire."

* * *

THE Conference on Educational Reform proposed to be held this month under the auspices of the National Federation of Ratepayers is postponed. "The education question from the Federation's point of view has assumed a new phase by the recent pronouncement of the organ of the National Union of Teachers endorsing the educational policy of the Trade Union Congress."

Honours.

THE University of Oxford has conferred the honorary degree of D.C.L. upon his Excellency Osman Hamdy Bey, Director-General of the Imperial Ottoman Museum of Antiquities, Constantinople.

* * *

THE title of Professor Emeritus has been conferred upon Dr. A. V. Dicey, on his resignation of the Vinerian Professorship of English Law in the University of Oxford after a tenure of nearly twenty-seven years.

* * *

DR. WILLIAM SANDAY, Lady Margaret Professor of Divinity, Oxford, has had his portrait presented to him by a number of friends. The artist is Mr. L. C. Taylor.

* * *

THE REV. W. H. HUTTON, M.A., Fellow of St. John's College, Oxford, has been presented with his portrait, which was subscribed for by two hundred members of the College that had been taught by him during the twenty-five years when he was Modern History Lecturer and Tutor. The artist is Mr. G. F. Kelly.

* * *

AMONG the scholars that received the honorary degree of Ph.D. on the occasion of the recent jubilee of the University of Leipzig was Dr. A. W. Ward, Master of Peterhouse.

* * *

THE University of Manchester has conferred the honorary degree of LL.D. upon the American Ambassador; Sir Robert Stout, Chancellor of the University of New Zealand; Sir Alfred C. Lyall; and Dr. Otto Wallach, Professor of Organic Chemistry in the University of Gottenberg.

* * *

THE University of Munich has conferred the honorary degree of Ph.D. upon Mr. F. W. Thomas, M.A., Librarian of the India Office, and Professor of Tibetan in the University of London, University College.

* * *

THE Czech University of Prague has conferred the honorary degree of Doctor of Philosophy upon a number of foreign professors, including W. R. Morfill, Professor of Slavonic Languages at Oxford; John Edward Marr, F.R.S., University Lecturer in Geology, Cambridge, and ex-President of the Geological Society; Sir Archibald Geikie, Secretary to the Royal Society; H. Gibson, Professor of Chemistry and Director of the Chemical Institute at Manchester University; Francis Darwin, Cambridge; John Burnet, Professor of Greek, St. Andrews; and Dr. Theodore William Richards, Professor of Chemistry and Director of the Chemical Institute at Harvard University.

* * *

THE Churton-Collins Memorial Fund is to be devoted to establishing prizes for literature in connexion with the extension work of Oxford, Cambridge, and London Universities, Birmingham University being left to its own choice of disposal of its share; and to placing a portrait of the late Professor in the Bodleian Library and a brass tablet in Balliol College Chapel or in Oulton Church. Complete sets of the Professor's works will also be distributed to certain University and other libraries.

* * *

AT the inauguration of Dr. A. L. Lowell as President of Harvard University (October 6), the honorary degree of Doctor of Letters was conferred upon the Right Hon. James Bryce, the British Ambassador to the United States, and the following representatives of British Universities:—Prof. W. A. Herdman, F.R.S., Dr. W. N. Shaw, F.R.S., Dr. G. A. Gibson, Prof. J. Biles, and Mr. J. Willis Clark.

* * *

A MEMORIAL window has been placed in Bute Hall, University of Glasgow, to commemorate the late Principal, the Rev. Dr. Story. It was designed and executed by Mr. Douglas Strachan, Edinburgh.

Endowments and Benefactions.

DR. G. B. LONGSTAFF, of New College, Oxford, has given £2,400 for an additional endowment of the Hope Department of Zoology in Oxford University.

* * *

CLIFTON HILL HOUSE, formerly the residence of Dr. Symonds, has been purchased as a hostel for Bristol University. Two ladies have subscribed £2,000 towards the cost of the undertaking.

* * *

THE Committee appointed by the Chancellor of the Exchequer to consider the apportionment of the £15,000 additional grants which he proposes to give to the University of Wales and its three constituent colleges have recommended the following allocation — viz., £1,500 per annum to the University for Fellowship in Arts and Sciences; £1,500 a year to the Cardiff Medical School; £4,000 each to the colleges at Bangor, Aberystwyth, and Cardiff to provide increased salaries to the staffs, further equipment for libraries and museums, and provision for tutorial assistance; and £500 each towards establishing a pension scheme.

* * *

MISS TALBOT, Margam Castle, has given £1,000 towards the building fund of Cardiff University College.

* * *

THE University of Glasgow has received, from Miss Pollock and Mrs. Gilchrist, sisters of the late Dr. Robert Pollock, Laurieston House, Pollokshields, an intimation that they intend, in accordance with their brother's wishes, to bequeath to the University £10,000 for the foundation of a Lectureship in Materia Medica for the encouragement of research.

* * *

DR. WILLIAM DEY, for many years a member of the University Court, Aberdeen, and his brothers have given £2,500 to the University to found a scholarship in Education in memory of their father.

* * *

SIR WILLIAM OGILVY DALGLEISH, Bart., of Errol Park, has made a second gift of £5,000 towards the erection and equipment of the new Technical College, Dundee; and he has also contributed £1,000 towards the purchase of the old Technical Institute buildings.

* * *

AN anonymous donor has given £6,000 towards the purchase of the Scots College, Paris, by the Franco-Scottish Society.

* * *

MR. CARNEGIE has given £20,000 to the general funds of the McGill University, Montreal. The gift was originally

Digitized by Google

made on condition that £100,000 should be raised from other sources, and the condition has now been satisfied, largely through the generosity of Lord Strathcona.

Scholarships and Prizes.

At Oxford University scholarships and exhibitions will be offered for competition as follows: *Classics*—December 7: Balliol; Exeter, Oriel, Brasenose, and Christ Church; Queen's, St. John's, Hertford, and Keble; Lincoln. December 14: University, New College, and Corpus; Merton; Trinity and Wadham. January 11: Jesus. March 15: Magdalen. *Mathematics* — December 7: Balliol, Queen's, Corpus, and St. John's; Merton, Exeter, New College, and Hertford; Hertford. January 11: Jesus. March 1: Magdalen, Brasenose, Christ Church, and Worcester. *Natural Science*—December 7: Balliol, Christ Church, and Trinity; Merton, Exeter, New College, and Hertford. December 14: University, Lincoln, Magdalen, and St. John's. January 11: Jesus. *History*—December 7: Balliol and New College; Queen's, St. John's, Hertford, and Keble; Lincoln. December 14: Magdalen and Corpus; Trinity. January 11: Jesus. March 15: Merton and Brasenose.

* * *

The next combined examination for 67 entrance scholarships and various exhibitions at Pembroke, Gonville and Caius, King's, Jesus, Christ's, St. John's, and Emmanuel Colleges, Cambridge, will be held on Tuesday, December 7, and following days. Forms of application (to be sent in by November 30) and further information may be obtained as follows:—Pembroke College, Mr. W. S. Hadley; Gonville and Caius, the Master; King's, Mr. W. H. Macaulay; Jesus, Mr. A. Gray; Christ's, Rev. J. W. Cartmell; St. John's, the Master; Emmanuel, the Master.

* * *

A combined examination of non-resident candidates for open scholarships, exhibitions, &c., will be held at Trinity College, Clare College, Trinity Hall, Peterhouse, and Sidney Sussex College, Cambridge, on Tuesday, December 7, and following days. A revised notice has been issued with regard to the emoluments to be offered at Trinity. They will comprise about twelve entrance scholarships of £80, about ten exhibitions of £40, and some sub-sizarships. Sizarships as such will no longer be offered. Forms of application may be obtained from Dr. W. M. Fletcher, Mr. W. C. D. Whetham, Rev. E. W. Barnes, and Mr. R. V. Lawrence, the tutors of Trinity College; Mr. W. L. Mollison, Clare; Mr. G. B. Shirres, Trinity Hall; Mr. H. J. Edwards, Peterhouse; and the Master of Sidney. Entries should be made by November 13.

* * *

The *Western Mail* (Cardiff) offers to Welsh students a Music Scholarship of £50 a year for three years.

* * *

Merchant Taylors School, London, offers 5 entrance scholarships for boys under fourteen. Competitive examination begins November 30.

Appointments and Vacancies.

The Rev. Claude H. W. Johns, M.A., Fellow of Jesus College, and Lecturer in Assyriology at Queen's College, has been elected Master of St. Catharine's College, Cambridge.

* * *

Mr. Henry Spenser Wilkinson, M.A. Oxon. and Lond., barrister-at-law, principal military writer in the *Morning Post* since 1895, and voluminous author on military history and policy, has been appointed to the Chichele Professorship of Military History at Oxford.

The Rev. George Adam Smith, D.D., LL.D., Professor of Old Testament Language, Literature, and Theology at the United Free Church College, Glasgow, has been appointed Principal of the University of Aberdeen.

* * *

At Manchester University, Mr. B. M. N. Perkins, B.A., of Gonville and Caius College, Cambridge, has been appointed Senior Assistant Lecturer in French Language and Literature; and Mr. C. P. Lapage, M.D., Lecturer in Observation of Children and in School Hygiene.

* * *

In the University of Birmingham, Mr. Jordan Lloyd, F.R.C.S., M.D., &c., has been appointed Professor of Surgery; Mr. Peter Thompson, M.B., Ch.B., Professor of Anatomy; Mr. F. W. Gamble, D.Sc., F.R.S., Professor of Zoology; Miss J. S. Bayliss, D.Sc., Lecturer in Botany; Mr. H. B. Keene, B.Sc., and Mr. F. W. Aston, Demonstrators of Physics; Mr. T. F. Wall, M.Sc., Assistant Lecturer in Electrical Engineering; and Mr. C. S. Fox, B.Sc., Demonstrator of Coal Mining.

* * *

At University College, Aberystwyth, M. J. L. André Barbier, L. ès L., Lecturer in French, Manchester University, has been appointed Professor of French Language and Literature; Mr. Alfred E. Codd, B.A., Assistant Lecturer in Latin, in place of Mr. E. D. T. Jenkins, resigned; Dr. G. A. Schott, Head of the Department of Applied Mathematics; and Mr. J. S. G. Thomas, B.Sc., Lecturer and Demonstrator in Physics, in place of Dr. Schott.

* * *

Applications for the Professorship of Physics in Canterbury College, Christchurch, N.Z., should be lodged with the High Commissioner for New Zealand, 13 Victoria Street, London, S.W., by November 17. £650, without fees.

* * *

Mr. James M. Crofts, M.A. Cantab., B.Sc. Lond., lately Head Master of the Johannesburg College, has been appointed by the Joint Matriculation Board Organizing Secretary for the Inspection and Examination of Schools.

* * *

Mr. J. Finnigan, B.A., B.Sc., has been appointed Secretary to the Senate of Queen's University, Belfast.

* * *

Miss Alice Parkin has been appointed Organizing Secretary for the courses in Home Science and Economics at King's College for Women, Kensington.

* * *

The Rev. David Smith, D.D., has been appointed Professor of Theology in Magee College, Londonderry.

* * *

Mr. M. A. Gerothwohl, Ph.D., D.Litt., Professor of Romance Languages in Dublin University, has been appointed Lecturer in French in the University of Bristol.

* * *

Mr. A. P. I. Cotterell, M.I.C.E., has been appointed Lecturer in Sanitary Engineering in the University of Bristol.

* * *

Mr. A. H. Dainton, B.A., Scholar of Jesus College, Oxford, has been appointed Lecturer in History at St. David's College, Lampeter.

* * *

Mr. James Johnston, M.A. Glas., has been appointed Lecturer in Philosophy at Westfield College, University of London.

Digitized by Google

Mr. E. L. Milner-Barry, M.A. Cantab., has been appointed Lecturer in German, and Mr. E. H. Harper, B.A., T.C.D., Assistant Lecturer in Mathematics, at University College, Bangor.

* * *

The Rev. S. Nowell Rostrom, M.A., St. John's College, Cambridge, has been appointed Principal, and Mr. J. Hartley Wadsworth, M.A., Jesus College, Oxford, Classical Tutor, of St. John's Hall, Durham.

* * *

The Rev. C. Chapman, M.A. Lond., LL.D., Principal of Western College, Bristol, since 1876, intends to retire in June next.

* * *

At the Heriot-Watt College, Edinburgh, Mr. A. R. Horne, B.Sc. Lond., has been appointed Assistant Professor of Engineering in place of Mr. W. Campbell Houston, resigned; Mr. John T. Wright, M.I.M.E., Lecturer on Prime Movers, in place of Mr. Horne; Mr. W. G. Duncan, M.I.M.E., Assistant in Engineering, in place of Mr. Wright; Mr. H. Curtis, Lecturer on Banking, in place of Mr. Moscrip; Mr. Robert Leslie, Lecturer in Economic Science, in place of Mr. A. B. Clark; Mr. A. D. Robertson, teacher of Lithography, in place of Mr. Flatt; and Mr. Matthew Shirland, Mus. Bac., F.R.C.O., Lecturer on the Theory of Music, in place of Mr. Grieve.

* * *

Mr. D. J. Taylor has been appointed Lecturer in Pure Mathematics, and Mr. A. B. Jones, B.A., B.Sc., Ph.D., Assistant Lecturer in the Day Training Department, at University College, Cardiff.

* * *

The Rev. Thomas F. Hobson, M.A. Oxon., Head Master of King's School, Rochester, has been appointed to the Vicarage of Leatherhead.

* * *

Mr. J. Buckley, Head Master, P.-T. Centre, Wigan, has been appointed Head Master of the Secondary School, Woodhouse.

* * *

Mr. James McCarter, B.A. Lond., second master, Church Institute School, Bolton, has been appointed Head Master of Farnworth Grammar School.

* * *

Mr. John Rounsefell, B.A., B.Sc. Lond., assistant master, Hoe Grammar School, Plymouth, has been appointed Head Master of Shebbear College.

* * *

Mr. Charles Roland Skrimshire, M.A. Oxon., assistant master, Bradford Grammar School, has been appointed Head Master of the English High School, Constantinople.

Literary Items.

Messrs. Dent announce a new series of some of the greater and some of the less known works of the Renaissance period—"The Renaissance Library"—under the editorship of Mr. Edward Hutton. The first volume will be Marlowe's "Hero and Leander," from the edition of 1584 in the British Museum. A new fount of type has been specially designed for the series after a Venetian type of the fifteenth century.

* * *

Messrs. A. & C. Black will shortly publish "Natural and Social Morals," by Prof. Carveth Read, M.A., of University College, London—"an attempt to explain the principles of morality in as close a relation as possible to human life."

The Oxford University Press will publish immediately a "History of Secondary Education in Scotland," by Mr. John Strong, Rector of Montrose Academy, who has had access to documents and facts that throw new light on the important parts of the period covered.

* * *

The Rev. J. O. Bevan, M.A., F.G.S., &c., Rector of Chillenden, has in the press a new volume—"The Birth and Growth of Toleration, and other Essays." It will be published presently by Messrs. George Allen & Sons.

* * *

Messrs. Duckworth announce a translation of Prof. Boutroux's work on "Science and Religion in Contemporary Philosophy," by Mr. Jonathan Nield, whose "Guide to Historical Novels" is well known.

* * *

Messrs. Jarrold announce a new "Life of John Milton," by Mr. Grinton Berry, M.A., in their "Men of Fame" series—a series designed to meet the requirements of secondary schools, young students, reading circles, &c., at a popular price.

* * *

The souvenir of the Conference of the National Union of Teachers to be held next year at Plymouth is to be published by Messrs. Jack. The volume will be entitled "The Book of Plymouth," and will contain much interesting information, with plenty of good illustrations.

* * *

Prof. Foster Watson contributes to the October number of the *Nineteenth Century* a very interesting paper entitled "A Suggested Source of Milton's 'Tractate of Education.'" The "suggested source" is Vives, whose views on the education of girls and of boys Prof. Foster Watson recently presented to our readers.

* * *

A new shilling monthly, *The Local Government Review* (Effingham House, Arundel Street, Strand, W.C.), appears this month. A strong staff will handle the great social problems with which local government is directly concerned. Education will be a prominent topic.

General.

The Judicial Committee of the Irish Privy Council dismissed the petitions presented under the Irish Universities Act, 1908, by the Rev. John MacDermott, the Rev. John J. Magill, Lord Londonderry, and others, praying that the statutes of the Queen's University, Belfast, so far as they provide that Scholastic Philosophy shall be one of the subjects of the Faculty of Arts, be disallowed.

* * *

Natal is erecting a University at Pietermaritzburg, which will start with five Professors—for Classics, English and Philosophy or History, Modern Languages, Mathematics, and Physics and Chemistry. It is interesting to note that the Professor of Modern Languages must be conversant with Dutch.

* * *

The St. George's Classes, Edinburgh, which have very successfully prepared pupils by correspondence for the St. Andrews L.L.A. for more than thirty years, have established themselves also at Maltravers House, Arundel Street, Strand.

* * *

Dr. J. C. O'Connor (17 St. Stephen's Square, Bayswater, W.) offers to deliver a free lecture on Esperanto before "any organization, body, society, or class in which teachers are interested," within a radius of thirty miles from Charing Cross, at any hour or on any day except Sunday.

A lakh of dollars (£8,750) has been collected in the Canton district, and forwarded to the Governor of Hong-Kong, as a contribution towards the endowment fund of the Hong-Kong University.

THE RELATIONS BETWEEN HEADS OF SCHOOLS AND PARENTS.

At the Evening Meeting of the members of the College of Preceptors, on Wednesday, October 20, Prof. Adams in the chair, Mr. W. Campbell Brown, M.A., F.C.P., introduced a discussion on the above subject. He said:—

First of all, let us consider for a moment what is the real position of the school—throughout I shall speak of the secondary *day* school—in education. It is almost axiomatic that the home and the family are the central and starting-point of all education, and, under proper conditions, the influence of the home should be throughout the pupillary stage the main and determining factor in all education. Presumably, in a primitive state of society the whole duties of the education of the young would fall upon the parent, but with the specialization of duties, consequent upon social and national development, some of the duties of the parent to his offspring must be handed over to others, able to give the whole of their time to such work. This, of course, is the main point of view from which the parent regards the school. He regards the school as a means of providing for his son that portion of his son's training and education which he himself cannot give, through lack of either skill or opportunity. Now, every parent realizes, more or less dimly, that the home and the family have a share in the care and education of the young. The stress the parent places upon this home training varies enormously, as do also the results which he expects to get from it. In any case—and this forms the crux of the whole situation—each and every parent expects the school to provide such an education as will complete the training of his children, and, in many cases, parents even expect, or, at any rate, hope that the school experience of the child will be such as not only to fill up all the individual gaps in his home training, but even to cure the results of faulty management. The parent regards the school from—if, for want of a better word, I may call it so—an individualistic standpoint. The school must provide for each and every individual just what he needs. On the other hand, this is not the point of view of the State for the children of which the schools are provided. The State regards her schools as institutes, provided either by herself or by others, to ensure the spread and growth of national *Kultur*, and in the effort to ensure progress in each generation a definite standard is fixed, to which the schools must endeavour, by hook or by crook, to bring all their pupils before they pass altogether from the school influence. That this standard should automatically rise from generation to generation is in the nature of things. It therefore follows that this view of the aims of a school may be, and indeed often is, diametrically opposed to the individualistic one of the parent as mentioned above.

In between these opposing forces stands—or rather should stand—the head master, and, having regard to the fact that he has to consider still other, as it were, secondary claims of no mean importance, his position is not an easy one if taken up seriously and conscientiously. I use the word "conscientiously" advisedly, for it is possible for him to shirk the whole of his responsibilities by saying, as it were, to each individual: "My dear fellow, I'm sorry for you, of course, but it is the rule. You must go through the mill the same as everybody else"—undoubtedly a valuable maxim if applied judiciously, but a wicked one if applied in anything like a wholesale manner. We may borrow a term from the manufacturing trade and speak of this system as an attempt to standardize the children—with, however, this great difference: that, whereas in the manufactures there is no limit to the amount of standardization that may take place, given a large enough output, there is in education a very early limit imposed by the idiosyncrasies of the individual. Such standardization is at its maximum at present in our elementary schools; the larger the classes and the more rigidly codes are carried out, the more standardized is the work.

On the other hand, there is great mental and moral value to the individual in being compelled, to *some* extent, to conform to a given standard. It is a disciplinary training necessary for the child's future life. School has often been called a world in miniature, and in this respect it certainly is so, training the child, as it does, to live *with* others and for others. It is at school that he learns to balance the claims of the individual with the more or less opposing demands of his social surroundings. To put it in short, he should learn to work and play to the utmost of his ability, but in all to "play the game."

Fortunately for the teacher, all parents realize this more or less, and are aware that every child that comes into a school has to go "through the mill" to some extent; for, however much his teachers may consider him specially as an individual, his fellow-companions certainly will not do so. With a natural inexperience due to youth, they will measure the new-comer by a most rigid standard, long since become traditional, and one to which he soon learns the advisability of conforming.

The nature and character of this social standard to which the child is made by his classmates to conform is all that we include under that vague and ill defined term, "tone." To the head master's position in regard to this tone I shall have occasion to refer again. Suffice it now to say that it is a matter over which he can, if he cares to set about it in the right way, exert a very great influence.

Let us now turn to the practical side of this question and discover how the head master is able to steer between the Scylla and Charybdis of the home and school demands. The parent, we have seen, realizes the right of the school to insist on a measure of uniformity, and the teacher sees the absolute necessity, let alone justice, of variety. Who shall hold the balance between them? Personally, I think this is the chief duty of the head master, though I am quite aware that in different countries and in different schools this work also falls sometimes on the individual teachers, sometimes on special teachers each responsible for a certain number of pupils.

If the school is not too large, there is no doubt that the head master should be wholly and solely responsible for the school to the parent. I trust that, in these days of Boards of Education and Local Education Authorities with their codes and schemes, I shall be pardoned for stating so plainly that there *is* a responsibility on the part of the school to the *individual* parent, implying, as it does, that a parent has a right to state his wishes with regard to his children, with some hope of seeing those wishes carried out. Personally, I think that it is only right that a parent should have ideas as to the education of his children, and it is the duty of the head master to listen to them and either to carry them out whenever desirable and possible, or to explain carefully to the parent why they are not expedient. I may have laboured this point of the justice of the claim of the parent to be heard, but I have done so because latterly, in my experience amongst men entrusted with the management and control of local and general educational matters, I have noticed a strong tendency to ignore the parent. This state of affairs undoubtedly arises from the fact that public management of educational affairs has commenced from below with the education of the illiterate classes, and I fear it will be many years before the conduct of secondary education is freed altogether from this undesirable bureaucratic interference. In the meantime, the head master of the present day finds himself once more holding the balance, this time between his pupils and their best interests on the one hand and the still more or less stereotyped demands of the authorities on the other.

I should like, before passing on, to give an instance in point. The head master of a modern school about to undergo a full inspection had, of course, to send up his scheme of work. In this scheme space was left for two fourth forms each with successive grades of work, the classification being mostly based on the mathematics. The boys in these classes had been mostly admitted together at a much lower stage, and at the beginning the difference of standard between the two classes scarcely represented more than a term's work. Now all teachers are

Digitized by Google

aware of the varying capacities not only of individual pupils, but of classes as a whole, and it happened that the lower division was by far the smarter class. The head master not only permitted, but encouraged the teacher to pull this class up to the standard of the upper division in order that, when the change to the fifth form should take place, the boys could be re-sorted into upper and lower divisions of that form. This state of affairs is undoubtedly open to criticism from a high pedagogic standpoint, and you will perhaps not be surprised to hear that it was severely criticized by an inspector. But on what grounds? Namely, that it was so undesirable to depart from the scheme of work laid down for the class—that, if each year's scheme of work had been as rigidly kept to as it ought to have been, it would not have been possible.

There is no doubt that in actual practice the head master's responsibilities as between parent and school are very complex, and he will need to exercise the utmost tact and discretion in all that he says and does. In the first place there should be absolute confidence between head master and parent. This would imply at the outset a full and weekly report from the school to the home. The report should be of such a nature as to give the parent a full and clear idea of the boy's work and behaviour for the week, without causing confusion by the inclusion of too many details. Some system of signature will ensure that these reports are seen by the parent, and an inspection of the report and countersigning by the head master each week will serve a manifold purpose—first, of keeping him in touch with every one of his pupils and of letting them feel that their head is personally interested in them, also of indicating to the parent the responsibility of the head master for each individual pupil under his care.

With some such system it is possible for the head master to communicate at intervals, weekly if necessary, with the home; and, if the pupils find that the home and the school are, as a result, invariably pulling in the same direction, a high standard of discipline and work can be readily maintained amongst them. I have said, *if* the pupils find the home and school working in harmony. Of course, cases will and do arise in which the home either does not bother to support the school, or even—but fortunately much more seldom—acts consciously or unconsciously in a manner subversive of school discipline. Though the latter is undoubtedly the greater evil, I really think the former is by far the more difficult to cope with. I am thinking at the moment of those parents—unfortunately there are a few about—who send a boy to school and consider that, for the time being, as far as his education is concerned, they are freed from all responsibility, and in consequence need take no further interest in the boy's doings. Under these circumstances, the boy's work and behaviour are seldom good, and the head master finds himself compelled, either to take the whole responsibility and ignore the very existence of the parents, or—and this is undoubtedly the better course if it can be carried to a successful issue—by some action force the parents to a realization of their responsibility.

I say most emphatically that the latter course is the better one, if only because it may have wider reaching results, long after the school years are past. Exactly how this stimulation of the home is to take place will depend very much on circumstances, and once more much tact and discretion must be exercised. The slightest false step will bring irretrievable disaster. The character of the boy himself, the character and standing of the parents and the circumstances of the family, such as the existence of elder or younger brothers and sisters—these and many other points must be considered before definite action is taken.

I can recall an instance of how on one occasion I brought a pupil's indifferent parents to book. Remarks in the weekly reports had obviously met with little or no support, nor even a strongly worded remark on the report at the end of the previous term to the effect that the boy's education could not be continued unless marked improvement were shown. In a desperate case like this, the head master is in the horrible position of deciding between the individual and the school. Unless an alteration, and that a speedy one, took place, school tone and discipline would suffer, and it almost seemed as if the boy would have to be dismissed. There was not the slightest doubt in my mind that the fault was not really the boy's, and though actual dismissal might give him such a lesson as to cure him, on the other hand it might, and more probably would—considering the home—ruin him altogether. Now I may add, for the more complete understanding of this case, that it has been my belief that a thrashing at school should not be lightly given, and I have always let it be clearly understood that no boy in the school should ever be thrashed twice. The incurring of the penalty a second time would involve instant dismissal. Now, the boy in question had already had his one thrashing, and therefore there seemed no other course open but to dismiss him, and this I was loath to do for the reason already mentioned. One day the boy himself brought the matter to a head, and I sent him off home at once with a note to his father to the effect that he was not to return to school unless the father could send me a written undertaking that for the rest of the time his son was at school he would see that his conduct and work were exemplary. I am glad to say they have been so.

This would not be successful in every case, and sometimes it seems desirable to suggest that the boy needs the regular and invariable discipline of a boarding school. It may be urged against this course that it is a confession of failure on the part of the day-school head master. Such a contention is made in absolute ignorance of the difference in circumstances between the two classes of schools and of the much greater limitation to the scope of action of the day school. The want of success with the given boy may be entirely due to the home, and it rests with the head master, if unable to arouse the parents to a sense of their duty, either to endeavour to put himself in the position of a boarding-school master and act altogether *in loco parentis*, or to suggest, as delicately as the case may demand, the placing of the boy in a good boarding school. Now, experience has shown me that in cases such as these the head master of a day school, if unable to secure some measure of co-operation on the part of the parent in stimulating an indifferent boy, will find that the mere fact of the existence of the indifferent home makes an almost insuperable barrier to real progress. Fortunately—and here I am speaking, I am glad to say, from personal experience—such sad cases are rare, and when they do occur are, more often than not, due to some deep-seated trouble in the home.

We thus see that a cordial relationship between head master and parent is of the greatest value in ensuring an even training and stimulus to each individual in the school, and it is obvious that a head master, as an expert in the management and control of children—other than his own, I admit—can all the more on that account give much unbiased advice to a parent as to his children.

It is only natural that one should dwell on the value to both the pupil and the parent of a cordial relationship between parent and head master; but there is another side to the question, and one worthy of the greatest attention: the great value it has to the head master both personally and officially. It aids him, first of all, by justifying or correcting the impressions he has formed of his pupil. If he finds them more frequently justified, his self-reliance and powers are strengthened, and in those cases where he is led to modify his opinions his experience is greatly increased. Not only the pupil himself, but the school as a whole, will profit accordingly.

Through the parents, a head master may discover any one moment, by judicious feelers in one direction or another, the general effect produced by any given course of action which he has taken and of which he is anxious to test the effect. Perhaps the most awkward, and withal almost the most important position in which the head master stands is between the pupil and parent on the one hand and his staff on the other. The utmost discernment and tact are required at times—the former to get an absolutely just view of the facts that may be brought to his notice, the latter to adjust the claims fairly and without undue friction. The head must, of course, support his staff, justifying them wherever possible; but he must not, in his efforts to speak in their favour, make absurd or trifling excuses where he knows they have acted wrongly. Far better to acknowledge a mistake than to excuse it. In either event the head master then has the task of seeing that the error is rectified without feeling of annoyance or friction on the part of the master. I need not dwell further on this point. It is all wrapped up in one word—tact: tact to select the wheat from the chaff in what he hears from the parents, tact to deal with each matter in the one and only way possible.

I should like to refer to a system which I believe has been tried in German schools, of holding meetings of parents with the staff, either for the purpose of hearing a set address upon school matters, followed by general discussion and conversation, or for mere informal talk and discussion between staff and parents. I have, unfortunately, not been able to get any information as to where these have been tried nor how far they have been success-

Digitized by Google

ful, but I am disposed to think that such formal gatherings would not be likely to be successful in this country. Probably far better results would and do accrue from the unofficial meeting of parents and staff upon the playing fields and at the social gatherings that ought to be a feature of every day school.

Up to the present I have dealt with the question as if it had been assumed that the only interest common to the parent and the head master is the welfare of the individual pupils concerned. There is no greater mistake than to make such an assumption. However much the head master may wish to individualize in his treatment of his pupils, there are certain clearly defined limits which he knows he must not pass. The parents of his pupils, as a whole, must be made to realize that, while he is not only willing, but even anxious, to give full credit to differences of character, a certain definite standard must be set up and maintained to which all his pupils must at least attain. The more local the character of the school, the easier is it for the head master thus to create the tone and tradition of a new school or to raise that of one in which it may be partly lacking, and the cause of its being easier lies in the greater support that the head master is able to get from the parents when they live in the more immediate neighbourhood of the school. Some of them, perhaps, in a fussy way may be disposed to give too much support, but one can afford to smile at the absurdities that may arise in this way, while at the same time drawing one's own inferences and conclusions.

Having created such a definite moral code and standard, it will be found that parents are quite willing to support it to the fullest; and even in cases in which a great personal sacrifice is involved, I have found fathers support one's action—even if with regret—at any rate with conviction of its soundness. I will cite one instance in point. On one occasion during the years when I felt I was building a new tradition, I had had considerable trouble of a kind, and I felt it incumbent upon me to give a general warning that, unless the trouble ceased altogether, I should have to make an example of the boy concerned if it occurred again. Unfortunately, it did recur, and I wrote to the father, explaining matters and requesting him to remove his boy at once. The father called to see me and begged me to reinstate his boy, as, indeed, under the circumstances, any father might have done. I was bound to refuse—firmly, if kindly—and I had the gratification of hearing from the father's lips afterwards that, though in his own boy's case he had naturally done his utmost to get me to go back on my word, he acknowledged I was quite right in refusing to alter my decision.

Fortunately, one seldom has occasion to put such support to the test, but I am of opinion that such a full measure of support can only be obtained by the fullest confidence between the head master and the parents, not only individually, but as a whole. How necessary, then, it is that the head master should have a high standard, for, with such intimate relationship between him and the parents, they get eventually to measure his standard and act accordingly. If this standard is high, they will, consciously or unconsciously, bring their children up to it, and the tone of the school will rise with it and form a good training ground for the children in the healthy atmosphere of mutual respect of head master and parent.

Mr. Hawe said the influence of school upon character formed a most important subject for consideration, and, unless the parent actively co-operated with the head master in the work, the tone of the school could not really be high. In his own experience, he had always found parents ready to co-operate with him in his efforts for the training of boys in school and out of school, and when once a good tone was established it would undoubtedly have its effect in all the relations of life. He agreed with Mr. Brown that private-school masters were quite willing to listen to the suggestions of parents, with a view to carrying them into effect, but principals whose schools were efficient were nevertheless in no sense to be regarded as under the dictation of parents.

Mr. Gutteridge observed that, in his opening remarks, Mr. Brown had dealt with the influence of the home, and also with the apparent neglect of the wishes of parents in some of our State schools. Speaking as a head master, he had always found that, in any difficulty in dealing with a boy at school, the father was disposed to relegate his parental functions to the mother. Parents, no doubt, were apt to complain that head masters in large schools were too unapproachable. That, of course, where it existed, was a defect, as there would be a weakening of that co-operation which should exist between home and school. Sometimes there seemed a difficulty in persuading parents that the school, particularly when a boy was leaving, was not a kind of employment agency. He had tried to impress upon parents that, if they did all they could to form their boys' character from the beginning, it would be easier for the head master to give recommendations to employers. In connexion with the day school there was the difficulty of home lessons — how they were to be done and what was to be done when boys systematically neglected them. He used to send round weekly a printed notice to parents asking them to state the amount of time devoted to home lessons each night. Thus some restraint was placed on the parents as well as on the boys, and it was often found to have a good effect where home lessons had previously been neglected. He gave, on the blackboard, an example of a weekly position list in which, in addition to marks for the work done, there was also shown, by means of letters, the conduct of the pupils in and out of school.

Mr. Addis could not agree with the opener's view of the desirability of confabulation and intercourse between parent and head master, as he was inclined to think that such intercourse would rather tend to lessen the confidence of the parent in the conduct of the school. The parent ought to look upon the school as a piece of first-rate machinery which had been tried and tested by agencies other than his own, and the parent should be made to feel that in sending his boy he was entrusting him to a competent institution, and that it was not his province to meddle with the methods or the rules or the discipline of that institution. The great point was that parents and boys should be made clearly to understand that, owing to the very nature of a school, one thing must be standardized, and that was obedience. Boys should recognize that nearly all school questions resolved themselves into obedience. The question of not doing home work was a question of disobedience; any infraction of rules was disobedience; bad writing was disobedience; and when a parent was inclined to think that his boy was being unjustly treated, the result of the interview with the head master generally was that the parent went away with the idea that the boy had, after all, been disobedient. If the parent could show the head master after the interview that it was not a case of disobedience on the part of the boy, then the head master would have reason to change his attitude or perhaps his method; but the important point was that the boy should clearly understand that the ground of offence was disobedience. He spoke from the dual position of head master and parent, and he always thought that the less he had to say about the school to which his boy went, the better for the boy.

Mr. Wilson said that the discussion thus far had been carried on by schoolmasters from their own points of view. This one-sidedness, he hoped, would be corrected before the debate closed by a contribution from the parents' standpoint. He could not persuade himself that all the strained relations which arose from time to time between schoolmaster and parent were due solely to the perversities of the latter. He even ventured to think that heads of schools were apt to take themselves too seriously and did not take heads of families seriously enough. The family, after all, was at once the oldest and soundest of modern institutions—older than the State, the Church, or the tribe, beside which the few centuries of the existence of schools and schoolmasters seemed as yesterday. This archaic institution, after a long evolution, had at length attained a form when normal in which it stood out as the nursery of all that was best and purest in modern life—parents and offspring bound together by the strongest ties of mutual affection; the offspring so helpless during the long period of infancy and immaturity that the parents were called upon each day, and all day, for the exercise of their utmost skill, good sense, and wisdom in the management of the home. The experience, knowledge, and what might be called the spiritual capital, accumulated in this long process of self-sacrifice and living for others, entitled the parent to a respectful hearing when he or she made representations about those that had long been the objects of their daily observation. Mr. Brown, he inferred from his paper, fully appreciated the relation of the school to the home. He correctly indicated the origin of the school as the product of a division of labour. He should have expected this attitude *a priori* from the head of a successful private school. The very fact that a parent made choice of such a school, where he bore the whole cost of the education, and not of one in which nearly all was borne by the State or by endowment, implied that he had good and sufficient reasons for doing so. This initial step made for harmony throughout the pupil's school life. The private-school master had every inducement so to arrange his school course as to meet the

Digitized by Google

reasonable requirements of parents. Such flexibility of adaptation need not in any way impair the efficiency of the education. A school of three hundred pupils afforded an excellent field for the evolution of uniformities from diversities, a strictly scientific process. In the public school the wants and wishes of parents were too frequently disregarded because they did not harmonize with some arbitrary or out-of-date standard. After all, it was not the amount of any particular sort of knowledge acquired at school that was the essential matter: it was the discipline, physical, mental, and especially moral, gained there that gave the average boy an invaluable training for playing his part in a world that was no fool's paradise. He had to learn obedience to two codes—that of the schoolmaster, and that more drastic one, enforced by more dreaded sanctions, the code of honour of his schoolfellows. He must not tell lies, be a sneak, or a coward; must take his chastisements, whether inflicted by master or schoolfellow, bravely. In this way he had to find some *via media* between self-assertion and self-repression, and thus almost every hour of his school life he was learning the invaluable lesson of self-control. The home-bred boy, even under such circumstances as those of John Stuart Mill's boyhood, had much reason to regret the decision of the parent that deprived him of such training.

Mr. ORCHARD said the leading thoughts that had been brought before them were individualism, co-operation, and tact. The child was not to be considered as merely a piece of wood or stone; but they must take account, as had been pointed out, of the character and idiosyncrasies, and the health also, of the pupil. Unless they did that, they could not expect that obedience upon which stress had very rightly been laid. Nothing was more harmful to education than the lack of sympathy and co-operation between the parent, the teacher, and the head master. If they were to be successful educators they must have the parents' co-operation, and the question was how to bring that about. No doubt much could be done by weekly reports and position lists, such as had been shown them. With regard to the use of games, it was impossible to know really what was suitable for a boy without consultation with the parent.

Mr. GOODFELLOW regretted that Mr. Addis's experience, in his dual capacity of parent and head master, had led him to the conclusion that every fault committed by a pupil was to be ascribed to disobedience. The distinction between conduct and faculty had been exemplified in the table shown by another speaker. Especially was this the case with regard to such matters as handwriting, which depended very largely upon the development of the artistic faculty. He thought they were getting a little too much of standardizing by the State, which appeared to him to come from the same source as some of the socialistic ideas which were being promulgated so earnestly at the present day. It arose from the notion that everybody should have an equal opportunity, and even that nobody was to be allowed to make more than a certain amount of use of his opportunity. The opener had given an instance of that where the inspector had affirmed the view that the bright children were to be checked, and not to be allowed to get too far ahead of their less able companions.

Mr. KING said he was getting rather tired of people reflecting on the private-school master for paying too much attention to the views of the parents. He did not believe that this was the case, but, on the contrary, that they had more freedom of action than the public-school masters. They were simply responsible to the parents for the whole of the education they were giving, whereas the unfortunate head masters of public schools were always thinking of what the Board of Management or their chairman or their governors would think of them; and on the top of that came the Inspector who reported to the Board of Education. Now there were in addition a number of officials from the various County Councils who might walk in at any time and look round, not to mention the occasional reports that had to be sent up to the Local Authority. On the whole, it could hardly be said that the lot of the endowed school head master was a happy one.

The CHAIRMAN said the fundamental question had really been brought out by Mr. Addis, who had, however, he thought, used the word "machinery" in the wrong way when he spoke of a school as a first-rate machine. He thought the word "organism" was what Mr. Addis had had in mind, and, if that word were substituted, it would state the whole position. A school must be regarded as an organism which developed in a particular way according to a law of its own. Not only must the boy fit into the school, but the school must fit into him, and the parent would come in as what the German philosophers might describe as the invariable third. Of the two kinds of school, private schools and public schools, the parents had too much influence in the former and not enough in the latter. In the case of strong private schools, like that of Mr. Brown, the head master was quite strong enough to be able to resist the forces from without. He did not think that any schoolmaster would wish to oppose the influence of the parent. In a German play by Otto Ernst, who was formerly a schoolmaster, now a playwright, there was a scene in which the masters were conversing in the common room, and one of them remarked: "What do parents know about education?" What could be more unwise than for a purely professional man to talk in that way? He knew more, no doubt, about the professional work, the actual subjects to be taught, and how to deal with pupils, but did schoolmasters on the whole know more about education than parents did? From the purely technical standpoint schoolmasters might claim precedence, but it was a wrong attitude altogether to take up with regard to parents to say they did not know anything about education. The solution of educational difficulties seemed to be that the influence of the parents should be exercised very strongly on schools; but it ought to be exercised in the proper quarter. The direct influence of parents on the school was altogether wrong. It was of no use for parents to come to the school bullying the masters and saying, "You must do this," and so on; that was the wrong place. In both public and private schools there were certain matters to which schoolmasters must attend, and they could not allow a parent to insist on carrying out his own views, however right those views might be. They could not allow that and still do their duty towards the rest of the school. One thing he had observed for a very long time about parents, and, though they did not always put it in this form, what they always wanted was "a little special attention to Johnnie"—not too much, but just enough to give him an advantage. That was the very thing they must fight against. On the other hand, if a parent took an interest in education, he would use his powers with the private schools, or with governing bodies, or with the Board of Education. But schoolmasters suffered too frequently from the complaints of parents as to what was being done at school, and there was nothing to do but to put the thing right. The parent blamed the teacher for the way the thing was going instead of using his influence in the proper places. In small parishes, people like the local butcher would be found having too much to do with the actual control of a school, and saying: "If you do not submit, I will get on to the School Board or the governing body and annoy you." That sort of thing was going to be fought. If they were going to make children fit for their work in life, neither they nor the parents must decide which knowledge was worth most: that must be decided by the body politic of which they formed part. With regard to the illustration Mr. Brown gave, it was interesting that Sturm, the great humanist, in his school made it as much a fault to get beyond the work of a particular year as not to get up to the standard; and yet that man had a European reputation, and students in training colleges and Universities, and schoolmasters generally, were influenced by his methods at the present day. That showed, perhaps, how wrong professional people might go when left to themselves.

Mr. BROWN, in reply, said, with regard to the view expressed by one of the speakers as to the faults of children being all reducible to disobedience, he agreed that this was the main factor with regard to moral training and school discipline; but it must not be forgotten that the connotation of the terms "obedience" and "disobedience" was exceedingly vague, and the question must be handled with delicacy. A boy had his own views of the punishments meted out to him, and, on careful inquiry, it would be found that his ideas on the subject were really very sane ones. A boy had, moreover, a surprising faculty of seeing through the outside envelope of his master, whether head master or assistant, and finding out his special quality or peculiarity, whether in discipline, management, or teaching. This quality was probably due to the fact that a boy's whole life was his school, and that for the time being his mind was concentrated on his surroundings. It was not enough to tell him, "This must be done because I say so," not because they had been brought up to think it was right. "Obedience," therefore, must not be the only word in their moral vocabulary. For the training of character they must have everything as far as possible in due proportion, or there would soon be an end of the pupil's respect and the master's control. He quite agreed with the Chairman in his suggestion of the use of the word "organism" in place of "machinery." If the school was to be a well developed organism and the child an organism to work in the

Digitized by Google

school, it was evident that there must be mutual accommodation. The very suggestion at once carried one away from the idea of machinery to the position he had taken up at the beginning of his paper. The parents with whom he had to deal were mostly business men accustomed to business routine, and he did not find that they expected the order of the school to be interfered with to suit their own notions of education. As the Chairman had put it, what was generally asked for was a little special attention for the individual pupil, and in his opinion the request was an entirely reasonable one. There was a tendency in the State schools, and generally he thought in all large schools whether public or private, for the teacher to get the better pupils on, and the request of a parent to give "a little special attention to Johnnie" really involved the question of the teacher devoting his best efforts to bringing on the intellectually weaker pupils and leaving those who did not require special attention to get on as they best could.

Votes of thanks to the opener and to the chairman concluded the proceedings.

EDUCATIONAL WASTAGE.

Mr. T. H. J. Underdown (Bristol), in his Presidential Address to the National Federation of Assistant Teachers at their annual Conference held at Northampton, dealt mainly with the need for raising the school age and for educational care during the period of adolescence. The neglect of the State to provide guidance and care for those between twelve—the present statutory minimum leaving age—and eighteen years of age (he said), results in the waste of a large part of the early training in the primary school, "in injury to character, in the lessening of industrial efficiency, and in the lowering of ideals of personal and civic duty."

Leaving Age—Half-Time—Street Trading.

Unfortunately no statistics are compiled by the Board of Education to show the number of children who leave school at the ages of twelve, thirteen, and fourteen respectively; but the Consultative Committee of the Board, in their report on "Attendance, Compulsory or Otherwise, at Continuation Schools," have estimated that at the present time 211,000 children between the ages of twelve and fourteen, out of a possible 1,216,000, have ceased to attend the primary school. Of those 211,000, some are to be found amongst the 90,000 taking the four years' course in those secondary schools which receive grants from the Board of Education. Another leakage in the primary-school system is that of half-time permitted under local attendance by-laws. Under the Robson Act of 1899, the rural child at the tender age of eleven may become a half-time agricultural labourer until thirteen, when the State ceases to care for him any further. The urban child may receive half-time exemption and enter the factory. The total number of half-timers recorded in 1900–1 was 74,468, the low-water mark of recent years. In 1907–8 the number had increased to 84,498. But we are nearing the end. The Inter-Departmental Committee recommend the abolition of all partial exemption. Mr. Runciman is anxious to give effect to this recommendation next session, and such a Bill would have the active support of educationists throughout the country. Another pernicious form of juvenile labour is street trading, which undermines and militates against the humanizing influences of the primary school. The Chief Constable of Manchester, in May, 1906, gave his opinion in these terms:—"Street trading, of all juvenile wage-earning occupations, is productive of a larger amount of evil than any other occupation followed by children. The boys develop into lazy, shiftless, and workless men, becoming for the most part racecourse touts, often travelling thieves and loungers. They dislike more and more honest work. They become mere creatures of chance, and sink down until they end their days either in gaol or in the workhouse." While a few of the Local Authorities use their powers under the Employment of Children Act, 1903, in the great majority of our large centres of population the street arab roams unchecked. With a full knowledge of these sources of waste in our present system, we emphatically claim for the child: (1) the abolition of half-time employment, (2) the prohibition of street trading under sixteen, and (3) the raising of the statutory minimum leaving age from twelve to fourteen, accompanied by powers under local by-laws to enforce attendance until fifteen or sixteen. These urgent reforms must take first place in any advance the Legislature makes in education; for it is of little use to attempt to extend the superstructure of further education provided by secondary, technical, and continuation schools until the foundations in the primary schools are truly and firmly laid.

The Period of Adolescence.

The extension of the school age, I have urged, would still leave unchecked the great educational wastage now going on amongst those who cease to attend school at fourteen. It is estimated there are about two million children in England and Wales between fourteen and seventeen years of age, of whom 75 per cent. are receiving no educational care from the State. These years are the most critical in the life of the future citizen. Stability of character cannot be fully established at fourteen years of age. A medical expert recently wrote in the columns of the *Practitioner*:

> It is during early education by the teacher that the foundation of character is laid. Probably, if a period is fixed, it is during the first seven years of life; the character being formed during the next seven and consolidated during the third seven—viz., between the ages of fourteen and twenty-one—and what is laid becomes too fixed and firm to be capable of reform after the age of twenty-one years. Children bear the scars of moral injury all their lives, and I have lived too long to believe in the complete reformation of character after full maturity, although I do not doubt the authenticity of exceptions.

This is strikingly in accord with the fact that 80 per cent. of our prisoners are first convicted of crime between sixteen and twenty-one.

Decay of the Apprenticeship System.

What are the conditions of labour under which these critical years are usually spent? Figures are unavailable, but there is reason to believe that year by year fewer enter a skilled trade on leaving school. Under the former conditions of industry, a boy left school to enter upon his term of apprenticeship, and thus continued his education or his general training. The decay of the apprenticeship system has been brought about by the changes in our industrial methods, by the subdivision of labour, by the use of machinery, and by the development of the factory system at the expense of the smaller workshop. This change has brought its disadvantages. The former tuition, general as it may often have been, has given place to the more modern, but slipshod, process of having "to pick it up." It is now more difficult to obtain a general knowledge, and skill can be obtained in only one branch of the trade. Thus the workman is evolved highly skilful in one limited direction and correspondingly narrow in a true appreciation of his trade. There is, too, a loss of discipline, for the former worthy master's kindly personal interest in his apprentice has given place to the complacency of the limited liability company. In our peculiar English way, where the State acts as parent—namely, in the Poor Law and industrial schools—the boys receive a trade training. Thus the State gives to the convicted boy at the industrial school what is unavailable for the great mass of law-abiding subjects. For once in a way it pays to be bad.

Blind-Alley Occupations.

The changes in our industrial system have also increased the opportunities for non-educative employment. Mr. Sidney Webb has stated that to-day in London some 40 per cent. of the boys leaving day school become van or errand boys. How rapid has been the increase in the number engaged in these occupations is thus shown:

Messengers, Porters, and Watchmen under Fifteen Years of Age.

Census.	Boys.	Girls.
1881	45,144	888
1891	78,169	2,246
1901	128,787	4,764

The report of the Inter-Departmental Committee on Half-Time makes this comment on the Bradford Mills:

> The majority of boys do not get permanent employment in the trade at all. Doffing or piecing is no apprenticeship to them, because they do not continue in the trade. Between fifteen and eighteen years of age the greater part of the boys leave the trade, having lost an important part of their schooling, having acquired some preliminary knowledge of a trade which cannot find them employment, and are cast upon the labour market to try to find employment in a district which is peculiarly deficient in well paid male occupations. As far as the boys are concerned, the system seems calculated to create casual and unskilled male labour.

Thus the ranks of the van boys, the messengers, the porters, and of a large proportion of factory workers are easily entered, but too often end in a "blind alley." The wages are at first proportionally high, but in a few years this worker finds himself ill paid, untrained, and under-employed or unemployable.

Our Continuation Schools.

In the midst of these difficulties, it is remarkable that our voluntary system of continuation schools has met with even the moderate success it has attained—a success achieved by the enlightened policy of many Education Authorities, by the grit and perseverance of the better placed adolescents, by the direct encouragement of many employers, and by the constant efforts of teachers and others interested in the social problem. From the statistics of the Board of Education, I make this comparison of the students attending evening schools:

Age.	1903–4.	1906–7.	Increase.	Inc. per cent.
15 to 21	359,503	362,627	3,124	0·8
Over 21	181,756	240,987	59,231	32·5

The outstanding weakness of the present system, therefore, is the lack of growth in the numbers (0·8 per cent.) between the ages of fifteen and twenty-one, a striking contrast when set against the great increase (32·5 per cent.) of the adults. These figures indicate very plainly that the voluntary system breaks down just where it is most needed and that we are drifting to an untenable and illogical situation: we educate our children at the public expense until they are thirteen or fourteen; we then allow them to be exploited by employers and parents for private, pecuniary gain; and, finally, we ask the State to undertake the burden of re-educating them in their manhood or womanhood.

Many firms recognize to-day that the adolescent is too heavily loaded with the shackles of industry, and they grant facilities for attending day or evening continuation schools, accompanied by a reduction of the hours of labour. But these employers are in a small minority, and the remainder are either apathetic or even hostile to the movement; and their apathy and hostility too often are endorsed by the workers themselves.

What are our competitors abroad doing in the matter? France and the United States adhere to the voluntary system, but in the latter case the leaving age is higher than in this country. Compulsory attendance is enforced in twenty-two out of twenty-six States in the German Empire. In Switzerland an area containing 88 per cent. of the population is under compulsion in this matter. Always in the vanguard educationally, Scotland secured powers under her Education Act of 1908 to enforce compulsory attendance at the local option of the School Boards.

In my opinion—and here I speak for myself alone—our voluntary system, as rapidly and as smoothly as possible, must give place to a scheme of compulsory attendance at continuation schools, for those under eighteen years of age. This is no new principle. We stand in this matter to-day where we stood forty years ago, when the State, realizing the ineffectiveness of voluntary attendance at the primary day school, adopted compulsory attendance under the Act of 1870.

Continuation Schools of the Future.

In the nature and scope of this training we are not likely to repeat our former mistakes in catering mostly for the embryo clerk to the neglect of the manual worker. The courses of study need to show greater versatility. The humanities, literature, art, physical and technical training must each have a fair field. The study of a trade, in practice and theory, if placed on a fair level with the professions, would do much to restore manual labour to the former status it occupied in the middle ages and to check that juvenile snobbery of to-day which drives droves of our young people into those so-called genteel, but poorly paid occupations. But, while the avocational side secures due prominence, the way must be open to a higher education, leading to a fuller appreciation of all that is best in art, science, and literature. Not only must the adolescent be put in a fair way of earning his living, but he must be taught how to live. This work can well be entrusted to the teachers of the highest skill and the ripest experience, and will form the coping stone of our educational fabric.

COLLEGE OF PRECEPTORS.

PRACTICAL EXAMINATION FOR CERTIFICATES OF ABILITY TO TEACH.

The following is a list of the successful candidates at the Examination held in October, 1909:—

Merrick, F. G.

Class II.

McAlister, A. | Wall, C. E.

REVIEWS.

The Science of Language.

Introduction to the Natural History of Language. By T. G. Tucker, Litt.D., Professor of Classical Philology in the University of Melbourne. (10s. 6d. net. Blackie.)

The development of language and the comparative forms of different languages are full of interest to many people that have little or no real technical knowledge. Similarities are curiosities, and subordinate differences give additional piquancy to the recognition of resemblance. But it is easy to be misled; and therefore one is prepared to welcome a capable account of the general course of linguistic development and of the facts of the distribution and history of language. The expository facility of Max Müller and the steady sense and accuracy of Whitney have rendered readers exacting; but the conceptions of pioneers naturally require occasional correction, and the scope of treatment has an irresistible tendency to expansion. Prof. Tucker has no claim to rival the charm of Max Müller's presentation or to supersede Whitney in his own field; but he is armed with abundant knowledge, and with a plain and perspicuous capacity of exposition. He does not profess to do more than outline the subject; his work, "so far as it is a student's book, is meant for nothing more than a first general survey." For this purpose it will serve admirably. Though the materials are in a considerable measure naturally the facts that have already done duty in similar works, Prof. Tucker shows everywhere complete independence of judgment, offering conclusions and speculations of his own "with all due diffidence."

After a preliminary chapter on the nature and scope of the subject, Prof. Tucker deals in considerable detail with Phonology, and with Speech and Writing. Incidentally we may remark that, while he accepts De Rougé's demonstration of the traditional derivation of the Phoenician alphabet from Egypt as "beyond all reasonable doubt," Dr. Giles had already (in the latest edition of the *Encyclopaedia Britannica*) abandoned it, under compulsion of Prof. Flinders Petrie's discoveries in the Egyptian royal tombs at Abydos (Egyptian Exploration Fund volumes, 1900 and 1901). No doubt these discoveries had not reached Melbourne in time for Prof. Tucker, and from 1874 De Rougé's explanation had been generally received; but the point shows how necessary it is to hold judgment in suspense on matters that cannot be definitively demonstrated. The classification of language—morphological and genealogical—is treated with marked ability, and with vigilant avoidance of pitfalls: the chapters form an excellent example of method of investigation. Three extensive chapters are occupied with a general survey of languages, with lucid dispositions into families, branches, groups, &c., and with a more or less detailed statement of the localities of their use. This leads naturally to a warning against the too common error of accepting kinship of language as a criterion of kinship of race; and the treatment of race and language is conducted with special reference to the Indo-European tongues. Prof. Tucker has something to say, at different points, about Celtic and the Celtae, and about certain confusions in connexion with the language and the race; and he comes nearer than most writers to the repudiation of Celtic as an ethnological term applicable within the British Isles. "There is perhaps," he says, "among philologists (so far as they speak in terms of ethnology) a growing tendency to narrow the use of the word 'Celt' to the stock (tall and rufous) which is primarily responsible for the diffusion of the Celtic languages. Though this involves the transference of the ethnical name from the central people to which it originally belonged to a people which originally had no claim to it, no harm would result if the name were used consistently, and if another title were no less consistently applied to the 'Auvergnat' or 'Savoyard' race." But this is too facile: there is no reason why people should be puzzled by a difference of nomenclature, or why the philologists and the ethnologists should not keep in accord in dealing with the same facts. With regard to the original seat and the diffusion of the Indo-European family of languages Prof. Tucker does well to follow Schrader; the exposition is cautious and lucid. Phonetic changes and changes of meaning are very ably discussed in succeeding chapters; and the final chapter, on the development of language, illustrates many processes under different specific heads. The volume is a very comprehensive treatise, amply sufficient for its elementary and general purposes, competent in point of knowledge, concise and lucid in presentation, and plain

Digitized by Google

in style. It ought to be welcome to the general reader with literary interests as well as to professed students.

Pure Mathematics.

A Course of Pure Mathematics. By G. H. Hardy, M.A. (12s. Cambridge University Press.)

The vast field implied by the term "pure mathematics" lends to the title of the above-named work a vagueness which invites much speculation as to the material likely to be selected for his purpose by a writer confining his attention to the production of a single volume of moderate size. The preface to the present treatise clearly indicates the author's aim, and, when that is understood, the contents of the treatise are readily seen to be the natural and fitting subjects of his choice. The preface itself impresses the reader as a more than ordinarily emphatic expression of personal opinion. It may, however, be borne in mind that the writer has given very special attention to the department of mathematics which he considers. The volume is thoroughly original in scope, and seeks to supplement, and not in any sense to supplant, existing text-books. It takes up portions of theory which are to be found in the standard treatises on special branches of mathematics; but the writer, as a result of the plan of his work, has been in a position to give greater space to individual points than is in general available in a student's manual on a definite subject. Prolonged experience as a teacher of first-year college students has led the author to believe the course he advocates to be essential to a thorough assimilation of ideas. It has been asserted that Euclid wrote practically the whole of his First Book of the "Elements" in order to prove the celebrated forty-seventh Proposition. In the present text-book the author's primary wish was to give an exposition of the theory of the logarithm and of logarithmic and exponential series which should be based on the definition of the logarithm as a definite integral. That particular theory is the subject of the last two chapters only of the present work, and the contents of the preceding sections are selected from materials required for—or, at any rate, conducive to—the full understanding of the theme to which the treatise really owes its existence.

A very interesting discussion of *real numbers* and of the possibility of representing them all, whether integral, fractional, or irrational, by means of a linear continuum, forms the subject-matter of the opening chapter of the work, and is followed by a consideration of various leading functions of real variables. A suggestive treatment of the first principles of complex numbers follows next, forming the text of the third chapter of the work. Chapters IV and V are perhaps specially characteristic of the author in the capacity of teacher. They treat with exceptional fullness the ideas underlying limits. The root meaning of a limit is discussed first in one form and then in another, and always in a suggestive manner. A wealth of illustration is afforded, in order that the student may realize the full significance of one of the most important and far reaching of mathematical conceptions. Portions of the differential and the integral calculus then claim the attention, and a distinct chapter deals with the principles of convergence in their bearing on infinite series and infinite integrals. Chapters IX and X are those which inspired the author, and are devoted to a scholarly discussion of logarithmic and exponential theory, first on the basis to which reference has been made above and afterwards by an alternative method. It is, of course, evident that the former treatment is unsuitable for students who are not already acquainted with the differential and integral calculus.

The value of the present work to the student of mathematics is beyond question. Such a study of it as will ensure familiarity with the principles of which the author treats, implies an acquisition of knowledge whose utility it would be difficult to estimate too highly. It is well to call attention to the existence of occasional misprints which may be corrected in any future editions of the volume.

GENERAL NOTICES.

CLASSICS.

The Electra of Sophocles. With a Commentary abridged from the larger edition of Sir Richard C. Jebb, Litt.D., by Gilbert A. Davies, M.A. (4s. Cambridge University Press.)

Prof. Davies has followed the plan pursued in the adaptation of the previous volumes of Jebb's great edition to the use of schools. Again we must express a doubt whether the critical foot-notes and the textual discussions in the notes are not superfluous: they are not very extensive, however, and they may strike the fancy of more inquiring students. The edition furnishes a most ample apparatus for grasping both the language and the meaning of the play. The whole get-up is admirable.

Q. Horati Flacci Saturarum Liber II. Edited by James Gow, Litt.D., formerly Fellow of Trinity College, Cambridge, Head Master of Westminster. (2s. Cambridge University Press.—"Pitt Press Series.")

To those that are familiar with Dr. Gow's previous editions of separate parts of Horace the present volume will not stand in any need of commendation. The biographical and literary introduction is a most careful and judicious summary of the necessary preliminary information, and the notes are exceptionally fresh, pointed, and suggestive. The saving grace of common sense is continually manifest. An admirable edition for school purposes.

Latin of the Empire; for use in Schools and Colleges. By W. King Gillies, M.A., B.A. Oxon., and A. R. Cumming, M.A., Classical Masters in the High School of Glasgow. (4s. 6d. Bell.)

The purpose of this volume of extracts, beginning with Seneca and ending with St. Augustine, is to disabuse ingenuous minds of the notion "that with the death of Augustus the Latin language suddenly became disreputable," and "to illustrate, in outline and in a handy form, the more important phases of Latin in its later development towards the Romance languages." Prof. Phillimore furnishes a bright and forcible introduction, showing why such a book is "peculiarly seasonable in the present circumstances." For ourselves, we have long anticipated his reasons, and we commend them to our readers. "How much of a teacher's duty, no matter in what rank of the profession he be placed, is neither to feed, nor to drill, nor to correct the pupil's mind, but to open windows for intellect and imagination!" And we agree that the editors of the present work "do open windows." At the same time, there may be a superfluity of windows, and the examination is lying in wait to test the Latin of the outlookers (or inlookers). The book must therefore be used with discretion until the examinations are oriented so as to dissipate the dangers of "disreputable" Latin. The selection has been made with experienced and careful discretion.

Stories from the Greek Legends. By C. Gasquoine Hartley (Mrs C. G. Gallichan). (3s. 6d. net. Werner Laurie.)

After a general introduction passing in review the greater gods and goddesses of Olympos (with some reference also to the less powerful divinities of the world of men), Mrs. Gallichan retells a score of the old stories of Gods and Heroes in very simple language suitable for quite young readers. These old stories are ever young, and, often as they have been told and retold, they still keep their freshness in Mrs. Gallichan's pages. She is considerably gifted with the story-teller's art There are eight full-page illustrations.

MATHEMATICS.

A New Algebra. Vol. I. By S. Barnard, M.A., and J. M. Child, B.A., B.Sc. (2s. 6d. Macmillan.)

An outcome of modern ideas, and written with a view to uniting with a useful school text-book a more logically ordered exposition of elementary algebra than has hitherto been generally found in works of similar scope. The authors, who are both experienced in the art of teaching, have spared neither time nor thought in the endeavour to arrive at a satisfactory scheme of study. It remains to test the success of any innovations they have made as to sequence. The earlier volume of the complete text-book—namely, the volume under notice—discusses in the first of its three subdivisions, and merely as generalizations of arithmetic, the fundamental laws of algebra, together with a number of rules. Letters throughout the entire section denote positive integers only and have mutual relations of value that admit of arithmetical interpretation. At the same time, suggestions of future broadening are made when opportunity offers. Part II serves as an introduction to zero and negative integral numbers. Ideas previously formed receive enlargement; processes already explained acquire new meanings supplementing the old and adapted to the wider number view considered. Part III of the volume embraces a still more extended number category, including fractions, and renders complete the introduction to the field of *rational* number. Again, previous knowledge is supplemented so as to carry the pupil to higher levels.

Concurrent Practical and Theoretical Geometry. Parts I and II. By W. J. Potter, M.A. (3s. net. Ralph, Holland, & Co.)

Part I has been issued for some time and was noticed very favourably in these columns. The present volume contains it in combination with Part II, and we learn that a third Part has also been prepared and that the work is now published complete. The same plan of instruction as that adopted in Part I is continued in the later pages of the text-book now considered. Hence the advantages of the course already noted with reference to its commencement mark its later stages also. Teachers must again be cautioned against allowing the practice of drawing up carefully tabulated work to be carried to excess. Neatness of arrangement is of great value, but the constant ruling of tables may easily lead to waste of time and energy.

An Introduction to Projective Geometry. By L. N. G. Filon, M.A., D.Sc. (7s. 6d. Edward Arnold.)

There appears to be ample room for a work of the kind, and

Digitized by Google

Dr. Filon's text-book is more than likely to establish itself as a standard treatise. The author discusses his subject with power, and writes very lucidly. His purpose is to present a concise and clear view of the theory of conic sections by means of a development depending as far as possible on projective methods of proof. All that is required by the student, unless he aspires to academic honours in mathematics, is contained in the first half of the volume, and may be read by any one already possessed of a knowledge of Euclid and having some slight acquaintance with the elements of analytical geometry and trigonometry. In the interest of beginners, and possibly at the expense of some elegance of proof, the author prefers to base his arguments on the general principles of cross-ratios rather than on harmonic groups. Hence we find the theory of anharmonic ratio considered at a very early stage. Referring to the plan of his book, Dr. Filon in the preface gives expression to a view with which we heartily concur—namely, that it is undesirable to create the impression that the essential focal properties of conics depend for their establishment on the theory of imaginaries. This theory makes its first appearance, together with the subjects of homography and involution, in the second half of the work. Here the pages are written for advanced students and for University "Honours" candidates. A measure of completeness is given to the whole discussion by the introduction of chapters on the cone, the sphere, and quadrics in general.

SCIENCE.

Elementary Chemistry. By Hollis Godfrey, Head of the Department of Science, Girls' High School of Practical Arts, Boston, Mass. (4s. 6d. net. Longmans.)

The author has written up to four ideals: "to obtain simplicity; to reach the understanding of the student; to rouse the pupil to a realization that the science of daily life is identical with the science of the schoolroom; to include all the essential facts and theories which could be rightly assimilated in one year's work in elementary chemistry." The results are very successful. The most wide-reaching general truths are kept in the foreground and effectively impressed; illustrations and examples are chosen from things likely to be familiar to the student; practical applications are constantly held in view; and the exposition is plain and perspicuous. Generally, the work "treats of those portions of elementary inorganic and organic chemistry which the author has considered of most value to the student." Chemical arithmetic is treated in a separate chapter once for all. Epitomes of the several chapters and questions on each chapter are appended. There are numerous illustrations.

The Periodic Law. By A. E. Garrett, B.Sc. (by research) Lond., F.R.A.S., &c. (5s. Kegan Paul, Trench, Trübner, & Co. International Scientific Series, Vol. XCV).

The first half of the volume consists of a concise historical account of the efforts made to establish a scientific classification of the elements, concluding with the work of Carnelley, "who did so much to establish on a firm basis the periodic law as given to the world of science by Mendeléef." It is very satisfactory to note that Mr. Garrett has been careful to set forth the views of the proposers of the various schemes, even though later investigation may have shown that such views were incorrect: they are always instructive, and secondhand information on them is always to be distrusted. The modern applications of the Periodic Law are adequately explained, the final chapter working to a climax of interest in the fascinating problem of the ultimate structure of the atom. The progress of recent discovery and speculation is well represented in all points of importance and utility. The volume is a welcome and able addition to a famous series.

The University Tutorial Press issues *First Stage Inorganic Chemistry (Practical)* for the First Stage Examination of the Board of Education (South Kensington)—in a revised edition by H. W. Bausor, M.A., late Scholar of Clare College, Cambridge. The altered character of the examination has led to large omissions and additions, as well as to much rewriting. The little book is now up to date and most serviceable for its purpose.

MODERN LANGUAGES.

Lectures on Dante. By the late N. Perini, F.R.A.S., Professor of Italian in King's College, London. (3s. 6d. Hachette.)

With the exception of the introduction, which is historical, biographical, and literary, the volume is a collection of notes for lectures rather than "lectures." The sketch of the times and the circumstances of Dante will be very useful to beginners, placing them in position to understand the works and to appreciate the genius of Dante. For the rest, it is simply a brief analysis of the contents of the several cantos of the "Divina Commedia," with incidental indications on the more important points, helpful so far as they go. Prof. Ricci's "Foreword" consists mainly of censure of "the most extraordinary mistakes" and the "meaningless obscurity" of the translations of Dante, and of ridicule of the accumulation of errors by industrious commentators imperfectly acquainted with Italian. Prof. Perini, he says, "has been satisfied with reading to his pupils the Italian text, accompanied by some simple explanations—the only way of studying Dante's immortal Poem, of understanding its meaning, and of enjoying its sublime beauties." We doubt whether this is the only way: we cannot but think that more assistance is both desirable and feasible. However, Prof. Perini's notes will be very useful by way of introduction.

French Lessons on the Direct Method. By Marc Ceppi, Senior French Master, King's College School. (1) Beginners' Course (1s. 6d.). (2) Junior Course (1s. 6d.). (3) Intermediate Course (2s.). (Hachette.)

The author has regard both to written and to spoken French, and endeavours to utilize the best materials and methods. The Beginners' book opens with phonetic lessons, and the phonetic script is carried on in diminishing use in later lessons. The verbs are instilled by an attractive drill; and the vocabulary and phrases used are based upon Hölzel's pictures. The Juniors' book is slowly progressive, with numerous well devised exercises. The Intermediate course rises to the requirements of such examinations as the Oxford and Cambridge Junior Local, and those for the College of Preceptors' Second Class and Naval Cadetships. The three books will ensure a good working vocabulary and not a little facility in putting it to practical use. Much labour has evidently been expended in the selection and the presentation of the materials. The volumes are attractively got up.

We welcome cordially another issue of Cassell's *New German and English Dictionary*, revised and considerably enlarged by Karl Breul, M.A., Litt.D. Cantab., Ph.D. Berl., Reader in Germanic in the University of Cambridge (3s. 6d.). It is now one of the very best and handiest of German dictionaries.

RELIGIOUS AND MORAL.

The Gospels in the Light of Modern Research. By the Rev. J. R. Cohu, Rector of Aston Clinton, Bucks, sometime Fellow of Jesus College, Oxford. (6s. net. Oxford: Parker. London: Simpkin, Marshall, & Co.)

Mr. Cohu aims at "placing before the reader, in an intelligible form, the present attitude of the Higher Criticism towards the vexed problems of the origin, composition, and historical trustworthiness of the four Gospels." First he puts forward a plea for a reasonable criticism of the Bible in the interests of true religion; next he handles sundry preliminary questions that require investigation; then he enters upon a detailed inquiry into the origin, composition, and historical value of the Gospels; and, finally, he sketches a supplementary picture of the social, religious, and political condition of things in Palestine in our Lord's time. Some special discussions are added in an appendix, including a singularly unsatisfactory argument in support of the Gospel miracles. The tone of the work is liberal, with a very proper dash of conservatism; while the value of the Higher Criticism is frankly recognized, Mr. Cohu is steadily alert against theories and assumptions that are not proved to his satisfaction. The work has obviously involved prolonged and arduous labour; it is written with adequate knowledge, with fairness (except, perhaps, to certain members of the Tübingen School), and generally with judgment; and it will be very helpful as a critical companion to the study of the Gospels.

Old Testament History. By the Rev. J. M. Hardwick, M.A., late Scholar of St. John's College, Cambridge, and Bell University Scholar, and the Rev. H. Costley-White, M.A., late Scholar of Balliol College, Oxford, Assistant Masters at Rugby School. Periods I, II, and V. (2s. each. Murray.)

The series will be in five volumes, of which we have three before us: (1) Period I, from the Creation to the Crossing of the Red Sea; (2) Period II, from the Crossing of the Red Sea to Ruth: and (3), Period V, from Hezekiah to the end of the Canon. Each volume provides material for one term's work. The narrative for the most part is given in the words of the Authorized Version; brief historical explanations and general commentary are supplied; the chronological order of events is followed; each period is illustrated by reference to contemporary literature and monuments; and difficulties of thought or language are explained in foot-notes. The aim is to combine the advantages of a general history with those of the ordinary commentary. The volumes will be very helpful towards a systematic and intelligent study of the texts.

The Divine Minstrels. By Auguste Bailly. Translated by Ernest Barnes. (5s. net. The Medici Society, through Philip Lee Warner, 38 Albemarle Street, W.)

This is "a narrative of the life of Saint Francis of Assisi with his companions." It is not systematic or complete as a biography: it is, rather, a series of scenes with a strong devotional colouring, depicted "in the form of a romance," and illustrating "the little less than miraculous revolution worked by the man of Assisi in the life and intellectual outlook of medieval Italy." Geraard David's picture of "St. Francis" is reproduced as frontispiece.

PSYCHOLOGY AND ETHICS.

An Introduction to Social Psychology. By William McDougall, M.A. Oxon., M.B. Cantab., M.Sc. Manc., late Fellow of St. John's College, Cambridge, Wilde Reader in Mental Philosophy in the University of Oxford. (5s. net. Methuen.)

In this fresh and vigorous volume Dr. McDougall contributes his "mite"—and a very considerable mite it is—"towards the building up of a psychology that will at last furnish the much needed basis of the social sciences and of the comprehensive science of sociology." "The basis required by all of them is a comparative and physiological psychology relying largely on objective methods, the observation of the be-

Digitized by Google

haviour of men and of animals of all varieties under all possible conditions of health and disease; it must take the largest possible view of its scope and functions, and must be an evolutionary natural history of mind; above all, it must aim at providing a full and accurate account of those most fundamental elements of our constitution, the innate tendencies to thought and action that constitute the native basis of the mind." The introspective description of the stream of consciousness—"pure psychology"—is but "a preliminary part" of the business. Dr. McDougall's conception, then, is generous, though not too generous in view of the final purpose; and he works it out in comprehensive detail with acute argument (in many points original), ample illustration, and fluent expression. If he handles some eminent names with unceremonious directness, that is a fault of manner; however, it adds a spice of piquancy and does no real harm: the thing is to know precisely where we are in the argument, and frank independence is more useful than tame acquiescence in the opinions of any authority. The work is extremely able and opportune, and will be very welcome to all students of the social sciences. We are glad to note that Dr. McDougall will shortly follow up this volume with another, building on the foundations here laid.

An Introduction to Psychology, for the use of Teachers. By J. H. Wimms, M.A., B.Sc., Lecturer on the Theory and Practice of Education, Goldsmiths' College, University of London. (1s. 6d. net. Charles & Dible.)

This little book will be extremely useful to teachers that have felt "a very real need for a small handbook dealing with the subject from the point of view of the classroom, and which was at once sound and consistent in its terminology and simple and definite in its language." Mr. Wimms wisely leaves aside the more profound and metaphysical aspects of psychology, and works out the more elementary principles, which are not likely to frighten off a beginner. Both in selection of material and in form of treatment he has kept his eye upon the solution of the problems of the school. An excellent introductory manual.

A Primer of Ethics. By E. E. Constance Jones, Mistress of Girton College, Cambridge. (1s. Murray.)

This little volume is, of course, elementary and brief. It "is substantially a compilation from those recognized authorities on the subject whose views it reports"—that is to say, mainly Aristotle and Sidgwick. An ethical vocabulary, drawn largely from Sidgwick, ekes out the meagre exposition; and a considerable collection of questions and some examination papers are appended. The philosophical horizon of Cambridge seems strangely limited; but the questions may send inquiring minds further afield.

EDUCATION.

Modern Education: its Defects and their Remedies. By J. Macmillan Brown, M.A., LL.D. (Christchurch, N.Z.: Lyttleton Times Company, Ltd., Printers.)

Dr. Macmillan Brown regards education as "the question of questions in modern life," and in the present brochure he seeks "to lay the finger on the new elements that have rendered the problem so dominant and so difficult." In seven chapters he discusses (1) the aims of modern education, (2) the home in the educational process, (3) religion, morality, and education, (4) cram and examinations, (5) the early stages of education, (6) the portal of manhood and womanhood, and (7) the final preparation of a nation's talent for the struggle of life. "It is in the making of our men and women," he truly says, "that we must seek for the source of the ever-present social failures that stir our pity." But it is not easy to agree with him when he says: "We have laid far too great stress on heredity; with our later evolutionists we should come to see that environment, and especially early environment, has far more to do with the career of not only the species, but the individual." That, we think, is a superficial view, and not even accurately stated: there are deeper students of these things than Herbert Spencer. But, in any case, it seems clear that we are bound to make the best of the material that happens to present itself in the school, and that is all that is necessary for the argument. We are pleased to note that he lays great stress on the education and the influence of women and of the home. "We have got to train our girls as moulders of mind and morality and character, or well as wielders of the broom, the needle, and the smoothing iron, as caterers for the stomach, if the education of the school is to have full effect on the future of our country." He points out defects of the examination system, and would have it reformed so as to become "a test of the whole humanity of the candidates"—a sufficiently startling demand, not easily to be satisfied. However, "examination is the only true method of teaching, for its aim and end is the development of faculty, skill, talent." Let us hope so. The chapters are full of experience and of thoughtful suggestion.

Principles of Educational Woodwork. A Handbook for Teachers and others interested in Education. By Charles L. Binns, formerly Editor of *Manual Training*, Instructor in the City and Guilds' Teachers' Classes 1892-3, &c., and Rufus E. Marsden, A.R.S.I., Head of the Architectural and Building Department, Goldsmiths' College. (5s. net. Dent.)

The authors deal with "the teaching and psychological aspects of Educational Woodwork rather than with the practical details of tool manipulation," holding that, whatever the importance of self-activity and the acquirements of skill, "the cultivation of the intelligence, of active and resourceful brains, forms the chief claim of handwork to a place in school-work." After considering the aim and scope of manual training in education, they turn their attention to the more marked characteristics of childhood and to the broader differences of children (motor and sensory); to motor training for the acquirement of dexterity; to the play of interest and attention; to the true character and basis of discipline; to the equipment of the teacher; and to the art of giving observation lessons, with more special regard to the art of questioning. Most of these matters are of general application. The remaining chapters—on trees and timber, tools and materials, drawing and bench-work—involve much description, but teaching method is by no means lost to sight. The selection of points is judicious, and the exposition is always simple and plain. There are about a hundred figures. The volume is soundly conceived and efficiently executed, and it ought to be in the hands of all teachers of woodwork.

MUSIC.

"Novello's Music Primers and Educational Series" (edited by Sir John Stainer and Sir C. Hubert H. Parry).—*A Manual of Harmony for Schools.* By Francis Edward Gladstone, Mus.Doc. Cantab. 2s. 6d. Key, 1s. 6d.

The main purposes of the volume are "(1) to set down clearly and methodically (so far as may be possible) the rules of Harmony, (2) to give the names, descriptions, and treatments of the various Chords in general use, and (3) to emphasize some details of Part-writing which are commonly passed over too lightly even by the best writers." The author brings long experience to the work. He develops the subject in patient graduation, with numerous exercises, and notes to the exercises; and he presents all the essential matters very lucidly and effectively.

"Novello's Elementary Music Manuals" (edited by W. G. McNaught).—*Lessons in Harmonizing Melodies in Four Vocal Parts.* By Cuthbert Harris, Mus.Doc. Dunelm., F.R.C.O. Book II (Stages III and IV.). (1s. 6d.)

The importance of modulation in the harmonization of most melodies leads Dr. Harris to handle it at some length. The difficulty of the study is reduced materially by elimination of the ornamental elements, the florid passages being brought down to their skeleton form. The treatment is methodical and clear, and well calculated to "give the student an insight into the foundation principles applicable to the harmonization of simple vocal melodies and also instrumental melodies of the most advanced type." Discriminating exercises are appended to each chapter, and *Additional Exercises* (by the Author) may be obtained separately (6d.).

Well-known Piano Solos, and How to play them with Understanding, Expression, and Effect. By Charles W. Wilkinson. First Series. (1s. Reeves.)

Mr. Wilkinson takes up twenty-six pieces of the most varied character by a score of eminent composers, and shows how they ought to be played. His touch is sure, and his manner is engaging; and he throws in by the way interesting, and generally suggestive, remarks about the composer, the particular piece, or the class of pieces. These notes will be found most valuable to the private student.

The Organ Fifty Years Hence. By Francis Burgess, F.S.A. Scot. (1s. net. Reeves.)

"A study of the development of the organ in the light of its past history and present tendencies"—a lecture delivered before the London Section of the Incorporated Society of Musicians. "There is no instrument which is so capable of becoming degraded in its construction and in its use as the organ: and there is no instrument more capable of producing effects of an inspiring nature or of spurring men on to high ideals and lofty thoughts." A very fair and independent survey, with cautious inferences.

PRACTICAL MANUALS.

Laboratory Arts: a Teacher's Handbook. By George H. Woollatt, Ph.D., F.I.C., Principal of the Municipal Technical School, Portadown, Professor of "Laboratory Arts" Summer Courses for Science Teachers, Ireland. (3s. 6d. net. Longmans.)

The volume deals with materials and tools used in the construction, adjustment, and repair of scientific instruments, and is "intended for the teacher who is more or less in charge of the apparatus he uses." Three separate sections are devoted to woodwork, metalwork, and glass-work; and a final section treats of a varied miscellany of matters, while a great many useful things are packed away in appendixes. There are 119 useful diagrams. While giving full credit to other methods and processes, the author goes his own independent way on the basis of his "experience during some twenty years of practical laboratory teaching in almost all grades of educational endeavour." This is just what he ought to have done. The work is markedly able and suggestive, and it is sure to be fully appreciated by teachers and by private practitioners of the various arts under consideration.

Messrs. Dawbarn & Ward issue the fifth edition of *The Photographic Annual*, "incorporating the Figures, Facts, and Formulæ of Photography," edited by H. Snowden Ward, F.R.P.S., President of the Photographic Convention of the United Kingdom (1s. net). This year the volume is largely extended, and it contains an immense mass of serviceable information carefully digested.

CHRISTMAS BOOKS.—I.

Romance of History.

The Red Book of Heroes, by Mrs. Lang, edited by Andrew Lang (6s., Longmans), is a varied record of noble lives, rich in example and strenuous in encouragement. "Honour and courage were the masters of the men and women whose stories are told in this book. . . . They are all, these men and women, good to live with, good to know, good to go with." The stories are admirably told, and they cannot be too widely read. The volume is beautifully got up. Eight coloured plates, seventeen full-page plates, and twenty-four illustrations in the text.

Heroes of Modern India, by Edward Gilliat, M.A., sometime Master at Harrow School (5s., Seeley), consists of "stirring records of the bravery, tact, and resourcefulness of the Founders of the Indian Empire." An introductory chapter sketches the country and its peoples; and the remaining twenty-four chapters cluster the main events of India under British conquest and occupation around the names of the more distinguished officers, military and civil. The volume is well written, and the author has evidently taken pains to be accurate, avoiding many common mistakes of fact. The book is of engrossing interest, and ought to be widely read by young folk. Sixteen illustrations.

Leo of Mediolanum, by Gertrude Hollis (2s. 6d., S.P.C.K.), is a tale of the fourth century. Mediolanum is the modern Milan; and Leo is the younger son of Leontius, a prominent citizen and a Christian. The tale runs from 374 to 387 A.D., and illustrates the strenuous struggles to maintain the Catholic (Nicaean) faith against the heresy of the Arians, under the leadership of Ambrosius (St. Ambrose), the Bishop of Mediolanum. The three principal characters, Leo, Crispus (brother of Leo), and Glycerius—Christian priest, Christian soldier, and Christian lawyer—are all strongly influenced by the Bishop. The story is well thought out, and it is written with much insight into the religious conditions of the period and with great spirit. Illustrations by Adolf Thiède.

The Royal Road, by Mary H. Debenham (2s. 6d., National Society's Depository), is a simple story quietly and agreeably narrated. It opens in the year 1247, on a May afternoon, when there is feasting in the Savoy Palace on the occasion of the wedding of two Provençal ladies to two young English nobles, wards of the Crown. Eventually it takes the hero off to a Crusade, where he of course distinguishes himself; and all's well that ends well on another afternoon in another May. Four full-page illustrations by Isabel Watkin.

The Failure of a Hero, by M. Bramston (2s., S.P.C.K.), is "a tale of Shakesperian days"; or, rather, it "is less a work of fiction proper than a set of pictures of the great Elizabethans of the last decade of the sixteenth century, strung together upon the possible experiences of a lad of the period." The author has her own solution of the problem of the Essex rising; and if Shakespere (so she spells the name) did not, so far as is positively known, act the character of Prospero, "neither is there any historical reason why" he should not have done so. The story is deftly woven and charmingly written. Illustrations by Adolf Thiède.

Under Puritan Rule, by Agnes Giberne (3s. 6d., National Society's Depository), is "a tale of troublous times," depicting family life in England during the Civil War. "Many of the characters, many of the scenes described," the author avers, "are absolutely true." Minor matters are handled freely in the interest of dramatic effect, "but in all matters of history, in all that concerns the habits and the spirit of the times, in the progress of the war, in the desecration of churches and cathedrals, I have kept to that which actually took place, only weaving in with facts some characters and circumstances of fiction." This is all to the good, and the narrative does not suffer. The interest is briskly maintained throughout. Five full-page illustrations by Isabel Watkin.

Shepperton Manor, by the late Rev. J. M. Neale (2s. 6d., S.P.C.K.), is a reprint, but none the less welcome for that. It presents an interesting and instructive picture of the English Church at the beginning of the seventeenth century—its external relation to Puritans and to members of the Roman communion and its internal discipline and ceremonies. Though a few anachronisms have been admitted, yet "the minutest attention has been paid, in essential matters, to accuracy." The delineation of Bishop Andrewes is strikingly careful and successful. Illustrations by W. S. Stacey.

The Marquis's Heir, by A. H. Biggs, M.A. (2s. 6d., S.P.C.K.), is "a tale of the early years of the French Revolution," narrated with close fidelity to the ascertainable historical facts. The real hero is an English youth, whose adventures will be followed with unfailing interest; and, of course, they are intertwined with the fate of the Marquis and the discovery and the fortunes of his heir. The story is elaborately worked out and briskly written. Illustrations by Harold Piffard.

Tales of Adventure.

Chillagoe Charlie, by Robert M. Macdonald (5s., Fisher Unwin), introduces us to "a flourishing sulphury-smelling settlement" in the heart of York Peninsula in Northern Queensland just when a Government reward is offered for the arrest of "the man known throughout North Queensland as Chillagoe Charlie." Things are lively enough in Caledonia Camp, and the rush at Crocodile Crossing increases the excitement, which is not lowered by the midnight riders; and still there is much going and coming of miners and troopers before Charlie of Chillagoe is unmasked. We should recommend readers to keep an observant eye on the fighting parson. Mr. Macdonald writes vigorously and draws varied materials from personal experience. Coloured frontispiece and sixteen other illustrations by Archibald Webb.

The Secret of the Sargasso, also by Robert M. Macdonald (5s., Fisher Unwin), is another dashing story of adventure, this time on the ocean wave. The chief of a sea-rover may be ousted by an ambitious lieutenant, may build himself a new ship and race the other thousands of miles, and may, after all, regain the upper hand. The intrigues are complicated; scientific inventions for speed are marvellous; the personal expedients are ingenious and novel. A rich American's yacht crosses the track of the Cosmopolites, and his daughter and her friend bring a special strain of adventure and a spice of tenderness into the *mêlée*. The story is of the breezy, ingenious, and forceful character that the natural boy delights in. Coloured frontispiece and sixteen other illustrations by Archibald Webb.

Adventures in the Arctic Regions, by H. W. G. Hyrst (5s., Seeley), recounts "romantic incidents and perils of travel, sport, and exploration around the Poles" in great variety. Mr. Hyrst piously seeks out and brings to the front many explorers whose names are generally forgotten—King, Maguire, Snow, and others—and less known heroes that served under renowned explorers that carried off all the fame of their common enterprises. The period is mainly the first sixty years of the nineteenth century, before science had reduced the more romantic features of Polar exploration. The book is full of interest, and comes at an opportune moment. Sixteen illustrations and artistic get-up.

Marvels of Nature and of Science.

Leisure Hours with Nature, by E. P. Larken (5s., Fisher Unwin), is a most charming volume, written apparently from direct experiences and thoughtfully suggestive. It is concerned mainly with the more common beasts, birds, &c., in multifarious aspects, including the poetical and romantic. No reader with a real sense of Nature will dip into a chance page without being fascinated, whether with the ways of the different animals or with popular fancies about them, or with particular anecdotes about particular performers. The volume is very instructive without laying itself out too openly to instruct, and is pleasantly written. There are seventy-one excellent illustrations beautifully reproduced.

Extinct Animals, by Sir E. Ray Lankester, LL.D., F.R.S., late Director of the Natural History Departments of the British Museum, Correspondent of the Institute of France (3s. 6d. net, Constable), appears in a new edition, with 218 illustrations. The descriptive matter is a corrected shorthand report of a course of lectures "adapted to a juvenile audience" at the Royal Institution half-a-dozen years ago. The volume, therefore, "will not be regarded as anything more ambitious than an attempt to excite in young people an interest in a most fascinating study," and, of course, "does not profess to give more than a peep at the strange and wonderful history of extinct animals." We hope that many readers will take a peep at these animals through Sir E. Ray Lankester's glasses and excellent illustrations.

Botany of To-day, by G. F. Scott Elliot, M.A., B.Sc., &c. (5s., Seeley), is not a systematic treatise on the science, but "a popular account of recent notable discoveries." Those that have read Mr. Scott Elliot's previous books of a similar popular character will not miss this one. He divests the subject, as far as possible, of cumbersome technical terms, and presents his story in plain and simple language, and a most interesting and instructive story it is. An admirable book to put into the hands of young folk. Twenty-seven illustrations.

By the Deep Sea, by Edward Step, F.L.S. (3s. 6d. net, Jarrold), is very welcome in a fourth edition, thoroughly revised and brought up to date. It is "a popular introduction to the wild life of the British shores"—very simple, engaging, and accurate. It is furnished with 128 illustrations, many of them new (we think), and it is strongly and tastefully got up. An excellent companion for the seaside.

Astronomical Curiosities, by J. Ellard Gore, M.R.I.A., &c. (6s. net, Chatto & Windus), is a piquant collection of "facts, fallacies, and paradoxes." These are grouped under the various heavenly bodies to which they refer, and there is no intention to furnish any continuous or systematic exposition—one may dip in at a venture without missing connexion. Yet these isolated paragraphs are extremely interesting, many of them amazing; and they provide much material for reflection. Not much of the information is found in popular works on astronomy. The volume is sure to excite much interest in the subject.

The Romance of Modern Manufacture, by Charles R. Gibson (5s., Seeley), is "a popular account of the marvels of manufacturing," after the manner of the author's former volumes in the series—"The Library of Romance." Mr. Gibson "has endeavoured to trace the evolution of the different industries, and to describe in everyday language the methods of modern manufacture in our principal industries." The story of developments is absorbing and astonishing, and must have cost the author immense labour of investigation. The reading of this book will open the eyes of the present generation, old as well as young. It is simply and clearly written, and tastefully produced. Twenty-eight illustrations and sixteen diagrams.

The Highway and the Street.

Highways and Byways in Middlesex, by Walter Jerrold (6s., Macmillan), will form a delightful Christmas book for the pedestrian in "the homeliest of the Home Counties." Thanks to the ramifications of railways and tramcars, any part of Middlesex, thinks Mr. Jerrold, "may be said to be

THE VERY BOOK YOU WANT!

How to Teach Drawing without Copies

A PRACTICAL SCHEME OF

OBJECT-DRAWING & NATURE-DRAWING for the USE OF TEACHERS in PRIMARY & SECONDARY SCHOOLS.

By R. RADCLIFFE CARTER,
Organizer of Art Instruction in the County Borough of Walsall.

Crown 4to, 116 pages, fully illustrated, net 3s. 6d.

The above Scheme is intended to be a **real, sound, and practical help to Teachers** who are associating themselves with the new movement in Drawing. An attempt is made throughout to give **practical advice** upon **principles** and **methods** which the author has worked out in extensive practice, in their relation to the **difficulties of Teachers.** This course is arranged in such a manner as to give, in the case of **each lesson,** (*a*) the **Subject of the Lesson**; (*b*) a **Suitable Object to be used**; (*c*) a **Suitable Method of Presentation**; (*d*) **Memory-Drawing**; (*e*) **Play-Drawing.** The book is illustrated by Photographs of over 300 objects suitable for Drawing Lessons.

E. J. ARNOLD & SON, Ltd.,

LEEDS AND GLASGOW.

Digitized by Google

accessible from London within the limits of a half-day holiday"; and, in spite of the encroachments and the influences of the capital, there still remain many restful byways, rural scenes, and places of personal and historic interest. Mr. Jerrold will be found a trustworthy and entertaining guide. There are somewhere about 130 typical illustrations by Hugh Thomson.

Aspects of Modern Oxford, by A. D. Godley, M.A., Fellow and Tutor of Magdalen College (2s. net, Seeley), is a new edition of a book that first appeared some sixteen years ago. "Many things have happened since then," Mr. Godley imagines the critics saying; "there is a new golf course, and no one now plays ringoal." Perhaps one of his two defences is good enough: "What was true in 1893 is still true in 1909, because Oxford only appears to alter, and in reality remains much the same." He speaks charmingly of dons and colleges, undergraduates, sightseers, examinations, and so forth; and one promptly forgets about the original date of the book. The illustrations are numerous and excellent.

FOR THE CHILDREN.

The Rosebud, and other Tales, by Arthur Kelly (6s. net, Fisher Unwin), is a very handsome volume of charming stories about familiar objects—rosebud, mirror, lump of coal, soap-bubbles, &c.—lavishly and splendidly illustrated in colours by Walter Crane.

The Rainbow Book, by Mrs. M. H. Spielmann (5s. net, Chatto & Windus), offers a considerable number of delightful "tales of fun and fancy," with abundance of illustrations by artists of renown. The fairy people are liberally represented in eight marvellous "adventures in Wizard Lane." Then there is Father Christmas: "here the children will find revealed and laid bare the secret and mystery of Santa Claus." "And for the first time in the history of romance we discover what it was that the Sleeping Beauty dreamt." And so forth. The get-up is worthy of the contents.

Five Little Peppers Midway, by Margaret Sidney (6s., Fisher Unwin), is brisk and whimsical enough, with a transatlantic flavour. As it is said to be in its 119th thousand, it appears to have enjoyed popularity among American children. There are eight good full-page illustrations by Herman Heyer.

The Fairies' Fountain, and fourteen other stories, by the Countess Evelyn Martinengo Cesaresco (3s. 6d. net, Fisher Unwin), will delight the children. The type is very liberal, and there are fifteen illustrations (besides the frontispiece) by Charles Robinson.

The Rose and the Ring, by Thackeray (3s. 6d. net, Chatto & Windus), is a charming edition of a perennial favourite, with fifteen full-page plates and thirty illustrations in the text by Gordon Browne.

A Wonder Book and *Tanglewood Tales*, by Hawthorne, are combined in a substantial volume (6s., Fisher Unwin), with four coloured plates and twenty-four other full-page illustrations by Willy Pogani. A handsome edition.

VARIOUS.

Messrs. Adam & Charles Black publish cheap editions of Farrar's School Tales—(1) *Eric; or, Little by Little;* (2) *St. Winifred's, or, The World of School;* and (3) *Julian Home, a Tale of College Life*—at 6d., 1s., 1s. 6d., 2s. 6d., and 3s. 6d. each, according to get-up. The more expensive of these inexpensive styles are very suitable for Christmas gifts, and the stories will be as good as new to a fresh generation of young readers.

Reuben the Fisherman, by William Webster (2s., S.P.C.K.), "a Lowestoft romance," is plainly and forcibly written, and in excellent tone. The prologue records the finding of a child by the roadside, and, when Reuben, leaving home in a temper, joins his first boat at Lowestoft, his captain tells him that he, too, has lost a child that might now probably be pretty like the new fisherman. Whether there was or was not an eventual identification we will not reveal. Meantime, the first voyage brings adventures; a trip to northern fishing grounds introduces complications; there are extended experiences on a trawler; and various tangles have to be unravelled. The interest is briskly maintained. Illustrations by Harold Piffard.

Ten Great and Good Men, by Henry Montagu Butler, D.D., Master of Trinity College, Cambridge (6s. net, Edward Arnold), consists of lectures sketching the character, the achievement, and the permanent influence of well known men in various walks of life: Burke, Pitt, Canning, John Wesley, Wilberforce, Lord Shaftesbury, John Bright, Gordon, Dr. Arnold, and Thomas Erskine of Linlathen. The lectures do not profess to be critical or complete, but they are well informed on the main facts, and select efficiently the points likely to impress a youthful or general audience. They will be very useful to "men or women who are from time to time called upon to give addresses in schoolrooms or to Young Men's Christian Associations, and the like."

The National Society's Depository issues several volumes of a sober tone, inculcating quietly some moral, and agreeably and interestingly written: (1) *Seven, and One More*, and three other stories, by Katharine E. Vernham, with two full-page illustrations by Isabel Watkin (1s. 6d.); (2) *Cousin Becky's Champions*, by Eleanora H. Stooke, with two full-page illustrations by Isabel Watkin (2s.); (3) *The Mystery of a Pink Stud*, by Mary E. Shipley, with frontispiece (1s.). Also *A Fair Haven*, and other stories for Sunday evenings, by Mary H. Debenham, which is of a more pointedly religious tone, the stories being based on incidents in the lives of notable Churchmen or other religious personalities. It completes a series for fifty-two Sunday evenings, and has four full-page illustrations by Violet M. Smith (2s.).

FIRST GLANCES.

CLASSICS.

Homer, The Iliad of. Books XI and XII. Translated by E. H. Blakeney, M.A. 1s. Bell (Classical Translations).

[Sedulously careful. Calverley's translation of "The Catalogue of the Ships" is appended.]

Latin Lessons, First. With English Exercises based on the Text. By C. M. Dix, M.A., Assistant Master in the Oratory School, Edgbaston, and Lecturer in Latin and Greek in the Birmingham and Midland Institute. 2s. Rivingtons.

["For the use of preparatory and all types of secondary schools." To end of deponent verbs. Lessons continuous in sense and carefully graduated—stories, conversations, historical incidents, easy poetry, &c. Grammar and exercises corresponding. Vocabularies, special and general. Elaborately worked out; claims attention.]

Ovid: Metamorphoses. Book III. Edited by M. Cartwright, M.A. Wales, Classical Mistress at the County School, Abertillery. 2s. Clarendon Press.

[Good introduction; useful notes; vocabulary.]

Pliny's Natural History: Selections from Books VIII–X. Edited by L. D. Wainwright, M.A., Assistant Master, St. Paul's School. 2s. net. Alston Rivers.

[Treats of land animals, fishes, and birds. Brief introduction, biographical and critical. Notes unpretentious, but useful.]

Vergil: Aeneid Book VIII. Edited by L. D. Wainwright, M.A., Assistant Master, St. Paul's School. 1s. 6d. Bell (Illustrated Classics).

[Text paragraphed, with summaries; serviceables notes; vocabulary. Introduction careful and adequate.]

MATHEMATICS.

Arithmetic, The Intermediate. Edited by J. L. Martin, Head Master of the Adcroft School, Trowbridge. Parts I and II, complete, 1s. Harrap (New Concrete Practical Arithmetic).

Calculus, Differential, A Text-book of, with numerous worked-out examples. By Ganesh Prasad, B.A. Cantab., D.Sc. Allahabad, Professor of Mathematics in Queen's College, Benares. 5s. Longmans.

["Strictly rigorous, and at the same time simple, exposition of the Differential Calculus and its chief applications."]

Calculus, Differential and Integral, Elements of the. By A. E. H. Love, M.A., D.Sc., F.R.S., Sedleian Professor of Natural Philosophy in the University of Oxford. 5s. Cambridge University Press.

["Intended merely to help the reader to make a beginning."]

Geometry, Differential, of Curves and Surfaces, A Treatise on the. By Luther Pfahler Eisenhart, Professor of Mathematics in Princeton University. 26s. Ginn.

[Elaborate work; many examples.]

Geometry, Projective, Elementary. By A. G. Pickford, M.A., M.Sc., sometime Scholar of St. John's College, Cambridge, Head Master of the Hulme Grammar School, Oldham. 4s. Cambridge University Press.

[For upper forms of schools and junior University students.]

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W. [FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.
Secretary—W. N. NEALE, ESQ. Actuary and Manager—FRANK B. WYATT, ESQ., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE without personal liability on highly favourable terms to

THE CLERGY AND THEIR RELATIVES.

ALL PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,351,137. Annual Income, £471,097.

Bonuses Distributed, £4,256,464.

LOW PREMIUMS. LARGE BONUSES. Notwithstanding the lowness of the Premiums charged, the BONUSES are on an EXCEPTIONALLY HIGH SCALE.

NEW AND SPECIAL POLICIES. Application is invited for the PROSPECTUS, and Leaflets explaining two new Policies, with valuable Options.

WHOLE-LIFE CONVERTIBLE ASSURANCES. Very Low Premium—about one half the usual rate—during first ten years.

2. PENSION POLICIES. Premiums returnable with compound interest in case of death or surrender before pension age. Option to commute for cash.

Assurances without profits, at low rates of premium, may be effected, and Life Annuities on favourable terms may be purchased, by any person irrespective of any special qualification by relationship to the Clergy.

ANNUAL PREMIUMS FOR £1,000, WITH PROFITS.

Age next Birthday.	£1,000 Payable at Death.			£1,000 Payable at Age 60 or earlier Death.		
	£.	s.	d.	£.	s.	d.
25	20	1	8	27	3	4
30	23	3	4	32	10	10
35	26	10	0	40	1	8
40	31	1	8	51	5	0

NOTE.—Under the Reduced Premium System (explained in Prospectus) four-fifths only of these Premiums need be paid, the other one-fifth remaining a charge to be repaid out of Bonus.

No Agents employed and no Commission paid for the introduction of business, whereby £10,000 a year is saved to the Members.

Assurances can be effected by direct communication with the Office, 2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

MATHEMATICS.

11067. (H. J. WOODALL.)—Prove that there do not exist three consecutive numbers whose prime factors are all low; if possible, find the greatest ratio of middle number to highest prime factor.

Solution by Professor E. B. ESCOTT.

The Question is quite indefinite, as to what is meant by "low." In the answer to my Questions 15500 and 15572 (November 1, 1904), I have given sets of three consecutive numbers with comparatively small factors, *i.e.*, ratio of number to largest factor,

$7534240 = 2^5.5.7^2.31^2$	
$7534241 = 11.13.19.47.59$	90774
$7534242 = 2.3^3.41^2.83$	
$15473808 = 2^4.3^3.7^2.17.43$	
$15473809 = 13^2.19.61.79$	195871
$15473810 = 2.5.11.41.47.73$	
$306331584 = 2^6.3.13.31.37.107$	
$306331585 = 5.7^4.17.19.79$	2028686
$306331586 = 2.11^2.83.101.151$	
$315630755 = 5.11.17.19.109.163$	
$315630756 = 2^2.3^6.7^2.47^2$	1936385
$315630757 = 13.37.73.89.101$	
$940737005 = 5.13.31.41.59.193$	
$940737006 = 2.3^2.11^2.19.127.179$	4874285
$940737007 = 7.17.23.47.71.103$	

It is easy to see that there is no limit to the ratio of the middle number to the highest factor,—

$$\tfrac{1}{120}(x^3-49x-120) = \tfrac{1}{120}(x-3)(x-5)(x+8),$$
$$\tfrac{1}{120}(x^3-49x) = \tfrac{1}{120}x(x-7)(x+7),$$
$$\tfrac{1}{120}(x^3-49x+120) = \tfrac{1}{120}(x+3)(x+5)(x-8),$$

are consecutive integers when

$$x \equiv 0, 8, 32 \pmod{40} \quad \text{or} \quad x \equiv 3, 5, 7 \pmod{10}.$$

The greatest prime factor of the three consecutive integers is not greater than $x+8$.

The ratio of the middle term to $x+8$ is $(x^3-49x)/[120(x+8)]$, which evidently has no limit as x increases.

16718. (*Communicated by* Professor K. C. SIH.)—Sum the series

$$\frac{1+2+3+4}{1.2.3.4} + \frac{5+6+7+8}{5.6.7.8} + \frac{9+10+11+12}{9.10.11.12} + \ldots \text{ ad inf.}$$

Solution by T. W. CHAUNDY *and many others.*

The general term is

$$\frac{(4n-3)+(4n-2)+(4n-1)+4n}{(4n-3).(4n-2).(4n-1).4n} = \frac{2(8n-3)}{(4n-3)(4n-2)(4n-1)4n}$$
$$= \frac{1}{4n-3} - \frac{1}{4n-2} - \frac{1}{4n-1} + \frac{1}{4n}.$$

Hence the sum is

$$\tfrac{1}{1}-\tfrac{1}{2}-\tfrac{1}{3}+\tfrac{1}{4}+\tfrac{1}{5}-\tfrac{1}{6}-\tfrac{1}{7}+\tfrac{1}{8}+\ldots = 1-\tfrac{1}{3}+\tfrac{1}{5}-\tfrac{1}{7}+\ldots-\tfrac{1}{2}+\tfrac{1}{4}-\tfrac{1}{6}+\ldots$$
$$= \tfrac{1}{4}\pi - \tfrac{1}{2}\log_e 2.$$

15294, 16486, 16575, 16687. (15294.) (H. BATEMAN.)—TP, TQ are the tangents from T to one of a system of confocal conics. Prove that the circles of type TPQ are coaxal.

(16486.) (H. L. TRACHTENBERG, B.A.)—Three conics are described touching the circum-circle of a triangle ABC: the first touches the sides AB, AC at B, C; the second BC, BA at C, A; the third CA, CB at A, B. If L_1, L_2, L_3 are the points of contact with the circum-circle, prove that AL_1, BL_2, CL_3 are concurrent in the symmedian point.

(16575.) (W. F. BEARD, M.A. Suggested by Question 16486.)—ABC is a triangle; a conic is described to touch AB, AC at B, C and to touch the circum-circle; if P is the point of contact and PQR is drawn parallel to BC to meet the circle at Q and the conic at R, prove

$$PQ = QR.$$

(16687.) (W. F. BEARD, M.A.)—TQ, TQ′ are tangents to an ellipse, centre C, foci S, S′, such that the circle TQQ′ touches the ellipse again at P. If QQ′ meets the tangent at P at X, prove that (i) XT touches the circle; (ii) TP is half the central chord of curvature at P; (iii) the centre of curvature at P lies on the circle TQQ′; (iv) T lies on the circle SPS′; (v) $CP.CT = CS^2$.

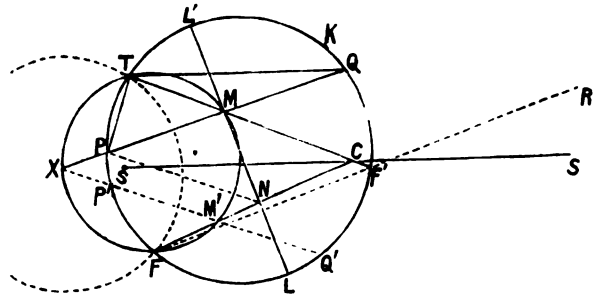
Digitized by Google

Solution by C. E. YOUNGMAN, M.A.

SCS′ as usual. The envelope of PQ (obvious from its equation) is a parabola; the directrix is CT, because two perpendicular positions of PQ are the axes CA, CB, and two more are the tangents at T to those confocals which pass through T; these two, TL, TL′, bisecting the angle STS′, bisect PTQ also. Now CT bisects PQ at M; therefore a fifth tangent to the parabola is LML′, the axis of PQ. Thus TLL′ is a triangle of tangents, and the circle about it, *i.e.* the circle TPQ, goes through the focus, a fixed point F.

The relation of T to F is the same as that of F to T. For F′, the image of F in the tangent LL′, lies on the directrix TM and also on the circle TPQ; therefore $\angle PTF = \angle QTF'$, TF is a symmedian of TPQ, MF = MF′, PQ bisects $\angle TMF$, and $MT.MF = MP^2$. And all this holds for S, C, S′, as much as for P, M, Q, of which they are special positions.

Another circle through F circumscribes the triangle formed by TL, TL′, and PQ. Its centre X lies on PQ, and it cuts TPQ orthogonally at T and F, so that T (XPFQ) is harmonic: therefore, for the confocal PQ, X is the pole of TF. If, then, tangents FP′, FQ′ be drawn from F to the conic, P′Q′ goes through X; at the same time the circle FP′Q′ goes through T, and cuts orthogonally that coaxal circle whose centre lies on P′Q′. That centre therefore is X; hence FP′Q′ is the same circle as TPQ.



Consequently, when TPQ touches the conic, it is at F; so that here is proof of 16486, and of (i), (iv), (v) in 16687.

Again (the circle still touching at F), let FF′ cut the conic at R. Then FR and PQ are parallel chords, and TCF′ bisects them; which is 16575. And always P′Q′ is bisected both by CF and by the circle FXTM; therefore when F is on the conic CF touches that circle, and CF, FT are equally inclined to FX, and have equal chords cut from them by any circle touching FX.

But the axis CS makes equal angles with PQ and FX, *i.e.* with FR and FX, chord and tangent; therefore the circle of curvature at F goes through R, and all chords in it are double the corresponding chords in TPQ, on which will lie its centre K, opposite to F. Hence (ii) and (iii) of 16687. [Rest in *Reprint*.]

16571. (W. J. GREENSTREET, M.A.)—If $\Sigma a = \Sigma x = \Sigma ax = 0$, then

$$\Sigma ax^7 = xyz\Sigma x^2\Sigma ax^2.$$

Additional solution by S. NARAYANAN, B.A., L.T.

From the given equations, we get

$$x : y : z = b-c : c-a : a-b \text{ and } a : b : c = y-z : z-x : x-y.$$

Therefore
$$E \equiv \Sigma ax^7 = \Sigma(y-z)x^7 \quad \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\text{(i)}$$
$$= \Sigma a(b-c)^7 \quad \ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\ldots\text{(ii)}.$$

(i) has evidently $\Pi(y-z)$ as factors, and (ii) has $\Pi(b-c)$ as factors, but $\Pi(y-z) = \Sigma x^2(y-z) = \Sigma ax^2$, and $\Pi(b-c) = xyz$, the constants being omitted.

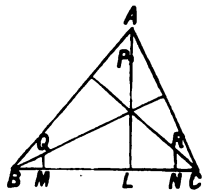
Now we have 6 factors. The last factor should be of the second degree in a, b, c, x, y, z, and, since a, b, c occur only in the first degree and in virtue of the given relations, it is easily seen that the fourth factor is Σx^2. Therefore $\Sigma ax^7 = xyz\Sigma x^2.\Sigma ax^2$.

16525. (JAMES BLAIKIE, M.A.)—Points P, Q, R are taken on the altitudes of a triangle ABC such that AP/BC = BQ/CA = CR/AB; prove that the centroids of PQR, ABC coincide. Hence show that the centroids of the triangles formed by joining (1) the vertices, (2) the centroids of the equilateral triangles described similarly on the three sides of any triangle coincide with the centroid of the original triangle.

Solutions (I) *by* M. T. NARANIENGAR, M.A.; (II) *by the* PROPOSER *and* SONTI PURUSHOTHAM; (III) *by* B. C. WALLIS, F.C.P., B.Sc. (Econ.).

(I) This follows at once from the property of the mean centre, viz., if AA′, BB′, CC′, ..., are measured parallel and proportional to the sides of a *closed polygon* in order, then the mean centres of ABC ... and A′B′C′ ... are the same.

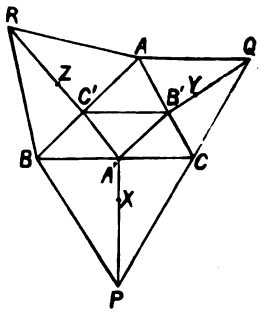
(II) Let ABC be the triangle; P, Q, R the points on the altitudes; and let PL, QM, RN be perpendicular to BC.



We have $AP = ma$, $BQ = mb$, $CR = mc$;

therefore
$$MQ + RN = mb\cos C + mc\cos B$$
$$= ma = AP.$$

Thus the sum of the distances of P, Q, R from BC is equal to the sum of the distances of ABC. Similarly for the distances from CA, AB. Thus the centroids coincide. In the case of the equilateral triangles the points P, Q, R and the points X, Y, Z are points on the altitudes of the triangle A′B′C′ formed by joining the mid-points of ABC. Also their distances from A′, B′, C′ are proportional to B′C′, C′A′, A′B′. We have, therefore, two particular cases of the previous theorem. [Rest in *Reprint*.]



15784. (S. C. GOULD.)—Give all the different square numbers that can be formed by the ten digits. The proposer has developed eighty-seven such numbers. Are there any more?

Prof. E. B. ESCOTT draws attention to the following errors in the solution of Question 15734 (*v. Educational Times*, May, 1905; and *Reprint*, New Series, Vol. VIII, p. 83):—

81122 *should be* 81222; 77246 *should be* 77346;

86704 is wrong, and the number placed opposite (*viz.* 7518029436) is not a square.

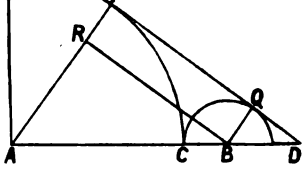
16489. (C. E. YOUNGMAN, M.A.)—Two circles (A), (B) touch externally at C, between A and the other centre of similitude D. If A and D be fixed points, prove that the common tangent of (A) and (B) is longest when AB = 2CD.

Solutions (I) *by* JAMES BLAIKIE, M.A., *and* SARADAKANTA GANGULI, M.A.; (II) *by* M. T. NARANIENGAR, M.A.; (III) *by* S. G. SOAL.

(I) Let PQ be the common tangent from D, and draw BR parallel to PQ. Then

$$PQ^2 = RB^2 = AB^2 - AR^2$$
$$= (r+r')^2 - (r-r')^2 = 4rr'$$

if $AP = r$, $BQ = r'$. Let $AD = a$.



By similar triangles

$$AD/AP = AB/AR,$$

whence $r' = r(a-r)/(a+r)$.

Thus PQ will be a maximum when $r^2(a-r)/(a+r)$ is a maximum.

Differentiating we obtain the condition $a^2 - ar - r^2 = 0$ which may be written $ar/(a+r) = a-r$.

Again $AB = r + r' = 2ar/(a+r)$, $CD = a-r$.

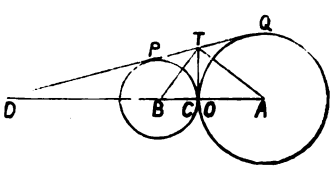
Thus the condition for a maximum is identical with the relation AB = 2CD.

(II) Now PQ = 2CT; therefore PQ is greatest when

$$CT^2 = BC.CA$$

is greatest. Let

$$OB = OA = x;$$



then $OC.OD = OB^2$,

i.e., $OC = x\lambda$ and $OD = x/\lambda$ (say);

therefore $AD = x/\lambda + x = x(1+\lambda)/\lambda = a$ (constant),

and $BC.CA = OB^2 - OC^2 = x^2(1-\lambda^2) = a^2\lambda^2(1-\lambda)/(1+\lambda)$.

Thus BC.CA is greatest when $\lambda^2 + \lambda = 1$, *i.e.*, $x/\lambda - x\lambda = x$, or DC = OB, *i.e.*, AB = 2CD. [Rest in *Reprint*.]

16719. (Professor SANJÂNA, M.A.)—Show that numbers of the form $x^4 - x^2y^2 + y^4$ can be resolved into two algebraic factors for a multiply infinite number of corresponding values of x and y. Hence factorize

$$120^6 + 119^6, \quad 193^6 + 141^6, \quad 243^6 + 242^6, \quad 447^6 + 445^6.$$

Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.

Numbers $N = x^4 - x^2y^2 + y^4$ can be resolved algebraically into two co-factors for a great variety of relations between x, y. Four of the most important relations are when $2xy$ or $6xy = \square$, and when $y^2 \sim x^2 = z^2$ or $3z^2$. These four factorizations have been fully explained in the writer's solutions of such questions in this paper recently.

Digitized by Google

The Proposer's third example is a case of $6xy = \square$. Here $x = 243$, $y = 242$, $6xy = (6\cdot99)^2$.

$N = L.M$, where $L = P-Q$, $M = P+Q$.

$$P = x^2+3xy+y^2 = 294031, \quad Q = \sqrt{(6xy)}\,.\,(x+y) = 288090,$$

whence $L = 5941 = 13.457$, $M = 582121 = 37.15733$.

A general method for generating whole series of such factorizable Sextans, and of (at same time) factorizing them, is indicated in Art. 37A of the writer's paper on "Diophantine Factorization of Quartans" in *Messenger of Mathematics*, Vol. 38, 1909, page 169; this method—as applied to Sextans—is fully detailed in Chapter IV of a paper on "High Sextan Factorizations" now appearing in that journal.

It appears probable that every factorizable Sextan is connected with a certain (solvable) 2-ic Diophantine equation. The process is not well suited for factorizing *given* Sextans—*i.e.*, when only x, y are given, as it is not easy to discover the Diophantine equation suited to the given number from the data x, y only.

The complete factorization of the four examples (into prime factors) is given below:

$x, y =$	120, 119	193, 141	243, 242	445, 447
$x^2+y^2 =$	13.13.13.13;	2.5.29.197;	337.349;	17.11701;
$x^4-x^2y^2+y^4 =$	61.3343861;	73.733.19477;	13.457.37. 15733;	13.709. 1933.2221;

The small divisors (<1000) of the numbers < 9 million were found by actual trial of all small primes $p = (12\varpi+1)$, and the rest from the large Factor Tables.

Orthogonal Projection.

By W. GALLATLY, M.A.

1. Let the triangle ABC be projected orthogonally into the triangle LMN with angles λ, μ, ν, area Δ', and sides l, m, n.

Let θ be the angle between the planes of the two Δ's. Denote the heights of A, B, C above the plane of projection by h_1, h_2, h_3. Then,

since $$(h_2-h_3)+(h_3-h_1)+(h_1-h_2) = 0;$$

therefore $$\sqrt{(a^2-l^2)} \pm \sqrt{(b^2-m^2)} \pm \sqrt{(c^2-n^2)} = 0.$$

This leads to

$$4m^2n^2-(m^2+n^2-l^2)^2+4b^2c^2-(b^2+c^2-a^2)^2 = 2.\Sigma.a^2(m^2+n^2-l^2)$$
$$= 2.\Sigma.l^2(b^2+c^2-a^2).$$

Now $$\cot A = (b^2+c^2-a^2)/4\Delta : \cot B + \cot C = a^2/2\Delta;$$

therefore $$16\Delta'^2+16\Delta^2 = 16.\Sigma.\cot\lambda\,(\cot B+\cot C)\,\Delta\Delta'$$
$$= 16.\Sigma.\cot A\,(\cot\mu+\cot\nu)\,\Delta\Delta';$$

therefore $$\Sigma.\cot\lambda\,(\cot B+\cot C) = \Sigma.\cot A\,(\cot\mu+\cot\nu) = \Delta'/\Delta+\Delta/\Delta'$$
$$= \cos\theta+\sec\theta;$$

therefore $$\Sigma.a^2\cot\lambda = 2\Delta\,(\cos\theta+\sec\theta),$$

and $$\Sigma.l^2\cot A = 2\Delta'\,(\cos\theta+\sec\theta).$$

This algebraic treatment of orthogonal projection does not appear in our text-books, and may therefore be unfamiliar to many students.

2. If ABC is equilateral, then

$$(l^2+m^2+n^2)\,1/\sqrt{3} = 2.\Delta'\,(\cos\theta+\sec\theta),$$

so that, if ω be the Brocard angle of LMN,

$$\cot\omega = (l^2+m^2+n^2)/4\Delta' = \tfrac{1}{2}\sqrt{3}\,(\sec\theta+\cos\theta).$$

Hence the following theorem:—Coplanar equilateral triangles project orthogonally into triangles having the same Brocard angle.

3. The above results, with those obtained in the article on "Pedal and Antipedal Triangles" (*v. Reprint*, New Series, Vol. XVII, p. 79), lead to a simple proof of Professor J. Neuberg's generalization of Lhuilier's theorem, which may be thus stated:—Let x, y, z and x', y', z' be the sides of the two antipedal triangles whose angles are λ, μ, ν: and let the triangle ABC be projected into the triangle LMN with angles λ, μ, ν. Then, if l, m, n are the sides of LMN,

$$2l = x-x' : 2m = y-y' : 2n = z-z'.$$

For, if Δ_2 and Δ'_2 be the areas of the antipedal Δ's, and $\Delta' = \Delta\cos\theta$, the area of LMN, then

$$2\Delta_2 = \Sigma.a^2\cot\lambda+4\Delta = 2\Delta\,(\cos\theta+\sec\theta)+4\Delta.$$

Therefore $$\Delta_2/\Delta = [\sqrt{(\sec\theta)}+\sqrt{(\cos\theta)}]^2.$$

Also $$2\Delta'_2 = \Sigma.a^2\cot\lambda-4\Delta;$$

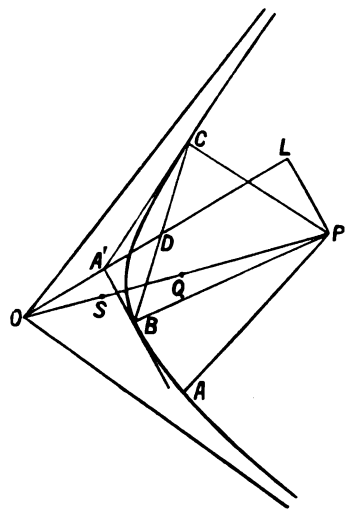
therefore $$\Delta'_2/\Delta = [\sqrt{(\sec\theta)}-\sqrt{(\cos\theta)}]^2;$$

therefore $$\sqrt{\Delta_2}-\sqrt{\Delta'_2} = 2\sqrt{(\Delta\cos\theta)} = 2\sqrt{\Delta'}.$$

But, since $\Delta_2, \Delta'_2, \Delta'$ are similar, their sides are as the square roots of the areas; therefore $x-x' = 2l, \ldots$.

16708. (C. E. YOUNGMAN, M.A.)—In a rectangular hyperbola, if normals at A, B, C meet at P, the nine-point circle of ABC subtends a constant angle at P.

Solutions (I.) *by* V. RAMASWAMI AIYAR, M.A.; (II.) *by* W. F. BEARD, M.A., *and* M. T. NARANIENGAR, M.A.



Let D, E, F be the middle points of the sides of the triangle ABC; O the centre of the hyperbola; A', B', C' the vertices of the triangle formed by the tangents drawn to the hyperbola at A, B, C. These should lie on the diameters OD, OE, OF. Let L, M, N be the feet of the perpendiculars from P on these lines.

By properties of the hyperbola

$$BD.DC \text{ or } DC^2 = DO.DA'.$$

But $$BD.DC = A'D.DL,$$

since B, C, L lie on the circle on A'P as diameter; therefore

$$DO = DL;$$

therefore $\triangle LMN$ is homothetic to $\triangle DEF$ with respect to centre O, and double of it in size. Now OP is obviously a diameter of the circum-circle of LMN; therefore, Q being the middle point of OP, OQ is a diameter of the circum-circle of DEF, that is, of the nine-point circle of ABC. The centre of this circle is therefore S, the middle point of OQ. Its radius SO, or SQ, is one-third of SP, which proves the theorem. [Rest in *Reprint*.]

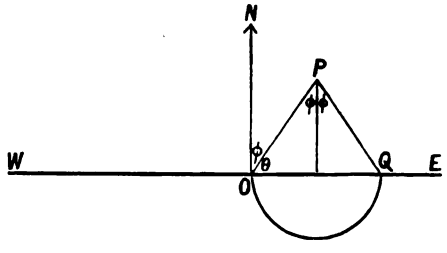
15932. (A. M. NESBITT, M.A.)—A person buys a ticket in a lottery. This ticket contains 80 symbols, of which he crosses out 10. Having done so, he compares it with a similar ticket held by the lottery keeper, in which 20 of the symbols are crossed out. Find the chance (1) that the 10 symbols he has crossed out agree with 10 of the 20 crossed out by the lottery keeper; (2) the chance that there is an agreement as to 5 of the symbols so crossed out by the purchaser and the lottery keeper.

Note by the PROPOSER.

The thing actually occurred in Melbourne in 1905; the lottery keeper offered 2800 to 1 for (1), and 2 to 1 for (2). My object was to get an approximation to the true odds in a form of which a court of justice would be able to grasp the result. On cancelling down the first answer I find $(23.34.67).(22.13.7).(62.61)$. Now the first three factors give (approximately) 52400, the next three 2002, and the last two approximately 3600; and the product of these is about 37730 millions. Instead of getting £70 for his invested 6d. the Melbourne speculator ought to receive about £900,000,000—a slight variation in favour of the astute lottery keeper. With regard to (2) I obtained the approximate result $8\frac{3}{4}$ to 1; but this was some years ago, and I do not feel equal to the labour of verification. The Melbourne odds offered were, I believe, 2 to 1.

16023. (*Communicated by* "INQUIRER.")—A. starts from a point on a straight endless canal and walks 20 miles in a straight line in a random direction, and then camps for the night. Next morning he starts off in a random direction, and keeps walking in a straight line. What is the chance of his meeting the canal again before he has walked more than 20 miles?

Solution by R. CHARTRES.



Let O be the starting point, and P the position at the end of the first day; then the chance of striking WE the second day

$$= M(OPQ)/2\pi = 2M(\phi)/2\pi = \tfrac{1}{4}.$$

θ must be measured all round in the same direction.

The above was suggested by Mr. Youngman's interesting note (*vide Educational Times*, July, 1909, and *Reprint*, Vol. XVII, p. 18).

11370. (The late Professor CLIFFORD, F.R.S.)—$\xi_1, \xi_2, \xi_3, \xi_4$ are connected with x_1, x_2, x_3, x_4 by the equations

$$2\xi_1 = -x_1+x_2+x_3+x_4, \quad 2\xi_3 = x_1+x_2-x_3+x_4,$$
$$2\xi_2 = x_1-x_2+x_3+x_4, \quad 2\xi_4 = x_1+x_2+x_3-x_4,$$

Digitized by Google

find the x's and the sum of their squares, in terms of the ξ's; and prove that

$$\theta x_1 . \theta x_2 . \theta x_3 . \theta x_4 + \theta_1 x_1 . \theta_1 x_2 . \theta_1 x_3 . \theta_1 x_4 = \theta_1 \xi_1 . \theta_1 \xi_2 . \theta_1 \xi_3 . \theta_1 \xi_4 + \theta \xi_1 . \theta \xi_2 . \theta \xi_3 . \theta \xi_4 .$$

Solution (and Correction) by JAMES BLAIKIE, M.A.

By addition and subtraction we find that

$$2(\xi_2 + \xi_3 + \xi_4 - \xi_1) = 2x_1.$$

Therefore $x_1 = \xi_2 + \xi_3 + \xi_4 - \xi_1$, ...

Also, if we square each equation and add, we obtain

$$4(\xi_1^2 + \xi_2^2 + \xi_3^2 + \xi_4^2) = 4(x_1^2 + x_2^2 + x_3^2 + x_4^2)$$

or $$\Sigma x_1^2 = \Sigma \xi_1^2.$$

In the absence of any definition of θ and θ_1, it seems impossible to give a solution of the last part of the question.

QUESTIONS FOR SOLUTION.

In Question 16733 (Professor Morley), the Proposer desires to insert the words "originally straight," which were accidentally omitted in the manuscript. (See *Educational Times*, October, 1909.)

16751. ("INQUIRER.") — Professor Jevons in his "Pure Logic," page 65, expresses the opinion that the combination of equivalences (A = B + C) and (B = $c + d$), in which c and d are the negations of C and D, involves "subtle contradictions." Verify, or disprove, this opinion.

16752. (H. J. WOODALL, A.R.C.S.) — Nine skittles are placed in square array, and a ball (suspended by a cord from a point not quite overhead) is set in motion in an elliptic orbit. Find the conditions of the motion in order that *one* skittle may be knocked over during the *first* revolution of the ball in its orbit, a *second* in the *second* revolution, and so on.

16753. (*Communicated by* R. F. DAVIS, M.A.) — A. and B. started on their motor-cars from Liverpool to London, travelling at the same rate. One hundred miles from London A. overtook a carriage driving 9 miles an hour. Two hours later he met a bicyclist riding 12 miles an hour. B. overtook the carriage 73¾ miles from London, and met the bicyclist $\frac{59}{77}$ of a minute after passing the seventy-first milestone from London. Where was B. when A. got to London?

[This question recently appeared in the *Star* newspaper as a "Suggested Occupation for a Wet Saturday."]

16754. (Professor COCHEZ.)—Limite de $(\cos x + \sin x)^{\cot g\, x}$ lorsque x tend vers zéro.

16755. (Professor SANJÂNA, M.A.)—Sum to $n+1$ terms the following series:—

$$1 - \frac{n}{1!}\cdot\frac{b}{c} + \frac{n(n-1)}{2!}\cdot\frac{b(b+1)}{c(c+1)} - \frac{n(n-1)(n-2)}{3!}\cdot\frac{b(b+1)(b+2)}{c(c+1)(c+2)} + \ldots .$$

16756. (Professor E. B. ESCOTT.) — Find two equations of the 7th degree, with rational roots having all their terms alike except the known terms.

Example.—$x^7 - 4214x^5 + 4716649x^3 - 1218798036x - 69837768 = 0.$

Roots: 51, 33, 24, −7, −13, −38, −50.

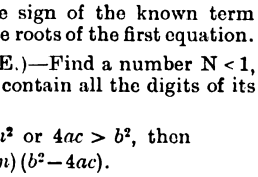
The second equation is the same with the sign of the known term changed, and the roots are the negatives of the roots of the first equation.

16757. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Find a number N < 1, which—when expressed as a decimal—shall contain all the digits of its smaller factor, and no more.

16758. (S. ANDRADE.)—If either $4ln > m^2$ or $4ac > b^2$, then

$$(2an + 2cl - bm)^2 \not< 4(m^2 - 4ln)(b^2 - 4ac).$$

16759. (R. CHARTRES.) — P is any point in the triangle. Show that the mean value of $\theta = \log 2$.



16760. (Professor NEUBERG.)—On donne trois plans quelconques α, β, γ et un point O. Par O, on mène une droite quelconque d qui rencontre α, β, γ aux points A, B, C. Trouver le lieu du point M de la droite d tel que le rapport anharmonique (ABCM) ait une valeur donnée K.

16761. (PULINBIHARI DAS, M.A.)—Prove that an arc of the curve

$$(x^2 + y^2 - 4a^2)^3 + 27a^2y^4 = 0$$

is proportional to the area of a focal sector of an ellipse.

16762. (M. T. NARANIENGAR, M.A.)—If O is a fixed point anywhere and P a point on a conic, find the envelope of the circle whose centre is at P and whose radius is $\sqrt{(r^2 - a^2)}$ where r stands for OP and a is a constant.

16763. (Professor NANSON.)—A parabola passes through three fixed points. Find the locus of the meet of tangents parallel to two fixed lines.

16764. (W. F. BEARD, M.A.)—A circle passing through the centre C of an ellipse cuts the curve in the points P, Q, R, S. Prove (1) that the rectangle under the perpendiculars from C on PQ, RS is constant; (2) that, if all of the points P, Q, R, S are real, the eccentricity of the ellipse is greater than $1/\sqrt{2}$; (3) that, if PQ passes through a fixed point, then the foot of the perpendicular from C on RS must lie on a fixed straight line.

16765. (S. NARAYANA AIYAR.)—The pedal circles of triangles inscribed in a conic with respect to a point on the conic are concurrent. Prove this and determine the point of concurrence. When the conic is a rectangular hyperbola, deduce that the point of concurrence is its centre.

16766. (D. BIDDLE.) — ABCD is a rectangle of known sides. BC being produced indefinitely, it is required to draw a straight line from A cutting CD, BC in X, Y respectively, the intercept XY being equal to a given straight line.

16767. (M. T. NARANIENGAR, M.A.)—Find, by a geometrical construction, the point on the circum-circle whose Simson line is parallel to the Euler line.

16768. (B. C. WALLIS, B.Sc., F.C.P.)—Under what conditions are the line joining the mid-points of two sides of a triangle, the line joining the feet of the perpendiculars from the opposite vertices, and the line joining the points of contact of the in-circle concurrent? How many sets of these lines may be concurrent simultaneously?

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

10849. (Professor WOLSTENHOLME, M.A., Sc.D.) — If V be the volume of a tetrahedron, Δ_0, Δ_1, Δ_2, Δ_3 the areas of the faces; prove that, if two opposite dihedral angles be (1) equal, (2) supplementary, then (1) the difference, (2) the sum of the lengths of the corresponding edges will be

$$[(\Delta_0 + \Delta_1 + \Delta_2 + \Delta_3)(\Delta_2 + \Delta_3 - \Delta_0 - \Delta_1)(\Delta_3 + \Delta_1 - \Delta_0 - \Delta_2) \times (\Delta_1 + \Delta_2 - \Delta_0 - \Delta_3)]^{\frac{1}{2}}/3V \ \ldots \ (1),$$

$$[(-\Delta_0 + \Delta_1 + \Delta_2 + \Delta_3)(\Delta_0 - \Delta_1 + \Delta_2 + \Delta_3)(\Delta_0 + \Delta_1 - \Delta_2 + \Delta_3) \times (\Delta_0 + \Delta_1 + \Delta_2 - \Delta_3)]^{\frac{1}{2}}/3V \ \ldots \ (2).$$

11198. (Rev. H. SEWELL, M.A.) — The recurring quotients in $\frac{1}{2}(2 + 10^{\frac{1}{2}})$ are found to be in the order 1, 1, 2; and those of $\frac{1}{3}(4 + 10^{\frac{1}{2}})$ in the reverse order. Generalize the phenomenon.

11428. (W. J. JOHNSTON, M.A.)—From points on a straight line tangents are drawn to a plane curve of the n-th degree. Show that the locus of the mean centre of the points of contact is a unicursal curve of the n-th degree.

11546. (Professor HAUGHTON, F.R.S.)—A globe filled with water, containing gold fish, is so supported on ideal rollers that there is no friction between the globe and the horizontal table on which it stands. What effect is produced by the muscular movements of the fish?

11731. (Professor SCHOUTE.)—Prove that the equation

$$\begin{vmatrix} a_{11} - x, & a_{12}, & \ldots & a_{1n} \\ a_{21}, & a_{22} - x, & \ldots & a_{2n} \\ \ldots & \ldots & \ldots & \ldots \\ a_{n1}, & a_{n2}, & \ldots & a_{nn} - x \end{vmatrix} = 0$$

does not admit real roots differing from ± 1 under the conditions

$$\sum_{j=1}^{j=n} a_{ij}^2 = 0, \quad \sum_{k=1}^{k=n} a_{ik} a_{jk} = 0 \quad (i \neq j)$$

of an orthogonal substitution.

11777. (MORGAN BRIERLEY.)—Given three points A, B, C in the circumference of a circle; find in it another point P, such that $PA^2(PB + PC)$ may be (1) a given quantity, and (2) a maximum.

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Road, West Kensington, W.

Vol. XV. (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, *89 Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.*

PRIZE DISTRIBUTION, CHRISTMAS, 1909.

NOW READY. POST FREE.

New Illustrated Catalogue of Leather Bound Books.

Containing particulars of upwards of 1,600 different books.
Every book mentioned in the Catalogue is in stock at the commencement of the season.
Every book is suitable for stamping in gold.

In addition to the large stock of books in

Full Calf,

The following bindings are also stocked:—

Morocco, **Paste Grain,**
Half Calf, **Fancy Leather.**

A large selection of Reward Books Bound in Cloth is also on view in the Showrooms, and a Catalogue of these will also be sent post free on application.

School Furniture made of Oak.

School Furniture can now be made of Oak at a small advance only on Pitch Pine prices. Oak is exceedingly durable, and, either dull finished or varnished, has a very superior finish.

Single Locker Desks.
Adjustable Desks.
Dual Desks.
Teachers' Desks.
Black Boards and Easels.
Boot Lockers.

CHEMICAL AND PHYSICAL LABORATORIES FITTED.
GYMNASIUMS AND WORKSHOPS FITTED.
Designs prepared and Estimates furnished free.

New Illustrated Catalogue just issued, containing particulars of every article required for School furnishing free on application.

THE EDUCATIONAL SUPPLY ASSOCIATION, LTD.,
42 HOLBORN VIADUCT, LONDON.

THE
School World.
A MONTHLY MAGAZINE OF EDUCATIONAL WORK AND PROGRESS.

A SELECTION FROM DENT'S PRIZE LIST.

ENGLISH IDYLLS.

Each Volume Illustrated with 24 Drawings by C. E. BROCK, reproduced in Colour. Narrow crown 8vo, cloth, **5s.** net; vellum, **8s. 6d.** net.

Christmas at Bracebridge Hall. By WASHINGTON IRVING.
Our Village. By Miss MITFORD.
The Household of Sir Thomas More. By ANNIE MANNING.
Cranford. By Mrs. GASKELL.
Silas Marner. By GEORGE ELIOT.
The Vicar of Wakefield. By OLIVER GOLDSMITH.

JANE AUSTEN'S Works in Six Volumes in this Series:

Emma.
Mansfield Park.
Northanger Abbey.
Persuasion.
Pride and Prejudice.
Sense and Sensibility.

Complete Set in Cloth Case, **33s.** net.

WATER BABIES.

By CHARLES KINGSLEY. With 13 full-page Coloured Illustrations, and Head-pieces in Black and White, by MARGARET W. TARRANT; and an Introduction by Miss ROSE KINGSLEY. Large Post 8vo, **5s.** net.

FAIRY GOLD.

A New Volume of Old English Fairy Tales, selected and edited by ERNEST RHYS. With many Illustrations in Colour and Line by HERBERT COLE. Large crown 8vo, **5s.** net.

FROISSART'S CHRONICLES.

13 full-page Coloured Illustrations and attractive Cover Design by HERBERT COLE. Large crown 8vo, **5s.** net. A charming Illustrated Edition of these well known Chronicles.

DENT'S OPEN-AIR NATURE BOOKS.

Edited by W. PERCIVAL WESTELL, F.L.S., and HENRY E. TURNER, General Secretary of the School Nature Study Union. Cloth extra, gilt top, Calendar and Notes, **1s.** net. Three Books in One Volume, **2s. 6d.** net; Six Books in One Volume, **5s.** net.

The First Six Books in this Entirely New and Important Series consist of the following:—

1. **The Hedge I Know.**
2. **The Pond I Know.**
3. **The Wood I Know.**
4. **The Meadow I Know.**
5. **The Stream I Know.**
6. **The Common I Know.**

The 2s. 6d. Edition contains 40 Illustrations in Colour, 50 in Half Tone, and 100 in Line; the 5s. Edition contains 80 Illustrations in Colour, 90 in Half Tone, and 190 in Line.

OLD MAN'S BEARD and other Tales.

By Miss G. M. FAULDING. With 5 Coloured Illustrations and many other Drawings by W. P. STARMER. Large square crown 8vo, **4s. 6d.** net.

EVERYMAN'S LIBRARY.

400 Volumes now ready. Cloth, **1s.** net; leather, **2s.** net: Aldine morocco, **2s. 6d.** net.

These books are specially suitable for gifts or presentation purposes, and a full list will be forwarded free on application.

THE TRUE ANNALS of FAIRYLAND

IN THREE VOLUMES.

The Reign of King Oole. Recorded by J. M. GIBBON.
The Reign of King Herla. Recorded by WM. CANTON.
The Reign of King Oberon. Recorded by WALTER JERROLD.

Each Volume has more than 150 Illustrations by CHARLES ROBINSON, with a Coloured Frontispiece and Title-page. Crown 8vo, **4s. 6d.** net per Volume.

DICKENS'S CHRISTMAS BOOKS.

A Christmas Carol.
The Chimes.
The Cricket on the Hearth.
The Haunted Man.
The Battle of Life.

With 8 Coloured and many Line Illustrations by C. E. BROCK. Long fcap. 8vo, cloth gilt, **2s. 6d.** net per Volume. Also a vellum binding, **5s.** net per Volume.

THE LION OF DE MONTFORT.

By ROWLAND HORNE. With 8 Illustrations in Colour by HERBERT GREENE. Crown 8vo, **4s.**

GRIMM'S FAIRY TALES.

With 100 Illustrations and Coloured Cover by R. ANNING BELL. Large crown 8vo, **5s.** net.

NEW BOOKS ILLUSTRATED BY ARTHUR RACKHAM.

GULLIVER'S TRAVELS into Several Remote Nations of the World.

By JONATHAN SWIFT. Medium 8vo, **7s. 6d.** net.

LAMB'S TALES FROM SHAKESPEARE.

Medium 8vo, **7s. 6d.** net.

NATURE PHOTOGRAPHY for BEGINNERS.

By E. J. BEDFORD. With Coloured Frontispiece, and about 100 Reproductions of Stereoscopic Photographs taken by the Author. Square demy 8vo, **7s. 6d.** net.

NATURE STALKING FOR BOYS through Field-Glass, Stereoscope, and Camera.

By W. PERCIVAL WESTELL, F.L.S. **With an Introduction for Boy Scouts by Lieut.-Gen. Sir R. S. S. BADEN-POWELL,** and Verses from a Patrol Song, by special permission of Mr. RUDYARD KIPLING. Four Coloured Plates and 100 Photographic Illustrations. With Chapters and Notes on Nature Photography, by Rev. S. N. SEDGWICK, M.A. Crown 8vo, **3s. 6d.** net.

ANIMALS AT HOME.

A unique series of life histories of well known animals. By W. PERCIVAL WESTELL, F.L.S. Beautifully Illustrated. A superb Gift-book. Large crown 8vo, **3s. 6d.**

COLLEGE OF PRECEPTORS.
(INCORPORATED BY ROYAL CHARTER.)

GENERAL MEETING.

The Half-Yearly General Meeting of the Members of the Corporation will be held at the College, Bloomsbury Square, W.C., on Saturday, the 22nd of January, 1910, at 3 p.m.

MEMBERS' DINNER.

The Members' Dinner will take place at the Hotel Cecil, Strand, W.C., on Saturday, the 22nd of January, at 6.30 p.m. Tickets (not including wine), 6s. each. Members who intend to be present are requested to send early notice to the SECRETARY. Members may obtain tickets for their friends.

LECTURES FOR TEACHERS.

The First Course of Lectures (Thirty-eighth Annual Series), by Prof. J. ADAMS, M.A., B.Sc., F.C.P., on "Rational and Experimental Psychology as applied to Education," will commence on Thursday, February 3rd, at 7 p.m.

This Course will to a certain extent prepare for the Examinations of the College in connexion with the Associateship, the Licentiateship, and the Fellowship; but its main purpose will be to present the facts of Psychology in such a way as to enable the teacher to make use of them in the practical work of the School. The work will be so arranged as to give the students an opportunity of comparing the results of their experience with the latest results of psychological research into educational processes. The Lectures will be illustrated by frequent references to the work in all classes of Schools.

The Fee for the Course is Half-a-Guinea.

The Lectures will be delivered on Thursday Evenings at 7 o'clock, at the College, Bloomsbury Square, W.C.

EXAMINATIONS.

Diplomas.—The next Examination of Teachers for the Diplomas of the College will commence on the 27th of December, 1909.

Practical Examination for Certificates of Ability to Teach.—The next Practical Examination will be held in February, 1910.

Certificate Examinations.—The Midsummer Examination for Certificates will commence on the 28th of June, 1910.

Lower Forms Examinations.—The Midsummer Examination will commence on the 28th of June, 1910.

Professional Preliminary Examinations.—These Examinations are held in March and September. The Spring Examination in 1910 will commence on the 1st of March.

Inspection and Examination of Schools.—Inspectors and Examiners are appointed by the College for the Inspection and Examination of Public and Private Schools.

The Regulations for the above Examinations can be obtained on application to the Secretary.

C. R. HODGSON, B.A., *Secretary.*
Bloomsbury Square, W.C.

UNIVERSITY OF ST. ANDREWS.

L.L.A. DIPLOMA FOR WOMEN.

The attention of Candidates is drawn to the Ordinary and Honours Diplomas for Teachers, which are strongly recommended as suitable for those who are or intend to be teachers.

Examinations are held at Aberdeen, Birmingham, Blackburn, Brighton, Bristol, Cardiff, Croydon, Devonport, Edinburgh, Glasgow, Hull, Inverness, Leeds, Liverpool, London, Manchester, Newcastle-on-Tyne, Norwich, Nottingham, Oxford, St. Andrews, Sheffield, Swansea, and several other towns.

Information regarding the Examinations may be obtained from the SECRETARY, L.L.A. Scheme, The University, St. Andrews.

THE ASSOCIATED BOARD
OF THE R.A.M. AND R.C.M.
FOR LOCAL EXAMINATIONS IN MUSIC.

PATRON: HIS MAJESTY THE KING.
PRESIDENT: H.R.H. THE PRINCE OF WALES, K.G.

LOCAL CENTRE EXAMINATIONS (Syllabus A). Examinations in Theory at all Centres in March and November; in Practical Subjects at all Centres in March-April, and in the London District and certain Provincial Centres in November-December also. Entries for the March-April Examinations close Wednesday, February, 9th, 1910.

SCHOOL EXAMINATIONS (Syllabus B). Held three times a year, viz., March-April, June-July, and October-November. Entries for the March-April Examinations close Wednesday, February 2nd, 1910.

Specimen Theory Papers set in past years (Local Centre *or* School) can be obtained on application. Price 3d. per set, per year, post free.

Syllabuses A and B, entry forms, and any further information will be sent post free on application to—

JAMES MUIR, *Secretary.*
15 Bedford Square, London, W.C.
Telegrams: "Associa, London."

CHERWELL HALL, OXFORD.
TRAINING COLLEGE FOR WOMEN SECONDARY TEACHERS.

Recognized by the Board of Education, by the Oxford University Delegacy for Secondary Training, and by the Cambridge Syndicate.

Principal—Miss CATHERINE I. DODD, M.A. (late Lecturer in Education, Manchester University).

Students are prepared for the Oxford and London Teacher's Diploma and the Cambridge Teacher's Certificate.

FEES ... ... for the Course from £65.

Scholarships of from £40 to £20 open to Students with a degree on entry. There is a Loan Fund.

BIRKBECK COLLEGE.
BREAMS BUILDINGS, CHANCERY LANE, E.C.

DAY AND EVENING CLASSES.

University of London.—The College provides courses of Instruction for the Examinations of the University in Arts, Science, Economics, and Laws, under Recognised Teachers of the University. The Laboratories are well appointed, and there are facilities for Research.

G. AUGUSTUS HOLMES, Esq., Director of Examinations.

EXAMINATION ARRANGEMENTS, 1910.

EXAMINATIONS in PIANOFORTE, ORGAN, VIOLIN, SINGING, ELOCUTION, THEORY of Music, &c., will be held in London and over 400 Local Centres in APRIL, JULY (JUNE for Scotland and Ireland) and DECEMBER, when Certificates will be granted to all successful candidates.

The Higher Examinations for the Diplomas of Associate (A.L.C.M.), Licentiate (L.L.C.M.), the Teachers' Diploma (L.C.M.), and Fellowship (F.L.C.M.) take place in JUNE, JULY, and DECEMBER.

LOCAL CENTRES may be formed in unrepresented districts; particulars may be obtained of the Secretary.

SCHOOL CENTRE examinations may be held under certain rules. The special School Syllabus is now ready.

SYLLABUS for 1910, together with Annual Report, may be had of the SECRETARY.

In the Educational Department students are received and thoroughly trained under the best Professors at moderate fees. The College is open 10 a.m. to 9.30 p.m.

A COURSE of TRAINING in Pianoforte and Singing for Teachers is held at the College.

VACATION LESSONS for Teachers and others are given at Easter, August, and Christmas.

T. WEEKES HOLMES, *Secretary.*

UNIVERSITÉ DE RENNES (France).
FRENOH COURSE for FOREIGNERS
OF BOTH SEXES.

Secretary—Mr. ARTHUR G. SYMONDS, M.A.

TRAINING COLLEGE FOR TEACHERS.
Principal—Miss E. LAWRENCE.
KINDERGARTEN AND SCHOOL.
Head Mistress—Miss A. YELLAND.

Students are trained for the Examinations of the National Froebel Union and other Examinations.
TWO SCHOLARSHIPS of £20 each, and two of £15 each, tenable for two years at the Institute, are offered annually to Women Students who have passed certain recognized Examinations.
Prospectuses can be obtained from the PRINCIPAL.

DENMARK HILL PHYSICAL TRAINING COLLEGE, LONDON, S.E.
(*a*) EDUCATIONAL DEPARTMENT
for fully Certificated Gymnastic and Sports Mistresses.
(*b*) REMEDIAL DEPARTMENT
for Massage and Remedial Swedish Movements.
Principal: Miss E. SPELMAN STANGER, M.B.C.P.E. and S.T.M., Sunray Avenue, Denmark Hill, S.E.

Tenth Edition, 12mo, price 3s. 6d.
THE ILLUSTRATED PUBLIC SCHOOL SPEAKER AND READER, based on Grammatical Analysis, comprising a choice Selection of pieces for Reading and Recitation, annotated for Expression, Emphasis, and Pauses, and illustrated by Diagrams and Figures exhibiting to the eye the appropriate gestures and positions; to which is added a selection of Greek, Latin, French, and German Extracts, suitable for "Speech Days" at Public Schools.
LONDON: LONGMANS & Co., PATERNOSTER ROW, E.C.

New Edition. 18mo, price 9d.
THE ELEMENTS OF BOOK-KEEPING, by SINGLE and DOUBLE ENTRY, with Practical Explanations and Exercises on the most useful Forms for Business. By A. K. ISBISTER, M.A., LL.B., late Dean of the College of Preceptors.
LONDON: LONGMANS & Co., PATERNOSTER ROW, E.C.

BEDFORD COLLEGE FOR WOMEN
(UNIVERSITY OF LONDON),
YORK PLACE, BAKER STREET, LONDON, W.

DEPARTMENT FOR PROFESSIONAL TRAINING IN TEACHING.
Head of the Department—Miss MARY MORTON, M.A.
The Course includes full preparation for the Examinations for the Teaching Diplomas granted by the Universities of London and Cambridge.
Students are admitted to the Training Course in January and in October.
One Free Place (value £26. 5s.), one Scholarship of the value of £20, and a limited number of Grants of £10, are offered for the Course beginning in January, 1910.
They will be awarded to the best candidates holding a Degree or its equivalent in Arts or Science.
Applications should reach the HEAD OF THE DEPARTMENT, not later than December 6th.

THE CAMBRIDGE TRAINING COLLEGE FOR WOMEN.
Principal—Miss M. H. WOOD, M.A., Lit.D., Girton College, Cambridge Classical Tripos.
A residential College providing a year's professional training for Secondary Teachers.
Preparation for the London and the Cambridge Teachers' Diploma. Ample opportunity for practice in teaching science, languages, mathematics, and other subjects. Fees £65 to £75. Admissions in January and September.
For particulars apply—The PRINCIPAL, Training College, Cambridge.

MARIA GREY TRAINING COLLEGE FOR WOMEN TEACHERS.
Students are prepared for the London and Cambridge Teachers' Diplomas and the Higher Certificate of the National Froebel Union.
FOUR SCHOLARSHIPS of from £15 to £25 offered to Graduates in January, 1910. For further particulars as to Middlesex Scholarships, Hall of Residence, &c., apply to the Principal, Miss ALICE WOODS, at the College, Salusbury Road, Brondesbury, London, N.W.

WINKWORTH HALL OF RESIDENCE,
215 CHEVENING ROAD, BRONDESBURY.
Warden—Mrs. H. R. FELKIN.
For Students attending the Maria Grey College for the Training of Teachers in Secondary and Preparatory Schools. Principal—Miss ALICE WOODS.
The Hall is situated on high ground, close to the College and within one minute's walk of the Brondesbury Park Station on the North London Railway.

JOINT AGENCY FOR WOMEN TEACHERS,
74 GOWER STREET, LONDON, W.C.
(Under the management of a Committee appointed by the Teachers' Guild, College of Preceptors, Head Mistresses' Association, Association of Assistant Mistresses, and Welsh County Schools Association.)

THIS Agency has been established for the purpose of enabling Teachers to find work **without unnecessary cost.** All fees have therefore been calculated on the **lowest basis** to cover the working expenses.
No Registration Fees are charged to members of the above Associations, and their Commissions are reduced.
Hours for Interviews:
11 a.m. to 1 p.m., and 3 to 5 p.m.;
Saturdays, 11 a.m. to 1 p.m., and 2 to 3 p.m.
When possible, special appointments should be arranged.
Registrar, Miss ALICE M. FOUNTAIN.

THE JOINT SCHOLASTIC AGENCY.
23 Southampton Street, Bloomsbury Square, W.C.
Managed by a Committee of Representatives of the following Bodies:—
HEAD MASTERS' CONFERENCE.
INCORPORATED ASSOCIATION OF HEAD MASTERS.
COLLEGE OF PRECEPTORS. TEACHERS' GUILD.
INCORPORATED ASSOCIATION of ASSISTANT MASTERS.
ASSOCIATION OF TECHNICAL INSTITUTIONS.
ASSOCIATION OF PREPARATORY SCHOOLS.
WELSH COUNTY SCHOOLS.
Registrar: Mr. E. A. VIRGO.
The object of this Agency is to render assistance at a minimum cost to Masters seeking appointments. The lowest possible fees are therefore charged.
A PROSPECTUS will be sent ON APPLICATION.
Interviews (preferably by appointment) 12 p.m.–1.30 p.m. and 3 p.m.–5.30 p.m. Saturdays, 12 p.m.–1 p.m.
Telephone—City 2257.

EAR TRAINING; SIGHT SINGING;
Tonic Sol-fa applied to Staff.
Mrs. Curwen's Pianoforte Method.

Messrs. TRUMAN & KNIGHTLEY, LTD.,
Educational Agents,
158 to 162 OXFORD STREET, LONDON, W.

Directors:
S. A. TRUMAN. F. E. KNIGHTLEY.
JAMES HEARD, B.A.
(Trinity College, Cambridge).

Telegrams—"TUTORESS, LONDON."
Telephone—No. 1136 City.

This Agency is under distinguished patronage, including that of the Principals of many of our leading Schools.

A.—EMPLOYMENT DEPARTMENT.

(i.) ASSISTANT MASTERS & TUTORS.
MESSRS. TRUMAN & KNIGHTLEY introduce University and other qualified ENGLISH and FOREIGN MASTERS and TUTORS to Schools and Private Families.

(ii.) ASSISTANT MISTRESSES.
MESSRS. TRUMAN & KNIGHTLEY introduce University, Trained, and other qualified ENGLISH and FOREIGN LADY TEACHERS to Girls' and Boys' Schools.

(iii.) LADY MATRONS AND HOUSE-KEEPERS.
MESSRS. TRUMAN & KNIGHTLEY introduce well qualified and experienced LADY MATRONS, HOUSEKEEPERS, and HOUSE MISTRESSES to Boys' and Girls' Schools.

No charge is made to Principals, and no charge of any kind is made to candidates unless an engagement be secured through this Agency, when the terms are most reasonable.

B.—SCHOOL TRANSFER DEPARTMENT.

A separate Department, under the direct management of one of the Principals, is devoted entirely to the negotiations connected with the Transfer of Schools and Introduction of Partners.

MESSRS. TRUMAN & KNIGHTLEY, being in close and constant communication with the Principals of nearly all the chief Girls' and Boys' Schools in the United Kingdom, to many of whom they have had the privilege of acting as Agents, and having on their books always a large number of thoroughly genuine Schools for Sale and Partnerships to negotiate, as well as the names and requirements of numerous would-be purchasers, can offer unusual facilities for satisfactorily negotiating the TRANSFER of SCHOOLS, and arranging PARTNERSHIPS.

No charge is made to Purchasers, and there is no charge to Vendors unless a Sale or Partnership be effected through this Agency.

All communications and enquiries are treated in the strictest confidence.

C.—PUPILS' DEPARTMENT.

MESSRS. TRUMAN & KNIGHTLEY have a carefully organized Department for the introduction of Pupils to Schools and other Educational Establishments. *No charge is made for registration.*

Any negotiations entrusted to MESSRS. TRUMAN & KNIGHTLEY receive prompt and careful attention, every effort being made to save clients as much time and trouble as possible.

Full particulars will be forwarded on application.

BLOOMSBURY SQUARE, LONDON, W.C.

Lectures for Teachers

ON THE

SCIENCE, ART, AND HISTORY OF EDUCATION.

PRACTICAL PROBLEMS OF THE CLASSROOM.

To be delivered by Professor J. ADAMS, M.A., B.Sc., F.C.P., Professor of Education in the University of London.

The Second Course of Lectures (Thirty-seventh Annual Series) commenced on Thursday, September 30th, at 7 p.m.

The matters to be dealt with are such as interest all classes of teachers, and will be treated with that frankness that is possible in an unreported discourse, but is out of the question in a printed book. While the Lecturer will lose no opportunity of indicating how present educational conditions may be improved, he will take the present conditions as the basis and show how to make the best of things as they are. The Lectures will be copiously illustrated by references to actual experience in all kinds of Schools.

SYLLABUS.

I. (*Sept.* 30.) *The Practical in Teaching:* nature of theory: its inevitableness: rule of thumb itself based on a theory: relation of theory to experience: practical dangers of lack of theory and of excess of theory: the doctrinaire and the empiric: the pedagogic type of mind: illustrations from actual school experience.

II. (*Oct.* 7.) *Organization:* relation between curricula and organization: organization by "sides": the "form" system and its modifications: "sets": the specialist system: the synchronous system: combination of systems: co-education: relations between head and assistants: visiting teachers: prefects and delegated authority.

III. (*Oct.* 14.) *Time-Tables:* length of whole school day: relation between class work and preparation work: arrangements of the major divisions of the day: theory of fatigue and its application to (*a*) rest-intervals, (*b*) sequence of studies, (*c*) length of study periods at different stage, and for different subjects, (*d*) relation between physical exercise and mental effort. Form in which time-tables should be drawn up—rigidity and elasticity.

IV. (*Oct.* 21.) *Nature of the Class:* various bases of classification in schools: psychological nature of class: difference from group of individuals: minimum number of pupils to form a psychological class unit: the fallacy underlying the phrase "average pupil": sympathy of numbers: disintegration and redintegration of class: coaching versus class teaching: advantages of the class teacher: schematic preparation.

V. (*Oct.* 28.) *Discipline:* various meanings of term: special sense of *control:* basis of discipline: authority: place of consciousness in the maintaining of discipline: personality: fabled power of the eye: George Nidiver: different ideals of class discipline: "talking": relation between discipline and class work: possibility of teaching on the discipline of another: the "discipline master."

VI. (*Nov.* 4.) *Teaching as Presentation:* presentation swallows up all the other steps in the mind of the specially practical teacher: basis on which presentation must be built: relation of teacher's mental content to pupil's mental content: mental focus: the inference point, the inference zone, and the gaping point: turning fact into faculty: the growing point.

VII. (*Nov.* 11.) *The Socratic and the Heuristic Method:* fundamental resemblances and differences in the two: the three stages in the Socratic process: law of internal harmony: confrontation: relation of both methods to the *Zielangabe:* subjects suitable for each of the methods: dangers of each method: relation to the ordinary work of the class: illustrations from actual class work.

VIII. (*Nov.* 18.) *The Concentric Method and Correlation:* the method in relation to "rapid impressionism": illustration from Geography teaching: the test of a good "concentric" text-book: in ultimate analysis all teaching is concentric: correlation the complement of the concentric method, but not limited to this application: selection of "core" subjects: extravagances of correlation: illustrations from American school syllabuses: results of actual experiments in the application of correlation.

IX. (*Nov.* 25.) *Teaching Devices:* anticipatory illustration: the vacuum: mistake-traps: rule and exception: the awful example: the use of the standard: fixing the alternative: mnemonics, legitimate and illegitimate: definition of cram: benevolent and malignant cram: the arithmetical challenge.

X. (*Dec.* 2.) *The Use of the Blackboard:* special appeal to the visual pupils: kind of writing suited for blackboard: rough work not necessarily slovenly work: different uses of pictures and diagrams on board: mechanical aids to blackboard drawing: coloured chalks: the optics of the blackboard: eyestrain, and how to prevent it: excessive use of blackboard.

XI. (*Dec.* 9.) *Note-making and Note-taking:* note-making by teacher: new demands: old form and new: legitimate and illegitimate notes by teacher: the lecture versus the text-book: notes by pupils (*a*) from lecture, (*b*) from other sources in the way of rudimentary research: dangers of ordinary system of note-taking in school: relation of age of pupils to amount of note-taking: revision of note-books.

XII. (*Dec.* 16.) *Under the King and over Us:* a study in superiors: teacher's relation to the various powers that be: how to serve many masters without being disloyal to any: how to interpret official documents: lesson of the shepherd's dog: the art of compromise: the fundamental agreement: the authorities as allies.

FEES FOR ADMISSION.

Half-a-guinea for the whole Course. Two shillings for a single Lecture.

*** The Lectures will be delivered on THURSDAY EVENINGS, at 7 o'clock, at the College, Bloomsbury Square, W.C.—Members of the College have free admission to the Course.

MR. EDWARD ARNOLD'S

BOOKS FOR TEACHERS.

JUST OUT.

Elementary Physiology.

For Teachers and others.

By W. B. DRUMMOND, M.B., C.M., F.R.C.P. Edin., Lecturer on Hygiene, Edinburgh Provincial Training College; Assistant Physician, Royal Hospital for Sick Children, Edinburgh. 206 pages. Crown 8vo, **2s. 6d.**

Its special features are as follows:—

(1) In each section particular attention is paid to the peculiarities of childhood.

(2) As physical training forms an important part of the student's own training, and will form an important part of his work in the classroom, a fuller account has been given of the physiology of bodily exercise and of the anatomy of the bones, joints, and muscles than is to be found in any other manual of the same size known to the author.

(3) The nervous system and the sense organs naturally receive special attention, and an entire chapter is devoted to the nervous system of the child.

An Introduction to Child Study.

By W. B. DRUMMOND, M.B., C.M., F.R.C.P.E. **6s.** net; post free, **6s. 4d.**

JOURNAL OF EDUCATION.—"The book is thoroughly interesting from start to finish. Mr. Drummond is particularly clear-headed, and expresses himself plainly, avoiding unnecessary technicalities. He has therefore succeeded in bringing within the reach of a very large circle practically all the important conclusions which have been reached by the best workers in the field of child study up to the present time."

The Child's Mind: Its Growth and Training.

By W. E. URWICK, M.A. **4s. 6d.** net; post free, **4s. 10d.**

NATURE.—"One of the most useful pedagogical treatises of recent years. He has given what is much more helpful than the best 'psychology for teachers'—a consistent interpretation of the educative process as a whole, as it presents itself under the more or less conventional conditions which actually determine it."

Psychology for Teachers.

By C. LLOYD MORGAN, LL.D., F.R.S., Principal of University College, Bristol. Lately rewritten. xii + 308 pages. **4s. 6d.**

A Short History of English Literature.

By C. E. BAINES. 396 pages. Crown 8vo, cloth, **3s. 6d.**

This volume covers the entire period of the history of our literature down to the close of the Victorian Age, with the deaths of Swinburne and Meredith—but the period before Chaucer is only briefly dealt with. Special care has been taken that, while the book contains all the names, dates, &c., that a text-book should contain, it should be as little cumbered as possible with the names of writers who "deserve a passing mention."

Lingua Materna.

Chapters on the School Teaching of English. By RICHARD WILSON, B.A. **3s. 6d.**

A Song-Garden for Children.

A Collection of Children's Songs. Adapted from the French and German. The Music edited and arranged by NORMAN O'NEILL. Imperial 8vo, paper, **2s. 6d.** net; cloth, **4s. 6d.** net.

Please write for Prospectuses.

Cambridge University Press

The Roman Republic. By W. E. HEITLAND, M.A., Fellow of St. John's College, Cambridge.

3 volumes Royal 8vo 30s net

It has been the author's endeavour to trace the whole course of the Republic, from the dim legendary days of the Kingdom and the early Free Commonwealth down to the Foundation of the Empire; from the single *imperium*, through the republican magistracies and the supremacy of the Senate, down to the Principate. Literary, military and economic history are touched upon as bearing upon public life and social details as indications of the trend of affairs, but the main object has been a political study. A number of sketch-maps, illustrative of the events of particular periods and omitting all irrelevant detail, are inserted in the text, and a full and detailed index, in which the author has aimed at completeness, concludes the work.

Herodotus I. Clio. Edited by J. H. SLEEMAN, M.A., late Fellow of Sidney Sussex College, Cambridge.

Extra fcap 8vo 4s

This edition of the First Book of Herodotus follows the arrangement adopted by Dr. E. S. Shuckburgh in his editions of the later Books in the Pitt Press Series. The notes deal chiefly with points of interpretation and Herodotean usage, while information as to persons and places has been massed together in a separate Historical and Geographical Index.

Geometry for Beginners. By C. GODFREY, M.A., Head Master of the Royal Naval College, Osborne, and A. W. SIDDONS, M.A., Assistant Master at Harrow School.

Crown 8vo 1s

In this book the suggestions on the teaching of Geometry to beginners contained in the Board of Education circular of 1909 are adopted. It is arranged in the order in which the subject may be presented to beginners and is divided into two stages. The first of these is devoted to introductory practical work concerned with the fundamental concepts, and the second to experimental work leading up to the discovery of the fundamental facts of geometry. . . . Each fact, or group of facts, when established, is followed by numerical examples and easy riders intended to illustrate and drive home the ideas discovered and to teach pupils to argue logically.

Crown 8vo 4d

Notes and answers to the exercises are published separately in pamphlet form, containing detailed suggestions to the teacher.

The Winchester Arithmetic. By C. GODFREY, M.A., and G. M. BELL, B.A., Senior Mathematical Master at Winchester College.

2 parts 1s 6d each

This book is now published in two parts, the division coming before square root. The book can still be obtained in one volume, price 3s. A teachers' edition is also published, with interleaved answers, price 6s net

BOOKS SUITABLE FOR THE

CAMBRIDGE LOCAL EXAMINATIONS, July and December, 1910

Exercises on Erckmann - Chatrian's Waterloo. By A. WILSON-GREEN, M.A., Senior French Master, Radley College.

Extra fcap 8vo 1s

This volume consists of 60 Exercises. Each exercise consists of (1) a piece of English, based on the reading material, for translation into French: (2) questions (in French), some directly on the text, and the rest of a general nature, introducing words and phrases of the text; the questions make some demand on the intelligence and cannot be answered by copying directly from the book: (3) questions (also in French), dealing systematically with all the more important parts of grammar.

Erckmann-Chatrian: Waterloo. Edited, with Introduction, Notes, Map, and Plan, by A. R. ROPES, M.A. 3s [*Junior*

The Educational Times.

The Regulations for Secondary Schools.

The organization of secondary education has now attained a considerable development. Endowed schools have been brought under efficient control, both by regulation of the application of their existing resources and by Government grants to supplement them, and new schools under local management have been instituted. The co-ordination of elementary and secondary education has been carefully studied, and, to judge by the number of pages in the "Regulations" assigned to it, is a subject of paramount interest to the Board of Education.

Much has been done in the way of collecting and circulating information valuable to teachers, beginning with the admirable series of reports drawn up under the auspices of Prof. Sadler, whose retirement from the public service cannot be sufficiently deplored. This work has been continued up to the present time by a number of useful fly-sheets on such subjects as "The Teaching of History," "The Teaching of Geometry and Graphic Algebra," "The Teaching of Latin," and so on. Such monographs make widely known the "newest lights" on which an agreement amongst the best teachers had previously been secured only slowly and imperfectly and confined to a small circle.

On one point, however, the objects generally in the minds of educational reformers have not been perfectly attained. At the end of the last century, private schools, both day and boarding, were playing a very important part in our system of education, and it was hoped that they could be utilized, to the fullest extent, as part of our national educational resources. Whether they could be assisted from public funds has always been a very difficult question, solved nowhere except in some Scandinavian countries. In this country, little or no effort has hitherto been made towards the solution of the problems involved. In the Regulations private day schools are absolutely excluded from grants. In other respects their position has been made more instead of less difficult, and for recognition as efficient schools they are expected to reach, as regards curriculum, staff, and other points, a standard of efficiency scarcely attainable without practically unlimited resources. Their position has always answered to the description:

> Chill penury repressed their noble rage,
> And froze the genial current of their soul.

For some time social and other considerations will often work in favour of well conducted private boarding schools, especially of those whose work is only preparatory; but for private day schools the outlook is very dark. For example, in the matter of curriculum, the requirement of practical elementary science, involving as it does considerable expenditure, is not easy to fulfil; and in girls' schools the demand for mathematics, though easier to meet, is of doubtful utility, both on general grounds and in regard to the wishes of parents. True, it may be avoided, in the case of older girls, by the substitution of instruction in domestic subjects; but the attempt to assimilate entirely the education of boys and girls is a counsel of perfection by no means universally approved, and may in the long run fail to be a satisfactory solution of a much vexed question. It is to be noticed that in the recent list of nearly eight hundred efficient schools recognized by the Board only ten private schools find a place. There exist a considerable number of such schools doing good work in their several localities which do not deserve to be stigmatized as inefficient, for that is the inference that will presumably be drawn from their absence from such a list.

It is time to turn to some details of the regulations which deserve some comment. In the first place, there is happily little or no "religious question" in secondary schools. The regulations on this point—alike as regards the governing bodies, the staff, and the pupils—are excellent. The same cannot be said of the preference given to Latin when two languages besides English are studied. On that point the reasons for the decision, as far as they can be gathered from the fly-sheet on the teaching of Latin, seem to be of a somewhat antiquated character, and may perhaps before long give way to a wider point of view. "Soft options" are no doubt to be deprecated, but it is not impossible to secure the discipline associated with hard studies in some other way. Anyhow, it is undesirable to limit unduly the discretion of teachers. Another point which looks like an encroachment on their liberty is the prohibition of sending into public examinations pupils under fifteen years of age. Surely this

Digitized by Google

might be left to the combined wisdom of the parent and the teacher.

In conclusion, it is desirable to point out that the good work already done by the Board needs to be supplemented by increased efforts to promote elasticity, and in particular by the encouragement of private effort whenever this can be done without detriment to real efficiency.

NOTES.

In another column we have the pleasure of printing at length a tolerably plain and stiff letter addressed by representatives of several important associations, educational and scientific, to the Board of Education. The main point is the unfortunate attitude of the Board in their inadequate circular on language teaching. It is not too much to say, as the remonstrants do, that there is now in the schools of this country a "rapid and alarming retrogression" in the study of German. This is a fact to be recognized and to be faced with prompt and vigorous measures of amelioration. It should be superfluous at this time of day to rehearse the value of a knowledge of German in industry and commerce as well as in all branches of study. Latin, no doubt, is immensely valuable, but the conditions of the modern world will not permit it to stand in the way of German with impunity. When we regard the action of the Board in recent circulars on other subjects, we cannot doubt that they will inquire into the particular grievances of their correspondents, and frame a fresh circular displaying a just appreciation of the state and prospects of modern language teaching in the schools.

In his presidential address at the annual meeting of the Association of Teachers in Technical Institutions (November 6), Mr. J. Wilson, M.Sc. (Battersea Polytechnic), after reviewing with satisfaction the progress of the year, proposed some special lines of action for the immediate future—among the rest, the holding of a series of conferences between the representatives of elementary, secondary, and technical teachers to discuss the possibility of reforms in the curricula and methods of work in elementary and secondary schools, from the point of view of the needs of the pupil who later passes on to the technical school. "Specially necessary," he said, "is the conference between the elementary and the technical teacher, as in most cases, if a boy receives any formal education after leaving the primary school, it is to the technical teacher he comes. Needless to say, we wish to disclaim any suggestion of criticism of the elementary teacher: our objection is to the system of work now imposed upon him by a monstrous regiment of faddists." Another point of importance emerges in the higher regions — the relationship of the technical institute to the University college; for "there is clearly visible at the present time, both in London and the provinces, the evil spectre of 'mutilation' masquerading under the guise of 'co-ordination.'" Mr. Wilson refers to "the tendency to restrict the higher scientific and technical work of our institutions." In view of developments—for, "despite its achievements in the past, technical education in England is only just commencing its real work"—it is most important that the right lines should be discovered, and that the different grades should be placed in the most effective relations. "The really hopeful factor" of the situation, says Mr. Wilson, "is the probability of the early establishment of some form of organized effort by the State to achieve the following ends:—(1) elementary education to be more real and less 'bookish,' without diminishing its value as an instrument of culture; (2) the establishment of some system of compulsory attendance for continued education for all between the ages of fourteen and seventeen years; (3) the linking together of the three main grades of education; (4) the co-ordination of the work of the elementary evening continuation and evening technical schools. A system of compulsory attendance at evening or day continuation schools, coupled with the co-ordination of curricula, should provide technical institutions yearly with a large number of trained students well qualified to profit by the courses offered at these institutions."

The *Standard* is doing yeoman's service by its stream of able articles on the higher education, and especially on the facilities for such education in connexion with the University of London. In a recent article Principal Miers pointed out strongly the importance of research in education. "Though the industrial applications gave a new stimulus to research as a recognized part of University education, and although, in the minds of the public, the word may be connected mainly with work which leads to such results, the introduction of research," Dr. Miers points out, "has really effected a far more profound revolution in education. It has meant the introduction of the research spirit." Undoubtedly, research ought to be an indispensable part not only of the work of the teacher, but also of the studies of the scholar. There is no branch of University study that lacks unexplored fields, or fields that require fresh exploration; and there is no form of exercise that will so effectively call forth the powers of the student and impress him with the significance of his work. The practical results in departments whose work is appreciated by business men may gradually lead to a more general belief in the value of similar research in subjects that do not bring out results with money on the face of them. Then one may begin to hope for at least a living-wage endowment in all the Faculties of the University.

The death of Dr. W. T. Harris, late Commissioner of Education in the United States, removes a great educationist and a very remarkable personality. Dr. Harris was perhaps best known in this country through his Annual Reports as Head of the United States Bureau of Education to the Minister of the Interior—volumes of singularly unattractive appearance, but full of valuable information not only about American schools and colleges, but about educational movements throughout the civilized world. Leaving Yale without a degree, Harris started as a teacher of shorthand at St. Louis. Presently he obtained a place on the staff of the St. Louis "common schools," and steadily rose step by step to the post of Superintendent (1867) with control of the whole of the popular education of the

Digitized by Google

city. Here he soon gained a national reputation—partly by his official reports, mainly by the reforms he advocated and initiated. He is said to have started the first kindergarten in America; and he did much to define the separate functions of the different classes and grades of schools. He resigned the post of Superintendent in 1880 owing to bad health. For some years he worked at philosophical studies, in which he had already taken an active interest; and it was in 1889 that President Harrison appointed him Commissioner. Prof. Findlay has described his bureau as "a laboratory for scientific research in the field of comparative education." Dr. Harris retired in 1906. He received doctorates from several Universities. The Trustees of the Carnegie Foundation placed his name first on their roll of honour, and assigned him the highest pension permissible under their rules. "There is naturally," they wrote, "no other name connected with American education which is so identified with the progress of the last thirty years as yours."

SUMMARY OF THE MONTH.

In reply to a communication from the National Council of Evangelical Free Churches, the Prime Minister wrote:

The fate of the Government's Education Bills has been a great disappointment not only to the Free Church of England and Wales, but also to his Majesty's Ministers. The present House of Commons and the Government have spared no time or labour in the effort to legislate on this subject. You need not be reminded that the Education Bill of 1906 was made the principal measure of the year, or of our renewed endeavours to settle the question in 1907 and 1908. Justice would have been done to the Nonconformists, and the popular control of all the public elementary schools of England and Wales would have been an accomplished fact, but for the action of the House of Lords. It is due to no fault of ours that those for whom you speak are disappointed and labour under the sense of a real and serious grievance, and for our part I can say that if no opportunity arises for dealing effectively with the subject in this parliament, we cannot in the next, if we are returned to power, allow the present injustices and the limitations or absence of popular control to continue to deface our educational system.

The President of the Board of Education received a deputation from the recent Rural Education Conference, at which certain resolutions were passed urging the desirability of giving greater administrative encouragement and greater financial assistance by way of grants towards the cost of instruction in "special subjects." Mr. Runciman said he took it that the object of the Rural Education Conference could be summed up shortly as follows: They wished the education of children in the public elementary schools to be made more practical and less bookish; and they also desired that the education should be adapted to the requirements in which the schools for the children were situated. With these objects he was in full sympathy. The question of grants was by no means an easy one. It was very complicated, and it was not entirely in the hands of the Board. But they had attempted to increase and to improve the grants during the last few years. As far as had been possible, they had attempted to encourage the very experiments which the deputation had advocated. The extent to which new work was being undertaken might very well be measured by a large increase in gardening classes. There was one great departure which they had taken in conjunction with the Board of Agriculture: they had arranged a rural education conference in respect of the great agricultural necessities in this country.

A return just issued by the Board of Education gives the following information regarding training college students:—(1) Number of students who satisfactorily completed their course of training in the year ending July 31, 1908—male, 1278; female, 3106—total, 4384. (2) Number of students included under Head 1 who are known or believed to have obtained employment by July 1, 1909, in schools satisfying the terms of the students' undertaking—male, 1221; female, 2848—total, 4069. (3) Number of students included under Head 1 who are known or believed not to have obtained employment by July 1, 1909, in schools satisfying the terms of the students' undertaking—male, 45; female, 214—total, 259.* (4) Number of students included under Head 1 as to whom no information is available—male, 12; female, 44—total, 56.† [* This number includes, besides one student who died during the year, a certain number of students trained in training colleges connected with Universities who returned to the University for further study and did not seek immediate employment. † The majority of these students were trained either at the London (New Cross) Day Training College, or at the Southampton Day Training College.]

A scheme has been organized by the Public Schools League for Imperial Land Settlement in connexion with the Head Masters' Conference. According to a memorandum just issued, the emigration sub-committee of the Conference undertakes to advise and assist public-school boys, who, after leaving school, decide, with the consent of parents or guardians, to seek a career in the Overseas Dominions. The plan at present is to secure for such boys a period of not less than a year's training on a farm in one of the Oversea States, to be followed by attendance at a first-rate agricultural college. No premiums are paid. Inquiries should be addressed to Mr. W. A. Evans, 12 King's Bench Walk, Temple, E.C.

The Secretary to the N.U.T. writes:—"More than the usual local interest attaches to the result of the Council Election at Bridlington. In the early part of this year Mr. Grimshaw, one of the assistant masters in the Council's service, made a speech at a teachers' meeting at which some of the members took offence. He was called before the Committee, and, on declining to withdraw statements which he considered to be true, was dismissed. He then became a candidate for the Council, and the election was fought mainly on the question of the right of a teacher to a fair hearing. There were six vacancies on the Council, and five of these have been secured by supporters of the principle, Mr. Grimshaw himself being elected for the Ward in which his school is situated."

At the annual prize-giving at the Mathematical School, Rochester, the head master (Mr. Charles Bird, B.A.) said he was not of those who went "pot-hunting," and did not believe in pitting one school against another and trying to beat the record. The Earl of Darnley, in distributing the prizes, said that it would be a great mistake to regard the boys who had no awards to take as "failures." The really important thing for every individual in the schools all over the country was that we should be able to raise a race of "triers." He congratulated the boys on belonging to a school that had a history of more than two hundred years behind it. There was no more legitimate pride than to belong to a school which had done work generation after generation as that school had done. They should never drop their connexion with the old school, however far their life's work might take them. They should have their school papers bound and keep them. Some of his own most prized possessions were volumes of the Eton School paper. During the last year he was at Eton he was one of the two editors of that paper. That great statesman Mr. Gladstone was an old member of the school, and he had been making a public speech somewhere in which they thought he had run down the old school. They put their editorial heads together and called in their strongest leader writer, the present Lord Curzon of Kedleston, and told him to write a good stiff article so as to bring Mr. Gladstone to his senses. So successfully did their leader writer do his work that Mr. Gladstone sent an autograph letter explaining away his speech in his very best style. He had still got that letter. Referring to the school sports, Lord Darnley said that physical training and exercises were not inconsistent with high intellectual attainments.

Speaking at the distribution of prizes at the Halifax Technical College, Sir Swire Smith said some people threw cold water on technical instruction, alleging that it did not train the mind to exercise in the highest possible degree its best faculties. But was not the aim of technical education to teach the student the principles underlying the work in which he was engaged, to teach him what to learn, and to implant in him

Digitized by Google

the desire for more knowledge? Technical education was like Latin and Greek, in that it was a good exercise, but it was unlike Latin and Greek because it would bring something in. Perhaps one of the most serious questions we, as a nation, had to face was one which he congratulated Halifax upon facing with such spirit and success—the wastage of educational effort which occurred after boys and girls left school. Everywhere we were hearing of unemployment in our country. He had known unemployment to be more general than it was now, although perhaps it was never so much advertised as it was to-day. You could not remove unemployment by a magician's wand. Parliament could do very little indeed in that direction. If we could establish classes in thrift, so that we could have that principle thoroughly engrafted in the minds of our people, we should have a much happier country than we had. A danger was that so many of our young people had never learned to work. The great pity was that most of the unemployed had never learned a trade. At the first pinch they drifted into unemployment. In many trades the apprenticeship system was practically dead, and therefore we should have to adapt education to the changed needs. We should have to train the whole boy while he was at school. We wanted artisans, and we were training clerks, and while this immense economical change was going on we were taking no notice of it. In nearly all our trades to-day there was a tremendous subdivision of labour, and that subdivision had come to stay, but it was taking the life and soul out of many of our people. In Halifax they were trying to deal with these problems by means of that college. They provided means whereby a boy in a particular shop where he learned one part of his trade might come to that school and learn the other part. Technical instruction was good not only for the student, but for the employer and the country.

At the Annual Meeting of the Secondary Education Association of Scotland, held in the University of Edinburgh, Dr. Marshall, the former Rector of the Royal High School, Edinburgh, delivered an address on "The Universities and the Secondary Schools." He said that towards all the modern changes his attitude was simply this: that the efforts and expenditure by which in Scotland since 1872 it had been quite honestly sought to improve education, had been largely neutralized or stultified by this one fatal defect—that in their very nature they had tended more and more to derogate from the liberty and independence of the teacher and to a corresponding degree in each case had rendered rarer and more difficult the production, through the influence of character and originality, of the old manly and enterprising and original type of scholar. Apparatus had complicated and multiplied, but the old humorous freedom had tended to disappear, and with the old freedom the manufacture of freemen. His one main hope for freedom lay in the freedom still largely untouched of the Universities of Scotland. The Universities were resuming their independence of each other in the conditions of admission, and they were busy now in reconsidering the methods and principles which were to determine their selection of bursars. That way hope and redemption lay. And in the leaving certificate arrangements there lay a second hope of freedom; and, if the new idea was finally worked out on the lines sketched by Mr. Struthers, it would restore in large part much of the old freedom of teaching. If they could only see organized and systematic recognition of the possibilities of that new scheme on the part of the Burgh and County Committees, with their extended powers in the way of the conferring of bursaries, he could imagine a new and splendid era of freedom for teachers. In co-operation with the inspector, each head master would be privileged to submit the names of his promising pupils who were desirous of going on to the University, and who required assistance to that end for the consideration of the Burgh or County Committee.

The Rev. Dr. James John Hornby, Provost of Eton College, died at the age of eighty-three. The third son of Admiral Sir Phipps Hornby, he had a distinguished career at Oxford, and rowed in the 'Varsity Eight in 1849 and 1851. He was Head Master of Eton from 1868 to 1884, when he was appointed Provost.

Dr. Frederick Fuller, Emeritus Professor of Mathematics in the University of Aberdeen, died at Surbiton at the age of ninety. He was Fourth Wrangler in 1842, and was Professor at Aberdeen from 1851 to 1878. He was one of the University Commissioners under the Universities Act of 1889. He gave a great impulse to mathematical study in the University and was extremely popular with the students.

UNIVERSITIES AND COLLEGES.

(From our own Correspondent.)

Cambridge.

The list of Special Examinations, as foreshadowed in these notes, is practically certain to receive an addition in the shape of a Special in military subjects. The schedule follows the lines of the examination which is the regular test for the admission of University candidates to the Regular Army, so that now the future officer can devote the major portion of his University career to a technical and yet scientific course of study likely to prove of advantage, directly and indirectly, in his future career. Much of the success of this military development is due to the organizing skill and tact of Col. H. J. Edwards, who commands the C.U.O.T.C., and the whole-hearted work of Col. Dyke, the Director of Military Studies.

The official report as to the number of matriculations for 1909 gives 1,198 as the total for the civil year, as against 1,173 for the corresponding period of 1908. When will college Authorities begin to consider that these details are for the Chamber and not for the market place? The colleges thrive on numbers, but how about the unfed crowd?

The annual assessment of the Colleges reveals the fact that the taxable income amounts to £259,500, of which the University claims £30,275 as its due. Then we have to consider the trust funds, which are not included in this sum, and wonder whether the University system is incapable of some slight amendment.

Sir Ernest Shackleton's lecture was delivered on October 29—too late for record in last month's notes. A belated appreciation, but a deserved one, must be given. The undergraduate may be all his detractors say, but he can recognize merit and a man. This time he had a full opportunity. Nansen was a popular hero here, but Shackleton was accorded a hushed silence and quickly checked applause, which spoke surely of the hold which a real man could gain over those who trusted to their instincts and knew they were right.

The election of Mr. J. Stanley Gardiner to the vacant Chair of Zoology was, to a certain extent, anticipated by popular rumour. Mr. Gardiner has wandered among savages in wild lands and has met wilder men in his proctorial ramblings nearer home; he has come out of it all with credit, and doubtless will not let the extinguisher of office descend upon the flame of his studies.—Dr. Nuttall was re-elected to the Quick Chair of Biology: this was inevitable.

The *Reporter* has been full of wrangles as to the ceremonies of creation and inauguration of graduates. How few know anything of these hollow mockeries, and how very few care!

The memorial to the late Prof. Maitland is to take the form of a bronze bust to be placed in the Squire Law Library, while the unexpended balance is to be utilized for founding research scholarships in that department of medieval legal learning which Maitland made his own.

To turn to outdoor matters. Our Rugby football team, like the curate's egg, is regarded as good in parts. The forwards are exceptionally good, the halves are good, and the full back is up to International form; the three-quarter line is the outstanding weakness, and has suffered severely from accidental causes. But, if Scholfield maintains his present form and if Pyman and Beecroft are able to get sound and remain so, the match against Oxford will at any rate be a good one to watch.

Our prospects on the river are fairly bright: the number of reasonably good men worth trying for a place in the trial Eights is larger than in any previous year. Harmony prevails in high places, and doubtless will continue till Putney is reached.

The Hawks Club deserve much credit for their enterprise in giving one of their delightful balls to enliven the monotony of the Michaelmas Term. Dancing was kept up till 4.30. Worms's band provided the music. The supper was of the usual Cambridge standard, and the whole affair went with *élan* to the very end.

As a sequel to the hoax perpetrated some time ago at Caius, the Emmanuel men had their revenge the other night. At an inter-college debate a well known M.P. was announced to speak, and he duly kept his appointment. When it was all over, the truth leaked out that Mr. Clarkson was responsible for the manu-

Digitized by Google

facture of an M.P. out of such humble materials as stage make-up and an undergraduate with histrionic talent.

Things are abnormally quiet, but the eggs of the goose take longer to hatch than those of the domestic fowl. Reform is in the air.

London.

Much exception (says the *Times*) is taken, among graduates of London University, to the fact that the Royal Commission on the University of London is sitting *in camera*. Lord Selborne's Commission of 1888 on a teaching University for London took evidence in public, and, in view of the fact that the reference to the Commission now sitting is not only wider, but includes an inquiry into the existing organization and working of the University of London, which concerns numerous interests, it is felt that it is vital to the University itself that the Commission should take evidence in public.

The Senate has decided to take part in the Modern University Congress which it is proposed to hold in 1910, and the Vice-Chancellor and the Principal have been appointed to represent the University on the Executive Committee which is being formed for the purpose.

The Medical School of King's College Hospital, which was, by the King's College, London (Transfer) Act, separated from King's College, has been admitted as an independent body to the status of a school of the University in the Faculty of Medicine.

Dr. Charles Graham, D.Sc., formerly Professor of Chemical Technology in University College, London, died at Hastings. Dr. Graham was a Vice-President of the Institute of Chemistry in the years 1882–4, and served on the Council for several years. After graduating as Doctor of Science in London, he studied applied chemistry in Germany. His Cantor lectures at the Society of Arts aroused a large amount of interest in the brewing world, and he was regarded as a pioneer of certain advances in scientific brewing. Dr. Graham was associated early in life with the Volunteer movement in the Berwick district. He was 74 years of age.

Tutorial Classes for Workers.

A conference on the subject of the formation of tutorial classes in industrial centres was held at Oxford, under the chairmanship of the Vice-Chancellor (Dr. T. Herbert Warren). Representatives were present from all the Universities in England, all but two of the University colleges, of the Workers' Educational Association, and various similar bodies. The chief resolutions adopted were as follows:—

That this Conference desires the extension of the tutorial class system, as far as is practicable.

That it is desirable to form an Advisory Committee representing the Universities and University colleges concerned, the Workers' Educational Association, and other interests involved.

That the secretaries be asked to communicate the foregoing resolution to the Universities and University colleges of England and Wales and to the Workers' Educational Association, and to invite them, if they approve of the foregoing resolution, to appoint two representatives each to such Advisory Committee, in the first instance for one year; and that, when a joint committee, consisting of University representatives and representatives of labour organizations, has been formed in connexion with any University carrying on tutorial classes, such joint committee shall be invited to appoint one representative of themselves, who must be a Labour representative.

Irish.

Irish Roman Catholic opinion (writes the Dublin correspondent of the *Times*) appears to be satisfied with the new staffs of the National University and of University College, Dublin. Irish Protestant opinion, perhaps from motives of delicacy, has not expressed itself at all. An impartial judgment would probably be that some of the appointments announced to-day are admirable, that the majority are respectable, and that in some others the qualifications which satisfied the Commissioners, though possibly excellent, are not before the public. The appointment of Dr. Douglas Hyde and Mr. John MacNeill, the president and vice-president of the Gaelic League, to important chairs in Irish was not unexpected. Its effect on the Gaelic League's threatened campaign against the University is now awaited with curiosity. I understand that the appointment of Mr. Swift MacNeill and Mr. T. M. Kettle to the chairs of Constitutional Law and National Economics respectively will not necessarily interfere with their duties as members of Parliament.

THE HISTORY OF EDUCATION AS A PROFESSIONAL STUDY.

At the Evening meeting of the members of the College of Preceptors on Wednesday, November 17, E. A. Butler, Esq., in the chair, Prof. J. W. Adamson read a paper on the above subject. He said:—

It is advisable to explain at the outset that the word "education" is here used as a convenient, even if too comprehensive a name for the task of the schoolmaster. One need scarcely add that "the history of education," if otherwise interpreted, would prove a very intractable subject. Accepting the narrower interpretation of the phrase, this paper is an attempt to answer the question: Of what use to the practising teacher is the historical study of education?

The plea has been urged that the history of education is part of the history of the development of culture in general, and shares with it the interest, the intellectual stimulus, the extension of the mental horizon, and the enlargement of sympathy which a study of the history of culture is capable of conferring on those who can pursue it with appreciation. These, however, are quite general arguments; persuasive as they may prove when addressed to educated persons indiscriminately, they are hardly likely to strike a purely professional audience as very convincing. The individual schoolmaster may reply that the advantages ascribed can be secured by other studies which he for his part greatly prefers. To justify the claim of the history of education to a place amongst professional studies, it is necessary to show that professional profit may be acquired from it which cannot be got so easily or got at all from any other study.

Most professional men need to be on their guard against the insidious dangers of routine and the prepossessions of their art; the schoolmaster is most certainly not excused from taking care in this respect. In his case it is especially desirable that he should retain the capacity of criticizing the daily task and of perceiving that "open questions" still exist. Of all professional men, he seems obliged to retain that wholesome scepticism which does not paralyse action, but renders it free, prompt to the occasion, and effective.

Education is relative to Social Surroundings.

But the critical temper and the sceptical attitude are hard to preserve when it is forgotten that most of the aims and all the instruments and processes of education share the common human disability of being merely relative. One or two fundamentals excepted, there is no absolute, all-comprehensive object proposed for the schoolmaster's attainment. Still less is there such a thing as the Absolute Curriculum. Educational aims have changed from age to age, and studies and methods have varied in similar fashion. Here the history of education becomes professionally helpful. While the relative character of his work is likely to be forgotten by one who is for ever absorbed in the attempt to satisfy the requirements of the present, it is the most obvious thing to the student of the past.

If it be true that there is no absolute curriculum, does it not follow that the teacher should strive to keep his own mind elastic, and to allow a free play of thought around that curriculum in which it is his daily occupation to give instruction? This would appear all the more needful since the character of his task and the circumstances amidst which it is done only too readily tempt him into routine and the acceptance of standards purely conventional.

The student of the history of education realizes, as no one else can, that the curriculum of the present day is of very recent growth; he reflects that most of the things now taught in schools are mere upstarts of the hour when compared with the long life of the school itself as an institution. He will go further, and recognize that education has been possible in the absence of schools and of tutors, as these terms are commonly understood.

Aims, curricula, methods are all relative to the stage of civilization reached by the society which erects or employs them; they are reflections of life outside the school as it is lived at the moment, or, more usually, they reflect the life of the immediate past. Failure to realize this truth brings about misunderstanding of the education given during any one period, our own not excepted. The failure to connect educational practice with the life of the time—the failure, that is, to study education historically—causes grave misrepresentation, for example, of the purposes and achievements of the educators of the sixteenth century.

Digitized by Google

Mr. Quick was alive to the danger of using labels as if they were interchangeable with persons; yet he ventured to classify the sixteenth-century teachers severally as "stylists," "scholars," and "verbal realists." This classification, based on the attitude of the teacher towards the classical literatures, misses the main point, which is, why employ the classical languages, and more especially Latin, as educational instruments at all? Mr. Quick's picture of the schoolmasters of that day shows us a set of pedants, devoted to the thought and life of another age than their own, and indifferent to the life of their contemporaries. A penetrating critic like Montaigne, feeling by anticipation the change which was to come over European society in general, also presents us with a similar picture of a fatuous set of persons engaged upon a task without meaning. But it seems to me that both Montaigne and Mr. Quick are unjust to the men who wrought so laboriously in sixteenth-century schoolrooms. Neither of them is fair to the concrete usefulness in that day of the power to write sound Latin after a Ciceronian model. A lad who had acquired this art had surmounted the first great obstacle to advance in public life: many a poor but capable youth found his way into the public service and to eminence in the State through ability to write an official letter and conduct affairs in the universal language of administrators. The schoolmasters who prepared boys to exercise this accomplishment were doing a very real service to the boys and to their parents, as long as the circumstances of the time made the Latin language a broad gateway to promotion. The usefulness of their work is a very good set-off to the charge of pedantry and obscurantism brought either by a contemporary looking beyond his age or by a man of to-day momentarily at least forgetful of the past.

The Attitude towards Innovations.

The schoolmaster's critics, however, are not the only men who need to view the school historically. Where the historical factor is ignored, whether by teacher or educational administrator, there is something more than a tendency to look askance at all innovation just because it is new, and to cling to the obsolete merely because it is familiar. How else are we to explain, for example, the widespread adherence to the syllabic plan of teaching reading, which is always discredited when spoken of, yet probably still serves for the instruction of many thousands of those children who are taught to read English more or less systematically? Employed originally to teach the phonetically spelled Latin, it was transferred in due course without question, and as a hoary tradition, to the teaching of modern languages, even in cases where these were almost destitute of a phonetic notation. Similarly, history and tradition account for the attempts which even now continue to be made to instruct children in processes and in modes of skill through descriptions only, whether conveyed in books or by means of oral lessons.

Curricula and Methods are Developments.

There is no absolute curriculum; not even our own attains that dignity. It is therefore a very practical thing to refer existing school courses to the life around us. But even in the most bureau-ridden of European lands, the curriculum is a growth, not a creation *ex nihilo*. It is a development which, to be duly appreciated in its relative character, must be regarded historically.

This is also true of the processes by which it is sought to turn curricula into instruments of education. One may illustrate by referring to the place occupied by the verbal memory in school work at different periods. When all books were few and hard to come by, it was a very natural device to require pupils to learn very many things by rote. The practice which had its origin in utility passed into a tradition, and was a settled usage long after the time when books, and school books amongst them, had become numerous and readily accessible. It was then no longer possible to explain the practice as a supremely useful one, but it was defended as a sovereign means of "training the memory," and on that ground tasks quite unnecessary and often harmful were imposed on schoolboys. In due course, the swing of the pendulum came. A multitude of cheap books and a very considerable extension of the hours during which a man could read, made it evident that much of the learning by heart so insistently practised in schools was needless. Here and there the onslaughts of Montaigne and Rousseau were remembered, and a legitimate, valuable, and necessary exercise fell into disrepute. The latest critics forgot the convenience, the saving of time, the readiness and alertness consequent upon a good verbal memory, to say nothing of the pleasure such a memory may confer upon its possessor when judiciously exercised and employed. Forgetfulness became easier with alterations in curriculum which reduced or ousted the old linguistic course of study.

The series of changes here outlined is typical in the history of education. Studies and methods which begin as necessary adaptations to circumstances crystallize later into habits; and then they are urged or excused on quite other grounds. Very frequently these grounds are merely fallacious generalizations which are used to resist innovation and reform, to excuse the survival of practices which have lost very much of their meaning and value, and to insist upon the educational worth of things which are to-day chiefly mischievous.

History gives a Standard of Value.

The historical student is in possession of a means of correcting values which he can apply to these questions of curriculum, of method, and of educational administration. He becomes aware of the close connexion between the best work done in the schoolroom and the daily life led beyond its bounds. He recognizes the obsolete, notwithstanding the fine phrases and illegitimate assumptions which are used to make it appear other than it is. His appreciation of the growth and development of educational instruments and processes teaches him to look ahead, while it preserves him from clap-trap.

It is sometimes objected that the history of education is no more a professional study for the schoolmaster than is the history of medicine for the medical man. The analogy, which is not a good one, seems to spring from a mind in search of the non-existent Absolute Curriculum. There is a better analogy between Education and Law, and legal history certainly is a professional study of high rank. Be that as it may, a medical man is helped by knowing what were the specific problems of his predecessors, even though he is not disposed to accept the solutions which they propounded.

The Conservatism of the Schools.

It was said above that the aims and usages of the school reflect the life of the *immediate* past. It has been a commonplace of educational reformers in all ages that the schools which they knew were "behind the times." The fact may be admitted without branding the schools as useless or inefficient. The explanation seems to be that the school is or tends to be a highly conservative institution just because it deals with one of the fundamental processes of human life, which cannot lightly be hazarded amidst experiments of unknown issue. If it be the long-established practice, let us say, of the schools of Brobdingnag to teach the Laputan language, there will, no doubt, grow up in time a general assent in that disagreeably named region that it is, after all, unnecessary, wasteful, and pedantic to retain the language of Laputa in the curriculum. But one must not on that account expect the individual Brobdingnagian to withdraw his son from instruction in Laputan. He will reflect that he himself and all his circle learned that tongue in boyhood, and that his son is, in due course, to take his place in a society of persons who have all learned Laputan. He will, therefore, decide that *his* boy, at all events, must learn Laputan, though for all other boys—or, at least, for very many of them—the instruction is "wasteful," "unnecessary," and the rest.

The schoolmaster and the school instinctively adopt this attitude of the parent, and there is much to be said for all of them. But, when the attitude is assumed independently by the schoolmaster, there are inconveniences and worse. "Being amongst friends," it may be said that the first place amongst real, effective reformers of education cannot, on the whole, be assigned to schoolmasters. Schoolmistresses may, perhaps, make good a claim to stand in greater numbers amidst those minor reformers who have improved our methods. But, as a general statement admitting few exceptions, the great reformers have not been professional teachers, and some of the notable exceptions were reformers first and schoolmasters in consequence. Too often the teacher by profession has stood in the way of reform.

The study of the history of education is one calculated to change this undesirable condition of things. It puts the schoolmaster on his guard against some special weaknesses which beset his profession. It encourages the open mind which should mark the teacher, if it distinguishes educated persons at all. The past of his profession, its aims, instruments, failures, and achievements, when placed in their historical setting, should help the schoolmaster to see how matters are shaping in his own day. A

Digitized by Google

knowledge of the manner of development of education is the best guarantee that its possessor will respond readily and intelligently to those outside forces which are moulding the future.

The True "History of Education."

This is no plea for the supremacy of the history of education amongst professional studies; that is a position reserved for the scientific study of education, which treats the phenomena of the actual school of to-day in the spirit and by the methods of the investigator and experimenter. But it is held that history deserves an honoured place amongst the many auxiliaries to which the scientific student must resort. After all, history is a narrative of experience, and it is upon experience that the scientific method is based.

Bearing in mind the character of much which passes under the name of "History of Education," it may be objected that educational experience—that is, the concrete facts of the schoolroom and the prescriptions of educational administrators—appear therein all too rarely. The objection is a very valid one; the history of educational opinion is not coincident with the history of education, and it is on behalf of the latter that the present plea is made.

The history of opinion concerning education, the story of suggested innovations which never got any visibly further than the printed page, has quite a different function from that which belongs to the history of education. It is interesting and stimulating to read the views which Mulcaster set forth in the "Positions"; but these, unhappily, form no part of the history of our profession. We are much closer in touch with that when we scan Cordier's "Colloquia Scholastica," or any other well-thumbed school book of Mulcaster's day. Even the biographies of great teachers, and much of the work of great thinkers on education, are rather *mémoires pour servir* with reference to educational history than substantive parts of the history itself. This, of course, is not a denial of their intrinsic worth, nor does it mean that they are valueless for the schoolmaster.

The history of education is the history of educational practice and of theory in relation to practice: it sets forth the aims proposed to the schools and the means by which the schools sought to attain them, the circumstances which favoured and those which hindered the search. It is, however, not a mere catalogue of particulars or a string of annals, though it includes these. Such things call for interpretation, and their meaning is to be looked for in their relation to the life of the time and to the intellectual forces which moulded it. It is a corrective to the purely scientific study of pedagogy, which is sometimes short-sighted. It is a solvent of prejudice and an enemy of bare routine.

Take, as an illustration, the prejudice against "useful studies." It is no prejudice, but a sound principle, which makes us distrust unintelligent "short cuts" that lead merely to the pretence of knowledge or to the acquirement of mere tricks. But there is in many minds a feeling of suspicion, or of downright hostility, to the employment, as an instrument of education, of any study which can be shown to have a direct use in daily life. Those who cherish the feeling will deny any sort of place in education to considerations which are commercial or industrial; it is no part of the educator's business, they maintain, to increase the "economic value" of the pupil. Nevertheless, it is matter of history that this very aim has been a most powerful agent in educational reform. The idea of public instruction owes much to it, not only as leading to the establishment of technical and trade schools, but also in the conception of what constitutes primary education. It is now a wellnigh universal belief that the "three R's" form the elementary stage of all instruction, from the University downwards. But it can be shown that this belief is a comparatively modern one, which owes its existence very largely to the specific demands of the shop and the factory. Even Latin and Greek owe their position in the curriculum historically to their usefulness in definite occupations, although the fact does not explain their presence there to-day when other reasons may be legitimately given for their retention.

Classical scholars who recall the names of Florence and of Venice should be the last to decry the services of industry and of commerce to education, and the power which they have often beneficently exercised on its behalf.

Is there no place for the statement of educational opinion in the history of education? Certainly there is, if the opinion is of the operative sort which has got itself incorporated in practice. In this sense, we are reading educational history when we study Rousseau's "Émile" or Comenius's "Great Didactic" or any of the tracts and text-books in which Erasmus or Sturm embodied his ideas on the upbringing of boys and girls. But even these cannot be profitably studied if they are looked upon as literary Melchizedeks, without parents or posterity. In other words, we need to bear in mind, when reading them, the circumstances out of which they grew and the effects upon educational theory or practice which they wrought. They should be studied historically and not as isolated monuments whose interest is confined within their own boundary lines.

Historical Research.

If the phrase "the history of education" has been correctly interpreted, it seems to follow that a great many pages in our text-books are blank; and the reason for this would appear to be that too many of our so-called "Histories of Education" have been written under literary inspiration rather than as the outcome of historical research. English educational books which can be assigned to the latter origin are few, but these are good. The administrative side of English scholastic history has been presented to us by Mr. Leach in a number of monographs, as well as in his larger work on "English Schools at the Reformation"; he and others have told us much concerning the past of individual schools in the various volumes of the "Victoria County Histories." The connexion between the State and the schools has been set forth historically by Mr. de Montmorency in his "State Intervention in English Education."

Of even greater professional interest, since they deal with the actual everyday work of the classroom in the past, are Prof. Foster Watson's "English Grammar Schools to 1660" and "The Beginnings of the Teaching of Modern Subjects in England." There is also Dr. Sandys' "History of Classical Scholarship," whose three volumes follow their special topic from the sixth century down to our own time; though its scope far exceeds that of the schoolroom, much that belongs to our subject may be gleaned from its earlier chapters more especially. The same may be said with reference to Dr. Rashdall's "The Universities of Europe in the Middle Ages." We have school and college histories in abundance, but too many of these begin well, only to become mere biography, anecdote and ana, owing to the absence of sustained research into the past of the institution as a whole.

Work needing to be done.

The truth is that a great deal of "spade-work" must be done before we can possess a satisfactory history of English education, and some schoolmasters and schoolmistresses engaged in the service of old foundations have extraordinary opportunities for doing such work well. There must exist a considerable store of material lying forgotton or unheeded in minute-books, school accounts and the like, which are in the charge of schoolmasters or are easily accessible to them. In 1727 there were 132 charity schools in London educating above five thousand boys and girls. Many of these schools still exist, usually in association with the parish churches. Their history has a direct bearing upon the development of popular education in the metropolis and in the country generally, and their endowed funds sometimes become the object of regard in the eyes of impecunious authorities even to-day. There was a great decline in the usefulness of these charity schools during the eighteenth century, for which there seems to be no good explanation forthcoming. The explanation cannot but be profitable knowledge for all who are now concerned in public elementary education, and some of it, at least, is in all probability in the places indicated. Yet, so far as I know, only two of these surviving London schools have "got into print"—namely, St. Anne's and St. Margaret's, both in Westminster, Miss Day writing of the latter in "An Old Westminster Foundation."

The number of German monographs of this kind is very great. It is the custom in Germany and in Switzerland for many secondary schools to issue an annual report which always contains one or more articles, contributed by members of the staff, and appealing to a wider public than that immediately concerned in the names of pupils, their distribution into classes, the studies they follow, and the masters who instruct them. These articles are sometimes independent contributions to research, scientific, literary, historical. Many of them present the history of the school itself at some particular period, the school and city archives being used as authorities. Moreover, the German States and cities, and the religious communities, have permitted

Digitized by Google

the publication, or have themselves published their school ordinances and records.

In this way, much material of the highest value for the purpose has been worked over and partially digested. When this in turn has been investigated by such a mind as that of the late Friedrich Paulsen, the outcome is so fine a book as his "History of Higher Instruction in the German Schools and Universities from the Middle Ages to the Present Day."

The English Paulsen has not yet appeared, and that is an additional reason why English teachers should study the history of education. Some at least might make contributions to the common stock, all are directly interested in its augmentation, and all would benefit by sharing its contents.

The CHAIRMAN thought it was, perhaps, unfortunate that the subject had not been treated from the point of view of the intending teacher, because it was during the period of training that the necessary time and opportunities for such a study were available. One would readily admit the advantages of this study; but teachers already complained that there was very little time even for work that must be done, and, if they had to take up the study of another strictly educational subject bearing upon the same matter which occupied their attention during working hours, their minds would become jaded. Opportunity was needed for a change of occupation and a difference in the kind of study if profitable work was to be done during the hours of teaching. The lecturer had said that schoolmasters, on the whole, stood rather in the way of progress. There might be some truth in this; but, when a number of new theories were put forward by those not actually engaged in teaching, it was possible that the practical teacher might see difficulties in the way of introducing these new ideas which did not appear to the theorist. This might account for the conservative attitude of some schoolmasters. With regard to the question of utility, it was difficult to realize the exact measure of utility in any subject. It was quite conceivable that a subject of study might at one time appear absolutely devoid of utility and might afterwards prove to be of supreme importance. He would instance the case of the elasticity of wires, the study of which afterwards proved of so much use in the measurement of electricity. The main point was that every subject of the curriculum should have some bearing on practical life and should aim at rendering the pupil able to take his place as an honourable citizen of his country. Everything tending in that direction should find a proper place in the school curriculum. Utility might also be regarded from the point of view of breadwinning; but, after all, man did not live by bread alone and they had to equip their pupils for more than this. They must be regarded as human beings with powers of intellect, and, as a matter of their own private enjoyment, it was desirable that those powers should be trained even though it might not affect their ability to earn so much a year. It would be right to teach reading, for instance, merely for the delight to be derived from reading, even if it were not a necessary preliminary to success in daily life. There was no reason why they should not have in the curriculum some subjects which were useful for the intellectual pleasure which they afforded, useful as a set-off against the strain of everyday life, and to keep one up to the mark physically and intellectually. He heartily concurred with the lecturer that there was no such thing as an absolute curriculum. It must depend partly upon local circumstances, and no definite lines could be laid down. The lecturer had advocated that the teacher should cultivate a critical mind with regard to the various subjects he was teaching. He thought, however, that at the present time the teacher ran a little risk of becoming too critical and having his energies paralysed owing to the number of new subjects and methods which were continually being introduced.

Mr. BEVAN thought that, unless teachers took up the subject during their period of training, they would hardly take it up at all. Unfortunately, many persons gave up study altogether after they left college, and did not add much afterwards to their original stock-in-trade. Furthermore, their practice in school was largely determined for them by others, and they were inspected and sub-inspected by so many departments that they were in danger of losing all originality and power of study themselves and of destroying the seeds of it in their pupils. In country and town schools alike the lack of initiative was evidenced. Farmers could get no young hands to take up the technical work connected with the farm, and the system of apprenticeship had broken down in our towns, partly owing to the restrictive tactics of trade unions, but partly owing also to unintelligent teaching in school. Doubtless the evolutionary theory applied in teaching as well as in other departments of action; and the lecturer had touched upon two illustrations—viz., the necessity in earlier times (owing to the scarcity and dearness of books) for committing many things to memory, and also the practical use of Latin to the man of affairs in the sixteenth and seventeenth centuries. Apart from the latter cause, it was then that Britain was again learning to take a deep interest in things outside herself. The Crusades had had this effect in the eleventh and twelfth centuries, the Hundred Years' War with France at a later period; but, after that, civil broils and the Wars of the Roses had concentrated attention at home. Then came the sack of Constantinople in 1453, the dispersion of scholars, the Renascence, the Reformation—all leading to the reviving of national interest in the classical languages. It was true, however, that the effect mentioned by the lecturer was a particular instance and result.

Mr. BUTT thought that it was during actual practical work that a knowledge of the history of education was most useful, and he therefore sympathized with the desire of the lecturer to confine this historical study to those who had passed through their course of training. A mere biographical study of the lives of ancient schoolmasters did not give much practical help; but, if one could trace the influence of a particular curriculum on the history of its period, the study of the lives of these ancient writers would be much more valuable.

Mr. KING said that his own study of the history of education had been from the biographical point of view, and not from the wider aspect set forth by the lecturer. He thought there would be great difficulty in the production of such works as the lecturer had suggested; but, if University students and readers of history could be persuaded to organize and work with schoolmasters in various districts in order to accumulate the mass of information which would be necessary, the results would be of great value to teachers who had passed through their course of training.

Mr. KITCHENER agreed that the study of the history of education gave the teacher a wider outlook and was of great value in preventing mistakes in practice, more especially when experimenting with new methods. Unfortunately, books on the subject were few. The production of others would no doubt induce more teachers to read, but, so far at least as assistants were concerned, very little time was available for this study.

Prof. ADAMSON having replied to the remarks of the various speakers, a vote of thanks to the lecturer concluded the proceedings.

THE REGISTRATION OF TEACHERS.

A CONFERENCE convened by the Federal Council of Secondary School Associations, in conjunction with the Head Masters' Conference, the National Union of Teachers, and the Associations of Technical Institutions and of Teachers in Technical Institutions, was held on November 13, at Clothworkers' Hall, Mincing Lane, to consider the subject of the Registration of Teachers. Sir Herbert H. Cozens-Hardy, Master of the Rolls, presided, and among those present were Sir Owen Roberts (Master of the Clothworkers' Company), Sir R. Morant, and the Hon. H. M. Bruce (representing the Board of Education), Sir James Yoxall, M.P., and Dr. J. D. McClure.

Mr. J. Easterbrook (Chairman of the Federal Council) said that in May last a small Committee was appointed to arrange for a conference in the autumn if they could discover sufficient agreement between the leading associations of teachers to warrant them in hoping that such a conference would lead to satisfactory results. The preliminary negotiations were sufficiently promising to justify further action, and the present conference was called. Neither Scotland nor Ireland had been included, nor had they summoned any direct representatives of University teachers. It was very desirable that such representatives should be included on the Council, and there was a place for them in the suggested scheme as nominees of the Crown. Thirty-seven associations had sent representatives. There were no direct representatives of such bodies as the Classical, Modern Languages, or English Associations. It had never been seriously maintained that there could be representation by subjects, and the interests in registration of such associations were sufficiently covered by other organizations, such as that of Assistant Masters in Secondary Schools. Unfortunately there was no representative of the different associations of music teachers. They were undecided whether to come on the official register or to have a register of their own. No scheme could possibly be devised which would not be open to criticism from one side or another. The Committee hoped that it had settled on a middle course between those who thought that a small council composed of a few heads of the profession would be adequate and those who considered that every section and interest should be directly represented on it. It was his hope that the Order in Council might be enabled to bring into existence a First Registration Council, which would be generally acceptable to teachers.

After discussion resolutions were passed to the effect that the Order in Council should provide for the formation of a Registration Council to consist of representatives of teachers in elementary, secondary, and technical schools, schools of art, &c., and representatives of certain other educational associations; that the Register should satisfy the statutory requirements contained in the Act—*i.e.*, the names of all registered teachers in alphabetical order in one column, their addresses, the date of their registration, their attainments, training, and experience, and such further statements as the Council might from time to time determine that it was desirable to set forth.

GERMAN IN SECONDARY SCHOOLS.

THE following (second) letter, signed by representatives of the Modern Language Association, the Society of University Teachers of German, the Teachers' Guild, and the British Science Guild, has been addressed to the President of the Board of Education:—

On behalf of Associations and other bodies concerned with the study of modern languages we, the undersigned, beg to convey to you our sense of disappointment generally with the "Memorandum on Language Teaching in Secondary Schools in England" (Circular 705) and our dissent in particular from several of the doctrines and statements laid down in its concluding paragraphs.

We desire, in the first place, to say a word on one point which was not directly referred to in our former letter, but which we feel to be of great importance. It is shown conclusively that the Board of Education has not obtained, and cannot obtain, the materials required for making the return on the time allotted to modern language teaching in schools in the exact form that the motion in the House of Lords, made on February 5, 1908, demanded; but there seems no good reason why the Board should not furnish Parliament and the public, in whatever shape it thought good, with the information suggested by the motion. What we desire to know, and what the Board has full power and opportunity for ascertaining, is the present condition of modern language teaching in secondary schools, the place assigned to it in the curriculum by head masters and governing bodies, the relation in which it stands to the teaching of classics and of English, the qualifications, emoluments, and status of its teachers. On these points the memorandum throws no light, for it is impossible to draw any conclusion from the reports of the Board's Inspectors therein summarized. Worse than this, the Board, while acknowledging the great value of an investigation conducted on the lines that are here suggested, can see no prospect of its undertaking the work for years to come. We would respectfully submit to the Board that it would be possible, at least, to give as full and adequate an account of the state of modern language teaching in England as has been given about the teaching of various subjects in the special reports on more than one foreign country.

In another respect the memorandum is equally disappointing. The circulars issued by the Board on the teaching of history, geography, and geometry were well considered documents sanctioning the views of experts in their respective subjects. They have greatly influenced educational opinion and have been welcomed as practical aids to teachers. We looked for something analogous in a memorandum on language teaching, but we search in vain. We feel that many would welcome guidance on those questions which are now engaging the attention of modern language teachers—*e.g.*, the new or direct method of teaching, use of phonetics, compulsory oral tests in examinations, prescription of set books.

In particular, we desire to take exception to paragraph (16) of the memorandum which professes to answer a letter on the position of German in secondary schools addressed by us to you in November, 1908.

It is granted that "the advance in the study of German is not at the present moment as rapid as the advance in the study of French or even of Latin." We would submit that there has been no advance in the study of German, but rather a rapid and alarming retrogression. If the present rate of decrease in the number of candidates offering German in the Local Examination continues, there will in three years' time be no candidates in German for the Oxford Locals, and in about four years' time none for Cambridge Locals.

The statistics set forth in the memorial were, for the sake of brevity, confined to Local Examinations, but the figures of the Joint Board Examinations, of the Army Entrance Examinations, the Army Qualifying Examination, and of the examinations of the College of Preceptors, all point to the same conclusion.

As regards the contention that "the curriculum of schools is necessarily guided by the course of the Universities to which it is to lead," we would observe that only a fraction of the pupils in State-aided schools proceed to the University, and no curriculum can be deemed satisfactory which does not satisfy the needs of the bulk of the scholars. The majority of the pupils in these schools leave school before the age of seventeen, and it is allowed that, for such pupils, "both practically and educationally German is a language of the first importance"; yet the Board throws the whole weight of its influence into the scale of Latin as against German, apparently out of consideration for the one boy in a hundred who will go on to the University. And in this case, what would be confessedly good for the many would be no less good for the favoured few. The number at Oxford and Cambridge taking medicine, science, and modern subjects is rapidly on the increase, and it is a constant cause of complaint among the professors and teachers of these subjects that their pupils come to them heavily handicapped by their ignorance of German. It is hardly necessary to insist on the value of a knowledge of German to Honour students in every faculty.

Our suggestion that the Board should encourage and foster schools of the type of the German *Realschule* and *Oberrealschule* is not noticed, but it is indirectly negatived by the insistence on Latin as one of two foreign languages where two are taught.

We would reiterate our conviction that a sound and thorough literary training can be given through English, German, and French, without a knowledge of Latin. If, in the words of the memorandum, English can serve as "the backbone of a humanistic education," surely a combination of English, German, and French would constitute a valuable type of humanistic education.

We greatly regret that the Board has not as yet seen its way to lead public opinion on so vital a matter as the study of modern languages, and we express a hope that the memorandum is not its last word.

PRIVATE INITIATIVE IN SWEDISH SCHOOLS.

By J. S. THORNTON, B.A.

IN the year 1828 the Swedish State, recognizing the rigidity apt to characterize State schools, erected a secondary school (the Nya Elementarskola), whose special purpose should be to try educational experiments for the good of the other schools in the land. That school still exists, and a history of its proceedings was published a few years ago. It has done good and useful work, amply justifying the yearly expenditure on it, which cannot be less than £6,000 or £7,000. But, though very extraordinary measures were taken to secure to it an unlimited freedom of experiment, it tries fewer and fewer experiments as the years go on—approximates, in fact, more and more to an ordinary State secondary school.

The State schools in Sweden were absolutely free until 1904, except that some small payment had to be made for firing, for the school library, and for repairs. But now a fee of 30 kronor (nearly 34s.) a year is charged in the upper school (gymnasium) and 20 kronor in the lower (*Realskola*). These fees are so low that a good private school (at any rate for boys) can hardly exist, unless the State give a subvention much more liberal than is given, for example, in Denmark. In 1908 eleven aided schools of this kind—some of them boys' schools and the rest co-education schools (*Samskolor*)—received altogether less than £6,000.

Was it worth while? Was there an adequate return to the State for the sums expended? A sufficient answer will be found below from last year's Bill for Regulating Payments to Communal and Private Schools (Kungl. Majestets nådiga Proposition, No. 163), in a statement drawn up by three of the schools in question and inserted by the Government as an appendix at pages 171–173 of the Bill. The last part of this appendix runs as follows:—

People often think that private initiative may henceforth be dispensed with; and so it may be of use for once to take a bird's-eye view of what private schools have hitherto accomplished and what they still occupy themselves with. Such a hasty bird's-eye view cannot be in any measure complete; but even a few outlines may be of interest.

I. *New Forms of Organization.*

Teaching of boys and girls together in the higher school. (Here Palmgren's Samskola led the way.)

The elementary school as the basis for the higher school. (Fjellstedtska School; private school in Lund.)

The division of the higher school into a middle school and a gymnasium, with completed courses and separate goal for the middle school. (Here the private school and gymnasium in Uppsala led the way.)

The three-year Gymnasium, *with the three-year Latin course*, as against the usual four-year course. (Uppsala Private Gymnasium.)

Experiments with different (foreign) languages as chief language, and a varying order in which they succeed one another. (Beskow's School, Fru Almquist's Samskola, Whitlock's Samskola, Uppsala, Gothenburg, and Lundsberg.)

The higher school arranged as a country boarding school. (Lundsberg.)

Measures for diminishing the pressure of too many subjects, partly by "concentrated instruction," partly by finishing certain subjects midway in the school course. (Beskow's School, Fru Almquist's Samskola, Whitlock's Samskola, and Lund.)

Class libraries and class museums. (Whitlock's Samskola.)

Lectures outside the school course. For instance, from Whitlock's Samskola has come the plan for lectures and demonstrations in social subjects, which have been arranged in common for schools in Stockholm.

Instruction in sexual hygiene. (Whitlock's Samskola and Uppsala.)

II. *Practical Subjects in the Service of Education within the Higher School.*

Educational wood-sloyd. (First came Palmgren's Samskola. The formation of courses and methods has also been promoted by other private schools.)

Digitized by Google

Smiths' work and other work in metal. (Uppsala Private School.)

Household economy in the Samskola. (Uppsala Private School.) The School of Household Economy in Uppsala, the most important institution of its kind in Scandinavia, had its beginning in the school kitchen of the private school.

Book printing (in Gothenburg. The Samskola, for instance, prints school books).

Bookbinding (Whitlock's Samskola).

Free games in school time, as part of the time-table. (Whitlock's Samskola, Uppsala, Lundsberg, and other schools, with a paid instructor.)

III. *New Methods in Various Subjects.*

Improvements in religious instruction are promoted especially by Whitlock's Samskola and the Samskola in Gothenburg.

A rearrangement of the instruction in the mother tongue; lectures whose aim is to teach pupils to express themselves orally; essay writing, even in the lowest classes (Beskow's School, Whitlock's Samskola, Uppsala, and others).

There are two schools which have been foremost in introducing the new method of language instruction (the imitative method and practical instruction)—Beskow's School (with the help of Hjorth's and Lindhagen's text-books) and Palmgren's, whose contributions to education in matters like Sloyd and language teaching have awakened attention in foreign lands. Modern methods in language teaching have been built up and applied in all private schools long before they found entrance into the public schools.

A new ordering of the way of teaching Greek. (Uppsala Private Gymnasium.)

New plans for teaching history, with the aim of uniting Swedish history and general history, and also of bringing political history, church history, and the history of literature into closer mutual connexion. (Beskow's School, Whitlock's Samskola, and Uppsala.)

The uniting of instruction in geography and biology in the lower classes. (Beskow's School and Gothenburg.)

The new scheme for teaching mathematics in the Realskola was first drawn up and applied in Fru Almquist's School and in Beskow's School.

Methods of teaching botany and geology, with chief weight laid upon the purely biological sides of the subject, and with experiments and series of observations conducted by the pupils, had long been in use in private schools (*e.g.*, in Stockholm, Gothenburg, and Uppsala) before they were formulated in the new schemes of the public schools.

The improvement of the teaching of drawing and the application of drawing as a means of expression (*e.g.*, by connecting it with essay writing) has been carried out in several private schools (amongst others, in Whitlock's Samskola, in Gothenburg, and Uppsala).

A series of models for metalwork in accordance with educational needs (in direct opposition to the methods used in the elementary school) has been worked out and put into use in Uppsala.

CONFÉRENCES FRANÇAISES.

SOCIÉTÉ NATIONALE DES PROFESSEURS DE FRANÇAIS.

LES COQUELIN.

Par Madame LATOUR.

LE samedi, 30 octobre, devant une salle plus que comble, Mme Latour nous a parlé des Coquelin, de ces acteurs de génie qui ont rempli le monde de leur célébrité et ont porté partout le goût des lettres françaises. M. Barlet était au fauteuil.

Quand on parle des Coquelin, nous a dit Mme Latour, on éprouve d'abord le besoin de dire qu'ils étaient trois, car ils sont nombreux ceux qui ne pensent qu'à Constant Coquelin, laissant dormir son frère Ernest dans la gloire de l'aîné, et ne s'occupant pas de Jean Coquelin, qui ne dément cependant pas son père.

Les Coquelin sont originaires de Boulogne. Constant Coquelin naquit en 1841 à Boulogne, dans une petite chambre modeste et proprette au-dessus de la boulangerie que tenait le papa. Cette boulangerie, rendez-vous des matelots et des "matelottes" du port qui venaient s'y régaler de chaussons aux pommes, était l'orgueil du père et de la mère Coquelin. Sans doute, le soir, durant la partie de cartes familiale, quand il fallait aller moucher les chandelles, qui l'éclairaient seules, c'était à qui n'irait pas; mais cela ne les empêchait pas d'aimer leur boutique presque à l'égal de leurs enfants. Cependant, quand les Coquelin eurent deux fils en âge d'apprendre à lire, Constant et Ernest, l'ambition du père Coquelin fut d'en faire des "savants." C'est pourquoi on les envoya à l'école. La maîtresse de pension, personne très recommandable d'ailleurs, menaçait les enfants de punitions toutes les fois qu'elle était à court pour ses explications. N'empêche que les petits Coquelin étaient, vers 13 ans, tout à fait prêts à entrer à la pension Taverne, le grand établissement où le père Coquelin rêvait de les envoyer. Constant Coquelin s'y montra déjà amateur de vers et caricaturiste remarquable, si bien que, quand il rentra à la maison, il ne manifesta nul goût pour la place de mitron que lui destinait son père. Bien plus, il osa parler de vocation théâtrale au bonhomme. Ce fut un scandale dans la maison. Mais une représentation d'amateurs qui fournit à Constant Coquelin l'occasion d'affirmer son talent dramatique, et même son talent de caricaturiste, en chantant une chansonnette comique de sa composition qui croquait quelques Anglais en villégiature à Boulogne, décida le père à céder aux prières du fils. Constant jura de rester honnête homme quoiqu'acteur, et partit pour Paris. Il laissait à la maison le petit frère bien triste de ne pas le suivre. Quant à lui, après neuf mois de conservatoire, il remportait un prix qui lui ouvrait la Comédie Française, où, deux ans plus tard (1861), il devenait sociétaire. Alors, chaque création est une victoire pour Constant Coquelin. Molière, Regnard, Beaumarchais sont à cette époque les auteurs qu'il fait applaudir; tandis que son jeune frère se débat dans les difficultés de fléchir le père une seconde fois. Pauvre Ernest! pour le détourner de l'idée du théâtre, son père lui a procuré chez un pasteur protestant, à Herne Bay, une place de maître de dessin et de maître de français. Le français, passe encore, Ernest peut très bien l'enseigner. Mais il n'a jamais su manier un crayon, et il en est réduit à déclarer à ses élèves qu'il ne croit qu'à la théorie dans l'enseignement du dessin et condamne tout maître qui se sert du crayon devant ses élèves. Il n'est pas plus heureux quand, quelques mois plus tard, revenu d'Herne Bay, il entre dans le contentieux des chemins de fer. Là, il doit se déclarer incapable de faire une addition juste. Bien lui en prit, car le père Coquelin, vaincu, permit à Ernest d'aller retrouver son frère à Paris. Ce fut le 10 juin 1868 que les deux frères se rejoignirent, et, un an plus tard, ils jouaient tous les deux sur la scène de la Comédie Française. Tout d'abord Cadet, comme on l'appellera désormais, ne vécut que dans l'ombre de son frère. Il fallut la création de l'*Ami Fritz*, de son rôle dans la pièce de *Barberine* et dans celle de *Denise*, pour faire remarquer au public qu'il y avait deux très grands acteurs dans la famille des Coquelin. Cette remarque devint de l'enthousiasme pour Cadet quand il eut poussé l'art dans la récitation du monologue si loin qu'il en fut bientôt regardé comme l'incarnateur de génie. Le travail commun des deux frères dans la maison de Molière ne dura que jusqu'en 1886. Coquelin aîné, après avoir connu à la Comédie Française tous les grands triomphes auxquels un acteur de génie peut prétendre; après avoir goûté aux gloires politiques, car il fut l'ami de Gambetta, et, au 16 mai 1876, il osa lancer vers la loge du garde des sceaux les brocards de Figaro avec une fougue toute républicaine; après tous ces succès, Constant Coquelin rêva d'une réputation mondiale. Il quitta la Comédie Française, pour aller porter dans le monde les œuvres françaises. L'Amérique et l'Europe l'applaudirent à l'envi. Il marcha de triomphe en triomphe, acclamé comme nul acteur, excepté Sarah Bernhardt, ne l'avait été avant lui. En 1890, cependant, il rentra à la Comédie Française à la prière de ses amis. Mais les ovations de l'Amérique et de l'Europe avaient exaspéré ses soifs de succès, et désormais la scène de la Comédie Française n'était plus un assez vaste champ pour lui. Il la quitta de nouveau en 1892 pour retrouver ses triomphes européens et américains. En vain, la Comédie Française lui intenta-t-elle un procès, qu'elle gagna, et qui obligeait Coquelin à lui payer mille francs d'amende toutes les fois qu'il jouait sur une autre scène que la sienne. Coquelin ne paya jamais l'amende, et ne revint pas. C'est même sur une scène parisienne autre que celle de la Comédie Française que, le 27 décembre 1897, Constant Coquelin atteignit l'apogée de son génie en créant le personnage de *Cyrano de Bergerac*. Edmond Rostand écrivit à Coquelin: "L'âme de Cyrano est passée dans votre âme, Coquelin."

Ce grand artiste, ce génie infatigable fut frappé en plein travail le 28 janvier dernier; et huit jours plus tard, ce frère que Coquelin avait tant aimé, Cadet, est venu le retrouver dans l'au-delà. Ainsi, ces deux artistes de génie se sont unis dans la mort comme dans la vie et dans l'art.

Dire que la sémillante conférencière a été applaudie à diverses reprises ne serait pas suffisant pour décrire l'état d'esprit de l'auditoire. Ç'a été une véritable ovation, bien méritée du reste à tous les points de vue, et le président, en quelques gracieuses paroles, n'a eu qu'à enregistrer un succès de plus.

New Books for Boys and Girls

Issued by

HENRY FROWDE and HODDER & STOUGHTON,

Publishers of ***The Oxford Elementary School Books.***

NOTE.—A complete List, beautifully illustrated, giving particulars of **Over One Hundred New Books** for boys and girls, and picture books for children, will be sent, post free, on application to the Managers, 20 Warwick Square, E.C.

HERBERT STRANG'S ANNUAL.

(SECOND YEAR OF ISSUE, ENLARGED.)

Containing a splendid selection of Stories and Articles by the best Boys' Writers, eight plates in colour, and a large number of pen-and-ink illustrations. Crown 4to, cloth, **5s.** net; picture boards, cloth back, **3s. 6d.** net.

NEW BOOKS BY HERBERT STRANG.

Palm Tree Island. Being the Narrative of Harry Brent, showing how he was left on an Island in the Southern Hemisphere, and the accidents and adventures that sprang therefrom. Crown 8vo, cloth, olivine edges, **6s.**

Settlers and Scouts. A Story of the African Highlands. Crown 8vo, cloth, olivine edges, **5s.**

Swift and Sure. The Story of a Hydroplane. Crown 8vo, cloth, **2s. 6d.**

By CAPTAIN GILSON.

The Lost Empire. With Map. Crown 8vo, cloth elegant, olivine edges, **6s.**

By A. C. CURTIS.

The Voyage of the "Sesame." A Story of the Arctic. Crown 8vo, cloth elegant, olivine edges, **5s.**

By FRANK H. MASON.

The Book of British Ships. Illustrated by the Author. Crown 8vo, cloth, olivine edges, **5s.**

By DESMOND COKE.

The School across the Road. Crown 8vo, cloth elegant, olivine edges, **5s.**

By GEORGE SURREY.

A Northumbrian in Arms. Crown 8vo, cloth, olivine edges, **5s.**

By Rev. J. R. HOWDEN.

Locomotives of the World. Containing 16 plates in Colour. **5s.** net.

NEW BOOKS FOR GIRLS.

By CHRISTINA G. WHYTE.

Uncle Hilary's Nieces. Crown 8vo, cloth, olivine edges, **6s.**

By ELSIE J. OXENHAM.

Mistress Nanciebel. Crown 8vo, cloth, olivine edges, **5s.**

By ANNA CHAPIN RAY.

Nathalie's Sister. Crown 8vo, cloth, olivine edges, **3s. 6d.**

By WINIFRED M. LETTS.

The Quest of the Blue Rose. Crown 8vo, cloth, olivine edges, **5s.**

By E. L. HAVERFIELD.

Audrey's Awakening. Crown 8vo, cloth, olivine edges, **3s. 6d.**

The Conquest of Claudia. Crown 8vo, cloth, olivine edges, **3s. 6d.**

All the above books are ***illustrated in full colour*** *by the best Artists.*

PATON'S LIST OF SCHOOLS AND TUTORS.

1176 pages. Red cloth, post free, 2s. 6d.

THIRTEENTH EDITION NOW BEING PREPARED FOR PRESS.

Specimen Copy and particulars of circulation and value will be sent to Head Masters free of charge on application.

The Queen.—"This work has now for many years occupied a foremost position amongst books of its kind."

Standard.—"A useful compilation that has fought its way to the front as an accurate finger-post to parents in their choice of schools."

Journal of Education.—"This annual is so well known that all we need say of it is that this is the twelfth year of its publication and that it increases each year in bulk till it now extends to over 1,000 pages."

Yorkshire Post.—"Contains all the features which in the past have established it as a safe guide to schools."

Scotsman.—"The work is too well known to need either description or recommendation."

Dundee Advertiser.—"Easily maintains the place it has won as an excellent guide."

Stamford Mercury.—"In its unique circulation, as in other respects, it maintains its foremost position amongst books of its kind."

South Wales Daily News.—"Maintains its foremost position among books of its kind."

Guardian.—"An important and useful publication."

Sheffield Daily Telegraph.—"An extremely useful reference book."

Western Daily Press.—"Ever since its first publication, it has been looked upon as the standard of its subject."

The Lady.—"With 'Paton's List,' increasing bulk keeps time with increasing popularity."

Bombay Gazette.—"It is a most useful publication, particularly for parents away from scholastic centres."

Liverpool Courier.—"Parents who are puzzled where to educate their children would do well to consult 'Paton's List.'"

Westminster Gazette.—"Parents who consult the book should see at a glance the kind of school they are in search of."

Western Morning News.—"The parent who cannot find a school to suit his offspring, of either sex, in these profusely illustrated pages must be hard to please."

Aberdeen Journal.—'The twelfth edition is fully up to the high standard of the work and the reputation it has acquired."

J. & J. PATON, Educational Agents, 143 Cannon Street, London, E.C.

COLLEGE OF PRECEPTORS.

MIDSUMMER AND CHRISTMAS, 1910.

CAESAR.—GALLIC WAR, BOOKS V and VI. Edited by A. H. ALLCROFT, M.A., and F. G. PLAISTOWE, M.A. Text, with Introduction and Notes. 1s. 6d. Vocabulary. 1s. Translation. 1s. In One Volume. 3s.
"A full introduction, comprising, among other topics, 'Rome and the Gauls,' 'Life of Caesar,' a 'Chronological Table,' and 'The Roman Army,' a clearly printed and carefully punctuated text, copious notes, and a geographical and historical index combine to make these excellent editions of this portion of Caesar."—*Schoolmaster.*

EURIPIDES.—MEDEA. Edited by J. THOMPSON, M.A., and T. R. MILLS, M.A. Text, with Introduction and Notes. 3s. 6d. Translation. 1s. 6d. In One Volume. 4s. 6d.
"The editors have consulted the best authorities and have compressed a large quantity of useful material into a small compass."—*Educational Times.*

HORACE.—ODES, BOOK I.* By A. H. ALLCROFT, M.A., and B. J. HAYES, M.A. Text, with Introduction and Notes. 1s. 6d. Vocabulary. 1s. Translation. 1s. In One Volume. 3s.
"A well compiled introduction, a clearly printed text, and notes just of the kind that the student requires."—*Schoolmaster.*

SHAKESPEARE.—AS YOU LIKE IT. Edited by A. R. WEEKES, B.A. 2s.

SHAKESPEARE.—TWELFTH NIGHT. Edited by Prof. W. J. ROLFE, D.Litt. 2s. 6d.
"Mr. Rolfe's excellent series of school editions of the Plays of Shakespeare give the student helps and hints on the characters and meanings of the plays, while the word-notes are also full and posted up to the latest date."—*Academy.*

VERGIL.—AENEID, BOOK VI.* Edited by A. H. ALLCROFT, M.A., and B. J. HAYES, M.A. Text, with Introduction and Notes. 1s. 6d. Vocabulary. 1s. Translation. 1s. In One Volume. 3s.
"Besides the usual complement of notes, there is a capital appendix with lists of Greek nouns, archaisms, grammatical peculiarities, metrical irregularities, and so on. Altogether a volume to be recommended."—*Educational Times.*

* This Volume contains a complete Alphabetical Lexicon.

Complete Catalogue of the University Tutorial Series, and Lists of Books for Oxford and Cambridge Locals, College of Preceptors, and London University Examinations, &c., post free on application.

University Tutorial Press, Ld.,
Drury Lane, London, W.C.

USE EARLY IN THE VACATION (TO OBTAIN BEST RESULTS)

For the ANHYDROUS

LAYING of DUST

(As recommended in the Education Department Blue Book)

The unequalled ODOURLESS, or powerful GERMICIDAL

FLORIGENE

(A REGISTERED NAME suggested by FLOOR—HYGIENE)

On all School, Laboratory, and other Floors—Wood, Linoleum, Stone, Concrete, Polished, &c.

Three times a year only necessary, as each application lays the dust for two to six months, according to wear. No Scrubbing (unless preferred) or Sprinkling of any kind—the ordinary daily sweeping alone required to clean the floors.

Books, Furniture, Apparatus, &c., are less likely to soil, and seldom require dusting or cleaning.

"Florigene" is easily and quickly applied by the unskilled—floors are impregnated, not sticky.

"Florigene" has been awarded the **BRONZE MEDAL OF THE ROYAL SANITARY INSTITUTE.**

A well-known Medical Officer of Health has reported:—"I consider **'Florigene'** an excellent preparation when applied to the floors of Public Institutions, Schools, and other buildings for 'weighting' and laying dust."

A School Principal writes:—"Your **'Florigene'** is excellent. I wish we had known of it before. My servants are loud in its praises, as no dust whatever arises when they are sweeping the schoolrooms. It saves labour, adds greatly to our comfort. We would not be without it on any account."

Send for particulars, **Bacteriological, Medical,** *and other Reports and Testimonials to the Sole Manufacturers—*

THE **"DUST-ALLAYER"** CO.,

165 QUEEN VICTORIA STREET, LONDON, E.C.

* * *

THE first session of the seventeenth International Congress of Americanists (we are informed by the Board of Education) will be held at the National University in Buenos Ayres, May 16 to 21, 1910; and a second session will be held in Mexico in September next. The Conference will deal with questions relating to the Ethnology, Archæology, and History of the New World. A detailed programme will be published presently. Communications (oral or written) may be made in English, French, German, Italian, Portuguese, or Spanish. Further information from Dr. Lehmann-Nitsche, Calle Viamonte 430, Buenos Ayres.

Honours.

THE Royal Society has made the following awards:—the Copley Medal to Dr. G. W. Hill for his researches in mathematical astronomy; a Royal Medal to Prof. A. E. H. Love for his researches in the theory of elasticity and cognate subjects; a Royal Medal to Major Ronald Ross for his researches in connexion with malaria; the Davy Medal to Sir James Dewar for researches at low temperatures; and the Hughes Medal to Dr. R. T. Glazebrook for researches on electrical standards.

* * *

THE Royal Meteorological Society has awarded the Symons Gold Medal to Dr. W. Napier Shaw, F.R.S., in recognition of his work in connexion with meteorological science.

* * *

THE University of Oxford has conferred the honorary degree of Mus.D. upon Principal Hadow, Armstrong College, Newcastle.

Digitized by Google

MANCHESTER UNIVERSITY has conferred the honorary degree of D.Sc. upon ex-Prof. Boyd Dawkins.

* * *

AT the final meeting of the Senate of the Royal University of Ireland the following honorary degrees were conferred:

LL.D.—Lord Castletown of Upper Ossory, K.P.; Sir Francis R. Cruise, M.D.; the Right Hon. John Young, M.A.; the Most Rev. Edward T. O'Dwyer, D.D., Bishop of Limerick; Edward Cuming, M.A.; the Right Hon. Christopher Palles, LL.D., Lord Chief Baron of the Exchequer; the Rev. William Nicholas, D.D.; the Right Rev. William E. Meade, D.D., Bishop of Cork; William J. M. Starkie, M.A., Litt.D.; Lieut.-Colonel Sir John F. G. Ross of Bladensburg, K.C.B.; Sir Henry Bellingham, Bart., M.A.; the Right Hon. the Earl of Westmeath, B.A.; the Right Hon. Lord Killanin, B.A.; Richard Whytock Leslie, M.D.; John Campbell, M.A., M.D.; the Right Hon. Michael Finucane, M.A., C.S.I.; the Rev. Edward A. D'Alton; the Very Rev. Peter Byrne, D.D.; William Richard Huggard, M.A., M.D.

M.Ch.—John Walton Browne, B.A., M.D.

D.Sc.—Alexander Macalister, M.D., F.R.S.; Alexander Anderson, M.A., LL.D.

M.A.—Frederick William Moore, M.R.I.A.

* * *

PROF. BIFFEN has been elected to a Professorial Fellowship at St. Catharine's College, Cambridge.

* * *

DR. NORMAN MOORE, of St. Bartholomew's Hospital, and the Rev. J. N. Figgis, D.Litt., have been elected Honorary Fellows of St. Catharine's College, Cambridge.

* * *

PROF. SAINTSBURY has been elected an Honorary Fellow of Merton College, Oxford.

* * *

A PORTRAIT of Prof. W. M. Hicks, Sc.D., F.R.S., the first Vice-Chancellor of the University of Sheffield, has been presented to the University by friends. The artist is Mr. A. S. Cope, A.R.A.

* * *

EMERITUS PROFESSOR CRUM BROWN, of Edinburgh University, has been presented, by his students and colleagues, with his portrait. The artist is Mr. E. A. Walton, R.S.A.

* * *

MR. R. BLAIR, M.A., B.Sc., Executive Officer to the L.C.C., has been elected a Corresponding Member of the National Education Association of America.

Endowments and Benefactions.

OXFORD CONVOCATION has accepted the Cuthbert Shields benefaction of £1,000 to advance the study of the Romance Languages and Literatures. Corpus Christi College will pay over the dividends for the use of the Taylorian Institution until the establishment of the Corpus Christi Professorship of the Romance Languages.

* * *

H.H. THE MAHARAJA SIR CHUNDRA SHUM SHERE JUNG BAHADUR RANA, D.C.L., Prime Minister of Nepal, has presented to the Bodleian Library a most valuable collection of more than six thousand Sanskrit MSS.

* * *

LORD ROSEBERY has given £1,000 to the Bodleian Library, Oxford University.

* * *

MR. HENRY F. TIARKS, a partner in the firm of Messrs. J. Henry Schröder & Co., has supplemented their endowment of a Professorship of German in Cambridge University by giving £5,000 for one or more scholarships in German—in memory of his father, the author of well known text-books on the German language.

* * *

THE Girdlers' Company have continued for another three years their grant of £100 to Cambridge University for the endowment of the Lectureship in Economics.

* * *

THE Executive Committee of the Frederic William Maitland Memorial Fund have offered the University of Cambridge a bronze bust of the late professor for the Squire Law Library, and the balance of the fund for the promotion of research and instruction in the history of law and of legal language and institutions.

* * *

MR. WILLIAM DE MORGAN has presented to the library of the University of London a collection of books, pamphlets, and MS. material formerly belonging to his father, Augustus De Morgan, who was for over thirty years Professor of Mathematics at University College, and whose library of mathematical and astronomical works was presented to the University by Lord Overstone in 1871.

* * *

AN anonymous donor has given £100 to provide a George Smith Studentship in London University this year, no money being available in the ordinary course.

* * *

THE Drapers' Company has made a further grant of £10,000 to the building fund of Bangor University College.

* * *

THE citizens and Corporation of Glasgow have contributed some £50,000 for the extension and improvement of the Medical School of the University. A scheme just adopted by the General Council contemplates the creation of four new medical chairs.

* * *

MESSRS. POLLETT & WIGGELL (Sowerby Bridge, Yorkshire), the National Gas Engine Company (Ashton-under-Lyne), Messrs. Drysdale & Co., and the Chatham (Ship) Telegraph Company (Bootle) have severally made valuable donations of machinery to the Engineering Laboratory of Dundee University College.

* * *

MRS. JAMES S. SHARPE, of Whitestones, Rothiemay, Banffshire, has bequeathed two bursaries, £30 each for four years, tenable at Aberdeen University; and eight bursaries of £5 each, tenable at local public schools.

* * *

THE REV. DR. BLAIR, Dunblane, has given 100 guineas to provide an annual prize in Greek in the United College, St. Andrews.

* * *

MR. WILLIAM GIBSON, of London, a citizen of Belfast, has presented a handsome gold mace to the Queen's University, Belfast.

* * *

MR. EDWARD L. BECKWITH, Eastbourne, has left £14,000 to the Corporation of the Sons of the Clergy, payable on the death of the first of his two sons, and £6,000 additional on the death of his other son, and, on the last-mentioned event, £5,000 to the Fishmongers' Company for the foundation of two scholarships of £75 a year each—one for a student at the Royal College of Music, the other for a student of sculpture at the South London Technical Art School at Kennington (City and Guilds of London Institute).

* * *

COLUMBIA UNIVERSITY will receive some four and a half million dollars (nearly £1,000,000) under the will of the late Mr. John S. Kennedy; also gifts amounting to about £47,200, of which £22,500 is from Mr. W. H. Charpentier, to be added to the J. S. Charpentier Fund, and £20,000 is given anonymously.—Yale University has received from Mr. W. D. Sloane and Mr. H. T. Sloane the sum of £95,000

to build, equip, and endow a physical laboratory; £5,000 from Mr. A. G. Vanderbilt for general endowment; and £3,000 from Mr. G. H. Meyers for the endowment of the Forest School.—The Pratt Institute of Brooklyn has received the sum of £350,000 from Mr. Charles M. Pratt, son of the founder and now its President, and from his five brothers and his sister, Mrs. E. B. Dane.—Dr. K. Pearsons has offered to give £20,000 to Berea College, provided that the sum of £80,000 is otherwise subscribed.—Mr. N. B. Duke has made a further gift of £10,000 to Trinity College at Durham, N.C.—Princeton University has accepted a gift of £100,000 from Mr. W. C. Proctor, of Cincinnati, on condition that an equal sum be obtained by May 1, 1910.—Haverford College has received £20,000 to establish a fund for pensioning its professors.—The General Education Board in the United States has made a conditional grant of £25,000 to Ohio Wesleyan University at Delaware, O.—Mrs. Charles E. Perkins, of Burlington, Ia., has given £6,000 to Harvard University to establish scholarships for students from Iowa. * * *

Miss E. Greene, Mathematical Tripos, Cambridge, has been appointed Mathematical Tutor in the Secondary Training Department of Bedford College, University of London; and Mlle M. Orliac, B. ès L., Assistant in the French Department.

* * *

Mr. Hardress O'Grady has been appointed Lecturer in French at the Goldsmiths' College, University of London.

* * *

Mr. Westcott Abell has been appointed to the Elder Chair of Naval Architecture in the University of Liverpool.

Mr. C. D. Henderson, M.A., B.Sc. (Aberd.), Ph.D. (Freib.), has been appointed Lecturer in Zoology in the University of Manchester.

* * *

The University of Leeds requires an Assistant Lecturer in French. £200. Apply to the Registrar by December 6. University graduate preferred.

* * *

In Birmingham University, Mr. Arthur J. Kenny, B.A., has been appointed Assistant Lecturer in Mathematics; Mr. J. Cameron Douglas, M.A., B.Ch. Oxon., Lecturer in Pathology and Bacteriology; and Mr. Leonard Doncaster, M.A., Special Lecturer in Heredity and Variation.

* * *

In Sheffield University, Mr. J. H. Sleeman, M.A., has been appointed Lecturer in Mathematics; and Mr. A. W. Bartlett, M.A., B.Sc., Assistant Lecturer and Demonstrator in Botany; and Mr. A. H. Thomas, M.A. Cantab., Lecturer in Ecclesiastical History.

* * *

Mr. J. P. Thorpe, F.R.S., D.Sc., Ph.D., has resigned his post as Lecturer in Bio-Chemistry and Demonstrator in Chemistry in Manchester University, on his election to the Sorby Fellowship (Sheffield) by the Royal Society.

* * *

The Commissioners under the Irish Universities Act, 1908, have appointed the following Professors in University College, Dublin:—Mathematics, H. C. M'Weeny; Chemistry, Dr. Hugh Ryan; Experimental Physics, Dr. J. A. M'Clelland; Mathematical Physics, Dr. Arthur W. Conway; Zoology, Dr. George Sigerson; Anatomy, Dr. E. P. M'Loughlin; Surgery, J. S. M'Ardle; Geology, H. J. Seymour; Physiology and Histology, Dr. B. J. Collingwood; Pathology and Bacteriology, Dr. E. J. M'Weeney; Medicine, Sir Christopher Nixon; Civil Engineering, P. F. Purcell. And the following Lecturers:—Eastern Languages, Rev. P. Boylan, M.A.; Physics, J. J. Dowling, M.A.; Modern Irish History, Miss M. Hayden, M.A.

* * *

A Professor of History is required in the National University of Ireland (University College, Dublin). £500. Apply to the Secretary to the Commissioners, University Buildings, Earlsfort Terrace, Dublin, by December 18, with three testimonials and three references.

* * *

In University College, Cork, Mr. P. J. Merriman, M.A., J.F.R.U.I., has been appointed Professor of History; the Rev. R. Henebry, Ph.D., Professor of Irish Language and Literature; Major H. A. Cummins, M.D., Professor of Botany; Mr. Isaac Swain, B.A., Professor of Geology and Geography; and Mr. Timothy Smiddy, M.A., F.C.S., Professor of Economics and Commerce. And the following have been appointed Lecturers:—Miss Mary Ryan, M.A., formerly J.F.R.U.I., in German; Miss Elizabeth M. O'Sullivan, M.A., in Methods of Education; the Rev. T. E. Fitzgibbon, O.S.F.C., B.A. (R.U.I.), Ph.D. (Louv.), in Philosophy; Mr. M. J. Conran, M.A., J.F.R.U.I., in Mathematical Physics; Dr. J. J. Fitzgerald, M.B., in Mental Diseases; and Mr. A. J. Magennis, A.S.A.A., in Accounting.

* * *

In University College, Galway, Mr. T. O'Maille, M.A., Ph.D., has been appointed Professor of Modern Irish Language and Literature; and Mr. J. Griffiths, B.Sc., Lecturer in Electrical Engineering.

* * *

Prof. John Watson, M.A., LL.D., Queen's University, Kingston, Canada, has been appointed Gifford Lecturer in the University of Glasgow for 1910–11, 1911–12.

Digitized by Google

In University College, Reading, Prof. Percival, Director of the Department of Agriculture and Horticulture, has been appointed Professor of Agricultural Botany; Mr. Ronald V. O. Hart-Synnot, D.S.O., B.Sc., Director of the Department of Agriculture and Horticulture; Miss Caroline Herford, formerly Head Mistress of the Ladybarn House School and President of the Teachers' Guild in Manchester, Lecturer in Education (Secondary Division), in succession to Miss Mary Grey, resigned; Mr. Percy C. Austin, M.A., late Scholar of Emmanuel College, Cambridge, Lecturer in Chemistry; Mr. Archibald Y. Campbell, B.A. Cantab., Assistant Lecturer in Classics, Liverpool University, Lecturer in Classics; Mr. F. G. Drew, Lecturer and Practical Instructor in Horticulture, in room of Mr. Charles Foster, resigned; Mr. Herbert L. Hawkins, B.Sc., M.A. Manc., Lecturer in Geology; the Rev. L. M. J. Couturier, L. ès L., Lecturer in French; and Mlle E. A. Régis, Assistant for Conversational French.

* * *

Mr. J. E. Gately, M.A. Liv., has been appointed Professor of History and Economics at Agra.

* * *

The Rev. John Dickie, M.A., Tarland Parish Church, Aberdeenshire, has been appointed Professor of Systematic Theology and New Testament Language and Literature in the College of the Presbyterian Church of New Zealand at Dunedin.

* * *

The University College of North Wales requires an Assistant Lecturer in History. Apply to the Registrar by December 4.

* * *

In University College, Dundee, Miss Helen S. Ogilvie, M.A., B.Sc., has been appointed Assistant Demonstrator in Botany; and Miss Janet B. Scott, B.Sc., Assistant Demonstrator in Chemistry.

* * *

Mr. C. E. Jackson, M.A. Oxon., Senior Physics Master, Bradford Grammar School, has been appointed an Inspector of Schools under the Board of Education.

* * *

The Rev. H. W. Thorne, M.A. Oxon., Sub-Warden of the Church Training College for Lay Workers, has been appointed Diocesan Inspector of Schools in the Stafford and Stoke Archdeaconries of the Diocese of Lichfield.

* * *

Mr. W. Durnford, M.A., of King's College, has been appointed Honorary Principal of the Day Training College, Cambridge; Mr. F. G. Blandford, M.A., Corpus Christi, Director of Studies for the Secondary Students; and Mr. W. H. S. Jones, M.A., St. Catharine's, Lecturer in Classics for the Secondary Students.

* * *

The Trustees of the Barrington Lecture Fund require a Lecturer in Political and Social Science for 1910. £210; no expenses paid. Apply to the Hon. Secretaries of the Statistical and Social Inquiry Society of Ireland, 35 Molesworth Street, Dublin, by December 15, with not more than six testimonials.

* * *

The Rev. Dr. Edmond Warre has been appointed Provost of Eton College.

* * *

The Rev. Albert A. David, M.A., Head Master of Clifton College, has been appointed Head Master of Rugby School. Mr. David was an assistant master at Rugby from 1892 to 1899.

* * *

Mr. John Miller, M.A., D.Sc., interim Head of the Mathematical Department, has been promoted to the Chair of Mathematics, in the Glasgow and West of Scotland Technical College, in succession to Prof. G. A. Gibson.

* * *

Merchant Taylors School, London, requires a Chief Mathematical Master. Apply to the Head Master.

* * *

The Head Mastership of Rochester Cathedral Grammar School will be vacant at Christmas.

* * *

Mr. A. J. F. Collins, B.A. Oxon., Assistant Master at Reading School, has been appointed Lecturer in the University Tutorial College, Cambridge.

* * *

Mr. W. H. Ault, B.Sc. Lond., Science Master, Grammar School, Sutton Coldfield, has been appointed Head Master of the Municipal Technical School, Sutton Coldfield.

* * *

Mr. G. L. Bradley, B.A. Cantab., Senior Mathematical Master, Royal Grammar School, Worcester, has been appointed Head Master of the County School, Penzance.

* * *

Mr. R. Dark, County School, Penarth, has been appointed Head Master of the Duke of York's Military School, Dover.

* * *

Mr. James Valentine, M.A. St. Andr., St. George's School, Harpenden, has been appointed Head Master of the County School, Harwich.

Scholarships and Prizes.

Gonville and Caius College, Cambridge, offers a Wollaston Research Studentship in Physics (£120 a year), and other studentships of smaller value, open to students of all British, Colonial, and American Universities, in June, 1910. Particulars from the Master.

* * *

St. Catharine's College, Cambridge, offers eight Scholarships and Exhibitions (£35 to £60, and £20 to £30, for three years) for competition on January 5–7. Subjects: Classics, Mathematics, Theology, History. Age limit (not so strictly enforced in the case of Exhibitions), nineteen. Forms of application from the tutors (A. W. Spratt, Esq., or the Rev. W. T. Southward), to whom certificates of birth and character must be sent by January 4.

* * *

Magdalene College, Cambridge, offers four Scholarships (each £60 to £40 a year for two years and continuable) and two or more Exhibitions (usually £30 a year) for Classics, Mathematics, Modern History, and Mechanical Sciences, for competition March 15–17, 1910. Particulars and forms from the Master, or from A. G. Peskett, Esq., Tutor.

* * *

Cambridge University offers two Squire Scholarships in Law, £50 a year each for three years, in July, 1910. Apply for form (by letter) to the Secretary to the Special Board for Law, Law Schools, Cambridge.

* * *

The North British Academy of Arts, Science, Literature, and Music (Claremont Buildings, Newcastle-on-Tyne) offers annually six open scholarships to students (of either sex) making music their profession. Age limit, twenty-five. Apply to the Honorary Secretary.

Literary Items.

The Cambridge University Press will publish early next year Prof. Feuillerat's monograph on John Lyly, containing particulars of several important discoveries concerning Lyly's life and a

Digitized by Google

full study of the plays and of Euphuism, and throwing new light on the "Euphues" and its social import.

* * *

MESSRS. DENT announce three new volumes in their charming series, "Les Classiques Français," edited by Mr. H. Warner Allen: "Les Fables de la Fontaine," with preface by Jules Claretie; "Chansons de Béranger," with preface by Jacques Normand; and "Les Pensées de Pascal."

* * *

MR. T. FISHER UNWIN has just been appointed by the War Office as agent for the sale of the Topographical Section General Staff Maps. Among these are many important maps of China, of various regions of Africa, and of the East and West Indies.

* * *

MR. UNWIN is publishing several new Ordnance Maps on the scale of one inch to the mile—a size peculiarly suitable for pedestrians. The new maps cover the districts surrounding the following places: Reading, Nottingham, Lincoln, Buxton, Bridgend, and Stonehaven.

* * *

MESSRS. CHRISTOPHERS will publish immediately "Broad Lines of Science Teaching," a series of papers by well known teachers edited by Dr. Hodson, Senior Science Master at Bedales. Prof. Sadler furnishes a comprehensive introduction on the present position of science teaching.

* * *

MESSRS. APPLETON announce a new work by Prof. Hugo Münsterberg of Harvard University—"Psychology and the Teacher"—a study of the school child in the light of modern psychology.

* * *

THE *English Review* for November contains a very interesting paper, on "The English Educational Renascence within the Circle of the Triumvirate" (Comenius, Hartlib, and Dury), by Prof. Foster Watson. "I would venture to assert that the Age of Cromwell is the Age of the English Educational Renascence."

General.

MR. C. E. TOWN, Assistant Secretary of the London Chamber of Commerce, has been presented with a silver cup by the Chairman, Vice-Chairman, and Jurors "as a mark of their appreciation of the services which he rendered in connexion with the Balkan States Exhibition, 1907."

* * *

THE foundation stone of the new extension buildings of the University College and Day Training School, Exeter, was laid by the Mayor of Exeter (Ald. J. G. Commin), November 8. The cost of the scheme will be some £15,000.

* * *

THE newest universal language, "Ido," is reported to be making rapid progress in Switzerland. Prof. Boubier, of Geneva University, has lectured on it to crowded audiences, and, during this winter, free classes on the subject will be given twice a week at the University. "Ido" is said to be "easier to learn and more cosmopolitan in its construction than Esperanto."

* * *

THE Neuchâtel Academy, founded in 1866 and reorganized in 1894, has been elevated to the status of a University (October 19).

* * *

QUEENSLAND is going to establish a University. The Government has introduced a Bill with this object, following the recommendation of the Royal Commission appointed to inquire into the matter.

THE new German University in Tsing-Tau was opened (October 25). It accommodates some 200 students.

* * *

MR. EDWIN GINN, a wealthy publisher of Boston, has announced that he will devote annually £10,000 to promote the cause of peace, and that in his will he has set aside £200,000, the income of which will be used for the same purpose. He intends to establish an International School of Peace, with a large staff of writers, lecturers, and teachers, to be paid out of the proceeds of subscriptions.

THE COLLEGE OF PRECEPTORS.

MEETING OF THE COUNCIL.

A MEETING of the Council was held at the College, Bloomsbury Square, on the 20th ult. Present: Mr. E. A. Butler, Vice-President, in the chair; Prof. Adams, Dr. Armitage Smith, Mr. Bain, Rev. J. O. Bevan, Rev. J. B. Blomfield, Rev. A. W. Boulden, Mr. Brown, Mr. Charles, Miss Crookshank, Mr. Eagles, Mr. Eve, Miss Jebb, Mr. Kelland, Rev. R. Lee, Mr. Marx, Mr. Millar Inglis, Mr. Pendlebury, Mr. Pinches, Mr. Rushbrooke, Rev. Dr. Scott, Mr. Starbuck, Mr. Storr, Mr. Vincent, and Mr. White.

The minutes of the last meeting were read and confirmed.

The Secretary reported the arrangements that had been made for the forthcoming Certificate and Lower Forms Examination to take place in the second week in December at 125 centres in the United Kingdom and at 35 colonial centres.

The representatives of the College reported the resolutions adopted at the Conference of Representatives of Associations of Teachers on the subject of teachers' registration, which had been held at the Clothworkers' Hall on November 13.

The report of the Special Committee on the work of the College was adopted.

The diploma of Associate was granted to the following, who had satisfied all the required conditions:—C. J. Brown, J. Garriock, S. Ignasimuttu, G. A. Nicolson, P. H. Prideaux, T. W. Girling.

Mr. Millar Inglis and Mr. Storr were appointed the representatives of the College on the Joint Scholarships Board for the ensuing year.

Prof. Adams was appointed to deliver the Psychology Course of Lectures for Teachers, to take place in the early part of next year.

The following persons were elected members of the College:—

Mr. H. C. Hopkyns, B.A. Oxon., The Grammar School, Enfield.
Miss S. Moss, Friends' School, Mountmellick.
Rev. H. H. Buswell, Quatre Bornes, Mauritius.

The following were admitted to the privileges of membership without payment, under Section II, clause 5, of the By-Laws:—

Mr. L. E. Littlewood, A.C.P., Althorne, Alum Chine, Bournemouth.
Miss A. R. Kiln, A.C.P., All Hallows School, Ditchingham.
Mr. J. P. O'Kearney, A.C.P., De La Salle School, Castletown, Queen's County.

The following books had been presented to the Library since the last meeting of the Council:—

By the CITY AND GUILDS OF LONDON INSTITUTE.—Report of the Department of Technology, 1908-9.

By A. & C. BLACK.—Black's Literary Readers, Book IV; Supplementary Readers (2 Books); Herbertson's Descriptive Geography from Original Sources (The British Isles); Kirkman's De Glouvet's Trois Héros de l'Ancienne France.

By BLACKIE & SON.—Blackie's Adaptable Arithmetics (Tests); Scottish Supplementary Readers (2 Books); Berry's Educational Handicraft; Bevan's Method of Analysis; Cain's Brief Course in the Calculus; Caven's Systematic Qualitative Analysis; Gregory's Physical and Structural Geography; Laurence's Little Folk in Many Lands; Lyde's Teaching of Geography; Magee's Le Chat Botté; Oswald's Advanced German Commercial Correspondence; Rey's French Composition, Parts I and II; Saillens and Holme's First Principles of French Pronunciation; Schmall's First Course in Analytical Geometry; Slater's German Conversational Sentences.

By W. B. CLIVE.—London University Guide and U.C.C. Calendar.

By GINN & Co.—Long's English Literature.

By MACMILLAN & Co.—Clarke's Daudet's Lettres de Mon Moulin, and Word- and Phrase-book; Goldberg's Daudet's Jack, Part II, and Word- and Phrase-book; Schoedelin's D'Aulnoy's L'Oiseau bleu.

By METHUEN & Co.—Carter's The Story of Milton's Paradise Lost; Rhoades's Deux Contes (from Prosper Mérimée); Wilmot-Buxton's Stories from Modern History.

By J. MURRAY.—Jose's The Growth of the Empire.

By the OXFORD UNIVERSITY PRESS.—Delbos's Cousin's La Société Française au XVIIe Siècle; Herbertson's Elementary Geography, Vols. II and IV.

By ALSTON RIVERS.—Fox's Selections from Wordsworth.

By RIVINGTONS.—Whitham's Readings in Old Testament History, Parts I and II.

Calendar of University College, London.
Calendar of University of Birmingham.
Calendar of University College, Nottingham.

THE EDUCATIONAL LADDER.

ABERDEEN UNIVERSITY.—Divinity Bursaries: Knox, Harry Leggatt, M.A., and Louis E. M'Vicar, B.A.; Sutherland, A. G. Reaper, M.A.; Johnston, R. A. Dieterlen, B.Litt. Stewart Prize (Hebrew): James Youngson, M.A. Mather Bursary (Law): G. G. Dawson. Medical Bursaries: First year—Liddell (£20), Helen Lillie; Mather (£20), A. J. Will. Second year—Marr (£30), W. J. Escoffery; Watt (£30), A. E. Campbell; Thompson (£22, £20, £18), R. M. Boyd, Ian G. Bisset, John Proctor; Greig (£6), F. F. Brown; Knox, H. T. Findlayson; Milne, Philip W. Stewart; Wight (£25), R. S. Snowie. Catto Bursary in Arts: R. N. Gilchrist, M.A.

CAMBRIDGE UNIVERSITY.—Arnold Gerstenberg Studentship: C. D. Broad, Scholar of Trinity.—John Lucas Walker Studentship: W. M. Scott, M.B., Ch.B., B.Sc. Edin.; C. W. Ponder, M.A., M.D., Emmanuel.—Bhaonagar Medal: Evelyn H. P. Jolly, B.A., St. John's.—Research Studentship in Medical Entomology: Gordon Merriman, Trinity Hall.—Charles Oldham Shakespeare Scholarship: R. C. Brooke, B.A., King's.—Anthony Wilkin Studentship in Ethnology and Archæology: A. R. Brown, M.A., Fellow of Trinity.—John Winbolt Prize in Civil Engineering: E. T. Busk, B.A., King's.—Member's Prize (English Essay): A. K. Gray (Jesus); *proxime accessit* G. H. L. Mallory, B.A., Magdalene; honourable mention, Alexander Ramsay, B.A., Gonville and Caius.

Gonville and Caius.—Drosier Fellowships: Harold Mattingley, B.A., and W. T. Layton, B.A.

St. John's.—Fellowship: D. W. Ward, B.A.—Hutchinson Research Studentship (Natural Science): D. G. Lillie, B.A.

IRELAND, ROYAL UNIVERSITY OF.—Studentships—Classics, Jeremiah M. Murphy, B.A., University College, Dublin, and Pope's Hall, Oxford. Irish, James J. Doyle, B.A., University College, Dublin. History and Political Science, Matthew Connolly, M.A., University College, Dublin. Mathematics, Arthur J. Donnelly, M.A., B.Sc., University College, Dublin; Mary Cotter, B.A., St. Mary's University College, Eccles Street, and School of Irish Learning, Dublin, and Michael Power, M.A., University College, Dublin, were awarded special prizes of £50 each.—Junior Fellowships—Modern Literature, Florence B. Adamson, M.A., Queen's College, Belfast. English and History, Norah L. Scott, M.A., Alexandra College; Maria W. Swertz, M.A., La Sorbonne, Paris, was awarded a special prize of £100.—Nine candidates gained exhibitions of £42 each, and sixteen candidates gained exhibitions of £21 each.

LONDON UNIVERSITY.—Martin White Scholarships (£35 a year for two years): Miss Aileen Marie Clegg, internal student of Bedford College, and Miss Gladys Mary Rhodes, internal student of the London School of Economics and Political Science.

MANCHESTER UNIVERSITY.—Research Fellowships: in Chemistry, J. Holt, junior, M.A., D.Sc., and A. N. Meldrum, D.Sc.; in Metallurgy, Walter Gontermann; in Physics, Hans Geiger, Ph.D., B. Beltwood, Ph.D., and W. Wilson, M.Sc.; in Zoology, N. S. Leigh.

NEWCASTLE, ARMSTRONG COLLEGE.—Johnston Chemical Scholarship (£65 for one year): T. P. S. Vitty, B.Sc.

OXFORD UNIVERSITY.—Eldon Law Scholarship: Alan E. G. Hulton, B.A., Fellow of All Souls, formerly Scholar of New College.—Craven Fellowship: W. R. Halliday, B.A., New College.—H. F. Pelham Studentship: T. E. Peet, B.A.—Senior Kennicott Scholarship: George G. V. Stonehouse, M.A. Exeter.—Naples Biological Scholarship: Julian S. Huxley, B.A., late Scholar of Balliol.

All Souls.—Fellowships: George Marsden, B.A., and Francis Clarke, B.A., both of Balliol College; Maurice L. Gwyer, M.A.

Magdalen. — Fellowship (Theological): John L. Johnston, B.A., formerly Demy of the College.

University.—Stowell Civil Law Fellowship: John C. V. Behan, B.C.L., Hertford.—Edwin Arnold Memorial Scholarship: H. V. Braham, B.A., late Scholar of the College.

WHITWORTH SCHOLARSHIPS AND EXHIBITIONS.—Scholarships (tenable for three years, £125 a year each): A. W. Judge, Plymouth; J. Airey, Shipley; H. S. Rowell, Newcastle-on-Tyne; H. Mawson (Leeds). Exhibitions (tenable for one year, £50 each): F. Duncanson, Sunderland; A. Ryan, Oldham; A. H. Campbell, Portsmouth; J. J. Clark, Liverpool; W. H. Shinkfield, Portsmouth; A. W. Stevenson, Melrose; G. W. E. Hayward, Southsea; J. Morgan, Sheerness; A. F. Grieveson, Chatham; A. E. Gladwyn, Plumstead; W. H. T. Harvey, Swindon; T. H. Webster, Newcastle-on-Tyne; W. J. Davis, Plymouth; O. R. Randall, Birmingham; G. F. Haddock, Sunderland; F. H. Reid, Plymouth; G. B. Kellagher, Gillingham (Kent); T. Norcross, Hollinwood, Oldham; L. P. Parker, Leytonstone; A. Morris, Portsmouth; J. Smith, Crewe; W. Shaw, Woolwich; H. E. Pinch, Sheerness; D. H. Emby, Plumstead; W. Fox, Plumstead; R. H. May, Leytonstone; E. D. Brodie, Swindon; H. J. Goudie, Leith; H. Collins, Gillingham (Kent); C. Williams, Plumstead.

REVIEWS.

MORAL TRAINING AND SCHOOL DISCIPLINE.

Principles and Methods of Moral Training, with special reference to School Discipline. By J. Welton, M.A., and F. G. Blandford, M.A. (3s. 6d. University Tutorial Press.)

This book is a companion or supplement to Prof. Welton's "Principles and Methods of Teaching," and deals more particularly with those functions of the school that are usually embraced under the names "training" and "discipline." It commences with several chapters on the ethical problem that faces the school. The most important of these is probably the second, in which the authors discuss "habits" and "habitudes." The distinction here drawn is no doubt important; a habit is specific, a habitude is generic; but we doubt whether the whole question of the relationship between the two has not been partially shirked, or at least obscured, in the present instance. How does a habit become a habitude? "Habitudes," our authors say, "result from doing, lead to doing, and by doing are always growing, for the forms of doing are infinitely varied." How does this agree with the results detailed in Prof. Bagley's "Educative Process," where it is shown, as a result of experiment, that "neatness" and "accuracy" in one department do not flow over appreciably to other departments, at any rate apart from instruction in the duty and meaning of these qualities? It seems to us that this distinction between "habits" and "habitudes," though valuable terminologically, is practically useless until the transition from habits to habitudes is more fully explained. To urge the reader to "cultivate the habitude of moral thoughtfulness—that is, of consideration and deliberation when such is needed"—is to advocate moral instruction, or its equivalent, but the authors fight somewhat shy of this admission.

Similarly we are told that in games are developed "such habitudes as those of working in co-operation with others, of willing submission to those who in other spheres of school activity may be only equals, or even inferiors, of bearing discomfort uncomplainingly . . . in short, the habitudes of social co-operation, self-control, and physical endurance." The question here again forces itself forward, whether generalized habitudes are actually formed by merely specific modes of activity. One is reminded of the suggestion in Forbush's "Boy Problem," that "with the stories of great leaders and patriots would be associated games which involve team play, leadership, &c.": here the element of elucidation—the element which alone functions in a *generalizing* way—is provided for in the "stories." Our present authors are fully conscious of the ambiguity of the word "habit," and of the need that "habit" should develop (via "habitude") into "purpose"; but throughout their treatment we somewhat miss the explicitness which we should desire in any discussion of the question how a specific series of habits (and habits are extraordinarily specific) becomes a generalized rule of life. And that, after all, is the crucial point in a book which deals with "moral training through school discipline." We have no doubt that the careful reader will discover the link between the two things—"moral training" and "school discipline"—but it is not obvious on a first inspection.

The older type of "school management" book erred in the barren definiteness and summary exactitude of its statements; the newer and vastly improved type seems likely to err in the opposite direction. We should rejoice if each of the present excellent chapters had a summary at its end; we should then probably be able to discover the "missing link" above mentioned, and the reader unfamiliar with ethical discussions would also find his path cleared of obstacles.

The chapters on "Duty," "Virtue," and "Conscience" are well written, and illustrated by many pertinent passages from modern literature.

Probably the most valuable chapters for the teacher are those which are headed "The School Community," "Exercise of Discipline," "Disciplinary Organization of the School," "The Relation between the School and the Home," and "Stimulus and Restraint." Here is heard the voice of the practical teacher and organizer. Though the logical arrangement of the book might have suffered, we should have been glad if these chapters had been, so to speak, fused with the earlier and more theoretical chapters, so that the ethical significance of the school functions

Digitized by Google

might have been made still more explicit than at present. The teachers for whom the book is intended are not fond of ethical discussions, however well illustrated; but they are keenly interested in whatever is seen to bear directly on their work. An account is given in Chapter X of the "Stars and Stripes" method of discipline (invented by Mr. B. G. Grenfell), which ought to prove valuable to teachers unacquainted with that system. We congratulate the authors on the production of a volume which, if not very distinctive, is a rational and useful contribution to the subject. F. H. H.

DYNAMICS.

A First Dynamics. By C. S. Jackson, M.A., and W. M. Roberts, M.A. (5s. Dent.)

The applicability of the titles of the present volume and its predecessor on statics has been called in question by some who consider that these text-books pass beyond the limits of what is usually included in a first course in mechanics. The authors, however, prefer to adhere to their original choice on the ground that a more restricted knowledge of the subject than that contemplated by them cannot be conceived of as a possession worthy of the effort necessary to acquire it. Possibly the writers have assigned a rather broad meaning to the titles selected, but, in "A First Dynamics," at any rate, the student starts at the very commencement of his subject. The authors, on principle, presuppose on the part of the reader some knowledge of the special case of dynamics which constitutes the science of statics. Apart from that, they look for little previous mathematical training beyond a study of ordinary algebra and an acquaintance with the elements of trigonometry. The above assumptions leave the writers free to discuss fully the difficulties of dynamics, whilst the attention of the student is enabled to concentrate itself on these alone. The general order of development and the method of treatment adopted in the text-book are very attractive and thoroughly suggestive in character. Experiment and anecdotes culled from the history of the subject furnish an interesting mould in which to cast the theory, and lend life and colour to the investigations by means of which the student acquires a knowledge of principles and a familiarity with working formulæ. At times broader assumptions are made than appear to be advisable, and the reader needs to be always thinking at his best in order to grasp the full meaning of the text. The sequence of the discussion presents features of novelty; arguments, however, with much to recommend them, support the innovations. We find, for example, the investigation of the principles of work and energy immediately following the consideration of speeds and speed accelerations, whilst the idea of mass is not introduced until nearly the middle of the course. In spite of the plea of usage set up by the writers in defence of their primary employment of the term "velocity" to denote mere speed, its adoption is deserving of adverse criticism. Velocity, in its strictly scientific sense, involves the conception of direction. The word "speed" does exist and is universally familiar as specifying velocity-*magnitude;* hence the use in a mathematical or scientific text-book of the term "velocity" apart from the notion of direction is both unwise and unnecessary, and the writers of such treatises can at least avoid supporting a loose employment of words, even though (to quote the argument of the authors) it may be beyond their power to alter the English language.

We must also once more deprecate the disregard of the *sense* of lines where the expressions for the trigonometrical functions are concerned. The correct nomenclature should be adopted invariably, and it does not matter that in a particular connexion the angles involved may, as a general rule, be acute. Otherwise, as soon as the functions of an angle greater than a right angle are required, imperfect modes of expression become worse than useless, and the student has to unlearn what he has been at some pains to learn only a short while before. The book is very fully illustrated with useful — though, in many cases, rather roughly executed—diagrams. It contains also a very large assortment of exercises in order that the individual student may have opportunities for selecting problems possessing special interest for him: it is not the intention of the authors that every reader should attempt all. The criticisms offered above deal with defects which, important as they are, still leave intact the excellence of the work as a whole. The volume is more than likely to take a permanent place amongst standard mathematical and scientific texts.

GENERAL NOTICES.

MATHEMATICS.

Differential and Integral Calculus. By Daniel A. Murray, Ph.D. (7s. 6d. Longmans.)

To some extent the volume is in the nature of a second edition of the author's "Infinitesimal Calculus," the text of which has been very freely adapted and reprinted. The contents, however, have been subjected to considerable rearrangement, and are now given in a form acceptable to students to whom at first it is desirable to present the ideas of the Differential and Integral Calculus otherwise than in intimate connexion. To suit the fresh purpose of the work and the type of student primarily considered in it, additions have been made and modifications of treatment have been introduced. The new material touches more especially on indeterminate forms, on the subject of solid geometry, and on the elementary theory of motion. The subject is very capably handled.

Elementary Algebra. By P. Ross, M.A., B.Sc. (4s. 6d. Longmans.)

The present volume contains the complete work; but Parts I and II are also issued separately, and the former has been already a subject of notice in these columns. Part II commences with the theory of indices, and treats successively the more advanced portions of the algebra usually included in the curriculum of higher-grade and secondary schools. The discussion is based on modern ideas, and is in general thoroughly clear and satisfactory.

MODERN LANGUAGES.

"El Pensamiento Infantil."—Sexta Parte: *El Grafico.* (Madrid: Saturnino Calleja.)

The series is adapted to the intelligence of young folk, though it is expected to be useful to adults as well. The present section consists of "trabajos manuales y lecciones de cosas sobre ciencias, artes y oficios," and is generally intended "dar á los niños nociones muy superficiales de hechos relacionados con el mundo material, esto es con las Ciencias físicas, Agricultura, Metalurgia, Mecánica, Química y práctica de industrias—nociones que pueden servir de base á estudios más profundos." The scope of the work is very wide, but the treatment is quite simple, and there are no fewer than 1,200 illustrations.

Histoire de la Nation et de la Civilisation Françaises. Par Edouard Driault, Professeur agrégé d'Histoire au Lycée de Versailles, et Henri Sée, Professeur d'Histoire à l'Université de Rennes. 1 fr. 50. Paris: Picard (18 & 20 Rue Soufflot.)

"En un mot, nous nous sommes appliqués à tracer un tableau des progrès de la civilisation même de notre pays, de son développement politique, économique et social, vers plus de liberté, plus de bonheur et plus de justice." The sketch is judiciously selective, reasonably full, and very clear; with questions and exercises to each lesson or chapter. The illustrations—maps, scenes, portraits, &c.—are very numerous and effective.

A Modern German Reader. For Middle and Upper Forms. By J. A. Joerg, Head of the Modern Side, and J. B. Joerg, B.A., Master of the Army Class and Senior Modern Language Master, Dulwich College. (1s. 6d. net. Alston Rivers.)

The volume contains fifty passages, mostly prose with occasional pieces in verse, a considerable proportion "describing the political and social institutions and conditions of Modern Germany, setting forth the life and the characteristics of its people, its industries, and its commerce." The matter accordingly is of live interest, and the language involves a wide and varied vocabulary. The volume will be very serviceable for "unseen" readings.

Messrs. Marlborough issue, in their well known "Self-Taught Series," (1) a fourth edition of *L'Anglais sans Maître*, revised and enlarged by M. H. Hébert, and (2) *El Inglés para Cada Cual*, for the instruction of Spaniards in English, by William Chevob, Profesor de idiomas (1s. each, wrapper; 1s. 6d. each, cloth). Both works follow the usual lines of the series, and are well calculated to do good service in their several spheres.

HISTORY.

Notes of Lessons on History. (Vol. I, 3s.; Vol. II, 3s. 6d. Pitman.)

"Notes *for* Lessons" would be a more appropriate title, for the actual guidance offered under the heading "Teaching Hints" is meagre. Each lesson or method-unit is arranged thus: Heads, Analysis of Lesson, and Teaching Hints. "It is not intended that each lesson shall coincide with the 'lesson period,'" but that the teacher shall regard the attainments, &c., of the class, and present the matter in accordance with their requirements. The selection and arrangement of the facts is excellent on the whole, though many of the statements made are misleading if taken alone. John still "signs" Magna Carta. When will text-book writers learn that he did not "sign" the document? The Charter confirmed in 1297 was not the Charter of 1215 (as the text would suggest), but that of 1225—the "Inspeximus" Charter. The "Revolution Society" and the "Constitutional Society" are quoted as having been formed expressly to support the Revolution in France, whereas the former (at any rate) met to commemorate the English

Digitized by Google

Revolution of 1688, and the latter, Burke says in his "Reflections" (1790), "is of seven or eight years' standing." The significant fact about the Bastille in 1789 is not that it was "the ancient prison of Paris," but that it symbolized tyranny. The facts are stated forcibly and clearly; but frequently there is insufficient guidance in interpreting them, which, after all, is the main business of history teaching. There are excellent quotations in prose and poetry from our leading authors and exhaustive lists of historical novels bearing on each lesson, and the topics of the lessons are varied and comprehensively treated.

The "Normal" Stuart Period. By J. Beith. (2s. 6d. Normal Press.)

The author "aims at meeting the needs of students who require a brief and clear account of the main facts of English history during the years 1603–1714." He follows traditional lines. No student that reads the book carefully can fail to become thoroughly conversant with the chief questions and personages of the period. The style is serious and the judgments expressed are substantially sound. Lists of questions are appended to each chapter, but there is no index. An excellent work, very suitable for examination purposes.

A First History of England. Part VII: 1820–1901. By C. L. Thomson. (2s. 6d. Horace Marshall.)

This book forms the last of an excellent series for pupils in secondary schools—a series that cannot fail to kindle a love for the subject. The material is capably managed and the leading movements are presented graphically and without bias. "Sources" are largely drawn upon, as in the previous volumes, and effective use is made of them to sustain the interest. In the chapter on Chartism, we suspect exaggeration in some of the details: nine (not twenty) Chartist victims would be nearer the mark in the Newport affair. The difficult matters of foreign policy are subordinated to the "history of the English people." The ministries of the period are set out in tabulated form. The illustrations—portraits of statesmen chiefly—are satisfactory. The style is lucid and agreeable. We cordially recommend the book.

MISCELLANEOUS.

An Editor's Chair: a Record of Experiences and Happenings. By Ernest Foster. (2s. 6d. net. Everett.)

Mr. Foster's modest aim is, "as far as possible, to show the wheels going round in the editorial office of a popular weekly." He bases his descriptions and suggestions upon twenty years' experience in the editorial chair of *Cassell's Saturday Journal* and a dozen concurrent years in charge of *Chums*. By giving prominence to the personal aspects, he secures a special interest. "The curtain is lifted on well known authors who contributed; on regular contributors, occasional contributors, and would-be contributors; there are glimpses of writers distinguished in other spheres, as well as of famous people outside the world of letters; and the human element is to be found too in incidents—many of them noted as they occurred—which illustrate different branches of editorial work." Different aspects of the subject are treated in separate chapters. The style is simple and agreeable; the handling is judiciously reserved; and intending contributors may gain many useful hints as to how to go about their work and how not to go about it. A charmingly instructive and entertaining volume, with the author's portrait as frontispiece.

The Navy League Annual, edited by Alan H. Burgoyne (2s. 6d. net, Murray), appears in its third year, corrected to October 10, 1909, and published appropriately on Trafalgar Day (October 21). The first Part surveys the progress of the British Navy and the state of the rest of the navies of the countries that need be seriously considered, concluding with a statement of comparative naval strength. It is something to learn from the editor "that between the Christmases of 1908 and 1909 the British Navy will be in a position of naval superiority as against foreign nations never before attained." But we must demur to his remark that we owe this position "more to good fortune (that is, the delays in foreign shipbuilding) than to the foresight of the present Government." Neither the present nor any other Government shuts its eyes to what is doing in foreign shipbuilding yards. Part II consists of a number of useful papers by experts upon various aspects of naval policy or of naval development. Part III gives numerous elaborate tables, extremely serviceable for reference. Though we must reserve confidence on occasional points, we heartily commend the volume as a valuable compendium of information on a vital subject. There are many good illustrations.

DIARIES.

Letts's Diaries (Cassell) are as useful as they are varied. By way of specimen we have No. 11, office diary and almanac, strongly bound, 4s.; No. 16, a dainty thing in leather for the corner of the pocket, 1s. net; No. 25, a larger pocket diary, also in leather, 2s. net; No. 26, a pocket diary and almanac in cloth boards, 1s. net.; No. 31, rough diary, 1s. 6d.; No. 32, also a rough diary, with interleaved blotting, 1s. 6d.; and No. 49, a scribbling diary (enlarged edition), with interleaved blotting, 1s. 6d. Most of the diaries contain a great variety of practical information, always serviceable for ready reference. Insurance coupons are attached to each volume.

Pitman's Shorthand and Typewriting Yearbook and Diary (1s.) contains the usual details relative to the two principal subjects. "Perhaps the most striking feature in the present directory is the number of new national societies—several being included for the first time—and their remarkable growth."

CHRISTMAS BOOKS.—II.

Romance of History.

A Northumbrian in Arms, by George Surrey (5s., Henry Frowde and Hodder & Stoughton), opens with a mad frolic and a wrestling bout at Saltersby Fair, in Lincolnshire, in the year 1054, and soon passes to matters of more serious import. Harald Ulfsson, of Olafsdale, feels the vengeance of Sir Robert de Main-de-Fer, lord of a great manor in the neighbourhood of Spalding and one of the chief of the well hated Norman friends of the King, and is outlawed. He goes north with Earl Siward's army against Macbeth. Incidentally there are many deeds of daring and adventures of varied interest. The outlawry is removed, and Harald fights at Senlac. Six illustrations in colour by J. Finnemore.

In the New Forest, by Herbert Strang and John Aston (1s., Henry Frowde and Hodder & Stoughton), is a story of the reign of William the Conqueror. It opens with a vivid description of the Battle of Hastings, and tells of the kidnapping and oppression of Eadric the Englishman by his uncle, a rapacious lord from Normandy. It pictures strongly many of the characteristic features of the time, and is full of movement and energy. Five illustrations.

Kinsman and Namesake, by R. Stead (2s. 6d., Blackie), is a story of the days of Henry IV. Richard le Scrope, of Bolton, is kinsman and namesake of the Archbishop of York, who, with the Earl of Northumberland, heads a plot against the King "for the laws and the good government of England," and Prince John and the Earl of Westmoreland lead the Royal forces north to quell the rebellion. There is abundance of scope for intrigues and conflicts, and the private interests are deftly interwoven with the public events. The interest is briskly maintained. Five illustrations by W. B. Handforth.

The Lost Empire, "a tale of many lands," by Captain Charles Gilson (6s., Henry Frowde and Hodder & Stoughton), sketches the dissipation of a dream of a French empire in the East through a narrative of "the fortunes and misfortunes of Thomas Nunn, and of all the astonishing adventures that befell him from the blockade of Genoa to the siege of Seringapatam." Both Nelson and Bonaparte figure in the scenes; and one notes with interest the author's appreciation of Berthier, "the greatest chief-of-staff that ever lived." Captain Gilson takes care not to contradict history, and limits his invention to supplementary facts that might very well have been true. A brilliant and vigorous story, full of incident, and absorbingly interesting. Eight illustrations in colour by Cyrus Cuneo.

In Days of Danger, by Harold Avery (3s. 6d., Nelson), is a bustling tale of the French invasion threatened by Bonaparte. It pictures vividly the popular feelings of the time: "at that time we were apt to think of our neighbours across the Channel as a dweller in the tropics might regard a species of death-dealing snakes." There is plenty of excitement on sea and on shore; and there is a mystery about a personage that busies himself with inventions of explosives, and a complication over the fate of a blue diamond, and a tangle about a missing will. The story is forcibly told, and will be followed with interest. Four illustrations.

Lads of the Light Division, by Lieutenant-Colonel A. F. Mockler-Ferryman (3s. 6d., Nelson), is a stirring tale of the Peninsular War. Jack Claverhill, of the 43rd, "was of the right stuff," as he had already shown at Eton and showed again at Talavera, in the lines at Torres Vedras, in the forlorn hope at Ciudad Rodrigo, and so forth. His foster-brother, a lad of Spanish blood, also encounters strange adventures, for which, let us hope, he is duly rewarded in the long run. A good deal of the actual history of the period is woven into the story, which is vigorously narrated and full of interest. Four illustrations.

A Hero of Sedan, by Captain F. S. Brereton (6s., Blackie), is a tale of the Franco-Prussian War, depicting vividly that terrible conflict "from the early days on the sunny slopes of the Vosges Mountains to the agonizing climax in Paris." The hero, a medical student, a Guy's man, performs prodigies of valour on the French side at Sedan, and afterwards with the Francs-tireurs: and eventually he enters the besieged city of Paris in a balloon and fights eagerly against the Commune. That was a pretty narrow escape when he was all but hanged for a spy at the instigation of the real spy, who had at an earlier date felt the force of his fists for rascally conduct. There are several companions, too, of different nationalities, whose adventures diversify and support the experiences of the hero. The course of the war is vividly sketched. Eight illustrations by Stanley L. Wood.

The Cruise of the Thetis, by Harry Collingwood (5s., Blackie), is a tale of the last Cuban insurrection, working in a considerable amount of historical fact. Two young fellows, an Englishman and a Cuban, who had been school chums, attempt to run a cargo of ammunition to the island—an attempt involving incidents of a sufficiently exciting character. Then there is the rescue of the Cuban's family from a Spanish convict ship, and the connexion of the "Thetis" with the blowing up of the "Maine." The story goes with great verve throughout, and will be greatly appreciated by youthful readers. Six illustrations by Cyrus Cuneo.

Among new editions of old favourites—all of them as good as new to fresh readers—are several of G. A. Henty's stories (3s. 6d. each, Blackie): *Orange and Green*, a spirited tale of the Boyne and Limerick,

Digitized by Google

with eight illustrations by Gordon Browne; *Under Drake's Flag*, a stirring tale of the Spanish Main, with eight illustrations by Gordon Browne; and *By Right of Conquest, or With Cortez in Peru*, an ingenious story of highly romantic interest, with eight illustrations by W. S. Stacey and two maps; also two other stories of Henty's, *The Young Franc-Tireurs* and their adventures in the Franco-Prussian War, with eight illustrations in colour by T. Dugdale, and *The Young Buglers*, a tale of the Peninsular War (3s. 6d. and 2s. 6d., Henry Frowde and Hodder & Stoughton). Further, two of Captain F. S. Brereton's breezy books (3s. 6d. each, Blackie): *One of the Fighting Scouts*, a tale of guerrilla warfare in South Africa during the Boer War, with six illustrations by Stanley L. Wood, and a map of South-eastern Africa; and *The Dragon of Pekin*, a tale of the last Boxer rising in China, with six illustrations by William Rainey, R.I., and a map illustrating the relief of the Pekin Legations.

Messrs. Henry Frowde and Hodder & Stoughton issue a second edition of *Samba*, a Story of the Rubber Slaves of the Congo, by Herbert Strang, with six coloured illustrations by William Rainey, R.I., and two plans (5s.). The aim of the book is "to show, within necessary limitations, what the effect of the white men's rule has been." The keynote is the Congo proverb, "Rubber is death." A most forcible and interesting story.

Romance of Adventure.

Palm Tree Island, by Herbert Strang (6s., Henry Frowde and Hodder & Stoughton), is "the narrative of Harry Brent, showing how he in company with William Bobbin, of Limehouse, was left on an island in the Southern Hemisphere, and the accidents and adventures that sprang therefrom." The story is amply furnished with varied incident—discontent, mutiny, shipwreck, encounters with sea-monsters, wild dogs, and savages, &c.; and it is briskly written. Eight illustrations in colour by Archibald Weir, numerous pen-and-ink sketches by Alan Wright, and a map of Palm Tree Island.

Settlers and Scouts, by Herbert Strang (5s., Henry Frowde and Hodder & Stoughton), is a picturesque and stirring tale of the African Highlands—the north-western parts of British East Africa—picturing some of the conditions under which the pioneers of civilization have had to work. Between native raiders and lions, rhinoceroses, hippopotami, &c., there are lively times. Said Mohammed, "failed B.A. of Calcutta University," cook and poet, is an irrepressible figure, and his "palpitating lay" in the last chapter challenges Kipling. Six illustrations by T. C. Drysdale, and map and plan.

The Voyage of the Sesame, by A. C. Curtis (5s., Henry Frowde and Hodder & Stoughton), was not such a wild-goose chase as the prudent lawyer anticipated when the three Trevelyan boys, left barely provided, proposed to go to Novaya Zemlya and the Kara Sea to inspect the place marked on a scrap of paper found on a dead shipwrecked sailor, "much gold here." The ship has to be built first, and then the adventures come thick and fast. "We have had a grand time in the 'Sesame.' What pals we have been! Depend upon it, the best part of the gold has been the fetching it." There are stirring fights with pirates, floes, walrus, and weather; and incidentally a good deal of information about Arctic conditions. A bright and breezy story. Six illustrations in colour by W. Herbert Holloway, with maps and plans.

The Hidden Nugget, by Alexander Macdonald, F.R.G.S. (3s. 6d., Blackie), is a stirring story of the Australian goldfields. The enormous gold nugget must be found, and the only clue to its whereabouts depends upon the decipherment of a cryptogram which has come into the hands of a couple of boys. The boys start on the quest. There are bush-rangers about, of course; but, after many trials, the boys capture the precious nugget. But how to carry it off in safety? They paint it to look like ironstone, place it on an improvised sled, and drag it through the sandy desert. They are attacked by a body of masked bushrangers. What eventuated must be left to the discovery of the reader. There is no lack of excitement over this nugget. Six illustrations by William Rainey, R.I., and facsimile of the cryptogram.

Through the Heart of Tibet, by Alexander Macdonald (6s., Blackie), is a vigorous record of the progress of a secret expedition to the sacred city of Lhasa in the face of incessant endeavours of Chinese agents to thwart the objects of the mission. But, before the start, there is the mystery of the man with the moonstone—"a large and perfect moonstone of a most wondrous tinge of colour," with a mysterious inscription inside it, and we dare say it has some connexion with the objects of the expedition. Incidentally there is much information about the traditions and customs of the Tibetans, and a fresh explanation of the causes of the recent advance of British troops into Tibet. Eight illustrations by William Rainey, R.I.

The Rival Treasure Hunters, by Robert M. Macdonald (6s., Blackie), is a tale of the debatable frontier of British Guiana, vigorously narrated and coloured by personal experience of the Hinterland. There, in a mountain hollow, inhabited by a strange tribe of Indians, are mines of wonderful blue diamonds, in quest of which are two rival bands of explorers. The materials for description and excitement are abundant, and the characters are boldly drawn. Eight illustrations by Cyrus Cuneo.

Mighty Hunters, by Ashmore Russan (6s., Longmans), professes to furnish "an account of some of the adventures of Richard and Helen Carson in the forests and on the plains of Chiapas in Mexico." The Barranca del Muerta was well named: very few strangers that entered it ever returned. Black tigers (jaguars), alligators, wolves, snakes, wild cats, devil-dogs, vultures, &c.—there is no lack of game nor of adventures in the pursuit of it. A fresh, stirring, and occasionally weird book. Twelve illustrations by Alfred Pearse.

Ford of H.M.S. Vigilant, by Staff-Surgeon T. T. Jeans, R.N. (5s., Blackie), is a tale of the Chusan Archipelago briskly told with a first-hand knowledge of modern warships and naval warfare. Midshipman Ford fights, is wounded, is captured, escapes, and (we should hope) lives happy ever after. "Practically all the characters are drawn from life, and the cruisers and gunboats, British, American, and Chinese, taking part in the various operations are actual ships under altered names." Boys that remember "Mr. Midshipman Glover" will hasten to follow the fortunes of Mr. Midshipman Ford. Six illustrations by William Rainey, R.I., and plan.

John Bargreave's Gold, by Captain F. S. Brereton (5s., Blackie), is a tale of stirring adventures in the Caribbean Sea for the recovery of treasure sunk in the wreck of a Spanish galleon on the Mosquito coast. A parchment describing the facts is, of course, the object of intrigues: it is stolen, and thus there is a race of rival parties to annex the treasure. Incidentally there is a good deal of information about the savage tribes of the coast and about the work of the Americans on the Panama Canal. The interest is actively maintained throughout. Six illustrations by Charles M. Sheldon.

Harry Escombe, by Harry Collingwood (3s. 6d., Blackie), is the story of "an amazing adventure in Peru"—the romance of a big railway survey. Escombe, a young civil engineer, goes out as assistant to the chief of the survey staff, an overbearing and tyrannical man, hated by the natives under him, and ultimately rewarded very much in accordance with his deserts. Left in sole charge, Escombe proceeds with the survey, and, while fishing one evening in Lake Chinchaycocha, he hooks and brings up a marvellous collar of gold and emeralds, which marks him in Indian eyes as "the reincarnation of him who first wore the sacred jewel, the lord and father of our people, Manco Capac." He is carried off to the City of the Sun, over the mountains. Here, then, is a plentiful source of exciting adventures, told with all the verve of the favourite author. Six illustrations by Victor Prout.

Dick Trawle, Second Mate, by W. Charles Metcalfe (3s. 6d., S.P.C.K.), is a varied and breezy story of maritime and other adventures. "If a man loves a girl, saves girl's father's life, then father's daughter's life, then didn't get father's daughter to save his own life, I should say something was wrong, very wrong, somewhere." We agree with Captain Storm. Illustrations by Harold Piffard.

The Islanders, by Theodora Wilson Wilson (2s. 6d., Blackie), describes the adventurous life of three youngsters of twelve to five, left under the guardianship of their sister, who is of the mature age of twenty-one, on their own island of Arcoombe in Morecambe Bay. A great tidal wave is responsible for a special excitement. The savage conditions of the islanders scandalizes their aunt Eliza of Liverpool, who visits them and does not at first understand them—whence complications. The events are simply developed and narrated. Six illustrations by Gordon Browne, R.I.

Swift and Sure, by Herbert Strang (2s. 6d., Henry Frowde and Hodder & Stoughton), is a bustling story of a Venezuelan revolution. The hero, an officer of the British Asphalt Company of Guayana, has a hydroplane which he sails upon the waterways, and which comes in especially handy in a race with a train, when the object is to save his chief and a fellow officer imprisoned under sentence of death by the revolutionary general. The excitement is strong and continuous from start to finish. Four illustrations by J. Finnemore.

Midly and Ensign; or, The Jungle Station, a tale of the Malay Peninsula, by the late G. Manville Fenn, appears in a new edition, with four illustrations in colour by G. D. Rowlandson (2s. 6d., Henry Frowde and Hodder & Stoughton). The interest is varied and lively, and the tone is excellent.

A Final Reckoning, by G. A. Henty (3s. 6d., Blackie), a fine tale of bush life in Australia, appears in a new edition, with eight illustrations by W. B. Wollen.

The Realm of Faerie.

Messrs. Longmans issue a series of charming volumes consisting of stories selected from the well known "Fairy Books" of multifarious colours edited by Andrew Lang: (1) *The Marvellous Musician* and thirteen other stories; (2) *The Forty Thieves* and fourteen other stories; (3) *The Magician's Gifts* and fifteen other stories; (4) *Beauty and the Beast* and sixteen other stories (2s. 6d. each). (5) *The Twelve Huntsmen* and twelve other stories; (6) *The Three Dwarfs* and fifteen other stories; (7) *The Invisible Prince* and thirteen other stories; (8) *The True History of Little Golden-Hood* and ten other stories (2s. each). Each volume has a coloured plate as frontispiece and numerous other illustrations (full-page plates and text pictures) by H. J. Ford. They are all printed in good round type and furnished forth artistically. They are full of delightful reading for young folk.

The Gateway to Romance (5s., Nelson) is a spacious volume of tales retold by Emily Underdown from "The Earthly Paradise" of William Morris, splendidly illustrated with sixteen coloured plates and many other pictures, and handsomely got up. It is sure to attract great favour among the children.

Digitized by Google

The Faery Queen and her Knights (5s., Seeley) is another volume from the charming and indefatigable pen of the Rev. Alfred J. Church, M.A. It consists of stories retold from Spenser, with all the grace, simplicity, and deftness that Mr. Church has so often exhibited in the long list of his delightful books for young readers. Eight illustrations in colour, delicately designed and beautifully produced, and handsome get-up.

The Irish Fairy Book (6s., Fisher Unwin), compiled by Alfred Perceval Graves and gorgeously illustrated by George Denham, is a most delightful collection from "as fair and bounteous a harvest of myth and romance as ever flourished among any race." The coloured head and tail-pieces and paragraph initials brighten the page. The volume is beautifully printed and got up.

The Story of the Little Merman, by Ethel Reader (3s. 6d., Macmillan), is simply told with bright and nimble fancy. There are shining palaces and the garden of red flowers, the dragon of the rocks and the dragon of the lake, the dwarf blacksmith and his cave, the queen of the gnomes and the true prince, and many other personages and marvels. Eight illustrations by Frank C. Papé, and artistic get-up.

Harding's Luck, by E. Nesbit (6s., Hodder & Stoughton), is one of those stories where the author invests common, even sordid, facts of life with wreaths of fancy. Dickie of Deptford, a poor lame lad, and dreamer, has wonderful experiences, which willebe followed—in spite of some stiff vernacular—with great interest by young readers. Sixteen full-page illustrations by H. R. Millar.

The Water Babies, by Charles Kingsley (2s., Blackie)—an ever fresh fairy tale for a land baby—appears again in beautiful type and bright get up, with four illustrations by Alice B. Woodward. An attractive edition.

Romance of Science.

The Romance of Modern Chemistry, by James C. Philip, D.Sc., Ph.D.' Assistant Professor of Chemistry at the Imperial College of Science and Technology, South Kensington (5s., Seeley), presents a most fascinating "description in non-technical language of the diverse and wonderful ways in which chemical forces are at work, and of their manifold application in modern life." It is very simply and lucidly written, most instructive and suggestive, and full of interest on every page. Twenty-nine illustrations and fifteen diagrams.

Aerial Navigation of To-day, by Charles C. Turner (5s. net, Seeley), offers a popular account of the evolution of aeronautics. It narrates the history and describes the principles of ballooning and mechanical flight, the sensations of the flyer, the conditions of "the aerial ocean," military and naval applications, &c.; surveys the work still waiting to be done; and speculates upon the social effects. "The machines of M. Blériot and Mr. Latham, and the Lebaudy and Clément-Bayard dirigible balloon, are described." A most interesting and up-to-date volume. Seventy illustrations and diagrams.

Romance of the Railroad.

The Book of the Railway, by G. E. Mitton (6s., A. & C. Black), "is intended for children of all ages, up to and over ninety, and is meant to give some idea of the working of that grand life of the railway which is so fascinating as completely to absorb the men who take part in it, and which is usually quite hidden from the eyes of casual travellers." Mr. Mitton describes the whole organization by departments as seen in working order, and "thus by a series of pictures a fair general idea of the whole management of English railways can be gained." The book is plainly and simply written, and is absorbingly interesting and most instructive. Twelve illustrations in colour by Allan Stewart.

Locomotives of the World, by the Rev. J. R. Howden, B.D. (5s. net, Henry Frowde and Hodder & Stoughton), is illustrated by sixteen coloured plates, showing as many different types of locomotives. The letterpress describes plainly and very interestingly the various railways, and especially the development of the engine department. A handsome volume in picture cover.

Romance of the Sea.

The Book of British Ships, by Frank H. Mason, R.B.A. (5s., Henry Frowde and Hodder & Stoughton), presents the main lines of the historical evolution of the principal types of ships, from the time when an adventurous man first "put off from the river bank astride of a fallen tree-trunk" down to the Dreadnoughts, palatial liners, smart yachts, and fishing smacks of the modern time. Mr. Mason knows his subject well, and succeeds in compressing a vast amount of most instructive information into his five and twenty chapters. The work is full of interest. Eight coloured plates and some fifty black-and-white illustrations.

Britain's Sea Story, edited by E. E. Speight, B.A., F.R.G.S., and R. Morton Nance (5s., Henry Frowde and Hodder & Stoughton), and now in a third edition, may be taken as a companion volume to Mr. Mason's. It tells "the story of British heroism in voyaging and sea-fight from Alfred's time to the Battle of Trafalgar": and the introduction traces the development of the structure of sailing ships from the earliest times. The authors have "thought it well to devote a considerable space to the earlier periods, especially in the introduction, since the teaching of history ensures a greater familiarity with naval progress since the Elizabethan days, by reason of the wealth of original records and critical work." A most interesting and informatory volume. Twenty full-page illustrations.

Romance of the School.

The School across the Road, by Desmond Coke (5s., Henry Frowde and Hodder & Stoughton), derives its interest from the keen feud between two neighbouring schools under different types of government, the friendly contests sometimes passing into hostile demonstrations. When the older type takes over the newer type, there naturally arise difficulties of effective amalgamation, which are accentuated by the prepossessions of a weak head master and his hopeless misunderstanding of a stubborn young pupil from across the road. There is also a vigorous brush with a third institution of the place, an Agricultural College. Mr. Coke knows his boys (and masters) thoroughly well, limns their characters in strong lines, and develops the difficult situation with ability. Boys will read the story with great zest. Six illustrations in colour by H. M. Brock.

The Nicest Girl in School, by Angela Brazil (2s. 6d., Blackie), depicts the school experiences of a lass of thirteen, with the troubles of arithmetic and Caesar and examinations, the action and reaction of schoolfellows, and incidental adventures, more or less exciting, out of bounds. It is an agreeable story skilfully worked out. Did Patty Hirst get the extra prize offered "to whichever girl shall be judged by her companions to have been the most kind, the most thoughtful and generous, and to have passed the most unselfish life amongst you during the whole of the school year"? Five illustrations by Arthur A. Dixon.

Happy School Days, by Margaret E. Sangster (2s. 6d. net, Hodder & Stoughton), is not a story at all, but "some bits of practical advice for all schoolgirls." The schoolgirl is caught at every hour of the day and in all situations, and advised and reasoned with in the kindest, brightest, and wisest manner. The docile young person will gain much sage counsel from the precepts of the experienced and friendly monitress. No illustrations.

For Girls.

The Quest of the Blue Rose, by Winifred M. Letts (5s., Henry Frowde and Hodder & Stoughton), is the story of Sylvia Sherwood, "a fairly competent telegraphist, earning a wage of fifteen shillings a week," an orphan, "sensitive, shy, much given to reading and to long dreams." The blue rose was part of the adornment of a Dresden china plate given to her once by an old godmother, and to her it signified "all the unattainable glorious things that the soul desires, the right to walk among the elect in meadows of asphodel," and so forth. A poetical thread runs through the story: "There's a lot of poetry in a telegram." Six illustrations in colour by James Durden.

Mistress Nanciebel, by Elsie Jeanette Oxenham (5s., Henry Frowde and Hodder & Stoughton), takes us back to the time of the Dutch War and the Plague, but is essentially concerned with some episodes in the life of a bright and courageous girl, whose father refuses to approve of or to take part in the war, and is consequently relegated to a place in Wales. The plague finds its way even there, and Sir John Seymour and his daughter fight it manfully. A simple but strenuous narrative. Six illustrations in colour by James Durden.

Audrey's Awakening, by E. L. Haverfield (3s. 6d., Henry Frowde and Hodder & Stoughton), is a well conceived and very well written story of a somewhat self-centred schoolgirl of narrow interests, who requires a variety of experiences to enable her to see things in their just proportions. The interest is extended by the activities of her brother, and by the contrasted character of a wideawake and genial fellow pupil, who exercises a great influence over her in face of much discouragement. Six illustrations in colour by James Durden.

The Conquest of Claudia, also by E. L. Haverfield (3s. 6d., Henry Frowde and Hodder & Stoughton), promises to be a lively affair, for in the first chapter there is the bursting of a bomb. Claudia is a fascinating lady of fifteen, who "lived habitually in a world of stories," by preference historical novels and love stories; when she was not reading a story she was writing one—a rather trying habit for her governess. It is possible, however, for a governess also to have a literary turn and to be surrounded with mysteries of a different kind as well. However, the conquest of Claudia is very naturally and interestingly effected. An attractive story brightly told. Six illustrations in colour by James Durden.

Saturday's Children, by Winifred James (6s., Blackie), is a courageous tale of two Australian girls that were left poorly provided and had to fend for themselves—one as a kindergarten teacher, the other as a tea-room attendant. They face the world with spirit and energy, and deserve to win. Eight illustrations by Frances Ewan.

Three Girls in Mexico, by Bessie Marchant (3s. 6d., Blackie), describes vigorously the adventures of the heroines in an old *presidio* in the interior of the country. A courageous act is rewarded by gratitude in a form that enables a secret process to be turned to marketable account. An act of kindness succours a fallen family, which eventually recovers the favour of fortune. It is a good experience to read this book. A capital story very capably and interestingly told. Six illustrations by William Rainey, R.I.

Young Mrs. Harris, by Lucy M. Parker (2s., S.P.C.K.), is a domestic story influenced by religious feeling. There is a marked contrast between the two allied families, and the difficulties arising in the course of events are managed so as make the good of the one triumph over the evil of the other. The story is crisply written. Illustrations by W. S. Stacey.

The Marriage of Jabez Alford, by Beechwood (2s., S.P.C.K.), is of a somewhat similar character, though cast in very different circumstances. "Don't matter two pins what her eyes or hair are like so long as her purse is full of gold." But Jabez is backward; which incensed Isaac, and possibly affected his intentions as to the disposal of his wealth by his will. However, we dare say Jabez did get married, and some of the other personages of the tale as well. Illustrations by Adolf Thiède.

The Girl who wouldn't Make Friends, by Elsie Jeanette Oxenham (2s. 6d., Nelson), is a Welsh story. Gwyneth *fach* ("little")—there was a Gwyneth *fawr* ("big")—without relations, was looked after by a kindly old gentleman that died without making any provision for her, leaving his property to another little girl. The family of the heiress go to take possession, and there are difficulties in conciliating Gwyneth *fach*. A secret hiding-place is one of the centres of interest; and the interplay of the young folk is always brisk. Frontispiece.

When Bab was Young, by L. E. Tiddeman (1s. 6d., S.P.C.K.), tells of a little girl of eleven, whose father, to her great grief, has to go away on a long sea voyage for his health, and who goes with her brother to the Devonshire seaside to recuperate after mumps, and meets some adventures; but the story is more reflective than adventurous. Illustrations by Oscar Wilson.

Nathalie's Sister, by Anna Chapin Ray (3s. 6d., Henry Frowde and Hodder & Stoughton), continues the interest in the Arterburn family created in "Nathalie's Chum." American boy and girl life is depicted in vivacious conversations and interesting circumstances. Six illustrations in colour by N. Tenison.

Uncle Hilary's Nieces, by Christina Gowans Whyte (6s., Henry Frowde and Hodder & Stoughton), is variously occupied by the multifarious aspirations of the young people, which involve not a little complication. There is the misappropriation of a fortune to be rectified. Girls will thread the mazes of the story with considerable interest. Eight illustrations in colour by James Durden.

Susanna and Sue, by Kate Douglas Wiggin (3s. 6d., Hodder & Stoughton), is a quaintly charming story of the sojourn of a mother and her little daughter at a Shaker settlement in Maine. The mother had left her intolerable husband. The situation is described in a very interesting and incisive way. Four illustrations.

For the Children.

Among "The Oxford Books for Children" (Henry Frowde and Hodder & Stoughton) are several series of a very attractive as well as instructive character. Of one series we have three examples: (1) *The Children's King Arthur*—charming stories from Tennyson and Malory; (2) *The Children's Shakespeare*—stories from four of the plays; and (3) *The Children's Dickens*—stories selected from various tales (1s. 6d. net each). These are all liberally illustrated in colours and in black and white, and furnished with picture covers. Of another series—"Herbert Strang's Library"—we have four examples: (1) *Tales from Hans Andersen*; (2) *Tales from Shakespeare* (Lamb); (3) *Mungo Park's Travels*; (4) *Robinson Crusoe* (6d. net each). These are nicely printed, and furnished with frontispiece and picture cover. Then there is an animal series: (1) *Madam Mouse*, and her Home in the Harvest Field; (2) *Bunnikin Brown*, and his Home in the Burrow; and (3) *Squirrel Hall*, and the Folk who lived there (1s. net each)—all spaciously printed, liberally and admirably illustrated, and bound in picture covers. Further, here is *The Rainbow Book* of coloured stories for children—delightful stories lavishly illustrated with pictures in all the colours of the rainbow and placed in a bright picture cover (1s. 6d. net). And, daintiest of all, *The Happy Book*, pictured by Millicent Sowerby, and told in verses by Githa Sowerby—a delicate and charming little volume (1s.).

A selection of favourite stories from *Grimm's Tales for Children*, (2s. 6d., Henry Frowde and Hodder & Stoughton) is boldly illustrated with coloured and black-and-white pictures in plenty, and furnished with a delightful picture cover.

A Book of Golden Deeds, by Charlotte M. Yonge (6s. net, Nelson), is reissued in a very handsome volume, with numerous full-page illustrations in colours and in black and white after pictures by famous painters, and with delicate marginal drawings on most of the pages.

Farm Babies (5s., Henry Frowde and Hodder & Stoughton) is a bookful of splendid illustrations by Cecil Aldin, faced by brief letterpress, descriptive and humorous, and placed in a picture cover. The drawings are very effectively outlined.

The Twins, also by Cecil Aldin (6s., Henry Frowde and Hodder & Stoughton), is on similar lines, exhibiting a couple of dogs in a great variety of positions, largely humorous and always characteristic. A clever and handsome volume.

The Bird Book, pictures of birds by William Foster, and talks about them by May Byron (3s. 6d. net, Henry Frowde and Hodder & Stoughton), is indeed "a beautiful Dicky Bird Book." The coloured plates and other illustrations are numerous and good, and the talks convey much information in an agreeable and simple fashion. There is a fine picture cover.

Sheaves of Gold (3s. 6d. net, Henry Frowde and Hodder & Stoughton) consists of a long dozen of stories simply retold from the Old Testament, with sixteen coloured plates, and in picture cover. It is a handsome volume, type and illustrations excellent.

Dollikin Dutch (2s. 6d., Henry Frowde and Hodder & Stoughton) has her story simply told—and how she helped Piet and Nella—in spacious type and with vigorous illustrations, partly colour plates and partly black and white. Piet and Nella present her on the gorgeous cover.

Ballads of Famous Fights—Fifteen of them on land and on sea, from Chevy Chase down to our own time—liberally printed, and handsomely illustrated with a dozen coloured plates by artists of repute, will make a capital gift or prize book (3s. 6d. net, Henry Frowde and Hodder & Stoughton). The bold picture cover is an additional attraction.

A Book of Wild Things, by Lucy Lyttelton (Mrs. C. F. G. Masterman), consists of prose and verse selections from many writers, describing a good score of common animals. It is spaciously printed and handsomely got up, with eight clever pictures from Japanese artists. (3s. 6d. Nelson.)

The Old Man's Beard, and other Tales, by G. M. Faulding (4s. 6d. net, Dent), are marvellous yarns introducing children to kings and fairies, Father Christmas and other mysterious old men, the Squidgicum-Squees, and the Dustman. The Teller-of-Tales acquits herself admirably; and there are four colour plates and nearly fifty text illustrations daintily and graphically executed by Walter P. Starmer.

The Little Duke Richard the Fearless, by Charlotte M. Yonge, is reissued in two bindings by Messrs. Henry Frowde and Hodder & Stoughton in "The Children's Bookcase" series (1s. 6d. net and 2s. 6d. net). The children will be happy with either form of the delightful and simple story. The book is very liberally and effectively illustrated in colour by Archibald Webb.

Christabel in France, by Mrs. Albert G. Latham (3s. 6d., Blackie), tells the further adventures of three little folk—Bell, Teddy, and Marybud, of "Christabel"—in entirely new surroundings. They are taken to France, and their experiences, grave and gay, depict French facts and French ways as seen by those romantic little Englanders. A clever and delightful sketch. Four coloured plates and thirty text illustrations by Paul Hardy.

Stories from Grimm, selected and edited for little folk (2s. 6d., Blackie), is a substantial and spaciously printed volume, with plentiful illustrations in colours, and in black and white, by Helen Stratton.

The Swiss Family Robinson, retold for little folk by Edith Roberts, and illustrated by John Hassall, R.I. (1s., Blackie), outlines vividly representative scenes of the famous story. The pictures are most varied and excellent.

The Story of the Frog who would a-wooing go is illustrated in bold lines and in bold colours by Frank Adams (2s., Blackie.) The type is an imitation of a bold, square script, sensibly clear. A great book for youngsters.

Tales and Talks for Nursery Land (2s. 6d., Blackie) is a delightful collection of stories and pictures, the illustrations by John Hassall and other well known artists.

Round the Clock is a picture-book for little folk—rhymes by May Byron, drawings by Elsie H. Stewart (1s. 6d., Blackie). The rhymes recount the occupation of the hours of the day, and the coloured illustrations are prettily designed and effectively produced.

True Stories from History, retold for little folk by Edith Roberts (1s., Blackie) and profusely illustrated in colours, will delight many young readers, and perhaps inculcate some of the virtues. The artist is no doubt privileged; but surely he (or she) might have taken the trouble to approximate the age of Wallace when he fought at Stirling Bridge.

A Boy's Book of Battleships, text by Gordon Stables, C.M., M.D., R.N., pictures by Charles Robinson (2s., Blackie), sketches and illustrates the development of fighting vessels from the earliest times to the latest "Dreadnought." The letterpress is instructive and simple, and the pictures will strike the imagination.

How They went to the Seaside, by S. Rosamond Praeger (2s. 6d., Blackie), is a handsome bookful of coloured pictures of children at play, with brief description of the various scenes on the opposite pages. It is brightly got up, and is sure to be a favourite.

Little French People, by Kate J. Fricero (3s. 6d., Blackie), is also a picture book for little folk, showing their little French neighbours in a variety of characteristic positions, the descriptive letterpress opposite. The artist displays a free hand. The get-up is handsome.

The Daisy—"great-grandmother's book"—consists of "Cautionary Stories in Verse, adapted to the ideas of children from four to eight years old," with illustrations by Ruth A. Hobson (3s. 6d., Blackie). The "cautions" are nicely administered, and the illustrations are appropriate, abundant, and effectively produced.

A NEW CLASSIFIED CATALOGUE OF OVER 1000 PICTURES, specially selected for use in schools, with several coloured and a great number of other illustrations, shortly ready. Inquiries solicited. Pictures sent on approval. Framing on the premises. Low prices. First class work only.

"HANFSTAENGL" SPELLS "EXCELLENCE."

F. HANFSTAENGL, 16 Pall Mall East, S.W. London; also at Munich and New York.

Digitized by Google

Two in a Tangle, by Alice Massie (1s. 6d., S.P.C.K.), is a spirited story of a sister and a brother (and some other people) and a bicycle expedition, with incidents. Illustrations by Oscar Wilson.

The New Line upon Line is a revised issue of "Line upon Line," edited by J. E. Hodder Williams (1s. 6d net, Henry Frowde and Hodder & Stoughton). The two parts of the original edition have been somewhat condensed and slightly modified in expression; and the present work includes both parts as so treated. The chapters retell the Bible story in simple form, with design "to lead children to understand and to delight in the Scriptures." There are a number of coloured illustrations and a picture cover.

VARIOUS.

Messrs. Henry Frowde and Hodder & Stoughton publish a magnificent edition of *Robinson Crusoe* (7s. 6d. net), embellished with twenty-four colour plates after designs by Noel Pocock. The type is large and clear, and the illustrations strike the imagination. He will be a proud boy that gets a copy of this handsome volume for his library.

The Silver Lattice, edited by Richard Wilson (6s. net, Nelson), is a very handsome book of poetical selections of the first quality, including many copyright pieces The type is large and the margins liberal; the illustrations in colour are excellent and numerous, and the cover is pictured. A splendid gift or prize book for boy or for girl.

Orpheus with his Lute, by W. M. L. Hutchinson (5s., Edward Arnold), consists of "stories of the world's springtime," worthy of the author of "The Golden Porch." She goes back to the Greek mythology, and induces each of the nine Muses to tell Orpheus a story by the Well of Memory in the enchanted glade: after which comes the story of Orpheus and Eurydice. A very charming and imaginative setting of the ancient myths, with eight beautiful illustrations after eminent painters.

Stories of Famous Men and Women, edited by J. Edward Parrott, M.A., LL.D. (4s. net, Nelson), is a most handsome volume, lavishly and beautifully illustrated. It tells of sixteen distinguished persons "who in their day and generation went about doing good, and left to future ages an inspiring example of helpful, earnest, and laborious lives" in various spheres of activity. "There is a lesson in every life here presented, and you will be wise if you lay the lessons to heart." The biographies are well written, interesting, and instructive. An admirable gift book for Christmas or any other season.

Jamaica, by John Henderson (1s. 6d. net, A. & C. Black), is an excellent specimen of the charming and instructive series of "Peeps at Many Lands." It describes in simple language both island and people, so that the reader will acquire a very fair general idea of them—of the geography and appearance of the country, and of the ways of life of the folk, including the work and the play of the children. There are twelve full-page illustrations in colour by A. S. Forrest, which admirably depict typical scenes. The get-up is chaste and agreeable.

The delightful series of "The Red Letter Library" offers a wide choice of modest volumes of excellent literature in most tasteful gets up. Among the more recent additions we have *The Ingoldsby Legend*- and *The Professor at the Breakfast Table* (2s. 6d. net each, Blackie.)

ANNUALS.

Herbert Strang's Annual (3s. 6d. net, or 5s. net cloth; Henry Frowde and Hodder & Stoughton) makes a valiant bid for the favour of young folk both in quality and quantity of matter. The numerous contributors are mostly well accustomed to the class of work, and the numerous artists furnish eight colour plates and countless other illustrations appropriate and effective. The letterpress is most varied and entertaining, many of the articles dealing with popular topics of the day, as well as recounting adventures, escapades, and other doings dear to the heart of the natural youth. The type is bold and agreeable, and the get-up is true blue. If we know anything of boys, this annual will be a great success.

Blackie's Children's Annual (3s. 6d.) consists, as usual, of simple and suitable stories and verses for young folk by a considerable number of writers experienced in this class of literary work, and it is lavishly illustrated in colours and in black and white. It is as varied and entertaining as ever.

The Empire Annual for Boys, edited by A. R. Buckland, M.A. (3s. 6d., Religious Tract Society), is a thick book of stories of various sorts, contributed by many well known writers, and illustrated with eight coloured and sixteen black-and-white pictures. There is a considerable spice of adventure, some personal narratives and experiences of interest, and local colour from most parts of the Empire. The tone is strenuous and healthy. The book should be widely read.

The Empire Annual for Girls, edited by A. R. Buckland, M.A. (3s. 6d., Religious Tract Society), consists of some forty stories (or articles) in great variety, by almost an equal number of writers, many of them experienced. The intention is moral and practical, and the "foreword" is strongly religious. The volume is thoroughly interesting. There are eight coloured plates and sixteen black-and-white illustrations.

Bo-Peep (2s 6d., Cassell) is a perennial "treasury for the little ones," with simple and suitable stories in prose and in verse, and abundance of capital illustrations in colour and otherwise. A delightful volume for young folk.

SEELEY & CO.'S NEW BOOKS

*** *A Miniature Illustrated Catalogue will be sent on Application.*

FAMILY NAMES AND THEIR STORY. By the Rev. S. BARING-GOULD, M.A. Demy 8vo, 7s. 6d. net.
"Exhaustive, picturesque, and amusing."—*Evening Standard.*

BOTANY OF TO-DAY. By Prof. G. F. SCOTT-ELLIOT, M.A., B.Sc., Author of "The Romance of Plant Life," &c. With 27 Illustrations. Crown 8vo, 5s. net.
"No one who reads this book will ever think botany a dull science again."—*Globe.*

AERIAL NAVIGATION OF TO-DAY. By CHARLES C. TURNER. With 70 Illustrations and Diagrams. Second Edition. Large crown 8vo, 5s. net.
"Wonderfully lucid—an ideal work of its kind."—*Bookman.*

ASPECTS OF MODERN OXFORD. By A. D. GODLEY, M.A. New Edition. Cloth, 2s. net; leather, 3s. net; buffed leather in box, 5s. net.
"The charm of Mr. Godley's work remains with its passages of humour and quiet satire and its excellent illustrations."—*Field.*

"THINGS SEEN."—*New Volumes.*
16mo, cloth, 2s. net; lambskin, 3s. net.

THINGS SEEN IN HOLLAND. By C. E. ROCHE. With 50 Illustrations.
"A most entertaining little volume."—*Queen.*

THINGS SEEN IN EGYPT. By E. L. BUTCHER. With 50 Illustrations.
"Mrs. Butcher is thoroughly conversant with her subject . . . excellently written."—*Globe.*

PROFESSOR CHURCH'S NEW BOOK.

THE FAERY QUEEN AND HER KNIGHTS. Stories retold from Edmund Spenser. By A. J. CHURCH, Author of "Stories from Homer," &c. With Illustrations in colour. Extra crown 8vo, 5s.
"It would be difficult to present the stories in more alluring guise."—*Guardian.*

HEROES OF MODERN INDIA. True Stories of the Founders of the Indian Empire. By the Rev. E. GILLIAT, M.A., Author of "Heroes of Modern Crusades." With many Illustrations. Extra crown 8vo, 5s.
"Of engrossing interest."—*Educational Times.*

THE LIBRARY OF ADVENTURE.—*New Volume.*
"There could be no more attractive books for boys."—*Scotsman.*
With 16 Illustrations. Extra crown 8vo, each 5s.

ADVENTURES IN THE ARCTIC REGIONS. By H. W. G. HYRST.
"Particularly timely, stirring, and thrilling."—*Scotsman.*

CLERGY MUTUAL ASSURANCE SOCIETY,

2 & 3 THE SANCTUARY, WESTMINSTER, S.W. [FOUNDED 1829.

Patrons—THE ARCHBISHOP OF CANTERBURY; THE ARCHBISHOP OF YORK.
President—THE BISHOP OF LONDON. Vice-President—THE LORD HARRIS.
Chairman—THE DEAN OF CANTERBURY. Deputy-Chairman—SIR PAGET BOWMAN, BART.
Secretary—W. N. NEALE, ESQ. Actuary and Manager—FRANK B. WYATT, ESQ., F.I.A.

The Society offers the BENEFITS of MUTUAL LIFE ASSURANCE without personal liability on highly favourable terms to

THE CLERGY AND THEIR RELATIVES.

ALL PROFITS BELONG TO THE MEMBERS.

Accumulated Fund, £4,351,137. Annual Income, £471,097.

Bonuses Distributed, £4,256,464.

LOW PREMIUMS. LARGE BONUSES. Notwithstanding the lowness of the Premiums charged, the BONUSES are on an EXCEPTIONALLY HIGH SCALE.

NEW AND SPECIAL POLICIES. Application is invited for the PROSPECTUS, and Leaflets explaining two new Policies, with valuable Options.

WHOLE-LIFE CONVERTIBLE ASSURANCES. Very Low Premium—about one half the usual rate—during first ten years.

2. PENSION POLICIES. Premiums returnable with compound interest in case of death or surrender before pension age. Option to commute for cash.

Assurances without profits, at low rates of premium, may be effected, and Life Annuities on favourable terms may be purchased, by any person irrespective of any special qualification by relationship to the Clergy.

ANNUAL PREMIUMS FOR £1,000, WITH PROFITS.

Age next Birthday.	£1,000 Payable at Death.			£1,000 Payable at Age 60 or earlier Death.		
	£.	s.	d.	£.	s.	d.
25	20	1	8	27	3	4
30	23	3	4	32	10	10
35	26	10	0	40	1	8
40	31	1	8	51	5	0

NOTE.—Under the Reduced Premium System (explained in Prospectus) four-fifths only of these Premiums need be paid, the other one-fifth remaining a charge to be repaid out of Bonus.

No Agents employed and no Commission paid for the introduction of business, whereby £10,000 a year is saved to the Members.

Assurances can be effected by direct communication with the Office, 2 & 3 THE SANCTUARY, WESTMINSTER, S.W.

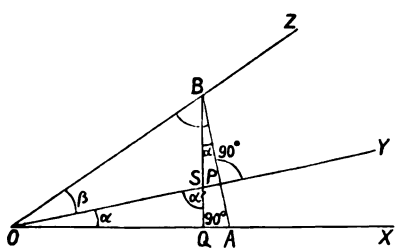
MATHEMATICS.

Trigonometrical Note.

By VENTURA REYES Y PRÓSPER.

Soit $\angle XOY = \alpha$,
$\angle YOZ = \beta$,
$\angle XOZ = \alpha + \beta$.

Prenons sur OZ un point B et menons BQ perpendiculaire à OX et BP perpendiculaire à OY. BQ coupe en S la droite OY, et BP coupe en A la droite OX. Appellons enfin α' l'angle QSO. Nous aurons



$$\sin(\alpha+\beta) = QB/OB = (AB\cos\alpha)/OB,$$

car le triangle BQA est rectangle en Q. Or, nous avons

$$(AB\cos\alpha)/OB = [(BP+PA)/OB]\cos\alpha = [(OB\sin\beta + OA\sin\alpha)/OB]\cos\alpha$$
$$= (OB\sin\beta\cos\alpha + OA\sin\alpha\cos\alpha)/OB$$
$$= \sin\beta\cos\alpha + (OA/OB)\sin\alpha\cos\alpha,$$

car $BP = OB\sin\beta$ et $PA = OA\sin\alpha$.

Or, dans le triangle OBA, nous avons

$$OA/OB = \sin ABO/\sin BAO = \cos\beta/\cos\alpha,$$

car les angles ABO et β, et BAO et α, sont complémentaires. Donc enfin

$$\sin\beta\cos\alpha + (OA/OB)\sin\alpha\cos\alpha = \sin\beta\cos\alpha + (\cos\beta/\cos\alpha)\sin\alpha\cos\alpha$$
$$= \sin\beta\cos\alpha + \cos\beta\sin\alpha.$$

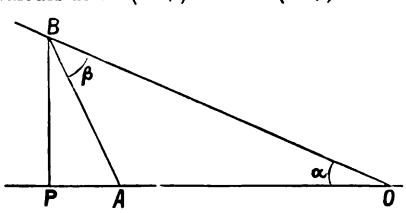
Cette démonstration peut être simplifiée en prenant $OB = 1$.

La formule donnant la valeur de $\cos(\alpha+\beta)$ peut aussi être obtenue de la manière suivante, que je crois nouvelle:

$$\cos(\alpha+\beta) = OQ/OB = (OS\cos\alpha)/OB = [(OP-SP)/OB]\cos\alpha$$
$$= [(OB\cos\beta - SP)/OB]\cos\alpha = \cos\alpha\cos\beta - (SP/OB)\cos\alpha$$
$$= \cos\alpha\cos\beta - [(BP\,\mathrm{tg}\,\alpha)/OB]\cos\alpha$$
$$= \cos\alpha\cos\beta - \{[OB\sin\beta(\sin\alpha/\cos\alpha)]/OB\}\cos\alpha$$
$$= \cos\alpha\cos\beta - \sin\beta\sin\alpha.$$

Je viens de trouver encore une nouvelle démonstration de la formule donnant la valeur de $\sin(\alpha+\beta)$, laquelle me semble avoir de l'intérêt, car la figure est la plus simple que l'on puisse imaginer, et la formule est obtenue par la résolution d'une équation du deuxième degré, donnant comme racines les valeurs de $\sin(\alpha+\beta)$ et de $\sin(\alpha-\beta)$.

Prenons $OB = 1$,
$\angle AOB = \alpha$,
$\angle ABO = \beta$;
alors $\angle PAB = \alpha+\beta = S$.



Nous aurons

$$PB = \sin\alpha,$$
$$\sin PAB = \sin(\alpha+\beta) = \sin S = PB/AB.$$

Donc, $\sin^2 S = PB^2/AB^2$ ou $\sin^2 S = \sin^2\alpha/[1+(AO)^2-2(AO)\cos\alpha]$, car dans le triangle ABO on a

$$(AB)^2 = 1^2 + (OA)^2 - 2(OA)\cos\alpha.$$

Or, dans le même triangle ABO, nous avons

$$OA/OB = OA/1 = \sin\beta/\sin BAO = \sin\beta/\sin(\alpha+\beta) = \sin\beta/\sin S,$$

ainsi l'on aura

$$\sin^2 S = \sin^2\alpha/[1 + (\sin^2\beta/\sin^2 S) - 2(\sin\beta/\sin S)\cos\alpha],$$

d'où en chassant dénominateurs l'on obtient

$$\sin^2 S + \sin^2\beta - 2\sin\beta\sin S\cos\alpha = \sin^2\alpha,$$

ou

$$\sin^2 S - 2\sin S\sin\beta\cos\alpha + \sin^2\beta - \sin^2\alpha = 0,$$

et en résolvant l'équation

$$\sin S = \tfrac{1}{2}[2\sin\beta\cos\alpha \pm \sqrt{(4\sin^2\beta\cos^2\alpha - 4\sin^2\beta + 4\sin^2\alpha)}]$$
$$\sin S = \sin\beta\cos\alpha \pm \sqrt{(\sin^2\beta\cos^2\alpha - \sin^2\beta + \sin^2\alpha)}$$
$$= \sin\beta\cos\alpha \pm \sqrt{[\sin^2\alpha - \sin^2\beta(1-\cos^2\alpha)]}$$
$$= \sin\beta\cos\alpha \pm \sqrt{(\sin^2\alpha - \sin^2\beta\sin^2\alpha)}$$
$$= \sin\beta\cos\alpha \pm \sqrt{[\sin^2\alpha(1-\sin^2\beta)]}$$
$$= \sin\beta\cos\alpha \pm \sqrt{(\sin^2\alpha\cos^2\beta)}$$
$$= \sin\beta\cos\alpha \pm \sin\alpha\cos\beta.$$

[Rest in *Reprint*.]

11654. (Professor DE LONGCHAMPS.)—L'équation

$$Ax^m + mBx^{m-1} + \tfrac{1}{2}[m(m-1)]Ax^{m-2} + \tfrac{1}{6}[m(m-1)(m-2)]Bx^{m-3} + f_{m-4}(x) = 0,$$

Digitized by Google

dans laquelle $f_{m-4}(x)$ désigne une fonction entière quelconque, du degré $m-4$, a, au moins, deux racines imaginaires.

Solution by W. E. H. BERWICK.

In order that all the roots of the equation may be real, it is necessary that all the roots of its derivative be real, and hence that all the roots of its second derivative be real, and so on.

The $(m-3)$-th derivative is a numerical multiple of

$$Ax^3+3Bx^2+3Ax+B \quad \text{or of} \quad (A+B)(x+1)^3+(A-B)(x-1)^3.$$

This cubic certainly possesses two imaginary zeros except when $A \pm B = 0$. Thus, except in this case, the given equation has two imaginary roots at least. If $A \pm B = 0$, the $(m-4)$-th derivative is a multiple of $A(x \pm 1)^4 + C$, a quartic which can only possess four real zeros when $C = 0$.

Proceeding in this way, we see that the given equation must have at least two imaginary roots unless the left-hand side is a numerical multiple of $(x+1)^m$ or of $(x-1)^m$.

16737. (Professor SANJÁNA, M.A.)—Prove that numbers of the form X^6+Y^6 can be resolved into three factors when

$X = 5, 121, 3597, 107761, \ldots,$ and $Y = 3, 119, 3595, 107759, \ldots$.

Resolve completely

$N_2 = 121^6+119^6$, $N_3 = 3597^6+3595^6$, and $N_4 = 107761^6+107759^6$.

Solution by Lt.-Col. ALLAN CUNNINGHAM, R.E.

Let $N = X^6+Y^6 = N_{ii}.N_{vi}$, where $N_{ii} = X^2+Y^2$

and $N_{vi} = (X^6+Y^6) \div (X^2+Y^2) = (X^4-X^2Y^2+Y^4)$, a Sextan.

In cases like this, where X, Y are both odd, and $X-Y = 2$ (a constant), it is convenient to change X, Y into x, y by the formulæ $x = \frac{1}{2}(X-Y)$, $y = \frac{1}{2}(X+Y)$, so that $x = 1$ throughout, and the series becomes

$$(x, y) = (1, 4), (1, 120), (1, 3596), (1, 107760), \&c.,$$

and N_{ii}, N_{vi} take the simpler forms

$$N_{ii} = 2(1^2+y^2); \quad N_{vi} = (1^4+14y^2+y^4).$$

The writer has compiled a Table of solutions of the congruence $y^2+1 \equiv 0 \pmod{p}$, complete up to $p \not> 52{,}181$ (this is now in course of publication); this has rendered it possible to factorise the series of N_{ii} completely (into prime factors), as below:

$(x, y) =$	1, 4	1, 120	1, 3596	1, 107760
$N_{ii} =$	2.17;	2.14401;	$2.13.994709$;	48481.239521;

To resolve N_{vi}, assume

$$N_{vi} = P^2-Q^2 = (1+Cy^2)^2-y^2z^2.$$

This requires $(2C-14).1^2+(C^2-1)y^2 = z^2$.

If this Diophantine can be solved (in integers), N_{vi} will be resolvable into two co-factors, $L = P-Q$, $M = P+Q$.

Denote the members of the series of N_{vi} by N_1, N_2, N_3, N_4, &c. Any number (say N_1) of this series may suffice (if the various assumptions are admissible) to determine C by the formula $C = (P-1) \div y^2$. Now $y_1 = 4$ gives $N_1 = (1^4+14.4^2+4^4) = 481 = 241^2-240^2$, whence $P = 241$, $C = 15$, and the Diophantine becomes $16.1^2+224y^2 = z^2$ or $(\frac{1}{4}z)^2-14y^2 = +1$, the successive solutions (y, z) of which are

$$(y, z) = (4, 15), (120, 449), (3596, 13455), (107760, 403201),$$

and these are the values of y required) so that the various assumptions are justified).

The members N_1, N_2, N_3, N_4, ..., of the series of N_{vi} may now be factorised, each into two co-factors (L, M) by the formulæ $P = 1+Cy^2$, $Q = yz$, $L = P-Q$, $M = P+Q$, as below, and then L, M can be further resolved (when < 9 million) by the large Factor-Tables, as the results below:

$x, y =$	1, 4	1, 120	1, 3596	1, 107760
L =	1	13.37	431521;	387504961?
M =	13.37;	431521;	387504961?	13.26767617157?

The large factors (marked ?), being > 9 million, are beyond the powers of the large Factor-Tables: it has been found (by trial) that they contain no divisors < 1,000; their prime divisors (if any) must be of form $p = 12w+1$. Note that these N_{vi} form a "Chain" such that $M_r = L_{r+1}$ for all values of r: this is a general property of all series of N_{vi} formed from successive solutions of 2-ic Diophantines as above (with x constant). This process will be found fully detailed in Chapter IV of the author's paper on "High Sextan Factorisations," now appearing in the *Messenger of Mathematics*. It is not really suited for factorising *given* Sextans (with only x, y known), as it is usually difficult to discover the form of Diophantine suited.

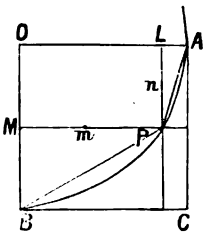
16694. (Professor SANJÁNA, M.A.)—Prove geometrically that

$$\tan^{-1}(\sqrt{m^2+n^2}-n)/m + \tan^{-1}(\sqrt{m^2+n^2}-m)/n = \tfrac{1}{4}\pi.$$

[It is impossible to publish all the numerous solutions sent in.—ED.]

Solutions (I) *by* M. T. NARANIENGAR, M.A.; (II) *by* R. CHARTRES; (III) *by* Prof. K. PRASAD DE, M.A., F. W. REEVES, M.A., *and* A. H. S. GILLSON; (IV) *by* Rev. WILLIAM ANDERSON.

(I) Take a square OACB and describe the quadrant APB. Through P draw PL, PM perpendicular to OA, OB. Denoting these by n, m,



$$\tan \angle MPB = MB/MP = (OB-OM)/MP = (\sqrt{m^2+n^2}-n)/m$$

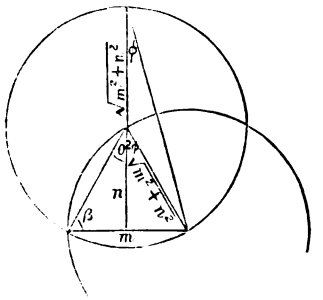
and $\tan \angle LPA = (\sqrt{m^2+n^2}-m)/n$.

Also $\angle APB = \frac{3}{4}\pi$;

therefore $\angle MPB + \angle LPA = \frac{1}{4}\pi$.

Hence $\tan^{-1}(\sqrt{m^2+n^2}-n)/m + \tan^{-1}(\sqrt{m^2+n^2}-m)/n = \frac{1}{4}\pi$.

(II) Evidently



$$\theta = \tan^{-1}(\sqrt{m^2+n^2}-m)/n$$

and $\phi = \tan^{-1}(\sqrt{m^2+n^2}-n)/m$.

Now $\theta+2\phi = \beta$;

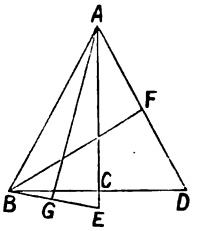
therefore $2\theta+2\phi = \beta+\theta = \frac{1}{2}\pi$.

therefore $\theta+\phi = \frac{1}{4}\pi$.

(III) Construct a right-angled triangle ACB such that its sides AC and BC are of lengths m and n respectively,

Then $AB = \sqrt{m^2+n^2}$.

Produce BC to D, making BD = BA, and AC to E, making AE = AB. Draw BF and AG perpendicular to AD and BE respectively.



Now $CD = \sqrt{m^2+n^2}-n$

and $CE = \sqrt{m^2+n^2}-m$;

therefore $\tan^{-1}(\sqrt{m^2+n^2}-n)/m$

$= \angle CAD = \angle FBD = \frac{1}{2}B$;

and $\tan^{-1}(\sqrt{m^2+n^2}-m)/n$

$= \angle CBE = \angle EAG = \frac{1}{2}A$;

therefore

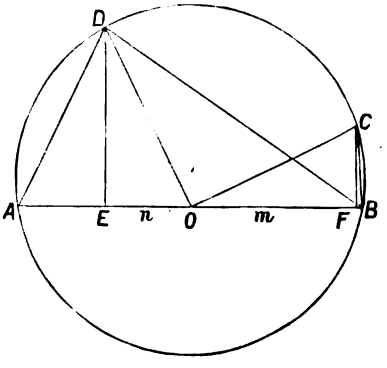
$$\tan^{-1}(\sqrt{m^2+n^2}-n)/m + \tan^{-1}(\sqrt{m^2+n^2}-m)/n = \tfrac{1}{2}(A+B) = \tfrac{1}{4}\pi.$$

(IV) Let $OF = m$,

FC perpendicular to it $= n$,

then $OC = \sqrt{m^2+n^2}$,

$OE = n$, $ED = m$.



$\tan^{-1}(\sqrt{m^2+n^2}-n)/m$

$+ \tan^{-1}(\sqrt{m^2+n^2}-m)/n$

$= ADE + BCF$

$= ABD + BAC$

$= \frac{1}{2}(AOD + BOC)$

$= \frac{1}{4}\pi$,

since DOC is right.

Mr. GILLSON remarks that:—

Geometrically this property may be stated as follows: ABC is an isosceles triangle having AB = AC; and from B, BD is drawn perpendicular to the side AC, and then produced to E, so that BE = AB. Show that twice the sum of the angles EAD, CBD is a right angle.

16683. (Professor NEUBERG.)—Éliminer les constantes a, b, c, m, n, p de l'équation $y = ae^{mx}+be^{nx}+ce^{px}$ en formant les dérivées y', y'', ...

Solutions (I) *by* A. M. NESBITT, M.A., C. M. ROSS, B.A., *and* KRISHNA PRASAD DE, M.A.; (II) *by* T. W. CHAUNDY; (III) *by* EDITH J. D. MORRISON, M.A.

(I) We readily find

$$\begin{vmatrix} y & 1 & 1 & 1 \\ y' & m & n & p \\ y'' & m^2 & n^2 & p^2 \\ y''' & m^3 & n^3 & p^3 \end{vmatrix} = 0,$$

Digitized by Google

and on removing the factors $\Pi(n-p)$, we get

$$fy - gy' + hy'' - y''' = 0,$$

where m, n, p are the roots of $\theta^3 - h\theta^2 + g\theta - f = 0$. Thus finally

$$\begin{vmatrix} y & y' & y'' & y''' \\ y' & y'' & y''' & y^{iv} \\ y'' & y''' & y^{iv} & y^{v} \\ y''' & y^{iv} & y^{v} & y^{vi} \end{vmatrix} = 0.$$

(II) We know that

$(d/dx-m)(d/dx-n)(d/dx-p)$ annihilates y,

i.e., $(d/dx)^3 + \alpha(d/dx)^2 + \beta(d/dx) + \gamma$,, y,

where $\alpha = -(m+n+p) : \beta = np+pm+mn : \gamma = -mnp$,

so that $y_3 + \alpha y_2 + \beta y_1 + \gamma y = 0$,

differentiating $y_4 + \alpha y_3 + \beta y_2 + \gamma y_1 = 0$,

$y_5 + \alpha y_4 + \ldots\ldots\ldots = 0$,

$y_6 + \alpha y_5 + \ldots\ldots\ldots = 0$,

so that, eliminating α, β, γ, *i.e.*, m, n, p,

$$\begin{vmatrix} y_3 & y_2 & y_1 & y \\ y_4 & y_3 & y_2 & y_1 \\ y_5 & y_4 & y_3 & y_2 \\ y_6 & y_5 & y_4 & y_3 \end{vmatrix} = 0,$$

is the eliminant, being of the right (the sixth) degree.

(III) Form the first six derivatives $y', y'', \ldots$. Eliminate a, b, c between the original and the first three derived equations; the first, second, third, and fourth; the second, third, fourth, and fifth; the third, fourth, fifth, and sixth; and we get the four equations

$$\begin{vmatrix} 1 & 1 & 1 & y \\ m & n & p & y' \\ m^2 & n^2 & p^2 & y'' \\ m^3 & n^3 & p^3 & y''' \end{vmatrix} = 0, \qquad mnp \begin{vmatrix} 1 & 1 & 1 & y' \\ m & n & p & y'' \\ m^2 & n^2 & p^2 & y''' \\ m^3 & n^3 & p^3 & y^{iv} \end{vmatrix} = 0,$$

$$m^2n^2p \begin{vmatrix} 1 & 1 & 1 & y'' \\ m & n & p & y''' \\ m^2 & n^2 & p^2 & y^{iv} \\ m^3 & n^3 & p^3 & y^{v} \end{vmatrix} = 0, \qquad m^3n^3p^3 \begin{vmatrix} 1 & 1 & 1 & y''' \\ m & n & p & y^{iv} \\ m^2 & n^2 & p^2 & y^{v} \\ m^3 & n^3 & p^3 & y^{vi} \end{vmatrix} = 0.$$

Hence, eliminating m, n, p, we get

$$\begin{vmatrix} y & y' & y'' & y''' \\ y' & y'' & y''' & y^{iv} \\ y'' & y''' & y^{iv} & y^{v} \\ y''' & y^{iv} & y^{v} & y^{vi} \end{vmatrix} = 0.$$

16748. (Professor E. HERNÁNDEZ.)—Dans tout triangle ABC, on a

(1) $r(1/r_ar_b + 1/r_br_c + 1/r_cr_a) = 4(r_a+r_b+r_c)/(a+b+c)^2$,

(2) $p^2r = r_ar_br_c$,

(3) $(ab+bc+ca)/rr_ar_br_c = 1/r^2 + 1/r_ar_b + 1/r_br_c + 1/r_cr_a$,

r étant le rayon du cercle inscrit, et r_a le rayon du cercle ex-inscrit qui touche directement le côté a, et de même pour r_b et r_c.

Solution by F. G. W. BROWN, B.Sc., L.C.P., *and others.*

If Δ denotes the area of the triangle, then, from well known formulæ, we have (i) $\Delta^2 = rr_ar_br_c = \frac{1}{4}(a+b+c)^2r^2$,

(ii) $1/r = 1/r_a + 1/r_b + 1/r^c$,

and (iii) $rr_a + rr_b + rr_c + r_ar_b + r_ar_c + r_br_c = ab + bc + ca$.

Hence

(1) $r(1/r_ar_b + 1/r_br_c + 1/r_cr_a) = r(r_a+r_b+r_c)/r_ar_br_c = r^2(r_a+r_b+r_c)/\Delta^2$
$= 4(r_a+r_b+r_c)/(a+b+c)^2$, from (i).

(2) p (although not defined) is obviously the semi-perimeter; therefore
$p^2r = \frac{1}{4}(a+b+c)^2 r = \Delta^2/r = r_ar_br_c$, from (i).

(3) $(ab+bc+ca)/rr_ar_br_c = (rr_a + rr_b + rr_c + r_ar_b + r_ar_c + r_br_c)/rr_ar_br_c$
[from (iii)]
$= 1/r_ar_b + 1/r_br_c + 1/r_cr_a + 1/r(1/r_a + 1/r_b + 1/r_c)$
$= 1/r_ar_b + 1/r_br_c + 1/r_cr_a + 1/r^2$, from (ii).

16613. (H. L. TRACHTENBERG, B.A.)—The angular points of a triangle, the foci of the maximum inscribed ellipse, and the symmedian point lie on a conic.

Solution by S. NARAYANAN, B.A., L.T.

Since the centroid is the centre of the maximum ellipse, it is evident that the isogonal transformation of the major axis of that ellipse gives a circumconic of the triangle, which passes through the symmedian point and the foci of that ellipse. Hence the theorem.

16657. (Professor V. RAMASWAMI AIYAR, M.A.)—P and Q are any pair of isogonal conjugates with respect to a triangle ABC. If AQ cut the circum-circle in O, and OP cut BC in R, show that QR is parallel to AP.

Solutions (I) *by* C. E. MCVICKER, M.A.; (II) *by* M. T. NARANIENGAR, M.A.

(I) Let AP meet the circum-circle at D; BC at S, and AQ meet BC at U.

Suppose PQ to vary on the lines AP, AQ, then obviously Q, R describe homographic ranges.

When Q is at U, R is also at U, since P is at A; hence QR passes through a fixed point.

When Q is at A, R is at S, and Q, R both lie at infinity when P is at D; thus QR meets SA at infinity. [Rest in *Reprint*.]

QUESTIONS FOR SOLUTION.

16769. (A. H. S. GILLSON.)—Two particles P and Q, of equal mass, connected by a light inextensible thread, are moving in a smooth parabolic tube, under the action of a force to the focus; the force attracting according to the Law of Nature. When the particles are at equal distances from the focus, the common velocity is the same as it would have been if only one particle were present. Show that the velocity at any instant is given by $V^2 = \mu(1/r + 1/r')$, where r and r' are the distances of the particles from the focus.

16770. (Professor SANJÁNA, M.A.)—Prove that the sum of the series $\tan^{-1}\frac{x-\cos\pi/2m}{\sin\pi/2m} - \tan^{-1}\frac{x-\cos 3\pi/2m}{\sin 3\pi/2m} + \tan^{-1}\frac{x-\cos 5\pi/2m}{\sin 5\pi/2m} \ldots$
$- \ldots + (-1)^{(m-1)}\tan^{-1}\frac{x-\cos(2m-1)\pi/2m}{\sin(2m-1)\pi/2m}$
is $\tan^{-1}x^m + C$, where C is independent of x and m is an integer.

16771. (*Communicated by* C. M. Ross, B.A.)—Show that

$$\begin{vmatrix} 1 & 1 & 0 & 0 & \ldots\ldots & 0 & 0 \\ 1! & & & & & & \\ \frac{1}{2!} & \frac{1}{1!} & 1 & 0 & \ldots\ldots & 0 & 0 \\ \frac{1}{3!} & \frac{1}{2!} & \frac{1}{1!} & 1 & \ldots\ldots & 0 & 0 \\ \ldots & \ldots & \ldots & \ldots & \ldots\ldots & \ldots & \ldots \\ \ldots & \ldots & \ldots & \ldots & \ldots\ldots & \ldots & \ldots \\ \frac{1}{(n-1)!} & \frac{1}{(n-2)!} & \frac{1}{(n-3)!} & \frac{1}{(n-4)!} & \ldots\ldots & \frac{1}{1!} & 1 \\ \frac{1}{n!} & \frac{1}{(n-1)!} & \frac{1}{(n-2)!} & \frac{1}{(n-3)!} & \ldots\ldots & \frac{1}{2!} & \frac{1}{1!} \end{vmatrix} = \frac{1}{n!}.$$

[N.B.—This question was proposed in the Mathematical Tripos, 1909, Part I, Old Regulations.]

16772. (Professor SANJÁNA, M.A.)—Let N be a rational number (greater than unity) such that $N^{\frac{1}{2}}$, when reduced to a continued fraction, gives $a + \frac{1}{b+}\frac{1}{2a+}\frac{1}{b+}\frac{1}{2a+}\ldots$, *ad inf.*,

and let successive convergents to the fraction be denoted by $c_1, c_2, c_3, \ldots$ Prove that

$$c_{2m} = \tfrac{1}{2}\{N/c_m + c_m\} \quad \text{and} \quad c_{l+m} = \{N/c_l + c_m\} \div \{c_m/c_l + 1\},$$

where l and m are any integers.

16773. (Lt.-Col. ALLAN CUNNINGHAM, R.E.)—Resolve algebraically into two co-factors each of the numbers $N = (tu)^4 + 3(t^2 \mp u^2)^4$.

Ex.—Taking $t = 100$, $u = 1$. Resolve both N into prime factors if possible.

16774. (D. EDWARDES.)—If S, T denote the substitutions

$$x' = (ax+b)/(cx+d) \quad \text{and} \quad x' = (\gamma x + \delta)/(cx+d)$$

respectively, find (1) the transform of S by T, and (2) the condition that S should be of finite order.

16775. (M. V. ARUNACHALAN, M.A.)—Prove that

$$\tfrac{1}{3}P_1 - \tfrac{1}{5}P_3 + \tfrac{1}{7}P_5 - \ldots + (-1)^{n+1}[1/(2n+1)]P_{2n-1} \ldots = 3\tfrac{1}{16}\pi^3,$$

where $P_{2r-1} = \frac{1}{2}R(1) + \frac{1}{4}R(3) + \frac{1}{6}R(5) + \ldots + \frac{1}{2r}R(2r-1)$

and $R(2p-1) = 1 + \frac{1}{3} + \frac{1}{5} + \ldots + \frac{1}{2p-1}$.

16776. (R. F. DAVIS, M.A.)—Prove that the Simple Interest on £N for t days at five per cent. per annum is $£137Nt/10^6$. [*E.g.*, the interest on £2000 for six days is £1. 12*s.* 10*d.*]

16777. (Professor NEUBERG.)—Étant donné un tétraèdre ABCD, on mène par un même point M des plans parallèles aux faces; soient t_a, t_b, t_c, t_d les aires des triangles suivant lesquels ces plans coupent les angles trièdres A, B, C, D. Trouver (1°) le lieu des points tels que la

Digitized by Google

somme $t_a^2 + t_b^2 + t_c^2 + t_d^2$ ait une valeur donnée ; (2)° le point qui rend cette somme minimum ; (3°) les points pour lesquels $t_a = t_b = t_c = t_d$.

16778. (C. E. YOUNGMAN, M.A.)—If three parallels touch a cardioide at P, Q, R, then the tangents *from* P, Q, R will meet at a point T lying on the circle inscribed in the space between the curve and its double tangent.

16779. (A. M. NESBTT, M.A.)—Two parabolas have contact of the second order at P, their axes being at right angles. A, A′ being their vertices, prove (1) that the rectangle under the abscissa and ordinate of P is the same whichever be the parabola to whose (ordinary) axes they refer; (2) that, if the A parabola be fixed and its latus rectum be $4a$, the locus of A′ will be $y^2 = 3ax$; (3) that the polar of A′ with respect to the A parabola envelopes $3y^2 = 32ax$; (4) that the locus of the intersection of the polars of A and A′, each with respect to the other parabola, is $5y^2 = 48ax$.

16780. (Professor E. HERNÁNDEZ.)—On donne un foyer F, un poin. A et les longueurs $2a$ et $2b$ des axes, et on demande de trouver les tan gentes communes aux éllipses déterminées par ces données, ainsi que leurs points de contact.

16781. (S. NARAYANAN, B.A., L.T.)—ABC is a triangle whose medial triangle is DEF. I is the in-centre or an ex-centre of DEF. P is the corresponding Feuerbach's point of ABC. A conic is circumscribed to DEF such that the normals to it at D, E, F meet at I. Show that IP is the *fourth* normal of the conic.

16782. (SONTI V. RAMAMURTY, B.A.)—The condition that an infinite number of triangles can be inscribed in a circle of radius R and in-centre S so as to circumscribe a given ellipse of foci F, F′ and minor axis b, is $(R^2 - SF^2)(R^2 - SF'^2) = 4R^2b^2$.

16783. (Professor NANSON.)—If a, a' ; b, b' ; c, c' are pairs of opposite sides of a four point , prove that

$$aa' : bb' : cc' = \sin\lambda : \sin\mu : \sin\nu,$$

$$aa' + bb'\cos\nu + cc'\cos\mu = 0,$$

$$a^2a'^2 = b^2b'^2 + c^2c'^2 + 2bb'cc'\cos\lambda,$$

where λ is the sum of the angles bc, $b'c'$, or, what is equivalent, the sum of the angles bc', $b'c$.

16784. (R. C. ARCHIBALD, M.A., Ph.D.)—Given a circle C, a line of given length z, and a line l of unlimited length, draw from any point of C a line meeting the circumference again in Q, and l in R, such that $QR = z$.

16785. (H. J. RAYMOND.)—OA, OB are two given radii of a circle, centre O, and C is a fixed point between O and A, on OA. From O and C draw parallel straight lines OE, CD to meet the circumference of the circle in E and D respectively, such that, if O, D be joined, the magnitudes of the angles DOE and EOB shall be in a given ratio.

16786. (W. L. MARR, M.A., B.Sc. Suggested by Qnestion 16563.)—Given a circle and two points A and B, find geometrically points P and Q on the circumference of the circle, so that AP/BP is a maximum and AQ/QB a minimum.

OLD QUESTIONS AS YET UNSOLVED (IN OUR COLUMNS).

12392. (R. KNOWLES, B.A.)—In any triangle, prove that

$$bc = (s-c)^2 + 2(s-b)(s-c) + r_b^2 - 2(2R\cos C - r)r_b.$$

12634. (J. J. WALKER, F.R.S.)—Show that the anharmonic polars of three collinear points of inflexion on a plane cubic meet in a point.

12638. (Professor SYLVESTER.)—If a plane moves with the same two of its points always on the circumference of two circles in a fixed plane, prove that no other point in the moving plane can describe a circle except in the case when the distance between the centres of the two circles, their radii, and the distance between the two points consist of two pairs of equal quantities.

12642. (Professor H. L. ORCHARD, M.A., B.Sc.)—In the cubic equation $ax^3 + bx^2 + cx + d = 0$, a and b being known, determine c and d, in order that the equation may be soluble as a quadratic.

12658. (Rev. T. P. KIRKMAN, M.A., F.R.S.)—Show how to find readily any one of the k-partitions ($_kPN$) of N, when merely the product of its k parts is given, the parts being integers > 0, either all different, or any repeated parts. N and k are any positive numbers.

12670. (Professor HUDSON, M.A.)—A cube is placed on a rough inclined plane with four of its edges horizontal. A sphere is placed loosely on the plane above the cube, resting against it. The coefficients of friction between the different bodies being equal, find how, and for what inclination of the plane, equilibrium will be broken.

NOTICE TO CORRESPONDENTS.

It is requested that all Mathematical communications should be sent to the Mathematical Editor,

Miss CONSTANCE I. MARKS, B.A., 10 Matheson Road, West Kensington, W.

Vol. XVI (New Series) of the "Mathematical Reprint" is now ready, and may be had of the Publisher, FRANCIS HODGSON, *89 Farringdon Street, E.C. Price to Subscribers, 5s.; to Non-Subscribers, 6s. 6d.*

THE LONDON MATHEMATICAL SOCIETY.

Thursday, November 11th, 1909 (Annual General Meeting).—Sir W. D. Niven, President, in the chair.

Mr. W. P. Milne was admitted into the Society.

The Council and officers for the ensuing Session were elected, as follows:—President, Sir W. D. Niven; Vice-Presidents, Mr. A. Berry, Prof. W. Burnside, Major P. A. MacMahon; Treasurer, Sir J. Larmor; Secretaries, Prof. A. E. H. Love, Mr. J. H. Grace; other members of the Council, Dr. H. F. Baker, Mr. G. T. Bennett, Dr. T. J. I'A. Bromwich, Mr. E. Cunningham, Mr. A. L. Dixon, Dr. L. N. G. Filon, Dr. E. W. Hobson, Mr. H. W. Richmond, Mr. A. E. Western.

The following papers were communicated:—

(1) "The Ordinal Relations of the Terms of a Convergent Sequence," (2) "The Application to Dirichlet's Series of Borel's Exponential Method of Summation," (3) "Theorems relating to the Summability and Convergence of Slowly Oscillating Series": Mr. G. H. Hardy.

"Notes on Synthetic Geometry": Prof. W. Esson.

"Kummer's Quartic Surface as a Wave Surface": Mr. H. Bateman.

"The Green's Function in a Wedge and other Problems in the Conduction of Heat": Prof. H. S. Carslaw.

"The Envelope of a Line cut Harmonically by Two Conics": Mr. J. L. S. Hatton.

"On a Case of q-Hypergeometric Series": Rev. F. H. Jackson.

Informal communications were made as follows:—

"On the Extension of Abel's Theorem concerning the Sums of Power Series at Points on the Circle of Convergence to Cases in which the Series are Oscillatory": Dr. E. W. Hobson.

"On the Effect of the Earth's Rotation upon the Observed Values of the Lunar Disturbance of Gravity": Prof. A. E. H. Love.

EXAMINATION PAPER
AS USED BY THE
COLLEGE OF PRECEPTORS.
In strict accordance with the College requirements, *and each Sheet bears their Watermark.*
Packed in Reams of 480 Sheets ... ... per Ream, 2s.
" " 960 " ... ... " 4s.
Bookkeeping Paper, ruled for Ledger, Cash Book, and Journal, 1s. per 100 Sheets.
Music Paper, 1s. per 100 Sheets.

63 HIGH HOLBORN, LONDON, W.C.

STAMMERING.
Mrs. CALDWELL (Specialist) successfully treats Stammering, Stuttering, and all defects of Speech.
Resident and non-resident pupils of both sexes and all ages received.
Booklet with Testimonials, Press Notices, &c., sent free.
Mrs. CALDWELL, Institute for Stammerers, 71 Princes Street, EDINBURGH.
(Established 1902.)

THE LATEST IMPROVEMENT IN SELF-FILLING FOUNTAIN PENS
is a proved success, and to make this Pen known to every reader of *The Educational Times* the makers offer 100,000 at less than one-third the usual price, namely, Sample Pens at **5/-**, or three Pens for **10/6.**

The Safety Self-filling Pen is truly the simplest Pen made; a single slide fills the Pen. No inside parts to get out of order, no rubber to perish, does not leak or blot, and every Pen is guaranteed for two years. The Pen is fitted with a 14-carat solid gold nib, iridium pointed—fine, medium, broad, or J—and every Pen is guaranteed to work well or money will be returned.

BLACKIE & SON'S LIST

A LATIN COURSE.

By **E. H. SCOTT, B.A.**, and **FRANK JONES, B.A.**
FIRST COURSE, cloth, 1s. 6d.
SECOND COURSE, cloth, Illustrated, 2s. 6d.
In use in the Junior Departments of the leading Public Schools, in the Girls' High Schools, and the Principal Preparatory Schools.

A FIRST LATIN GRAMMAR.

To accompany Scott and Jones's Latin Course.
By **E. H. SCOTT, B.A.**
Late Head Master of Boys' Secondary School, Barberton, Transvaal, and
FRANK JONES, B.A.
Assistant Master, King Edward's School, Aston, Birmingham.
Crown 8vo, cloth. Price 2s.

This grammar has been prepared by the late Mr. Scott and Mr. Jones as a natural complement to their well known First and Second Courses.
Great care has been given to the arrangement and typographical display of the matter, in order to secure the utmost clearness. Thus, use is made throughout of a synoptical arrangement of parallel columns which shows the various declensions and conjugations side by side, bringing out their differences and resemblances.

GEOGRAPHY.

STRUCTURAL—PHYSICAL—COMPARATIVE.
A TEXT-BOOK FOR SENIOR STUDENTS.
By **J. W. GREGORY, D.Sc., F.R.S.**
Professor of Geology in the Glasgow University.
With a Series of specially constructed Coloured Maps and Sketch Maps and Plans in Black and White. Large 8vo, 6s. net.

The main purpose of this book is to put before the student the most important facts concerning the Structural Geography of the Earth, and the evolution of our present continents from older lands. It marks a new departure both in aims and in method. It furnishes the student with such knowledge of the entire surface of the Earth as will ensure his acquisition of geographical perspective.

PHYSICAL AND STRUCTURAL GEOGRAPHY.

By **J. W. GREGORY, D.Sc., F.R.S.**
Being the Introductory Portion of the Complete Book, issued separately to meet the convenience of many who have asked for it. Cloth, 2s. 6d.

ELEMENTARY PHYSIOLOGY.

By **Prof. AINSWORTH DAVIS,**
Principal of the Agricultural College, Cirencester.
With Appendix for Agricultural Students. Cloth, 2s.

THE TEACHING OF GEOGRAPHY.

By **L. W. LYDE, M.A.,**
Professor of Economic Geography in University College, London.
CONTENTS.—Personality of Teacher — Specialist Teaching — Human Note — Unity of the Science — Scheme of Work — The Outlook Faculty — Outdoor Work—Mental Pictures—Modelling—Mapping—Seasonal Work, &c., &c., &c.
Price 1s. net. (*Just published.*)

THE PEDAGOGY OF EDUCATIONAL HANDICRAFT.

By **T. W. BERRY,**
Director of Education, Rhondda, S. Wales; late Assistant Director of Education in Manchester; Author of "Professions for Girls," "How to Become a Teacher," &c.
Illustrated. Crown 8vo, cloth, 1s. 6d. net. (*Just published.*)

A GENERAL TEXT-BOOK OF ELEMENTARY ALGEBRA.

Covering the ground of a School or ordinary College Course.
By **A. E. LAYNG, M.A.,**
Formerly Head Master, Stafford Grammar School.
With or without Answers. 4s. 6d.

"We have looked very carefully through this text-book of Algebra, and have been attracted by the simplicity of treatment, the skilful gradation, the orderly arrangement, the clearness of explanation, and the practical and up-to-date methods employed. Mr. Layng is to be congratulated on the production of this able and workmanlike book, which will undoubtedly take a foremost place among such works."—*Educational News.*

FIRST PRINCIPLES OF FRENCH PRONUNCIATION.

By **ÉMILE SAILLENS,**
Professor of English at Lycée de Nantes, and
B. R. HOLME, B.A.,
Lecturer in English, Sydney University,
With Introduction on Organs of Speech by **Prof. T. P. ANDERSON STUART, M.D., Ch.M., LL.D.** Price 2s. 6d. net. (*Just ready.*)

ADVANCED COURSE OF GERMAN COMMERCIAL CORRESPONDENCE.

Compiled by **ALFRED OSWALD,**
Glasgow Athenæum Commercial College, &c.; Author of "First Course of German Commercial Correspondence." Crown 8vo, cloth, 3s. 6d.

ELEMENTS OF MATHEMATICS. Practical and Theoretical

By **THOMAS BARR, B.A.,**
Senior Mathematical Master, Hutcheson's Boys' Grammar School, Glasgow; Lecturer on Mathematics, Coatbridge Technical College.
2s. net. (*Just published.*)

A FIRST GEOGRAPHY.

By **C. A. E. RODGERS, M.A., F.R.G.S.,**
Assistant Master, Bradford Grammar School; and an Examiner in Geography to the College of Preceptors.
With Coloured Pictures and Diagrams on every page. Small 4to, cloth, 1s.

THE TEACHING OF ENGLISH.

By **A. E. ROBERTS, M.A.,**
Principal Lecturer in English at the Islington Day Training College, and
A. BARTER, L.L.A.,
Late Head Mistress of the Braintree Pupil-Teacher School. 2s. 6d. net.

METHOD OF ANALYSIS.

With Passages from English Literature for Practice.
By **FRANCES E. BEVAN,**
Classical Tripos, Cambridge; Joint Head Mistress of the South Liverpool School for Girls. Fcap. 8vo, 1s. net.

A GREEK BOY AT HOME.

An Original Greek Story, specially written for use with Rouse's "First Greek Course."
By **W. H. D. ROUSE, Litt.D.,**
Head Master of the Perse School, Cambridge.
Crown 8vo, cloth, 3s. 6d. net. (*Just published.*)

A FIRST GREEK COURSE.

By **W. H. D. ROUSE, Litt.D.,**
Head Master of Perse Grammar School, Cambridge.
Crown 8vo, cloth, 2s. 6d. net.

This is a Course based upon Oral Methods. The sentences and passages for translation are, from the first, drawn from Greek literature, and the plan is such that the pupil is reading a Greek author before the end of his first year at the language.

BLACKIE'S LONGER FRENCH TEXTS.

FROM MODERN AUTHORS.

Printed in large type. Cloth limp, **8d.** each. With brief Notes and Questionnaire, Memory List of Useful Phrases, and Vocabulary.

Féval—Le Docteur Bousseau.
Laboulaye—Yvon et Finette.
